I express my appreciation to the chairman of the subcommittee for his patience and indulgence in listening to the discussion on the large number of amendments which were offered. I am sorry he did not see fit to consider a number of amendments which I feel would have made the bill a better labor reform bill. But we will have a chance to offer and debate them on the floor of the Senate.

The press of the Nation is becoming aware of the inadequacies of the Kennedy-Ervin bill. To demonstrate this fact, I ask unanimous consent to have printed at this point in the RECORD editorial comments from the press throughout the Nation.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times, Feb. 3, 1959]

RETAILERS SCORE NEW LABOR BILL—GROUP SAYS KENNEDY CONTROL PLAN IS WORSE THAN NO LEGISLATION AT ALL

WASHINGTON, February 2.—The American Retail Federation attacked the Kennedy labor control bill today, implying it would be worse than no legislation at all.

Harry L. Browne, Kansas City, Mo., an attorney speaking for the federation, assailed the antiracketeering sections of the measure as well as the changes Senator JOHN F. KENNEDY, Democrat, of Massachusetts, seeks to make in the Taft-Hartley law.

"The greatest danger we now face is that a bill will become law which only scratches the surface of a deep-rooted problem," Mr. Browne said.

"Passage of such a bill will lull the public into complacency and, at the same time, act as a license for some unscrupulous labor leaders to increase use of the very weapons they used to gain their position of dictatorial powers—namely, organizational picketing and secondary boycotts."

EIGHT HUNDRED THOUSAND IN GROUP

Mr. Browne said that his organization consists of 31 national retail associations and 38 statewide retail associations having a membership of 800,000 retailers.

The Associated General Contractors of America also criticized the Taft-Hartley features of Senator KENNEDY'S bill—but supported the general principles of the measure designed to deal with labor corruption.

Frank J. Rooney, of Miami, Fla., appearing for the contractors group, also attacked one provision in the rival labor bill offered by the Eisenhower administration.

The witnesses appeared before the Labor Subcommittee, headed by Senator KENNEDY, opening its final week of public hearings on the legislation.

Mr. Browne said that provisions of the Kennedy measure for union financial reporting in some cases weakened the Taft-Hartley law. The election-democracy code for unions in the measure is inadequate, he said.

CALLS STORES VULNERABLE

Mr. Browne said that retail stores were peculiarly vulnerable to organizational picketing and secondary boycotts. The Kennedy bill, he said, does not touch secondary boycotts at all and its provisions aimed at blackmail picketing are limited to situations which have almost never arisen.

Mr. Rooney assailed a section of the administration bill providing that secondary boycotts in the construction industry would no longer be considered unfair labor practice in certain circumstances. He noted that the Kennedy bill did not contain this.

"Secondary boycotts are indefensible wherever found," Mr. Rooney said.

A secondary boycott occurs when pressure is put on a third party in a labor dispute.

[From the Wall Street Journal, Mar. 11, 1959]

PICKETS AND BOYCOTTS—UNIONS WIELD THEM AS BLACKJACK TO BELABOR BUSINESS

(By Robert D. Novak)

WASHINGTON.—The sumptuous Waldorf-Astoria Hotel in midtown Manhattan came perilously near to closing its doors in 1956. The hotel had no labor trouble of its own, but a dispute in the separately-owned hotel barber shop almost brought the $25 million-a-year business to a standstill.

That same year, trucker Tom Coffey in tiny Alma, Nebr., was forced to go out of business. Mr. Coffey, who had plenty of labor trouble of his own, had refused to sign a contract with the Teamsters Union.

The big hotel and the Nebraska small businessman had felt the cutting edge of two union weapons that the Eisenhower administration wants to dull: Organizational picketing and secondary boycotts. It is this attempt that is producing the most heated words in the current congressional debate over labor reform. President Eisenhower argues that no labor bill can fight racketeering effectively without curbs on "blackmail" picketing and boycotts, but labor bitterly opposes the President's proposals as restricting legitimate as well as illegitimate union practices.

EMPLOYEE INTEREST

The union-favored labor reform bill of Democratic Senator KENNEDY, of Massachusetts would prohibit picketing aimed at extorting money from an employer. The administration bill would go much further; it would ban picketing when a union could not show that employees had a sufficient interest in joining a union.

The two programs are more sharply contrasted when it comes to secondary boycotts. Mr. KENNEDY would make no change in the present law aimed at stopping unions from forcing a neutral employer to cease business dealings with a strike-bound employer. The Taft-Hartley Act prohibits a strike against a neutral employer or a union inducing its members to strike the neutral, but many a loophole has been found. The Eisenhower bill would try to close two of the biggest by prohibiting unions from applying pressure directly on a neutral employer as well as through his workers and by extending the ban to the actions of one employee as well as several acting together.

Predictions are risky in the shadowland of labor law. But the administration's proposals, had they been on the statute books, might well have aided the Waldorf-Astoria and Mr. Coffey in addition to hundreds of other businessmen across the country.

The hotel's woes began when the then AFL Barbers Union failed to woo employees of the barber shop, owned by Terminal Barber Shops, Inc., away from their independent union. The AFL unit promptly threw a picket line around the hotel. This didn't have much impact in the way of reducing haircut business, but it served as boycott activity aimed at pressuring the hotel into severing its relationship with the barber shop. Because of Barber Union pickets at the hotel's service entrance, Teamster members refused to drive trucks in with food and drink or drive trucks out with garbage. Waldorf-Astoria officials soon left no doubt that they would prefer to close the barber shop than see the hotel shut down. The barber shop employees, facing the loss of their livelihood, disbanded their independent union and joined the AFL unit.

In contrast to the hotel's experience, Mr. Coffey was the target rather than the instrument of union tactics. The Teamsters had demanded recognition even though they had union cards for only 7 of his 22 drivers and refused to agree to a recognition election conducted by the National Labor Relations Board. When he declined recognition, the union picketed the company. Then, truckers with Teamster contracts refused to exchange freight with Coffey Transfer Co. Business dwindled for about a year until Mr. Coffey sold out for a third of the price he had been offered 3 years before.

Picketing has been used often for objectives other than winning a labor contract. The Teamsters and the now-famous Labor Relations Associates of Nathan Shefferman, a potent team elsewhere in the Nation, used it in dealing with many a small businessman in Flint, Mich.

This was the basic pattern of the Flint operation: A Teamster official suddenly would demand that a businessman recognize the union as bargaining agent for his workers. A picket line would be established, and then a Shefferman aide named George Kamenow would step from the wings. Offering his service as a labor relations consultant, Mr. Kamenow would request a hefty fee and the Teamsters would fade away. Records of the special Senate Investigating Committee show Mr. Kamenow lavished the money on Teamster officials for everything from Christmas gifts to a gala trip to the Rose Bowl.

The Teamsters, refusing to permit a recognition election, set up a picket line around Flint's Skaff Rug Co. in 1956 when the company refused to sign a contract. Skaff Rug next agreed to pay the Shefferman organization a $2,000 fee and $75 to $100 each month, and the Teamsters were not heard from again. Another Flint firm, Advance Electrical Supply Co., found itself surrounded by Teamster pickets in 1954 without warning. After the customary $2,000 payment to Mr. Kamenow, the pickets disappeared. The company had no contract with the union throughout the episode.

Chicago restaurateurs have encountered much the same problem at the hands of Restaurant Workers locals. In 1950, one local without employee support deployed pickets around the plush London House, in Chicago's commercial district. The famed center of jazz music selected 40 employees at random as union members, and dues wound up being deducted from their paychecks for a net loss in take-home pay. A Howard Johnson restaurant in suburban Niles, Ill., trying to get rid of Teamster pickets who had little employee backing paid $2,240 in 1952 to lawyer Abraham Teitelbaum for "labor relations" work. The money found its way to the union as initiation fees and dues, and 40 Howard Johnson employees became union members even though neither they nor the bosses knew about it.

Dawson Taylor, a Detroit Chevrolet dealer, was hit by a different approach in 1957. Without proving employee support Teamsters picketed his firm but withdrew when Mr. Taylor agreed to throw his laundry business to the hoodlum-infested Star Coverall Co. After that, the Teamsters lost interest in negotiating a contract.

In the more complex field of secondary boycotts, the most frequently used device is the "hot cargo" agreement under which truckers promise the Teamsters not to exchange freight with a strikebound trucker. The Eisenhower bill would not abolish such agreements but probably would bar the Teamsters from threatening to strike in order to enforce them. Trucking firms invoking hot cargo agreements cost the strikebound Southwestern Motor Transportation, of San Antonio, Tex., around $1 million in revenue between 1954 and 1958. As for the strike itself, Southwestern's employees at no time expressed interest in joining the Teamsters.

A jurisdictional dispute between the AFL–CIO international unions resulted in a boycott that Burt Manufacturing Co. of Akron, Ohio, estimates has cost $3 million to $4 million in lost revenue. With the Sheet Metal Workers trying to displace the United Steelworkers as bargaining agent at the Burt plant, the company found it tough going to get its ventilators installed by the sheet metal workers.

Examples: A foreman, acting as an individual and not affected by present law, would not permit sheet metal workers to install Burt equipment on a University of Akron construction job. Wooster (Ohio) Sheet Metal Co., under direct union pressure not now covered by the law, promised not to use any more Burt products on its jobs.

MARATHON STRIKE

Although the efforts of the United Auto Workers in its marathon strike against Wisconsin's Kohler Co. have been labeled as a consumer boycott designed to discourage purchases of Kohler plumbing fixtures, there have been secondary boycott implications.

Examples: A plumbing contractor switched to another brand of fixtures for a Fort Leavenworth, Kans., junior high school after being warned by the Plumbers Union that no Kohler fixtures should be used—a form of direct pressure on the employer. A Plumbers Union steward, acting as an individual, refused to use Kohler products on a Bellflower, Calif., residential development project.

The use of organizational picketing and secondary boycotts took one of its most bizarre twists in 1955 when a gangster-dominated New York City local of the old AFL United Auto Workers picketed shops that install glass parts in automobiles. The shops resisted even after shipments of glass parts were halted. All resistance crumbled, however, when one of the shops showed signs of recognizing the union. This would have made possible a secondary boycott directing all work into the one union shop. Labor peace came when the union was recognized and the shops chipped in for a $2,500 payment to convicted labor extortionist John Dioguardi, alias Johnny Dio.

The bizarre twist? About 60 percent of the shops were one-man operations with the owner the only worker. This meant these very small businessmen were paying dues and padding Dio's bank account to become union members just so they could have labor peace.

[From the Richmond Times-Dispatch, Jan. 23, 1959]

WISHY-WASHY LABOR BILLS

The first so-called labor bill to be introduced at this session of Congress has been tossed into the hopper by Senator JOHN F. KENNEDY (Democrat, of Massachusetts).

Except for minor changes, it is a carbon copy of last year's Kennedy-Ives bill. It nibbles around the edge of the problem and leaves the core untouched.

Senator KENNEDY's presidential hopes are well known. He hasn't a chance to win the Democratic nomination, unless he appeases the union hierarchy. Hence he is hardly the man to propose legislation intended to curb abuses of unionism.

KENNEDY calls his bill "bipartisan," but unlike last year's bill it has no Republican sponsor. The GOP is expected to introduce its own labor bill after Mr. Eisenhower has submitted his recommendations in the scheduled labor message.

Since it is generally assumed that any Republican-sponsored labor bill will have to obtain Labor Secretary Mitchell's approval—and since Mitchell is said to have hopes of being a dark horse at the 1960 convention—the chances are that the GOP measure will not be much of an improvement on KENNEDY's timid approach to the problem of curbing massive union monopoly.

The Kennedy bill should be dismissed as a gesture. Senator ERVIN of North Carolina, who cosponsored this wishy-washy proposal, gives it only halfhearted support. He said on Wednesday that he hoped the union-sponsored Taft-Hartley amendments would be dropped. That, basically, is in line with Republican objections to the bill.

Last year's Kennedy-Ives bill—also a mere gesture—passed the Senate 88 to 1, but was buried by a House avalanche of political maneuvers, seemingly intended to sidestep even so feeble a commitment during a congressional election year. At the time we (rather hastily) rebuked the House, on the ground that any union-curb bill would be at least a step in the right direction.

This year the need to halt the inflationary wage-price spiral is even more urgent. The threat of sympathy strikes and secondary boycotts carries the full weight not only of the striking union, but also the threat

inherent in the 16 million membership of the full AFL–CIO syndicate. Therein lies the greatest danger of union monopoly.

The right to unionize, to bargain collectively, and to strike locally should not be impaired (so long as public welfare and national security are not endangered). But unless the threat of nationwide strikes in key industries is removed, the inflationary trend cannot be checked.

[From the Chicago American, Jan. 29, 1959]

IKE'S LABOR BILL

President Eisenhower's labor bill is a much more effective measure than Senator KENNEDY's for putting an end to thieving by union officials and to abuses of union power that injure business and the general public. The President pointed this out (though he did not mention KENNEDY's name) in the message he sent to Congress with the bill.

This, he said, is "complete and effective labor-management legislation, not a piecemeal program." KENNEDY's gentle measure confines itself to reforms designed to protect union members against being exploited. It says nothing about protecting the public against oppression by arrogant union bosses, but KENNEDY says he will take care of that later by proposing amendments to the Taft-Hartley law, and this divided approach justifies Ike's description of his program as "piecemeal."

To protect the funds of union members against the sticky fingers of crooked officials, the President's measure provides that union finances be fully and publicly reported, and to put control of the unions in the hands of their members it requires election of all officers by secret ballot.

And Ike's bill provides, too, for giving the Secretary of Labor authority to conduct investigations and compel unions to obey the law.

For the protection of the American people in general, the President's bill puts restrictions on secondary boycotts. These are designed to ruin business firms by scaring other firms out of doing business with them. The boycott the Auto Workers Union now is conducting against the Kohler Co. of Sheboygan, Wis., is a particularly vicious example of this kind of boycott.

Ike's bill also outlaws the common union practice of picketing an employer to make him drive the people who work for him into a union they do not want to join. This is racket picketing. Union bosses have used it to destroy many small businessmen who stood up for the principle that their employees had the right to decide for themselves whether to join a union or not.

If Congress is really interested in cleaning up labor abuses, it will do better to pass Ike's bill than KENNEDY'S.

[From the Peoria Journal Star, Jan. 30, 1959]

STRONG LABOR LAW NEEDED

Senator JOHN KENNEDY's new labor-management bill, as everyone knows, is considerably less than is needed to protect workers and the public from union racketeers and monopolists. But the old "half a loaf is better than none" argument has been trotted out to justify it.

Sometimes the "half a loaf" argument is logical. But this is not one of those times.

The sordid record of lawlessness in some unions so far produced by the McClellan committee has been brought to the people by every communications medium—newspapers, radio, television, magazines, and newsreel. It has alarmed labor union members as well as the general public. Never has the need for comprehensive reform in any area been so clear and so well understood.

To say that it would be useless to expect Congress to pass a sweeping reform bill, because it is a Democratic Congress heavily indebted to labor union politicians, is to say that the party owes a greater debt to labor bosses than to the rank and file of labor and to the people of the United States.

If the Democrats in Congress feel that way about it, let them bear the blame for failing to vote a reform that is widely demanded. And instead of accepting half a loaf, which would theoretically appease the public, let us continue to demand real reform and set about electing a Congress in 1960 with enough courage to give it to us.

Senator KENNEDY's bill is aimed at characters such as Jimmy Hoffa and his associates. It would drive hoodlums out of labor unions. But it would do nothing about the monopoly power of unions, such abuses as the secondary boycott, blackmail picketing, or the dangers that have grown up with the uncontrolled power of some unions.

Labor unions once needed the protection of the law against big business. Now they themselves have become big business and their power, in some instances, is greater than that of the robber barons of business who brought on antitrust and other restrictive legislation. Public protection against this unrestricted power is as necessary as worker protection against racketeers in unions.

The need for comprehensive reform is proven. The public demand is unmistakable.

This is no time to talk of settling for half a loaf.

[From the Peoria Journal Star, Jan. 29, 1959]

CHANCE FOR LABOR CLEANUP

Congress, with its large majority of Democratic members friendly to the cause of organized labor, has an opportunity this year to clear away some of the abuses which have given certain sections of the labor organization a bad name.

It has before it now two proposals. One is the spineless bill sponsored by Senator KENNEDY, of Massachusetts, which is similar to the legislation passed by the Senate last year and which really will do little toward routing the racketeering bosses from some of the labor unions.

The other is the program presented by President Eisenhower, which also won't accomplish everything which needs to be done but which would go a long way toward providing protection against racket picketing in cases where no labor dispute is involved.

There are rumors to the effect that a third and stronger bill will be presented by Senator MCCLELLAN, who, as chairman of the Senate labor racketeering committee, knows as much as anyone just what is needed to clean up labor.

Certainly the Kennedy bill will not do the job. It obviously was drafted with a primary objective of doing nothing which might offend the labor bosses. It has all the earmarks of the work of a man who is trying to line up strong support for an effort to win a presidential nomination.

The Eisenhower program, whatever its shortcomings, tries to bring racket picketing under control. That section of the bill is desperately needed. Secondary boycotts and racket picketing inflict severe damage on people who are not directly involved in labor disputes and they must be curtailed.

Congress now has its choice. It either can go along with the hollow pretense of adopting the Kennedy bill or it can draft the more workable legislation which bitter experience has shown is the country's need.

[From the Washington Daily News]

RACKETEERS ON THE PICKET LINE

Blackmail and coercive picketing by racketeers masquerading as unions has been thoroughly exposed by the McClellan committee.

As was shown through a series of witnesses, such picketing was an effective weapon for extortion, notably in New York City. There, in the words of Senator MCCLELLAN, "the illiterate Puerto Rican and Negro laborer was misused by both management and labor. In some instances, the employees didn't even know they were in the union. The dues of these union members fattened the pocketbooks of the racketeers and their henchmen."

Two proposals now before Congress seek to provide a remedy at law for this kind of banditry. The Kennedy-Ervin bill would simply forbid picketing for purposes of extortion and is, in our opinion, wholly inadequate.

The Eisenhower administration bill, just submitted, perhaps does not cope fully with the infinite ingenuity of the underworld, but it at least attempts to cover the field.

The administration bill would: Forbid picketing by one union organization after another union had been recognized; or when a valid election to determine union preference had been held within 12 months; or when it cannot be shown that the employees of the business being picketed want what the pickets want; or when the pickets have been marching for a reasonable length of time and a union preference election has not been held.

All our labor law is based on the conviction that the workers have a right to organize and negotiate with their employers through agents of their own choosing. The picket line, as often abused, directly violates that right, forcing workers into unions they don't want and forcing employers to sign them into unions against their will, on pain of financial ruin.

There is nothing in these provisions of the administration bill which would hurt any decent union. They strike, in fact, at racketeering abuses which the AFL–CIO has itself condemned.

[From the Chicago Daily Sun-Times, Jan. 22, 1959]

DO WHAT IS NECESSARY TO CURB HOFFA

A bill that he says would virtually put Teamster Union President James R. Hoffa out of business has been introduced by Senator JOHN F. KENNEDY, Democrat, Massachusetts. It is similar to but not identical with the Kennedy-Ives bill that passed the Senate but became bogged down in the House last year.

The American public will welcome any legislation that would curb the brazen activities of the racket-ridden Teamster Union leadership.

In addition to new laws needed to correct the abuses of unethical labor leaders, other changes in the Taft-Hartley Labor Act have become overdue.

KENNEDY argues against loading his bill with some of these other changes. Later, he says, after a projected study of other amendments to the Taft-Hartley Act is made, he would support a second bill to cover them.

It is understandable that KENNEDY wants to push through speedily a bill to curb Hoffa and not get sidetracked by arguments about labor reforms that have little to do with the Hoffa problem. Senator BARRY GOLDWATER, Republican, Arizona, senior Republican on the Senate Labor Committee, conceded such an approach might be feasible provided the Democratic leadership guaranteed a second bill would be offered.

KENNEDY asked the Senate not to clutter up his bill with amendments banning secondary picketing of customers of a struck company and picketing by a union that does not represent a majority of employees. These prohibitions are advocated by President Eisenhower, who wants to end blackmail picketing.

It seems to us that any bill designed to strike at the excesses of the Teamsters Union should contain prohibitions to end

blackmail picketing. Such changes need not await a general overhaul of the Taft-Hartley Act. They certainly are more appropriate in a bill to curb Hoffa than some other provisions in the Kennedy bill. He includes such union-backed changes as one to extend labor board election voting privileges to strikers replaced by nonunion replacements. What is urgent and anti-Hoffa about this provision?

KENNEDY'S bill does ban shakedown picketing by which an individual seeks personal profit or enrichment. But it does not ban picketing used by the Teamsters Union to force unionization of a shop against the will of the employees. Without such a provision, the Kennedy bill is not as strong as it should be to crack down on Hoffa. And if it does not crack down on Hoffa, it loses its claim for urgency.

EXTENSION OF TIME FOR RECEIPT OF TEMPORARY UNEMPLOYMENT COMPENSATION

The Senate resumed the consideration of the bill (H.R. 5640) to extend the time during which certain individuals may continue to receive temporary unemployment compensation.

The PRESIDING OFFICER. The question is on agreeing to the amendment, in the nature of a substitute, offered by the senior Senator from Michigan [Mr. MCNAMARA] for himself and other Senators.

Mr. HART. Mr. President, I speak to the amendment offered by the senior Senator from Michigan [Mr. MCNAMARA], of which I am happy to be a cosponsor.

The 3-month withdrawal of temporary unemployment benefits endorsed by the administration and reported by the Senate Finance Committee is, as I see it, totally inadequate in the face of the continuing high national unemployment total. It would be too little, too late.

With the expiration of the TUC program, over 1 million persons will have exhausted all benefits. The House bill will not help 800,000 of these. The House bill will not help the added 540,000 persons who will exhaust their regular insurance in the months of April, May, and June. The House bill will not help the 2,450,000 who will exhaust their benefits between April 1, 1959, and July 1, 1960. The House bill will not help the 2,289,000 persons who have not been eligible for unemployment insurance. In short, it will help only 10 percent of the 4,700,000 unemployed Americans who are looking to the President and the Congress for help.

This is a continuing crisis. It deserves the same type of national action that we have always taken in the face of disaster. We help southern farmers hit by tornadoes and frost. We help Western States with soil erosion and water problems. We undertake regional power developments and flood relief. There are a few who label these things a "public dole" or "budget busters." The majority of us properly are not panicked by such labeling. The burden of these programs has been willingly shared by the people of the large industrial States now in desperate need.

While the bill endorsed by the administration would theoretically help 405,000 persons, I have joined 16 other Senators in cosponsoring Senator MCNAMARA'S emergency unemployment benefits bill (S. 1323) as a substitute for the House bill because I am convinced it is more realistic in the face of the current situation. It will provide 16 weeks of benefits to all those who are unemployed and available for work. It is a three-dimensional approach—it would provide benefits for those exhausting their regular State benefits up to June 30, 1960, for those exhausting last year's temporary benefits and for those who have had substantial attachment to the labor force but who have not worked in jobs covered by insurance programs. All of them are unemployed. All of them must be helped through this crisis.

The cruel facts of continuing unemployment cannot be covered over by political slogans about balanced budgets. They cannot be covered over by economic theories about inflation. This is not the time to play "brinkmanship" with the welfare of nearly 5 million Americans and their families. This is not the time to "wait and see if things won't get better." We waited last year and most of the large industrial States ended up by mortgaging their insurance programs for the next 5 years. And unemployment is nearly as high today as it was then. The McNamara bill is needed now.

And while we are watching the administration beat a strategic withdrawal from the unemployment compensation crisis, we also hear rumblings that the White House is considering a veto of the Douglas area redevelopment bill (S. 722) approved by the Senate on Monday.

We need both immediate and long-range measures if we are to restore the country to a level of production, jobs, and economic growth that will truly enable us to balance the budget because we will have the income to do it with. The Douglas bill is part of the long-range attack. The McNamara bill is an essential feature of an effective short-range attack.

I am grateful for the leadership and effort of the senior Senator from Michigan, and I am hopeful that the Senate will support the amendment which he has offered in the nature of a substitute.

The PRESIDING OFFICER. The question is on agreeing to the amendment, in the nature of a substitute, offered by the senior Senator from Michigan [Mr. MCNAMARA] for himself and other Senators.

Mr. BYRD of Virginia. Mr. President, I wish to speak in opposition to the amendment offered by the distinguished senior Senator from Michigan and other Senators.

The most outstanding change created by the substitute amendment is that the proposed compensation would be financed by Federal appropriations from the general revenue. I wish to emphasize that the cost would be $875 million, which would have to come from the general revenue. By contrast, compensation under the bill as passed by the House would be paid initially from Federal loans to the States, which would be repaid.

We attach great importance to the two different methods of financing the temporary compensation. The proposed amendment introduces in the present system, set up and operated on insurance principles, a new element—a Federal grant for the payment of compensation—which has the flavor of a relief program, but without any provision for testing the need of the proposed beneficiaries.

This proposal would seriously undermine the principles on which the present program has operated successfully for more than 20 years. Even more important, once congressional grants were made available for financing unemployment compensation, it might be extremely difficult to divorce the program from reliance on congressional grants.

The British experience in financing unemployment benefits from parliamentary appropriations should be a warning to us. During the depression years of the 1920's and 1930's, the British financed a whole series of temporary extensions of benefit from parliamentary appropriations. Each extension was believed to be the last. The large parliamentary appropriations not only threatened to unbalance the British budget; they also so undermined the system that many persons, with negligible prior employment, could draw benefits for an almost unlimited period. We must not, I believe, start on this dangerous downhill road on which it may be difficult to set the brakes.

Provision of Federal grants for the payment of temporary unemployment compensation presents other dangers. The first is that the provision of outright grants might encourage some States to make agreements for the payment of these federally financed additional weeks of compensation, despite the fact that their State was not suffering high unemployment. For example, in the week ending March 7, 1959, insured unemployment—that is, unemployment among persons eligible for benefits under a State law or under the Federal law for Federal employees—ranged among the States from 1.7 to 11.8 percent of persons covered by these State laws. In 11 States, this percentage was less than 4 percent.

Mr. President, I ask unanimous consent to have a table on this subject printed at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Insured unemployment (State and UCFE), week ending Mar. 7, 1959

[Arrayed by percentage of insured unemployment]

States	Number	Rate
		Percent
District of Columbia	1,507	1.7
New Mexico	5,125	3.1
Colorado	11,373	3.3
Florida	27,895	3.3
Texas	62,199	3.3
Iowa	14,740	3.3
Virginia	26,663	3.6
Kansas	13,614	3.6
Ohio	95,534	3.7
South Carolina	15,707	3.8
Indiana	43,218	3.9
Missouri	40,005	4.0
Wisconsin	35,548	4.1
Nebraska	9,288	4.1

Insured unemployment (State and UCFE), week ending Mar. 7, 1959—Continued

[Arrayed by percentage of insured unemployment]

States	Number	Rate
		Percent
Delaware	5,541	4.3
Illinois	121,317	4.4
Georgia	35,047	4.5
Arizona	10,042	4.6
Utah	8,884	4.6
South Dakota	3,678	4.8
Oklahoma	19,619	4.8
New Hampshire	7,547	4.9
North Carolina	44,419	5.1
Alabama	30,209	5.2
Michigan	101,567	5.3
Connecticut	42,064	5.4
California	208,803	5.5
Massachusetts	86,923	5.6
Maryland	43,611	5.8
Louisiana	35,021	5.9
New York	315,686	6.1
Wyoming	4,111	6.2
Tennessee	41,252	6.3
Vermont	4,588	6.3
Minnesota	45,315	6.5
New Jersey	105,636	6.7
Mississippi	18,284	6.9
Rhode Island	17,395	7.0
Washington	46,076	7.1
Nevada	5,185	7.1
Kentucky	34,446	7.2
Arkansas	20,523	7.7
Oregon	30,091	8.1
Pennsylvania	258,864	8.1
Idaho	9,563	8.4
Maine	17,658	8.9
West Virginia	34,744	9.0
North Dakota	7,233	9.9
Montana	14,161	11.8

Mr. BYRD of Virginia. Mr. President, by contrast, when a State must repay Federal advances for temporary compensation, States with low unemployment are less likely to sign agreements to pay compensation, the cost of which must be repaid to the Federal Treasury.

The second danger is that these grants, if continued, would diminish the incentive of States providing the shortest duration of benefit to increase duration. The Federal grants would enable them to pay additional weeks of compensation at no cost to their employers.

PROVISION OF TEMPORARY UNEMPLOYMENT COMPENSATION TO PERSONS NOT COVERED BY THE UNEMPLOYMENT INSURANCE PROGRAM

The proposed amendment, which would pay temporary compensation from Federal grants to a specified group of persons insured under the old-age, survivors, and disability insurance, but not under unemployment insurance, presents numerous difficulties. This proposal is objectionable in principal because it would provide compensation from public funds to a highly selected group without any evidence that its members were in need.

The amendment in the nature of a substitute presents numerous administrative problems. It would rely, for example, on information available from the Department of Health, Education, and Welfare in order to determine whether these persons had had the requisite amount of employment during the 2 preceding calendar years and had earned the required minimum of $1,000 during 1 calendar year. The necessity of getting this information for any substantial number of claimants would impose additional work on the State employment security agencies and might well delay them in paying benefits to other claimants.

The proposed provision of compensation for the self-employed presents a further problem. It has never been considered possible to include self-employed persons in a system of unemployment benefits because of the impossibility of determining when a self-employed person is unemployed. How is it possible to determine, for example, that a commission salesman is unemployed and is not enjoying a vacation from his work? This inherent difficulty in including self-employed persons might well lead to abuses of the proposed temporary compensation.

COST

At a time when we are making every attempt to balance the Federal budget, we should look carefully at the relative costs of H.R. 5640, as passed by the House, and of its proposed amendment, especially in view of the problems the amendment presents. The Department of Labor estimates that the cost of compensation provided under H.R. 5640, as passed by the House, would approximate $78 million. The proponents of the amendment estimate that their proposals would cost $875 million, more than 10 times the cost of the bill as passed by the House.

I hope the amendment in the nature of a substitute will be rejected.

Mr. CLARK. Mr. President, I desire to reply to the speech just made by the distinguished Senator from Virginia in opposition to the McNamara amendment, first with respect to the cost of the amendment.

While it is true that the gross cost would be approximately $875 million, there is at present unexpended from appropriations heretofore made by Congress for temporary unemployment compensation somewhere in the neighborhood of $205 million. So the net cost would be reduced to $670 million, rather than $875 million.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. CLARK. I yield.

Mr. WILLIAMS of Delaware. Is not the $205 million of unexpended appropriations available for use only in the form of loans repayable by the States?

Mr. CLARK. The Senator is correct.

Mr. WILLIAMS of Delaware. If the amendment were agreed to, it would authorize an $875 million appropriation by the Federal Government, none of which would be repayable. Therefore, I see no connection between the two proposals.

Mr. CLARK. No; it is my impression that the Senator from Delaware is erroneous in that understanding, because I understand the $205 million appropriated but unexpended and not chargeable against the 1960 budget would be available if the amendment were agreed to.

Mr. WILLIAMS of Delaware. That money or any other money could be available; but the point is that if the amendment shall be agreed to, the Government will be paying out $875 million, none of which will be repayable.

Mr. CLARK. The Senator is quite correct. My statement was that the cost in terms of new appropriations was $670 million. I think that is correct. Does the Senator challenge that statement?

Mr. WILLIAMS of Delaware. I disagree with your conclusion. Money which is authorized to be used as a loan cannot be used, by substitution, for a grant. An entirely new appropriation of $875 million would be needed if the amendment were agreed to.

Mr. CLARK. If the Senator from Delaware is correct in his assumption—which he may well be—then the $205 million would not be available for grants, and it would return to the Treasury because not used. So the net amount of new money would be $670 million. That is a large sum of money. It should not be appropriated without careful thought. As the Senator from Michigan has said, I think every Senator who supports the amendment in the nature of a substitute desires to see a balanced budget. I know that I do. I took the floor of the Senate on March 5 to suggest how the budget could be balanced by the closing of tax loopholes, even if the President's budget were to be increased by something in excess of $4 billion.

Among the loopholes which could be closed and which would provide revenue far in excess of the $670 million of new money called for by the McNamara amendment are the following: The mere employment of additional Internal Revenue agents to audit income tax returns has been estimated by the Treasury itself to yield $100 of new revenue for every 38 cents of administrative expense for the additional revenue agents.

If as many as 3,000 such agents were placed on the payroll, as they were in years past, and if all accounts were audited, it is estimated that $2,700 million additional revenue would be received without a single change in the tax laws.

Let us cut that sum in half and make it $1,350 million. There would still be considerably more money raised without any change in the tax laws, merely by employing more agents in the Internal Revenue Service, than is necessary to pay for the additional expenditures called for by the amendment.

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. CLARK. I yield.

Mr. CARLSON. The Senator from Pennsylvania stresses the need for additional agents in the Internal Revenue Service for tax collections. I agree with him. But I am quite certain the Senator is familiar with what happened in the House of Representatives, where the Committee on Appropriations struck out all requests for new employees in the Internal Revenue Service. That does not look promising, so far as getting additional personnel to collect more money is concerned.

Mr. CLARK. I have great confidence that the Senate Committee on Appropriations will not follow the lead of the House, the need for revenue being as great as it is. The Senator knows that the bill is at present pending before the Committee on Appropriations. I am hopeful that the additional funds for this purpose will be provided.

Mr. President, I shall not take the time of the Senate to detail the 10 other loopholes which could be closed without perpetrating any injustice or inequity, but, in fact, eliminating injustice and inequity. I believe I am conservative in repeating what I said on the

floor of the Senate on March 5th—namely, that the closing of these loopholes would yield approximately $7 billion of additional revenue with no increase in tax rates generally.

So there need be no concern about breaking the budget ceiling by adopting this amendment. The question is whether we wish to help those who are unemployed, those whose families do not have enough to eat, and whether we are so much in favor of helping them that we are willing to vote to close these tax loopholes in order to obtain the funds with which to make the expenditures called for by the amendment.

Mr. President, as the Senator from Michigan [Mr. McNAMARA] has said, this problem is a national one, and it should be treated on a national basis.

The Federal Government is also making national payments for public-assistance grants in specific categories; and those grants are not very different from unemployment compensation grants. I see no difference in principle between those payments by the Federal Government and the payments proposed to be made by the McNamara bill. Just as the problem of relief is a national one, so is the problem of unemployment.

Furthermore, I do not believe the States should be called upon to carry this load indefinitely. My distinguished friend, the Senator from Virginia, [Mr. BYRD], and I had a little discussion on that point during the hearings held by the Finance Committee. I suggested that my State was broke. The Senator from Virginia indicated that that meant that my State was bankrupt. Finally we agreed not to argue about the semantics. However, Mr. President, the fact is that in Pennsylvania unemployment has increased to a dangerous level; and additional payments by our employers to this fund at this time would result in putting a great brake on the States' industry and the development of a healthy economy.

Mr. President, the administrative problems which would arise from the amendment are not inconsiderable, but in my judgment they are surmountable. The determination of need would be made by the States. The States are well qualified to determine whether an applicant is entitled to receive unemployment compensation. The States can satisfactorily make that determination with respect to the covered employment, as they have in the past. In the case of employment that is not covered, the applicant must show that he comes within the terms of the act—in other words, the burden of proof is on him to show that he was employed and that he is able to qualify.

Mr. President, I do not think it proper to call upon American citizens who are out of work, and who need jobs, to take up the slack in the case of the States which, because of their difficulties—acute as they are in many cases—cannot meet this need.

So, Mr. President, I hope the pending amendment will be agreed to.

Mr. WILLIAMS of Delaware. Mr. President, I wish to speak briefly in opposition to the pending amendment.

I have listened with interest to the remarks made by my good friend, the the Senator from Pennsylvania [Mr. CLARK,] in regard to the fact that the financial position of his State is such that it cannot afford to finance this unemployment compensation insurance.

However, I call his attention to the fact that if the Senate agrees to the pending amendment, which provides for expenditures, at the National level, of $875 million, the Federal Government must raise that amount of money by levying additional taxes upon the people of the States. The Federal Government does not have access to any mysterious source of income. The only money it can spend, the only money it can pay to the States, must first be taken from the citizens of the respective States.

In this connection, let me point out that the citizens of Pennsylvania are at the present time paying approximately 10 percent of all the revenue which the Federal Government obtains by taxes. Therefore, if the pending amendment is enacted into law, the $875 million of additional payments it calls for will have to be obtained by the Federal Government by placing additional taxes on all the people of all the States—and, in the case of the people of Pennsylvania, to the extent of $87,500,000. The Federal Government can obtain the money it spends only be levying taxes on the people of the various States.

Mr. CLARK. Mr. President, will the Senator from Delaware yield?

The PRESIDING OFFICER. (Mr. LAUSCHE in the chair). Does the Senator from Delaware yield to the Senator from Pennsylvania?

Mr. WILLIAMS of Delaware. I yield.

Mr. CLARK. My good friend, the Senator from Delaware, and I have in the past had occasion to bandy this argument across the aisle. He has always insisted that the same people in Pennsylvania who pay the taxes are the ones who would receive these benefits.

Mr. WILLIAMS of Delaware. No, I have not said that.

Mr. CLARK. The Senator from Delaware just said they are the same people.

Mr. WILLIAMS of Delaware. No; I said they are citizens of the same State. I recognized that those who receive unemployment insurance compensation in Pennsylvania are not paying these taxes. But I suggest that the necessary taxes are paid by the people of the same State; and surely the Senator from Pennsylvania will agree to that statement. According to the statistics of the Treasury Department, approximately 10 percent of all the tax revenue of the Federal government comes from your State.

Mr. CLARK. Mr. President, will the Senator from Delaware yield further to me?

Mr. WILLIAMS of Delaware. Of course.

Mr. CLARK. No doubt the Senator from Delaware inadvertently used the words "the same people." The RECORD will speak for itself, and I am quite sure it will show that he did use those words.

Heretofore, he and I have discussed this point. Of course, my position is that those who receive these payments are in a class which is entirely different from the class of those who pay the necessary taxes. The overwhelming amount of the taxes which would be paid in Pennsylvania would not at all come from the ordinary citizens of Pennsylvania; instead, it would come from Pennsylvania corporations and from taxpayers who can well afford to make this additional contribution in the interest of human compassion and kindness.

Mr. WILLIAMS of Delaware. I am sure the people of Pennsylvania are prepared to pay their share; and I shall not enter into an argument with the Senator from Pensylvania, as to whether Federal taxes are levied more on the basis of ability to pay, than do State taxes. I do not know how taxes are collected in Pennsylvania. I would assume that that situation in Pennsylvania is similar to that in Delaware.

If in Pennsylvania taxes are levied less on the basis of ability to pay more than is true in the case of Federal taxes I do not know about that. But I repeat that, on the average, 10 percent of the total revenue of the Federal Government comes from Pennsylvania. About 1 percent comes from Delaware. As these expenditures are increased, it is necessary to increase the taxes that are levied on taxpayers of the various States, in order to provide the tax revenue of the Federal Government; or else an additional deficit must be incurred. In the latter event, the per capita Federal indebtedness of both the people of Delaware and the people of Pennsylvania would be increased. We cannot escape that simple fact of life.

Therefore, I repeat, the people of Pennsylvania will have to help finance this appropriation or any other appropriation which Congress may make. Again I emphasize that the Federal Government does not have any mysterious source of income. The revenue of the Federal Government is based entirely upon the funds obtained by the Federal Government from the pockets of the taxpayers. So, in the final analysis, payments of the sort now proposed will not constitute gifts to Pennsylvania, Delaware, or any other State. It will merely represent the return of a part of that which will be collected from them.

Mr. CLARK. Mr. President, will the Senator from Delaware yield further to me?

Mr. WILLIAMS of Delaware. I yield.

Mr. CLARK. The Senator from Delaware represents an extremely prosperous State, even though it is small in size. It is prosperous not only because of the activities of its people, but also because it has a corporation law which brings into the State many millions of dollars from corporations which wish to be incorporated in Delaware. I have no quarrel with that situation at all; that is a privilege of Delaware.

I am not arguing about what attitude the Senator from Delaware should take on the pending amendment. He is fully able to determine his own position with regard to it.

However, despite his little lecture, I believe that the people of Pennsylvania are overwhelmingly in favor of the pending amendment, even though it might result in their paying, in taxes, a little more than they would receive by means of the amendment. The citizens of Pennsylvania are interested in people being fed, in people being clothed, in people being housed. They have a sense of compassion for their unfortunate fellow Americans, and I am sure they would want both Senators from Pennsylvania to vote for the amendment.

Mr. WILLIAMS of Delaware. I am not disputing or quarreling with the position of the Senator from Pennsylvania. I merely say that if Congress passes this bill, the State of Pennsylvania is going to help to furnish the money to pay for the program. All this talk about producing this extra money by closing mysterious loopholes is not going to produce the money. I have just as much interest as has anyone else in discovering these mysterious billions. I do not think the phrase "loophole" is exactly proper. We all consider as a tax loophole a tax advantage with which we are in disagreement, even though it is in the present law. The people are paying the taxes according to the law, whether they are taking advantage of a 27½-percent depletion allowance or not. I personally think these depletion allowances are too high but we in the Congress have the responsibility of changing the law when we think there is an inequity in the tax law. As one Senator, I have tried to change these inequities, and will continue to do so. But that is no excuse for voting another billion now on the assumption that later we will collect more taxes from some source.

Let us collect the money first. For years we have been operating at a deficit. It is time we call a halt.

No one denies the fact but that if this amendment is enacted, the $785 million which the Federal Government will have to furnish to the States under this program, will all have to be raised by levying some kind of tax on the people of the respective States. There is no mysterious source of income at the National level.

The fact is that the proposal provides for the expenditure of $875 million over and above the amount recommended in the budget.

If this amendment is enacted, it will be the first step toward nationalizing State unemployment insurance; it will be the first step toward nationalizing a program which has always been recognized as being the responsibility of the States.

I was interested to note that the executive committee of the National Conference of Governors, which reported to the President this week, recommended that this program was a State program, and that the Federal Government should not take even the first step toward nationalizing it. This proposal now before us is not endorsed by the Governors, on the basis that the Governors recognize this program as being one of State responsibility.

I agree that such a step would be a dangerous precedent for Congress to establish. Once we take this step we shall be establishing a new principle, not of unemployment insurance—and I believe very strongly in a sound unemployment insurance program—but the minute Congress adopts the approach recommended under the amendment, the program will cease to be for unemployment insurance, it will become unemployment relief. I do not believe the American working man wants an insurance and a relief program connected.

If Congress is going to pass a relief measure, it should not do so under the guise of enacting an unemployment insurance measure. This proposal is not an unemployment insurance measure; it is a proposal to make it possible to provide relief in many instances to those who have never been covered under the unemployment insurance program, who have contributed nothing to it, and perhaps they will make no payments to the fund in the future.

Let us study well the experience the British had when they adopted a similar proposal and later had to drop it. We in this country would do well to heed the warnings of history and keep this program as a bona fide State-financed unemployment insurance program. Let us keep the program as the Governors of the respective States, through their executive committee, have recommended we in the Congress should.

Let us not spend another billion which we do not have.

Mr. CARLSON. Mr. President, I was a member of the House of Representatives in 1935 at the time Congress enacted the original Social Security bill. In 1939 I was a member of the House Ways and Means Committee, at which time we rewrote some of the provisions of that bill and changed some of its basic principles.

The basic principles of the act as passed in 1935 were that the unemployment law of each State would be written by the legislature of the State. The duration of benefits, the benefit amounts, and the eligibility conditions were to be locally determined to meet local conditions.

It was the intent of Congress that the responsibility of the Federal Government should be limited. The State responsibility was not only uppermost, but it was fundamental in the program.

I do not minimize the current unemployment situation. However, I believe it would be disastrous for our Nation to change completely the basic philosophy of our current social security program because we are in a temporary unemployment period.

The present unemployment picture is improving—although I will admit, not so rapidly as I would like to see it—and new claims for unemployment compensation have declined appreciably in recent weeks. They are now running about 40 percent under those of a year ago, and employment should show at least seasonable improvement in March.

The Senate today is confronted with a choice between two bills. One is S. 1323, which is sponsored by several Members of the Senate, and would provide for a greatly expanded Federal program. In fact, if enacted into law, it would not provide for repayment of funds used within a State for unemployment compensation benefits, but would in reality be a give-away program.

H.R. 5640 is a 3 months' extension of the emergency Federal jobless pay program which Congress approved last year. When it was passed by Congress last year, it was understood it was to be temporary; and if we today approve this bill it will be truly a temporary measure.

Under the emergency legislation we enacted last year, only 17 States have elected to participate fully in its provisions.

My own State of Kansas did not take advantage of these funds, although our unemployment reached a total of 5.6 percent in 1958. In February of this year our unemployment was reduced to 4.2 percent of the insured work force.

The Kansas Legislature, which has just concluded its biennial session, has increased the duration of the benefit period under our social security program from 20 to 26 weeks, and has hiked the payments to $40 a week. This increase in the period of the duration of the benefits, plus the increased benefits as approved by the legislature, is proof that Kansas is concerned about its insured who become unemployed.

Our State has a good record in dealing with its own unemployed, and we expect to continue our active interest in their problems.

As one who has been personally familiar with our social security legislation since its inception, I urge the Senate to vote down S. 1323, which is the pending amendment, and support H.R. 5640.

I ask unanimous consent that an editorial appearing in the Kansas City Star, under date of March 19, entitled "Keeping Perspective on Jobless Benefits," be printed in the RECORD as a part of my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KEEPING PERSPECTIVE ON JOBLESS BENEFITS

A 3-month extension of the temporary Federal jobless pay program appears to be reasonable in view of the continued high level of unemployment. It would carry the emergency program through the spring when the normal job pickup can be expected to brighten the picture. And it would reemphasize what we regard as one of the most important features of the law: It is a temporary measure not designed to negate the traditional philosophy that unemployment benefits should remain a State function.

There are men in Congress who would have it otherwise. The original Democratic proposal to extend the temporary program a full year might have given them an opening wedge. Also it would have played havoc with the balanced budget. But the House has restored reason and voted for the 3-month extension that would expire July 1. Under the present law the additional Federal benefits would expire at the end of this month.

In 1958, the temporary program was approved as an antirecession measure. It permitted the Federal Government to advance funds to the States to extend by as much as

one-half the number of weeks for which an unemployed worker is eligible for jobless benefits. The extension averages out to 13 weeks for the Nation.

But while production has been rising steadily, unemployment has continued. The February figure was 4,749,000. As the President recognized last year, unemployment is far more than a matter of statistics. A tapering off of the emergency program would ease the critical financial plight of a large number of Americans.

The cost would be about $49 million out of this year's budget, which already is hopelessly unbalanced. Then if the expected job increase materialized the sound unemployment compensation program would revert to normal. Presumably Uncle would vacate a field that he entered just to do a specific job.

Mr. CARLSON. Mr. President, I also ask unanimous consent that a weekly summary of Kansas unemployment insurance benefit activities, submitted by the director of the Kansas Department of Labor, be made a part of the RECORD at this point.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

Weekly summary of Kansas unemployment insurance benefit activities, for the week ended Mar. 14, 1959

	This week	Last week	Year ago
	State programs		
Claims against Kansas:			
Initial claims—intrastate	1,086	1,236	2,607
New (including transitional)	645	769	1,717
Weeks claimed—intrastate	11,075	13,393	18,113
Initial claims—interstate	245	243	358
New	138	142	213
Weeks claimed—interstate	2,301	2,412	3,133
Claims against other States:			
Initial claims	99	125	237
Weeks claimed	955	1,252	1,631
Insured unemployment rate	3.9	4.2	5.8
Payments issued:			
Number	12,451	12,651	19,022
Weeks compensated	13,799	13,860	21,130
Amount	$386,878	$388,712	$599,561
Average weekly rate	$28.04	$28.05	$28.37
	Federal programs		
UCFE, no UI:

Weeks claimed	399	476	-------
UCV only:			
Initial claims	12	10	79
Weeks claimed	118	139	616

Mr. CARLSON. Mr. President, I also ask unanimous consent to have printed in the RECORD, as a part of my remarks, an article which appeared in the financial pages of this morning's Washington Post and Times Herald, entitled, "Business Outlook," written by J. A. Livingston, in which he discusses some of the problems of the automobile industry.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, Mar. 25, 1959]

BUSINESS OUTLOOK—DETROIT GETS NEW ENGLANDITIS

(By J. A. Livingston)

Grimly, despairingly, men today make the rounds of Detroit employment offices in fruitless quests for jobs, because Detroit, over the last several years, has imported unemployment. What a strange, unwanted import amid nationwide prosperity.

The 1958 recession brought into retrospect this glacial economic trend. It demonstrated that automobile manufacturers had moved jobs out of Detroit and Michigan to Missouri, Ohio, Delaware, California, Texas, and elsewhere—in the interest of efficiency. Result: Detroit suffers from New Englanditis. Nowhere is this more significantly manifested than in three seemingly innocent sentences in Chrysler Corporation's 1958 annual report:

"The Newark, Del., assembly plant * * * supplies Plymouth and Dodge cars for east coast markets * * *. The new [St. Louis] plant will enable the company to supply the fastgrowing south and southwest market * * *. Improvements at the Los Angeles plant included new flexible conveyer systems * * *."

PAINFUL DISCOVERY

New Englanditis is what the towns of Manchester, N.H.; Lowell, Mass., Boston, and other large textile and shoe centers had to contend with in the late twenties and during the thirties and forties. Companies beset by high labor costs, rigid union regulations, old facilities, and high taxes moved elsewhere—often to the South. When depression settled over the Nation, New England workers painfully discovered that they were laid off first, rehired last, often not rehired at all. The efficient plants were elsewhere.

Only recently has New England routed this economic malaise. The lively electronics industry, growing like a newborn babe, has provided jobs for skilled textile machinists and retrained textile workers. It took time, energy, and imagination on the part of New England government officials, businessmen, and labor leaders to reinvigorate an area which had reached economic maturity and seeming senescence.

OLDER PLANTS CUT BACK

Now, apparently, Detroit and Michigan, though to a lesser extent, face a similar task of recrudescence. Can new industry be imported to provide jobs? For even if car sales pick up to 1956 or 1957 levels, it's unlikely that Michigan or Detroit employment will fully recover to the levels of those years. Too much deterioration took place under a panoply of false prosperity.

During the postwar years of rip-roaring auto sales in 1955, 1956, and 1957, New Englanditis was slowly setting in. All three of the Big Three were decentralizing—putting up newer plants outside Michigan. Yet, at the time, all capacity seemed needed. It was not fully appreciated, then, that if auto sales were to fall off, the newly automated facilities would be kept operating. The older plants in Michigan would be cut back. Unemployment would be imported.

In boomy 1955, more than 52 percent of the jobs in the automobile industry were in Michigan and 37 percent in and around Detroit. Last year Michigan accounted for only 45 percent of automobile employment and Detroit for only 29 percent. According to U.S. Commissioner of Labor Statistics, here is how this came about:

Automobile employment

	1955	1958	Percent decline
United States	904,000	627,000	31
Michigan	477,000	284,000	40
Detroit	333,000	182,000	45
Rest of the United States	427,000	343,000	20

IRONICALLY SAD SITUATION

Thus, the drop in employment in Michigan was both numerically and in percent twice as great as the rest of the United States. From this might be deduced an economic law: As an industry, such as automobiles, becomes bigger, as its market spreads, efficiency dictates decentralization of facilities nearer ultimate markets.

Eventually, the plants in original locations are less efficient than plants erected later—and elsewhere. The Pittsburgh region is to steel what Detroit is to autos. More, more, and more production is concentrated in the newer plants. That leaves older plants with less to do, established workers without jobs.

It's ironically sad for Detroit that the one domestic company whose employment is at an alltime high, American Motors, concentrates its Rambler production at Kenosha and Milwaukee, Wis. Its Hudson plant in Detroit is not making autos. Similarly, Studebaker-Packard, undergoing a revival with its Lark, concentrates at South Bend, Ind.

Mr. CARLSON. Mr. President, I yield the floor.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the senior Senator from Michigan [Mr. MCNAMARA] for himself and other Senators.

Mr. WILLIAMS of Delaware. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question is on agreeing to the amendment offered by the senior Senator from Michigan [Mr. MCNAMARA] for himself and other Senators. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from Mississippi [Mr. EASTLAND], the Senator from North Carolina [Mr. ERVIN], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Texas [Mr. JOHNSON], the Senator from North Carolina [Mr. JORDAN], the Senator from Georgia [Mr. RUSSELL], and the Senator from Florida [Mr. SMATHERS] are absent on official business.

I further announce that, if present and voting, the Senator from Mississippi [Mr. EASTLAND], the Senator from North Carolina [Mr. ERVIN], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from North Carolina [Mr. JORDAN], the Senator from Georgia [Mr. RUSSELL], and the Senator from Florida [Mr. SMATHERS] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Vermont [Mr. AIKEN] and the Senator from Utah [Mr. BENNETT] are necessarily absent.

The Senator from Maryland [Mr. BUTLER] is absent on official business as a member of the Executive Committee of the Interparliamentary Union.

The Senator from Illinois [Mr. DIRKSEN] is absent on official business.

If present and voting, the Senator from Utah [Mr. BENNETT], the Senator from

Maryland [Mr. BUTLER], and the Senator from Illinois [Mr. DIRKSEN] would each vote "nay."

The result was announced—yeas 38, nays 49, as follows:

YEAS—38

Bartlett	Hennings	Murray
Byrd, W. Va.	Humphrey	Muskie
Carroll	Jackson	Neuberger
Chavez	Kefauver	O'Mahoney
Clark	Kennedy	Pastore
Dodd	Long	Proxmire
Douglas	Magnuson	Randolph
Engle	Mansfield	Smith
Gore	McCarthy	Symington
Green	McGee	Williams, N.J.
Gruening	McNamara	Yarborough
Hart	Monroney	Young, Ohio
Hartke	Morse	

NAYS—49

Allott	Ellender	Morton
Anderson	Frear	Moss
Beall	Goldwater	Mundt
Bible	Hayden	Prouty
Bridges	Hickenlooper	Robertson
Bush	Hill	Saltonstall
Byrd, Va.	Holland	Schoeppel
Cannon	Hruska	Scott
Capehart	Javits	Sparkman

Case, N.J.	Keating	Talmadge
Case, S. Dak.	Kerr	Thurmond
Church	Kuchel	Wiley
Cooper	Langer	Williams, Del.
Cotton	Lausche	Young, N. Dak.
Curtis	Martin	
Dworshak	McClellan	

NOT VOTING—11

Aiken	Eastland	Jordan
Bennett	Ervin	Russell
Butler	Fulbright	Smathers
Dirksen	Johnson, Tex.	

So the amendment in the nature of a substitute, offered by Mr. MCNAMARA for himself and other Senators, was rejected.

Mr. BYRD of Virginia. Mr. President, I move to reconsider the vote by which the McNamara amendment was rejected.

Mr. GOLDWATER. Mr. President, I move to lay that motion on the table.

The motion to reconsider was laid on the table.

Mr. MCCARTHY. Mr. President, on behalf of the Senator from New York [Mr. JAVITS], myself, and Senators HARTKE and MCNAMARA, I offer the amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment offered by the Senator from Minnesota will be stated.

The LEGISLATIVE CLERK. It is proposed to strike out all after the enacting clause, and insert in lieu thereof the following:

That paragraph (1) of section 101 (a) of the Temporary Unemployment Compensation Act of 1958 (42 U.S.C. 1400) is amended by striking out "April 1, 1959," and inserting in lieu thereof "July 1, 1959."

The PRESIDING OFFICER. The question is on agreeing to the amendment in the nature of a substitute offered by the Senator from Minnesota for himself and other Senators.

Mr. MCCARTHY. Mr. President, I ask for the yeas and nays on my amendment.

The yeas and nays were ordered.

Mr. MCCARTHY. Mr. President, my amendment simply extends the temporary unemployment compensation program for 3 additional months.

The bill reported by the Committee on Finance contains a provision that anyone who qualifies before April 1 shall be eligible for benefits until July 1. The effect of my amendment is to provide that anyone who qualifies before July 1, shall be eligible for the temporary unemployment benefits paid under the program.

The amendment makes no changes in the State programs. It provides for a continuation of the loan program which was adopted last year. The effect of the amendment is to give some measure of benefit and some measure of aid to the large number of unemployed persons who would otherwise in those 3 months receive no unemployment compensation whatsoever.

The amendment has a second advantage, I think, in that it would give State legislatures time to respond to the needs in the field of unemployment benefits.

By extending the time until July 1, there will be no excuse for any State legislature to say "We did not have time; the act expired before we were able to provide unemployment compensation."

I favor the enactment of national standards. I supported the McNamara amendment which was offered earlier this afternoon. It is my opinion that when Congress was adopting temporary legislation last year, it perhaps should have approved something like the McNamara amendment. As a matter of fact, what the Senator from Michigan proposed was essentially what the Democrats advocated last year. That program would have been a genuine emergency or temporary program. The Federal Government would have assumed responsibility for a year, during which the States could have taken action. Instead of assuming that responsibility, Congress passed an act which threw the burden on the States, which were already overburdened.

I say the least we can do today is to extend for 3 months the duration of the temporary unemployment compensation program.

The cost is estimated to be $130 million.

As was pointed out earlier today, in excess of $200 million remains in the appropriation which was made in the last Congress. Consequently, some of that appropriation will remain, even though this program is fully adopted and is completely carried out.

Mr. KENNEDY. Mr. President, I desire to compliment the Senator from Minnesota [Mr. MCCARTHY] on his amendment.

I wish to call the attention of the Senate to the fact that the Senator from Minnesota and other Senators sent to a number of State Governors a telegram in which the latter were asked whether they supported the concept of minimum standards for unemployment compensation benefits; and they were also asked to state how long they believed such benefits should be provided.

I ask unanimous consent to have printed at this point in the body of the RECORD the telegram which was sent to the Governors; and also the replies which have been received from Governor Clauson, of Maine; Governor Freeman, of Minnesota; Governor Ribicoff, of Connecticut; Governor Docking, of Kansas; Governor Rosellini, of Washington; Governor Brooks, of Nebraska; the Acting Governor of Alaska, Hugh J. Wade; Governor Hickey, of Wyoming; Governor Lawrence, of Pennsylvania; Governor Loveless, of Iowa; and Governor Williams, of Michigan. Their telegrams indicate very clearly that the States which are most involved with this problem are strongly in support of Federal minimum standards, and that some of the statements which came from the Governors' conference held the other day at the White House do not indicate the feeling of the Governors of the States which are most directly concerned with this problem.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

MARCH 20, 1959.

Senator JOHN F. KENNEDY,
Washington, D.C.:

We understand that the President is seeking expressions of opinion from the executive committee of the Governors' conference concerning the strengthening of the unemployment compensation system. The undersigned Senators believe the only solution for the individual hardships created by the loss of jobs, the community suffering from large-scale unemployment, and the depressing effects of cutbacks in the flow of earnings is an amendment to the Federal Unemployment Compensation Act which would require each State to adopt the same minimum standards. This would eliminate any tendency to reduce benefits in order to encourage industry to move to those States with low benefits, it would fulfill the objectives repeatedly requested by both Democratic and Republican Presidents, by Governors, by leading economists, such as Arthur Burns, and by studies such as those contained in the Rockefeller Brothers' report of April 1958 and the report of the Federal Advisory Council on Employment Security recently published. S. 791 and the corresponding House bills would include these recommendations. Hearings on the House bills are scheduled to begin April 7 before the Ways and Means Committee. We would appreciate an expression of support by you for this legislation. Please address your telegram to Senator JOHN F. KENNEDY, Senate Office Building, Washington, D.C., and send a copy to the executive committee of the Governors Conference, White House, Washington, D.C., or to Gov. LeRoy Collins, Sheraton-Carlton Hotel, Washington, D.C. Please do not confuse this request with the request of a few days ago for an expression of opinion on the temporary unemployment compensation bill.

Senator JOHN KENNEDY, Senator JOHN CARROLL, Senator STEPHEN YOUNG, Senator HARRISON A. WILLIAMS, Jr. Senator STUART SYMINGTON, Senator JENNINGS RANDOLPH, Senator WILLIAM PROXMIRE, Senator JOHN PASTORE, Senator RICHARD NEUBERGER, Senator EDMUND MUSKIE, Senator JAMES MURRAY, Senator WAYNE MORSE, Senator PAT MCNAMARA, Senator GALE MCGEE, Senator MIKE MANSFIELD, Senator WARREN MAGNUSON, Senator JACOB JAVITS, Senator HENRY JACKSON, Senator HUBERT HUMPHREY, Senator JOSEPH CLARK, Senator PHILIP HART, Senator EUGENE MCCARTHY, Senator ERNEST GRUENING, Senator THEODORE GREEN, Senator CLAIR ENGLE, Senator PAUL DOUGLAS, Senator THOMAS DODD, Senator FRANK CHURCH, Senator DENNIS CHAVEZ, Senator HOWARD CANNON, Senator ROBERT BYRD, Senator CLIFFORD CASE.

AUGUSTA, MAINE, *March 23, 1959.*
Senator JOHN F. KENNEDY,
Senate Office Building,
Washington, D.C.

I strongly endorse the proposal to establish uniform minimum standards for unemployment compensation throughout the Nation. Adoption of such standards would lessen the impact of recessions on communities and reduce hardship caused by loss of employment. It also would eliminate any tendency for industries to move to low benefit States. I believe that establishment of minimum standards for unemployment compensation in all the States is imperative.

CLINTON A. CLAUSON,
Governor of Maine.

ST. PAUL, MINN., *March 24, 1959.*
Senator HUBERT HUMPHREY,
Senate Office Building,
Washington, D.C.

This is the text of the telegram which was sent to Gov. LeRoy Collins:

"I urge the passage of S. 791 to establish minimum Federal standards for jobless pay benefits. The effects of the 1957–58 recession still hang over nearly 5 million unemployed Americans. The hardships to the people and the depressing effect to the community as a result of the cutback in the flow of earnings calls for positive action to strengthen unemployment compensation on a national level—thus ending the tendency to use low benefits as a means to encourage industry to move to those States with low benefits. Such action has been recommended by any number of important economic studies. Establishment of Federal standards will stabilize the unemployment compensation programs of States to enable the unemployed to find jobs without suffering disastrous loss of savings and property."

ORVILLE L. FREEMAN,
Governor of Minnesota.

HARTFORD, CONN., *March 23, 1959.*
Senator JOHN F. KENNEDY,
Senate Office Building,
Washington, D.C.:

I consider legislation setting up nationwide minimum standards under Unemployment Compensation Act necessary both in the interest of national economy and fairness. Agree such legislation has long been needed and should be enacted without further delay.

ABE RIBICOFF,
Governor of Connecticut.

TOPEKA, KANS., *March 23, 1959.*
Hon. JOHN F. KENNEDY,
Senate Office Building,
Washington, D.C.:

I respectfully urge the strengthening of the unemployment compensation system through Federal legislation which would standardize the minimum standards among all the States.

Sincerely,

GEORGE DOCKING,
Governor of Kansas.

OLYMPIA, WASH., *March 24, 1959.*
Senator JOHN F. KENNEDY,
Senate Office Building,
Washington, D.C.:

Endorse principles of Senate 791 and companion House bills but feel that time is needed for comprehensive study of impact of this legislation on our present State unemployment compensation law. Complexities of bills make definite stand difficult at this time. Specifically concerned about 39-week minimum duration and financing provisions.

ALBERT D. ROSELLINI,
Governor, Washington State.

LINCOLN, NEBR., *March 22, 1959.*
Senator JOHN F. KENNEDY,
Senate Office Building,
Washington, D.C.:

We are heartily in favor of the strengthening of the Unemployment Compensation Act as set forth in your telegram of March 21.

Sincerely,

RALPH G. BROOKS,
Governor, State of Nebraska.

Hon. ERNEST GRUENING,
U.S. Senate,
Washington, D.C.:

Hon. HARRY F. BYRD, chairman, Senate Finance Committee, U.S. Senate, Washington, D.C., Senate bill 1323, highly preferable to House bill on temporary unemployment compensation. It is essential that cost of such programs be covered by grants rather than loans. Including of workers not covered under State programs will create some administrative problems but can be administered. We do not believe this provision essential but have no objection to it. This bill would to some degree alleviate distress and unemployment in Bristol Bay area by Federal closure of fishing this year. We endorse and recommend Senate bill 1323. This bill would help solve immediate problems due to unemployment. For permanent improvement in the unemployment insurance program we recommend passage of Kennedy bill, Senate bill 791.

HUGH J. WADE,
Acting Governor of Alaska.

CHEYENNE, WYO., *March 24, 1959.*
Hon. JOHN F. KENNEDY,
U.S. Senator,
Senate Office Building,
Washington, D.C.:

Urgently request favorable consideration of H.R. 3547 and S. 791 to require each State to adopt same minimum standards and extend payment to a 30-week period by amendment of the Federal Unemployment Compensation Act. Higher benefits of longer duration is only solution for individual hardships created by loss of jobs.

J. J. JOE HICKEY,
Governor of Wyoming.

HARRISBURG, PA., *March 24, 1959.*
Senator JOHN F. KENNEDY,
Senate Office Building,
Washington, D.C.:

The only meaningful way to improve unemployment insurance nationally to combat future national recessions more effectively, to provide equal protection to workers wherever they live, to remove the tax handicaps now being suffered by employers in States with high standards like Pennsylvania, is to require agreed upon national minimum standard for unemployment compensation similar to those recommended by Federal Advisory Council to Secretary Mitchell and, I understand, embodied in your bill, S. 791.

DAVID L. LAWRENCE,
Governor.

DES MOINES, IOWA, *March 24, 1959.*
Hon. JOHN F. KENNEDY,
Senate Office Building,
Washington, D.C.:

I strongly support proposed legislation to establish minimum standards for unemployment compensation applicable in all States. Have requested permission to present testimony on House bills embodying these proposals on Monday, April 13.

Warm personal regards.

HERSCHEL C. LOVELESS,
Governor of Iowa.

Senator JOHN F. KENNEDY,
Senate Office Building,
Washington, D.C.:

Please convey to Members of the Senate my unqualified support for S. 791. The achievement of realistic benefit levels and duration have been held back by drum beating competition to hold down tax rates and benefits. Everyone agrees that we must preserve our Federal-State system, but, despite annual pleas by the President over the last 5 years State response has been less than sufficient, and only the stimulation of Federal basic minimum standards will make our unemployment insurance practical and effective. While States are intimately involved, both the cause and effect of unemployment are national in scope as the last recession has only too well pointed out. Federal responsibility consequently is patent. Reinsurance provisions of S. 791 strengthen the partnership between the States and the Federal Government which is so vital to successful defense against both inflation and a depression.

G. MENNEN WILLIAMS,
Governor of Michigan.

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed at this point in the RECORD a statement by me in connection with this subject.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR KENNEDY

Twenty-four years ago, in the wake of the depression, the Nation took a major step toward the goal of a society in which every willing worker could enjoy insurance against the tragedy of unemployment. Provision was made for a Federal-State system of unemployment insurance under which jobless workers could receive weekly benefits while actively seeking employment.

Without question, unemployment insurance has served as a buffer against fear of want and privation, as an important part of our humanitarian social legislation, and as an economic stabilizer. Sensitive to fluctuations in the economy, it automatically pours millions back into the economy to replace lost wages whenever a downturn occurs. Unfortunately it has failed to keep pace with the increase in price levels and the increase in wages since 1935 and has, therefore, lost much of its effect both as insurance to the worker and as a prop to the economy in times of distress. The recent University of Michigan study, published in February 1959, reaches the conclusion that "if unemployment insurance benefits had been paid at a rate of 50 percent of the average wages instead of the approximately 37 percent actually paid, and, if coverage had been broadened, and the maximum duration of benefits had been 39 weeks in all States for the entire period of the recession—about $1.5 to $2 billion additional would have been dispersed to unemployed individuals."

The following are the recommendations of the authors of the study made by the University of Michigan, William Haber, Fedele F. Fauri, and Wilbur J. Cohen:

"RECOMMENDATIONS

"The experience of the recession indicates that the existing built-in stabilizers in our income maintenance programs were not—and still are not—satisfactory to meet another similar recurrence. A free enterprise economy must make more effective provision than we now have for meeting the unemployment hazards which occur from the free play of economic forces in the marketplace.

"The full potential of our unemployment insurance system was not utilized during the recession for the alleviation of hardship and the support of our economy.

"The tragic part of the situation was that there was $7 billion in unemployment insurance reserve funds which were not touched during the recession. If State and Federal unemployment laws had been more

adequate and had permitted $1.5 to $2 billion of these reserves to be used to pay benefits to the unemployed, many personal hardships could have been avoided. There would still have been about $5 billion of reserves left if unemployment insurance benefits had been more adequate.

"Among the most urgent improvements in Federal and State legislation which are vitally needed while the lessons of the recession are still fresh in our memory are:

"1. Coverage should be broadened to cover all persons who have a substantial attachment to the labor force including the 1.8 million persons in small firms who are not covered in 33 States and some of the hired farm laborers and other groups not now covered.

"2. The maximum duration of benefits should be increased to at least 30 weeks in a benefit year in all States. Provision should be made for longer duration whenever the average unemployment in a State reaches recession levels of say 6 to 9 percent.

"3. Steps should be taken to establish an equalization fund in order to reduce the excessive costs of unemployment insurance in States suffering from a high incidence of unemployment caused by national economic conditions.

"4. The great majority of eligible claimants should receive at least one-half of their normal full-time gross weekly earnings. States and employers should be given a period of 6 years to accomplish this objective. The great majority of eligible claimants in a State should receive at least 40 percent of their normal full-time gross weekly earnings for the first 2 years following the effective date of the standards; for the next 2 years, not less than 45 percent, and after that not less than 50 percent. In order to provide benefits at these levels, States would have to make changes in their benefit structure including increasing the maximum weekly benefit amount.

"5. The Federal temporary unemployment compensation law which expires March 31, 1959 should be extended until permanent Federal standards and supporting State legislation are enacted to improve the benefit duration and financing arrangements of State laws.

"6. Since a major impact of the recession was on younger workers with families, it was especially unfortunate that most State unemployment insurance laws did not provide for benefits in relation to the number of dependents. Only 11 States had such provisions.[1] Dependents benefits should be included as an integral part of each State unemployment insurance program.

"7. Because a social insurance system does not protect all individuals from want during extended periods of unemployment, Federal and State funds for direct relief should be made available to assure all needy persons a floor or protection against want in all localities. Such a program should be designed to assist individuals to become self-supporting."

During the late 1930's, the unemployment compensation system served its purposes well. No State at that time paid unemployment benefits of less than 50 percent of the average weekly wage in the State, and in most States unemployed workers received from 60 to 90 percent of the State's average weekly wage in benefit payments. However, over the years the States have found it difficult or impractical to modify their laws to keep the program up with current wage and price levels. In a program of this nature, individual action by a single State to increase benefits and therefore increase its taxes upon employers inevitably results in a competitive disadvantage to that State. As a result, the benefits paid to workers out of a job today are geared to price and wage levels prevalent in the 1930's. In very few States do most unemployment insurance recipients receive as much as 50 percent of their previous weekly wages. In some cases the percentage is as low as 30 percent. Today the average production worker receives $88 per week. But his average benefit when he becomes unemployed is $30 per week. In some States the average benefit is as low as $21 per week and the most he can get is $26 per week.

It takes no expert in family budgeting to realize that present State unemployment benefits fail miserably in providing the wherewithal in maintaining even a modest standard of living with today's prices. Aside from the serious impact on the welfare of families and individuals, the overall effect on our complex and inter-dependent economy is even more serious. The butcher, the baker, the insurance salesman, the doctor, the mortgage holder—all of these and many more depend, for their economic health, upon the maintenance of consumer income.

The startling inadequacies of the present system is illustrated by the fact that with almost 5 million unemployed less than 3 million are drawing benefits. Too many workers are not even covered by the law. Too many others have been out of work for so long they have exhausted their benefit rights.

The law extending benefits for 3 months is only a pretense at a solution. It will inevitably result in more temporary laws and more problems. As a temporary expedient it seeks to patch a cover for the economy which is so threadbare it cannot provide the protection for which it was designed.

On Monday the President called a conference of eight Governors who were members of the executive committee of the Governor's conference. At the conclusion of this conference, they issued a release stating that they favored adequate Federal advances to meet emergencies where the problems of unemployment are beyond the ability of the affected State governments but that the discretion now vested in the States to set eligibility, adequate benefit amounts and the duration of benefits should be preserved. The Governors attending the conference emphasized, however, that they were merely expressing the concensus of the views of the individuals participating in the meeting and were not authorized to speak for members of the conference not present at the meeting.

In order to obtain an additional cross section of opinion, I addressed a telegram to 23 additional State Governors from both manufacturing and agricultural States. I have thus far obtained 13 responses to this telegram. Twelve Governors strongly supported S. 791, the bill to establish minimum Federal standards of unemployment insurance introduced by Senator McCarthy, Senator Case and myself, and cosponsored by 31 other Senators. The one response that did not strongly support the bill gave it qualified approval.

I am firmly convinced that the only permanent solution to a constantly recurring crisis resulting from an inadequate unemployment compensation program is a permanent law with adequate standards such as those contained in the Kennedy-McCarthy-Case bill. In 24 years it has been conclusively demonstrated that we cannot expect the individual States to individually resolve the problems created by a Federal law that is deficient in omitting benefit standards and is inadequate in the coverage it offers.

Mr. JAVITS. Mr. President, I am a cosponsor, with the Senator from Minnesota [Mr. McCarthy], of this amendment.

I originally urged my colleagues, particularly those from the industrial States, to vote against the McNamara amendment.

The difference between the McNamara amendment and the pending amendment, which I have joined the distinguished Senator from Minnesota in sponsoring, is that the former would allow the inclusion of unemployed who now are receiving unemployment compensation under State programs, but whose entitlement will expire after April 1 and before June 30, under the present program.

The pending amendment will not allow them to come under the Federal program. Hence, I think it essential that the pending amendment be adopted if we take the position—which I feel we should take, regardless of party—taken by Senators from industrial States; namely, that the Federal Government must take up the slack of the unemployment.

This program is not strictly one which will taper off in the case of those who already are covered; but it is one in which we endeavor to deal with the unemployment situation which now exists, which I consider to be at the high-water mark, because it has gone down only very little from the high point of the recession.

Accordingly, I strongly commend the pending amendment as the proper middle-of-the-road course; and I urge Senators from industrial States, regardless of their party, to support the amendment.

In the view of some of us, the McNamara amendment dealt with the problem of States which have very good unemployment compensation programs of their own. However, today some of the States do not have such programs; and we prefer to adopt a Federal standard in connection with such a program, rather than to proceed in the ad hoc way of providing a temporary program to deal with unemployment. The support for the latter is understandable; but I believe it important that the pending amendment be enacted into law, because it seeks to deal with unemployment which exists throughout the country, rather than simply to treat this problem as one which has substantially ended. I believe my colleague has emphasized the fact that the problem continues; it has not substantially ended. We are now trying to provide for taking care of the problem of unemployment until it is substantially ended—as we hope will occur—or until we can make further provision in this connection.

Mr. President, I am very much honored that the Senator from Minnesota [Mr. McCarthy] has allowed me to join him in sponsoring the amendment.

Mr. McCARTHY. Mr. President, I yield the floor.

ADMISSION OF SPAIN INTO NATO AND USE OF ITS TROOPS

Mr. BRIDGES. Mr. President, it was revealed last week by Gen. Maxwell D. Taylor, Army Chief of Staff, in testimony before the Senate Preparedness Subcommittee, and made public by the

[1] Alaska, Connecticut, District of Columbia, Illinois, Maryland, Massachusetts, Michigan, Nevada, North Dakota, Ohio, and Wyoming.

Defense Department, that Gen. Lauris Norstad, American military commander in Europe, has asked for Army, Navy, and Air Force reinforcements from the United States to meet the threat over the Berlin situation.

Mr. President, there is a logical answer to this request without calling for additional American military forces. I refer to Spain. Spain is a member of the United Nations. Common sense dictates she should also be a member of NATO. Spain was one of the first nations to resist Communist aggression. Communists have never had a foothold in that country since Spain fought so bitterly and so tragically the Communist attempt to infiltrate and conquer her.

No argument has ever been advanced, either in a military way or strategically, that Spain would not add greatly to the strength of our military power on the European Continent.

On April 12, 1957, House Concurrent Resolution 115, calling upon the President and the Secretary of State to do everything possible to bring Spain into NATO, was adopted unanimously by both Houses of Congress. There have been more than 40 resolutions adopted by the Senate and in excess of 70 resolutions adopted by the House favoring Spain's admission to NATO.

I ask: Can we afford in these critical times not to press for Spain's admission to NATO, considering the fact that all of us should be united in meeting the Communist menace confronting us?

Spain is a maritime nation, which dominates the entrance to the Mediterranean. Her mountains serve as a natural barrier protecting its northern European boundary. We have recognized these advantages by our large financial investment in a series of military and naval bases on Spanish territory.

Spain has available 15 divisions, fully mobilized and excellently trained. Their morale is high. Spain now has F–86 Sabre jets and, with U.S. Air Force assistance, is becoming one of the best air arms in Europe. This is testified to by U.S. officers.

The entry of Spain into NATO would not only add materially to European defense, but would integrate more closely the economy of that country with that of other European nations, which would be of benefit to all.

Spain has mutual defense pacts with the United States and Portugal. Portugal is a member of NATO.

Spain, in case of an emergency, naturally would be allied with all the NATO countries.

Here is an answer to the need for reinforcements. Admit Spain to NATO and add her contribution to the peace and stability of the free world.

Mr. President——

The PRESIDING OFFICER. The Senator from New Hampshire.

PRESERVATION OF FREE BERLIN AND ALLIED RIGHTS IN GERMANY

Mr. BRIDGES. Mr. President, before the Senate recesses over Easter week, I should like to address myself to a subject which is of the greatest concern to all the free countries of the West—the preservation of free Berlin and allied rights in Germany.

First, I should like to extend my congratulations to my colleagues on both sides of the aisle who have spurned all opportunity for political advantage on this issue. Regardless of party affiliation, we have all stood together as true Americans with only one objective: to preserve the position of the West and to meet our obligations to free Berlin and free Germany. The Congress has acted well, as have the executive departments, in this serious matter.

Our position has been right. I believe the American people agree it is right and are supporting our determination to stand up for our rights and defend them.

This is not a crisis of our making. The Soviet Union created this dangerous situation by threatening to abrogate its solemn agreements and undertakings.

These undertakings are clearly established by the treaty providing for the occupation of Berlin and Germany. The governmental machinery and the execution of the treaty have been set for 14 years by precedent established by the occupying powers.

On one other occasion the Soviet attempted to break the treaty and its pledges by denying us free access to West Berlin. We all recall the allied response to this blackmail. The Berlin airlift will long remain a symbol of the resolve and resourcefulness which the allies employed to defeat the Russian threat.

In these anxious days, the allies are once again exploring ways to achieve a peaceful, honorable—and I stress honorable—settlement of this latest Soviet challenge. President Eisenhower and Prime Minister Macmillan earlier this week concluded their private conversations looking to common action to meet the situation. Of necessity, the detailed substance of these conversations has not been officially revealed.

But apparently the talks enhanced the possibility of a Big Four foreign ministers' meeting in May, as a forerunner to a possible summit conference with Premier Khrushchev in the summer.

I am encouraged by the fact that, before undertaking to meet with Soviet leaders, the allies are doing the necessary spadework to achieve common agreement and a united front. Next week, for example, the British, French, and West German foreign ministers are scheduled to meet in Washington with Acting Secretary of State Herter.

Irrespective of whether a foreign ministers meeting or a summit conference takes place, whatever discussion the allies hold among themselves will, in my opinion, be all to the good.

The closer we and our allies become on our mutual Berlin policies, the better the prospects for meeting the Soviet challenge.

Any cracks that may now exist in the allies' shield regarding Berlin ought to be thoroughly repaired before negotiations begin with Soviet leaders. Past experience shows quite clearly how skilled are the Communists in finding the weakest chink in our armor and exploiting it to the utmost.

Our professions of firmness must be backed up with well thought out and strongly supported proposals and counterproposals. We must have jointly agreed plans for action in event of a number of contingencies. This is a part of what I consider proper and adequate preparation for either a foreign ministers' meeting or a summit conference.

United we will be formidable adversaries in the diplomatic skirmishes ahead.

Khrushchev and his advisers are credited with being shrewd men. If that is so, they will be quick to recognize allied unity, and quick to notice any allied disunity. This is why the West must speak with one voice in the approaching Berlin crisis and in meetings with Soviet leaders.

I suggest the voice of the West should be a voice of cool determination to make no surrender of principle or position of strength. In our negotiations, I suggest we must not yield on principle, though we can properly yield on procedures and details.

To date, the West European allies—France, England, and Western Germany—and our own great Republic have again provided vivid proof that representative governments can face crucial problems and sudden crises in friendly and effective accord. Free and full debate of free peoples and free governments should not be misunderstood by monolithic Communist governments as in any way weakening our resolve to do whatever is necessary to preserve our integrity and assure our survival.

Mr. President, we of the West do not bluster. We do not threaten. Neither do we cajole nor beg.

Let us not forget their self-made crisis poses great risks for the Soviets as well as for the free world.

United the allies can keep the pressure on the Soviets.

Divided we would minimize the risks to the Communists.

Our position is that we are perfectly willing to study the Soviet viewpoint, to make reasonable accommodations, to be flexible in negotiations.

At the same time, we are not fools. We will not negotiate away our position so dearly won with the blood of American boys. We do not intend at the bargaining table to make concessions which can only weaken us in the years to come. That would be piecemeal surrender.

It seems imperative to me to inject a note of caution regarding negotiations with the Soviets, whether the negotiations be at the summit or in the valley. The leopard has not changed his spots. We cannot safely entertain any illusions that the Soviet Premier has undergone a change of heart. So we should not expect too much from such negotiations. We should not expect an arch foe to become filled with brotherly love.

Nevertheless, we can ever be hopeful that a united, firm allied position will help persuade Premier Khrushchev of the advantages of honoring the treaties his government has entered into. We can be hopeful that the men in the Kremlin will see the error of their threats and intimidation.

We certainly do not expect these negotiations will come to easy and pleasantly satisfactory conclusions.

Whatever the outcome, I am confident the allied peoples are intellectually and spiritually capable of facing the true facts. Our leaders will freely tell us the facts, our press will freely print the facts, and our radio commentators will freely discuss the facts—knowing we the people have the stamina and the courage to face the facts and not tremble before them.

It is unthinkable that any partisan would take political advantage of an unsuccessful summit conference. Therefore, there should be no temptation to make concessions at the summit for domestic political advantage. There should be no political liability attached to a failure to reach full agreement at the summit at this time.

We do not expect our leaders to come back with easy or unreal victories. Experience of recent history has amply prepared us for disillusionment. If these negotiations fail to resolve all the problems of Berlin and of Germany, we will not be dismayed. We shall be disappointed, but our disappointment will take the form of even deadlier determination not to sacrifice basic principles.

To restate the position very simply, and I hope very firmly, we must make the most vigorous preparation to defend our position in Berlin and in Germany.

Neither war, nor the threat of war, will dissuade us or divert us from our firm duty.

Berlin and the people of West Germany must remain free under a government of their own choosing. We will not make any compromise on fundamental position. Neither threat, subversion, nor chicanery will divert us.

Any negotiations we enter into, any changes we make from the Four Power occupation now provided must leave us without any disability in our commitment to a free West German Republic.

I consider it to be one of the great privileges of my time to sit in the U.S. Senate and to be a member of this Government and of the free West resisting the Communist threat to our position in Germany.

I am proud to be an American. I am proud of the American people, who face the threat without fear or tremor—quiet, unafraid, and determined.

The tribute I pay to our Government and our people, I also pay to our allies. It is a cheering and heartening and inspiring experience to find the great democracies of the West responding together to a threat to one of their number.

If we had similarly banded together to resist the constantly encroaching conquest of the Soviet Union in the early years after World War II, the situation today would not be so difficult.

We have all learned from bitter experience that appeasement is no solution. We have learned about Soviet intentions. We have learned how to resist Soviet aggressive moves. The very ruthlessness of the Soviet conquest has been a great educational force in the free world of the West. Knowing our opponent and his objectives, we can concert our forces and our energies to see that right shall prevail.

THE AREA REDEVELOPMENT ACT

Mr. BUSH. Mr. President, as a member of the Joint Economic Committee of the Senate and the House, I was interested to see recently in the Washington Daily News an editorial entitled "Distress Compounded." The editorial has to do with the Area Redevelopment Act, but the principal thing that caught my eye in the editorial was the following paragraph, speaking of the minority views of the Committee on Banking and Currency on the area redevelopment bill:

> Six members of the committee (three Democrats and three Republicans) shoot it full of holes in an unusually lucid minority report. They say the bill is unlikely to do any of the things it promises, and besides would be harmful to the country generally and the areas it is supposed to assist.

I ask unanimous consent that the editorial be printed in the RECORD at this point in my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DISTRESS COMPOUNDED

Now before the Senate, following a squeaky OK by the Senate Banking Committee, is another one of those hurry-up patch-up, prop-up bills supposed to cure the economy of some of its ills.

This measure melodiously is known as the Area Redevelopment Act. It is a bill to bail out a hundred or so communities listed as victims of chronic unemployment.

The question is not whether these communities are hard hit. No one denies that. The question is whether the bill, if enacted, would be any help.

Six members of the committee (three Democrats and three Republicans) shoot it full of holes in an unusually lucid minority report. They say the bill is unlikely to do any of the things it promises, and besides would be harmful to the country generally and the areas it is supposed to assist.

It flies straight in the face of a free-swinging flexible economy. Its ponderous machinery would raise unfounded hope. And its ultimate cost—like most such Washington proposals—would range far beyond its most optimistic prospect of usefulness.

It is discriminatory, the minority points out, because at the most it would affect only a small fraction of the unemployed, while probably creating more unemployment in other areas. The initial outlay of less than $400 million eventually would run to $4 billion or $5 billion.

It would create another sprawling Government agency, added to others already in this field.

The bill is founded on the identical illusions which led to 25 years of subsidies for a few special farm products. It will lead to exactly the same result—disrupted markets, billions of taxpayer money wasted, and an economy blighted by Government interference.

TESTIMONY OF MARRINER S. ECCLES BEFORE JOINT ECONOMIC COMMITTEE

Mr. BUSH. Mr. President, this morning before the Joint Economic Committee we had the privilege of hearing Mr. Marriner S. Eccles, who for 14 years was a member of the Federal Reserve Board and its Chairman. I consider the statement by Mr. Eccles made before the Joint Economic Committee today to be one of the finest statements which has been made before any committee while I have been a Member of the Senate. Accordingly, I ask unanimous consent that the statement by Mr. Marriner Eccles be printed at the conclusion of my remarks in the body of the RECORD.

The PRESIDING OFFICER (Mr. BARTLETT in the chair). Is there objection to the request of the Senator from Connecticut? The Chair hears none, and it is so ordered.

(See exhibit 1.)

Mr. BUSH. Mr. President, I particularly invite attention to what Mr. Eccles says about the long-term interest rate:

> The long-term interest rate is not greatly influenced by the monetary policy of the Federal Reserve.

To those who complain in the Senate from week to week about high interest rates I commend very strongly this message from Mr. Marriner Eccles. He has had 14 years of experience on the Federal Reserve Board and certainly is in a position to look at this situation objectively, which he has done. Mr. Eccles' statement in connection with interest rates in his testimony today is worthy of the attention of all Senators.

I also invite the attention of Senators to what Mr. Eccles says about the subject of creeping inflation. He stated:

> It has been said that creeping inflation is the best answer to this dilemma. I do not believe it is any answer, for the reason that the cornerstone of capitalistic democracy rests upon the savings of the public. These constitute the principal source of capital accumulation upon which the growth of our system depends. Why should anyone buy life insurance or annuities, Government or municipal bonds, utilities or railroad bonds, mortgages, or any other kind of fixed interest-bearing obligations payable at a future date in dollars depreciated at the admitted creeping inflation rate of 2 to 3 percent a year? For the Government to sell such obligations and to permit conditions to develop where not only their obligations but all other fixed dollar obligations are being paid, including interest, in dollars depreciated from 2 to 50 percent, depending upon the maturity dates—is to say the least immoral if not downright dishonest.

I have quoted two passages from the testimony of this distinguished gentleman, and I earnestly recommend that the statement by Mr. Eccles be studied by all Members of the Senate, since it will be printed in the RECORD following my remarks.

In conclusion, Mr. President, I wish to invite attention to the remarks made on the floor of the Senate yesterday by the distinguished senior Senator from Utah [Mr. BENNETT]. His remarks were partially in answer to those of the distinguished Senator from Tennessee [Mr. GORE] of a week or so previous, but I found the remarks of the Senator from Utah to be a complete answer to those of the Senator from Tennessee. I am delighted that the Senator from Utah promises we shall hear more from him in connection with this important subject in the very near future.

EXHIBIT I

STATEMENT BY MARRINER S. ECCLES BEFORE THE JOINT COMMITTEE ON THE ECONOMIC REPORT

Mr. Chairman and members of the committee, I was complimented, and thus too easily persuaded, by a telephone conversation with the chairman of your committee, to accept an invitation to appear here today. Due to the short notice, and many other commitments and responsibilities, I have had little time and no staff to help me prepare a statement that would do justice to the importance of this committee and the economic inquiry it is undertaking. This inquiry aims to cover three objectives: "To provide substantially full employment; to achieve an adequate rate of economic growth; to maintain substantial stability in the price level and thus prevent inflation." The trick, however, is to reach these objectives under the system of democratic capitalism. I, for one, do not believe in the millennium, which does not mean, however, that we should not set our sights high, far beyond our present achievements.

There has been no economic subject which has been more fully discussed, and with disappointing results, by the Government as well as many other groups of our society and also every other democratic country. There is little, if anything, that I might add to what has been presented to this committee by an extremely able staff and outstanding experts who have preceded me. The documentation and statistical information has been so formidable that I neither knew where to begin or end. I, therefore, decided that possibly my greatest contribution to this inquiry would be to add nothing further to your confusion—lest it should equal mine. But, seriously, I have never ceased to be deeply concerned about the problems under consideration and their inherent complexity. I profoundly wish that I could make some real contribution to their solution. However, the short statement that I make and the interrogation which may follow, I hope may, at least, help to clarify some of the aspects of the dilemma with which we are confronted.

In this inquiry, we should recognize that our objectives of full employment and an adequate rate of economic growth are also the Communist goals. We must concede that there is no unemployment in Russia and China—and they are achieving a startling rate of economic growth. The stability of the price level or inflation is not vital under their system because they are not concerned about profits, wages, fringe benefits, or savings. And, neither are they concerned about the freedom of the individual—which is the very cornerstone of our society.

I have said it before, and want to say again, that to achieve our objectives will always be a source of great political and economical controversy because everyone wants a greater share of the economic pie than it contains. Government and other public bodies want more money to spend—the leaders of organized labor want more pay and fringe benefits for less hours of work—business presses for further profits—and increasing ranks of oldsters call for higher pensions. However, everyone expects these benefits in dollars of stable purchasing power. Unfortunately, all the economy has to divide are the goods and services it is able to produce—and not the amount of money it could create, which is, of course, limitless.

In our society, this situation is creating a dilemma for the Members of Congress whose constituents want easy money, lower prices, higher wages, greater profits, and fewer taxes. Only a combination of the Government, Congress, and the Federal Reserve can successfully deal with these diverse forces. To do this adequately it would be necessary for them to agree on the problems and have the courage to act, regardless of political conditions. This is possibly more than we can expect.

During the bottom of the recent recession, with more than 5 million unemployed and a large excess productive capacity, for the first time the country was confronted with increased wages and fringe benefits on the part of organized labor, and increased prices on the part of big business. In order to meet recession problems, the Government expenditures were substantially increased. This, together with the reduction in the tax intake, brought about by the recession, will create in the fiscal year of 1959 a cash deficit of about $13 billion. The Federal Reserve supplemented the Government's fiscal policy by an easy money policy which brought about a material growth in the money supply. Although the fiscal and monetary policy on the part of the Treasury and the Federal Reserve has brought about a rapid and substantial recovery, there are still over 4 million unemployed and considerable excess capacity. Notwithstanding this situation, new demands on the part of organized labor are in the offing—no doubt to be followed by further price increases.

The large Government deficit and the Fed's easy money policy, together with increased wages and prices despite the unemployment and idle facilities, has created a dangerous inflation psychology. This is reflected in the strength of real estate prices and especially in the soaring prices of stocks. Concurrently, we have seen the skidding market for bonds and mortgages—particularly the securities of the Federal Government. This developing situation caused the Federal Reserve to reverse its easy money policy—thus slowing down the growth of the money supply. On the other hand, the Federal Government is promising to bring about a balanced Federal Budget.

To continue an easy money policy and substantial budgetary deficits until the economy had reached its full potential of employment and production would inevitably bring about a serious inflationary situation. I do not believe it possible to have all of the freedoms which we demand, on a basis of stable prices and, at the same time, have full utilization of our manpower and productive facilities. The Communist world meets this problem by the sacrifice of the personal freedoms.

Our unemployment situation is very spotty. In some areas there is serious unemployment—some of which is no doubt due to union demands pricing the workers out of the market. In other areas, however, shortages are developing, particularly among skilled workers. Russia would manage this situation by moving the workers to where the work is, or would develop work where the people are—whichever was the most economically desirable. The wishes of the people would not be a factor in the decision.

It may be desirable for the Government to give assistance in those depressed areas where there is serious unemployment by making funds available where new industries can be developed or old industries be revived. This, however, can only be successfully done through the combined efforts of private enterprise and the local and State governments, assisted by the Federal Government. An extension of unemployment insurance payments, as a temporary expedient, seems to me to be indicated in the present situation.

I believe that the present inflationary dangers confronting the country call for the monetary and credit policy now being carried out by the Federal Reserve and the fiscal policy announced by the Government of achieving a balanced budget at the earliest possible date.

The Government's only source of income is what it takes from the economy in taxes and what it can borrow from the savings of the public. If this is insufficient, they must rely upon credit from the commercial banking system made possible by the Federal Reserve. This operation creates new money and, under present conditions, is inflationary. The Government is having great difficulty in refunding its huge maturities, as well as raising new money to meet its deficit—even though it is paying the highest interest it has paid for many years. This indicates that the public is losing confidence in the stability of our currency. This loss of confidence forces the Government to rely increasingly upon very short term financing through the commercial banking system with the assistance of the Federal Reserve—which only adds further to inflationary pressures.

The long-term interest rate is not greatly influenced by the monetary policy of the Federal Reserve. It depends primarily upon the amount of investment and savings funds available in the market and the choice made in how these funds shall be invested. The rates offered on bonds and mortgages have been going steadily up in an attempt to attract investment funds away from other markets. These funds are going into stocks and real estate at an accelerated pace in an effort to hedge against our depreciating dollar. From this situation it should be apparent that the Government cannot continue to finance heavy deficits unless it is to ignore the inflationary impact of such financing. It certainly cannot finance more than a $40 billion defense program (which, in my opinion, is beyond the needs for adequate defense), and at the same time meet all of the other demands made upon it—unless the American public is willing to further increase its tax burden. This, however, is already excessive when the total tax take—National and State—is considered.

We all recognize the many new economic and social problems which are crowding in upon our economy from every direction. These are due to the rapid population growth, as well as the need to maintain and improve our position of strength throughout the world. Worthy, as are the many programs the Government is called upon to sponsor and support, such as highway programs, foreign aid, health, aid to education, agriculture, conservation, and many others, the country does not have capacity to meet all the demands made upon it. The Members of Congress who are so willing to sponsor and vote for programs which unbalance the budget should be just as willing to vote for unpopular tax increases necessary to pay for them.

There is an increasing laxity and waste in the appropriation and expenditure of public funds. There always seems to be a tendency on the part of governments and public bodies to go on increasing expenditures and taxes, thus helping to feed the endless self-serving demands of their influential constituents—very often not in the public interest.

In my opinion, now is the time to face this budget problem. I realize that every appropriation represents a political struggle. Nevertheless, each should be considered only in the light of its present need and the real public interest. We all know there is a place in a budget of $78 billion for substantial economies in the aggregate. No doubt the defense program, which represents nearly 60 percent of the budget, is a good place to begin. It is hard for me to believe that a realistic streamlined program for adequate defense, eliminating duplication and obsolescence, would not strike plenty of pay dirt. Likewise, there needs to be a close reappraisal of the foreign aid program with an eye to eliminating waste, duplication, and greatly reducing its tremendous overhead. The huge and increasing cost of the farm program, running at a rate of more than $6 billion net this year, is no longer justified on any basis. A solution must be found which will greatly lessen this burden on the taxpayer.

If one can credit the reports in the press, a good place to set an example for economy would be in the White House where over $5 million is being spent this year to run that establishment, with a requested increase for next year of $332,000. This is more than twice the Truman budget for the same purpose during his last and most expensive year.

Further, the nepotism in Congress and other extravagances are shaking the public confidence in the good judgment of our lawmakers. I note that the chairman of this committee is aware of some of the extravagances and abuses since he proposes to sharply reduce the number of limousines and chauffeurs used by the Government from 99 to 35.

It is being said recently that an adequate defense is more important than a balanced budget. I don't believe they necessarily have any relationship. If we need a deficit in order to maintain economic stability because of a deflationary development, we should have a deficit—whether for defense or any other purpose. We may need a deficit without a large defense program to maintain production and employment, but we should not permit a deficit solely for the purpose of maintaining an adequate defense program if the effect of so doing is inflationary. Such a situation demands an increase in taxes or a reduction in other expenditures, or both, if the objective is stable money.

I have attempted to show, in a general way, the uses that can be made of the fiscal policy of the Government and the monetary and credit policy of the Federal Reserve to maintain economic stability. However, it is becoming increasingly clear that even with a balanced Federal budget, monetary and credit policy are entirely inadequate to maintain reasonably full employment and production, on the basis of stable prices. With the economy running in high gear there is little or no resistance to labor demands on the part of business, because business finds it easier to pass on to the public their increased costs. Competition for labor, as well as the products of big business, largely disappear under conditions of full production and employment. Under these conditions, unless the Federal Reserve curbs the growth of the money supply, or the Federal Government develops a substantial budgetary surplus, the wage-price spiral would continue with devastating inflationary effect. On the other hand, the dilemma is, that by curbing these inflationary pressures, recession is brought on with resulting unemployment and idle facilities.

It has been said that creeping inflation is the best answer to this dilemma. I do not believe it is any answer, for the reason that the cornerstone of capitalistic democracy rests upon the savings of the public. These constitute the principal source of capital accumulation upon which the growth of our system depends. Why should anyone buy life insurance or annuities, Government or municipal bonds, utilities or railroad bonds, mortgages, or any other kinds of fixed interest-bearing obligations payable at a future date in dollars depreciated at the admitted creeping inflation rate of 2 to 3 percent a year? For the Government to sell such obligations and to permit conditions to develop where not only their obligations but all other fixed dollar obligations are being paid, including interest, in dollars depreciated from 2 to 50 percent, depending upon the maturity dates—is to say the least immoral if not downright dishonest.

The reason the public has bought such a vast amount of insurance and saved tens of billions of dollars in other forms of fixed income is because they believed their Government would protect the integrity of their savings. The real danger confronting the country now is that our people, as well as foreigners, are beginning to expect creeping inflation and, maybe worse, that our Government will do nothing about it. Their preference for low-yielding stocks rather than high-yielding bonds and mortgages is an indication of their fears of further inflation.

Escalation has been suggested as a means of equalizing the depreciation in the purchasing power of the dollar, in the case of pensioners and owners of fixed income obligations. This is an interesting idea, but it constitutes built-in inflation. It takes away all restraint and would, therefore, accelerate it. And what would become of people and institutions that have bought in good faith, and own present outstanding obligations? And what would happen to the needed stability of the American dollar in the world market under these conditions—when it took more than $2 billion in gold last year to stabilize it?

Nothing is more urgent, unless it be an adequate defense, than to arrest the growing belief in the inevitability of inflation, and to organize our economic affairs so that faith in the integrity of our dollar be reestablished at home as well as throughout the world.

We all agree with the desirability of the objectives which this committee is considering—substantially full employment and an adequate rate of economic growth, while at the same time preventing inflation. However, I must confess that in the light of developments I see some formidable hurdles ahead, requiring courageous decisions by Government, if we are to have any degree of success in attaining them.

The leaders of the huge labor organizations and their affiliates, representing more than one-fourth of the working force, largely dictate the wages and fringe benefits without control of any kind, in all of America's basic industries. Through their monopolistic power they have been able to wring from the economy benefits far in excess of their contribution to it. These excess benefits have largely been passed on to the public in increased prices. This development is and for some time has been the principal reason for inflationary developments. I understand that the steelworkers union, numbering 1,250,000 workers, will demand from the steel industry when its present contract expires June 30, a billion-dollar package as a price for renewing its contract. If all of the other workers of America—more than 65 million—were to demand and receive these same benefits it would add $52 billion to the costs of goods produced. There would be nothing creeping about the resulting inflation.

The rate of growth in national productivity should be the basis of wage increases and fringe benefits. This is in the range of from 2 to 3 percent annually. Such limits would permit a just share of productivity gains to go to the consumer, and leave a fair return on invested capital without increasing prices.

It may be expected that the employer could and should absorb most of these added costs; however, let us consider what the amount of business profits are and what happens to them. According to a study by the 20th Century Fund, total wages and salary disbursements were 50 percent of the national income in 1929—and 73 percent of it in 1955—whereas dividends decreased over the same period from 5.8 percent to 3.9 percent of that income. The workers' share of the national income from 1950 to 1957 increased by 10 percent—whereas the business share, represented by profits of all corporations, has decreased by 33 percent. It is apparent from these figures that business cannot absorb out of profits, as organized labor contends, increased wages without increasing prices. Retained corporate earning is the greatest source of new capital for industry.

If corporate profits were eliminated, as is the case in a communistic society, there would be very little difference in the prices paid by consumers for goods and services. Corporate profits, after income taxes, amount to about 6 percent of the national income. Approximately one-half of this amount, or 3 percent, as disbursed as dividends. The balance, or 3 percent, is retained in the business. Of the dividends disbursed, it is estimated that the Federal Government collects between 1 and 1½ percent, leaving the remainder to the shareholder to spend, or to save.

If the corporations and their shareholders did not exist, the amounts collected by the Government from them in taxes, and the amount retained in the business, would have to come out, in one way or another, of the national product. Therefore, the total consumer purchasing power would not be increased more than 1½ percent—2 percent even if business profits were eliminated entirely. I think this is an extremely cheap price to pay for the benefits we reap from the system of capitalistic democracy.

It should be apparent that unless the Government and the Congress has the courage to control the rapidly growing monopolistic powers of organized labor, further inflation is inevitable. The only alternative is to stop the growth of the money supply; ultimately bringing with it heavy unemployment and idle facilities.

We cannot tolerate having private groups dominate our Government and our economy by means of organized monopolies. For a few men at the top to exercise such power in effect constitutes a private dictatorship of public policy and must, in the interest of our country, as well as in the real interest of the rank and file of labor itself, be courageously dealt with by both political parties. This can no longer be considered a party issue. It has assumed the proportions of a national issue, almost as important as defense.

In closing, I wish to thank the committee for the opportunity of appearing here today. I realize that my statement is very sketchy and leaves much to be said on all of the issues discussed. It does, however, have the merit of raising many very controversial questions. I do feel that it is necessary to face up to the basic issues, whether popular or unpopular, and that this is neither the time nor the place for timidity.

This committee has great power and prestige and I believe it will stand up to its responsibilities and not permit itself to be intimidated by fear of political retaliation from any source, nor are its members likely to be lured away from basic principles by shortrun interest and attractive promises.

Mr. MOSS. Mr. President, I have not had the benefit of hearing or seeing the testimony of Mr. Marriner Eccles, as now submitted by the Senator from Connecticut, but he is an outstanding citizen of my State of Utah. Mr. Eccles certainly is one of the leaders in the fiscal field in the United States.

I join with the Senator from Connecticut in urging the Members of the Senate to carefully read the testimony. Mr. Eccles has been a close friend of mine for many years, and I value his counsel at all times. I am certain I would in this instance.

Mr. President——

The PRESIDING OFFICER. The Senator from Utah.

COMMENDATION OF ROSEL HYDE

Mr. MOSS. Mr. President, the Utah Broadcasters Association is an organization concerned with television and

radio broadcasting. Recently that organization in convention adopted a resolution having to do with the reappointment of Mr. Rosel Hyde to the Federal Communications Commission. Mr. Hyde is a personal friend of mine whom I have known for many years.

I ask unanimous consent that the resolution be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the members of the Utah Broadcasters Association have asembled this 21st day of February 1959, for their annual meeting; and

Whereas the Honorable Rosel Hyde has served the radio and television industries long and well as a competent public servant in the Federal Communications Commission, having served impartially and with great discretion and wisdom in the office; and

Whereas Rosel Hyde has gained the respect and admiration of those engaged in the broadcasting and telecasting industries and is regarded by the broadcasters of Utah as one whose ability, character, and unique knowledge of the operations and problems of the broadcasting industry are such that the industry and the public are greatly benefited by Mr. Hyde's services as a Commissioner in the Federal Communications Commission; and

Whereas the Utah Broadcasters Association is cognizant of the fact that the term of office of the Honorable Rosel Hyde, as a member of the Federal Communications Commission, is soon to expire: Now, therefore, be it

Resolved, That the Utah Broadcasters Association, in convention assembled this 21st day of February 1959, affirms its appreciation for the outstanding performance and service to the radio and television industries by Rosel Hyde as a member of the Federal Communications Commission; and be it further

Resolved, That the Utah Broadcasters Association go on record as declaring that the Mountain States area should be represented on the Federal Communications Commission, and respectfully urges the reappointment of Rosel Hyde; and be it further

Resolved, That this resolution be spread on the minutes of this, the annual meeting of the Utah Broadcasters Association, and that a copy of said resolution be sent to the President of the United States.

UTAH BROADCASTERS ASSOCIATION,
JAY W. WRIGHT, *President*.

Attest:

ARCH G. WEBB,
Secretary.

SPEECHES BY WEST VIRGINIA SENATORS REGARDING DEPRESSED ECONOMIC CONDITIONS IN THEIR STATE

Mr. NEUBERGER. Mr. President, I desire to comment briefly on the outstanding job done in the Senate by the two distinguished Senators from the State of West Virginia [Mr. RANDOLPH and Mr. BYRD] in bringing to our attention the grave economic conditions confronting their State. This was accomplished during the debate over the area redevelopment bill. Although my own State of Oregon has suffered economically because of the lumber crisis brought on by a reduction in new housing starts, I nevertheless was shocked to hear of the West Virginia communities where whole populations have been stranded and left destitute of adequate financial resources. This is a challenge to the entire Nation, and it is a national responsibility. Our colleagues from West Virginia [Mr. RANDOLPH and Mr. BYRD] have presented their case with dignity, with ability, and with the facts. Their people are fortunate to be represented so ably in this Chamber.

INFLATION AND A BALANCED BUDGET

Mr. MONRONEY. Mr. President, an enormous number of words have been spoken on the floor of the Senate or written in the statements emanating from the White House and the Government departments about the effect upon inflation of an absolutely balanced budget. Many of us on the floor of the Senate have protested against the tight-money policy and against the ever-increasing high interest rates, largely created by Government edict and by legislation urged upon the Senate by the administration.

The word has gone forth to the public that the only way we can prevent inflation is by having the budget balanced to the last penny.

Mr. GORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield to my distinguished colleague.

Mr. GORE. Insofar as an influence upon inflation is concerned, an enormous budget surplus or an enormous budget deficit would be necessary to have any appreciable effect. A budget surplus of a billion dollars or a deficit of a billion dollars would have practically no effect at all upon the price level.

Mr. MONRONEY. The Senator is exactly correct. I should like to read from the editorial of March 12, published in the Journal of Commerce, which I intend to have printed in its entirety in the RECORD. I think this is exactly in line with the point the Senator from Tennessee has made. The editorial declares:

> In examining the inflationary impact of debt, it is the total of new debt creation that has to be looked at, not just the Government deficit. This is a fact the administration appears to have forgotten.

In other words, whether there be a deficit of $1 billion, $2 billion, or $3 billion in Government spending, there should not be overlooked the inflationary impact of the creation of commercial debt, which may run as high as $50 billion or $100 billion. The oversimplification, or attempt to cure the inflation danger we have merely by a "witch doctor's remedy"—screaming that only a balanced budget will give us protection against inflation—places us in grave danger as a result of ascribing the cause of inflation to the wrong germ.

Mr. GORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield to my distinguished colleague.

Mr. GORE. One need not favor an unbalanced budget to recognize that a balanced budget theoretically has no effect up or down on the price level.

Mr. MONRONEY. The Senator is correct.

Mr. GORE. It would be only a very large budget surplus which could have a repressive influence upon the price level to any considerable extent. Merely to say that the whole battle against inflation and rising prices is to be won or lost by a teetering balancing of the budget is utterly unrealistic.

Mr. MONRONEY. It further emphasizes the fact that everyone, including the administration, knows that the President's budget is strictly for political purposes. It is not a realistic budget. It anticipates revenue from a 5-cent postage stamp, which any realistic Member of Congress knows will not be voted. It anticipates other tax revenue in the way of consumer taxes which every realistic Member of Congress knows will not be added. Yet the cry goes out, in hundreds of millions of publications, that the President's budget is balanced. It could be balanced only if Congress were to enact new legislation, which it is not likely to do, and there are very few signs from the Republican Party to indicate that its members even intend to try to obtain the revenue which the President has assumed in order to achieve his "balanced budget."

There will be a damaging effect by reason of creating the idea that if the budget is "unbalanced," inflation will occur. That is dangerous, because it drives away investors. It drives away people who are planning expenditures. It tightens the money supply and reserves it for future lending. Many other deleterious effects will result from saying that inflation will occur unless the budget is balanced to the precise penny, when any realistic man knows that a political budget cannot be balanced, and that the President and his party do not intend to try to balance the budget. They have left out hundreds of millions of dollars from the budget of 1960, shifting it over to 1959, with the result that there is an imbalance in that budget year of from $12 billion to $15 billion.

Apparently it does not matter to the President and other members of his party how much imbalance is created in 1959. Yet the budget of 1960, because it will be the budget which will be shown off in neon lights during a political campaign year, must be snow white. "Snow White" is a fairy tale, and so is the President's "balanced budget." The administration does not intend to do anything about it except to show it off for political purposes and, I am sorry to say, to mislead the people as to the true condition of their budget.

Mr. GORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. GORE. Can the Senator explain how the price level would be affected, how the cost of living would be affected, how the monopoly of price increases would be affected, by a decision to extend $1 billion to the International Bank either on June 30 or July 1?

Mr. MONRONEY. The Senator has touched the very delicate political nerve connected with the budget. In the eyes of the present administration, apparently expenditures are not inflationary if they are made on June 30. But if

they should fall on July 1, they become dangerously inflationary. I am not familiar with the Wall Street school of economics, which seems to dominate this administration——

Mr. GORE. Just how would the cost of living be affected, whether the expenditure was made at all, or whether it was made in June or July? How would the price of groceries be affected?

Mr. MONRONEY. There would be no effect so far as raising or diminishing the cost of bread, butter, bacon, or beans is concerned. Yet the administration's budget bookkeeping system allows Snow White, in all her pristine glory, to be shown off to the world as a long-delayed balanced budget, which this administration says it has finally achieved.

But as we draw nearer to it, we see the impossibility of the President ever realistically driving for the revenue necessary to attain a balanced budget within his own estimates, even if Congress did not increase it one thin dime.

Because of the importance to the Nation's economy, and as proper guidance to sane thinking on this subject, I ask unanimous consent to have printed in the RECORD at this point as a part of my remarks an editorial entitled "A Matter of $2 Billion or $3 Billion," published in the New York Journal of Commerce for March 12, 1959.

It exposes the phony nature of the President's budget, which we have been so strongly urged not to "unbalance," for fear of creating an overwhelming degree of inflation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A MATTER OF $2 OR $3 BILLION

The administration keeps walking farther and farther out on that well-known limb with its every fresh assertion that the Federal budget must be kept in precise balance if this country is to avoid a renewal of inflation.

The fact of the matter is, barring the wholly unlikely eventuality that 1959 turns out to be a boom year of 1955 dimensions, that the 1960 budget is going to be unbalanced. A boom could produce enough additional revenue to put the Government in the black for fiscal 1960, but spending, regardless of economic conditions, is bound to exceed the budgeted $77 billion. This will happen because Congress will have it that way; because the administration based its every estimate of outgo on the happiest possible assumptions, and some of them are bound to turn out wrong; and because there is evidence of plain hanky-panky in some of the budget figures, such as the maritime subsidies.

Government leaders surely know this as well as we do, yet all of them, from the President down, keep warning of terrible inflationary consequences if there is a deficit, however small. They are doing this, quite obviously, because they hope to scare Congress out of voting additional spending programs.

But it would appear that the administration has never stopped to consider the fact that it is helping to create the very thing it is seeking to avoid—inflation—by this constant equating of a deficit with inflation.

The day of reckoning may come soon, and certainly not later than August or September, a few weeks after Congress has completed action on the last appropriations bill, when the Bureau of the Budget publishes its annual revised budget estimates. If the revision indicates a deficit, as we believe it surely will, the administration's response can only be one of two things, neither of them very pleasant to contemplate.

It can say, in effect, "Shucks, Mr. Citizen, Mr. Investor, Mr. Businessman, we didn't really mean it. A deficit of this size isn't really going to hurt much."

Or it can say, "Well, we warned you and now it has happened. Congress unbalanced the budget and prices are going to take off into the upper stratosphere."

Obviously, some version of the former, rather than the latter, is the line which will have to be adopted. But it may not be believed in the light of all that has been said in the past, and the financial markets, business and the public may begin behaving as though inflation were inevitable—thus helping make it inevitable.

Even if the public accepts the administration's sudden assurances that all is going to be well after all, real damage will have been done, because no future warning of inflationary danger will be credited. This is no small point. In the calendar year 1960, unlike this one, economic conditions may be such that a balanced budget actually will be crucial to the prevention of inflation. And 1960, as everyone knows, is a presidential election year and therefore a year in which it will be difficult, indeed, to hold the congressional spenders in line.

There are those (including one member of the Eisenhower Cabinet) who have chided us for not joining in the fight for a budget balanced to the last penny, and asked why, as a conservative newspaper, we are not more concerned about the inflationary consequences of an imbalance.

This newspaper's unyielding opposition to even a little bit of inflation ought to be fairly well known by now. But as a conservative newspaper, we have always taken seriously our obligation to think straight on economic issues. It just isn't that to hold that a deficit of $2 or $3 billion would pitch this economy into inflation.

Such a hypothesis implies the single factor which dictates the trend of prices is the Federal budget. Not so. The economy must be looked at as a whole and present conditions are not inflationary. It is an increase in the money supply, basically, which creates inflation, and the Federal Reserve—having learned a lot from its errors in 1953 and 1954—maneuvered through the late recession without allowing any important increase in the money supply and then pulled the reins tight again almost at the first sign of recovery. In addition, there is little reason to believe that consumer or business borrowing is going to expand to any dangerous extent this year. There is small prospect of any strong pickup in business spending for capital equipment until fall or later, and plenty of retained earnings in hand to finance what pickup there is.

In examining the inflationary impact of debt, it is the total of new debt creation that has to be looked at, not just the Government deficit. This is a fact the administration appears to have forgotten.

To be sure, the administration should try for a balanced budget because there is moral worth in pay-as-you-go in reasonably good times. We agree with that. We should limit Federal spending because there is danger in constantly increasing the centralization of power in Washington. We agree with that.

We ought to balance the budget in 1960 so we can have a tax cut next year. We hope conditions will be such that we can agree with that.

Washington ought to stop telling us that the budget has to be balanced to the last penny because otherwise uncontrollable inflation will result. We know better, but many people will be persuaded if administration spokesmen keep saying it. And therein lies the danger.

EXTENSION OF TIME OF RECEIPT OF TEMPORARY UNEMPLOYMENT COMPENSATION

The Senate resumed the consideration of the bill (H.R. 5640) to extend the time during which certain individuals may continue to receive temporary unemployment compensation.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Minnesota [Mr. MCCARTHY] for himself and other Senators.

Mr. BYRD of Virginia. Mr. President, I rise to oppose the pending amendment. This amendment would add $105 million to the cost of the program. It is true that that money has been appropriated, but the budget did not anticipate the expenditure, and for that reason it would affect the budget to the extent of $105 million.

I wish to speak very seriously to Senators who favor the bill. The House is in recess, waiting upon the Senate for action on the bill. If the bill is amended in substantial fashion, as is now proposed, it is my opinion, as Chairman of the Senate Committee on Finance, that we shall be unable to have a conference, because one objection on the floor of the House would prevent a conference on the bill. If there is no conference, of course, the bill will die. Under existing law the time limit is April 1. After that date is passed, it will be impossible to enact retroactive legislation.

As chairman of the Senate Committee on Finance, I wish to absolve myself from all responsibility for the defeat of the bill by reason of the fact that the House will probably not act upon it if it is substantially amended. One objection could prevent action on the bill. It would have to go to conference, and conferees would have to be appointed on both sides.

The information which I have does not come directly from those who will be on the conference committee; but I am advised that there is very serious danger that the House will not consent to a conference at this late date. Failure to go to conference will mean that the bill will be defeated; and, once defeated, it cannot be made retroactive when Congress reconvenes on April 7.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. BYRD of Virginia. I yield.

Mr. ALLOTT. What the Senator has just said is very impressive. I should like to state the situation in another way, and obtain an answer.

Mr. GRUENING. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. GRUENING. Who has the floor?

The PRESIDING OFFICER. The Senator from Virginia [Mr. BYRD] has the floor.

Mr. ALLOTT. The Senator from Virginia yielded to me for a question.

Mr. BYRD. I yield to the Senator from Colorado.

Mr. ALLOTT. The purpose of the bill before the Senate, providing for an extension, is to provide unemployment relief until the 1st of July, and to extend the provisions of the legislation which we passed last year so that those who are now unemployed, and who are in the status up to April 1, will have an opportunity to participate in unemployment benefits through to July 1. Is that correct?

Mr. BYRD of Virginia. The Senator is correct.

Mr. ALLOTT. If I interpret correctly the statement which the Senator from Virginia has just made—and I have great respect for his ideas on this subject—the adoption of the amendment, no matter how desirable or feasible it may seem in some respects, would force a conference with the House, and that, because of the time limit, and because of the situation in the House, the conference committee could not resolve the differences between the two Houses.

Mr. BYRD of Virginia. That is correct.

Mr. ALLOT. Therefore, if the amendment were to be adopted, a vote for the amendment would, in effect, take away from the people who desire an extension of the Unemployment Act until July any opportunity to participate in the program. Is that correct?

Mr. BYRD of Virginia. I am informed by the experts in the Labor Department that approximately 400,000 people will be denied a continuation of unemployment insurance on July 1 unless the bill is made operative by April 1.

Mr. ALLOTT. By adopting the proposed amendment we would be gambling with the opportunity of those 400,000 people for future relief. Is that correct?

Mr. BYRD of Virginia. Yes. Any Member of the Senate who has any doubt about the seriousness of the situation should communicate with the House leadership. If they will do that, they will be advised as to whether it is possible to get the bill through a conference committee at this late hour.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. BYRD of Virginia. I yield.

Mr. LAUSCHE. What will be the legal situation if the existing law expires through the expiration of time and thereafter a conference is had? Does the Senator follow my question?

Mr. BYRD of Virginia. Will the Senator repeat it, please?

Mr. LAUSCHE. In the event the existing law terminates because of the expiration of time, and then the House consents to meet in conference, will Congress have the right, ability, or opportunity to act upon an amendment to a law which has already expired?

Mr. BYRD of Virginia. The Senator has raised a very important point. It seems to me that would raise grave doubts indeed. I am advised by the experts in the Labor Department that on the expiration of the act on April 1 the staff would have to be dismissed.

Mr. LAUSCHE. The point I have in mind is that on April 1 the existing law comes to an end because of the expiration of time.

Mr. BYRD of Virginia. The Senator is correct.

Mr. LAUSCHE. If the law comes to an end, how can an amendment be acted on in conference after the House and Senate return following the Easter recess?

Mr. BYRD of Virginia. That is the point exactly. The Senator is entirely correct. I am advised that the staff which administers the law will go out of existence on April 1. It will be practically impossible to make the act retroactive even though it should be enacted as a new law.

Mr. LAUSCHE. When the Senator from Virginia said that an objection on the floor of the House would prevent the bill from going to conference, that does not mean that at a later date it could not be sent to conference, does it?

Mr. BYRD of Virginia. Oh, no.

Mr. LAUSCHE. I suggest to my colleagues that after a law has died because of the expiration of time, any amendment to a nonexisting law would raise great doubt as to its legality.

Mr. CLARK. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. CLARK. Who has the floor?

The PRESIDING OFFICER. No Senator has the floor at the moment.

Mr. McCARTHY obtained the floor.

Mr. CLARK. Mr. President, will the Senator from Minnesota yield to me?

Mr. McCARTHY. I yield.

Mr. CLARK. Will the Senator yield so that I may propound a question to the acting majority leader?

Mr. McCARTHY. I yield.

Mr. CLARK. Mr. President, at the request of the Senator from Michigan and myself, the acting majority leader has been in communication with the Speaker of the House of Representatives with respect to the possibility of a conference on the pending measure, in the event the pending amendment should prevail. I should like to ask my friend from Montana if he would enlighten our colleagues as to the result of that conversation.

Mr. MANSFIELD. I will say to my good friend from Pennsylvania and to my other colleagues in the Senate that, although I intend to vote for the McCarthy amendment, as I did for the McNamara-Clark substitute, I was informed by the Speaker of the House that if the McCarthy amendment should be adopted, the chances of the act being extended for the 3-month period desired would be practically nil. It is my further understanding that the only thing which the House would accept would be a technical amendment, which, I pointed out to the Speaker, had already been accepted by the Senate at the beginning of the discussion on the bill.

Mr. CLARK. Is it not correct to say that the House stands in recess, to be reconvened upon the termination of Senate action on the bil, and that we have every reason to believe that the House will go to conference on the bill and attempt to resolve the differences before the April 1 date had arrived?

Mr. MANSFIELD. The Senator is correct when he states that the House is in recess awaiting the disposition of the bill by the Senate. Whether the House might go to conference if a bill markedly different from the one passed by the House were passed by the Senate, to be perfectly frank about it, is an open question. The Senator from Virginia [Mr. BYRD] has indicated that in the House conferees are appointed under a unanimous-consent request, and one objection can keep conferees from being appointed. Therefore, if there are no conferees, there can be no conference.

Mr. CLARK. I came to the floor toward the end of the statement by my good friend the senior Senator from Virginia. I wonder if he said that he doubted the House would go to conference. It seems to me that, as a coordinate body, we should act as we believe we should act, in accordance with our conscience, and we should expect the other House to extend the courtesy to us of going to conference. It might be that the conferees could not agree, of course, but I hope no Senator will change his vote because of the threat of no conference.

Mr. MANSFIELD. I agree that, regardless of what the House does or does not do, each Senator ought to do what he thinks is the right thing to do, and I am sure each Senator will do that.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. McCARTHY. Mr. President, I certainly approve of what the acting majority leader has said. I do not know what will happen in the House of Representatives, but I believe that, in anticipation of the Easter recess, we ought to take a stand which Senators feel is justified and is sensible. What is involved is the question whether benefits will be made available to approximately 200,000 unemployed persons.

It seems to me that we would be in a difficult position if we were to say that, in anticipation of the Easter recess, we decided to ignore and neglect these people in their difficulties; and that we eliminated the provision from the bill because of the threat of the refusal of the House of Representatives to go to conference with the Senate on the bill.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. McCARTHY. I yield.

Mr. JAVITS. It seems to me that there are two other questions we should consider. First, is it not a fact also that if we adopt the pending amendment, we are moving within the 3-month frame of reference? Secondly, is it not a fact that we are doing a very desirable thing in accommodating people who are now on the State unemployment rolls and under the House bill cannot get on the Federal roll?

My point is that it is one thing to proceed as we wish without regard to the other body, because we think what we are doing is the right thing to do. We cannot do that, of course. It is another thing to proceed with a very reasonable effort to conform to the fundamental frame of reference set by the other body; and then, if they

want to—and we cannot assume that this will happen—they will let the bill lie on the table.

I respectfully submit that we are arguing in the frame of reference set by the House of Representatives. It is not something outside the context of what the House has offered. It seems to me that it would be unreasonable on that ground if we should find—and I say we cannot assume this—an obdurate attitude in the other House.

Mr. MANSFIELD. What the Senator from New York has said is correct. Each House must make up its own mind and reach its own decision on proposed legislation. I believe that each House will do what it believes in its own mind to be right. The point is that, as a practical matter, the argument advanced by the Senator from Virginia should be considered, as to what the ultimate outcome of the bill would be if the pending amendment were adopted. I do not agree with the idea that a vote for the McCarthy amendment is not good for the bill. I believe it is good for the bill. Whether the House agrees to go to conference with us is something for the House to decide. We have our own duty to perform here. I know we will perform our duty.

At the same time, many Members of the Senate will keep in mind the practical aspects of the situation. They will bear in mind that the present law expires on the last day of this month; and if it expires, either through the normal expiration of the act, or because of a lack of conference, it means, in the end, that the unemployment compensation law will not be extended.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. McCARTHY. I yield.

Mr. ALLOTT. It is not a question, as I understand, of the House adopting a Senate ultimatum.

Mr. MANSFIELD. No.

Mr. ALLOTT. The fact is that in order to enable the House to appoint conferees to act upon the matter, there must be unanimous consent in the House. That means that if any one of the 436 Members of the House objected to the particular form of the bill in which it passed the Senate, the House would be able to forestall the appointment of conferees and thus prevent the enactment of the proposed legislation.

Mr. MANSFIELD. The Senator is correct. He is emphasizing what he so cogently stated in his colloquy with the distinguished Senator from Virginia.

Mr. JAVITS. Mr. President, will the Senator from Minnesota further yield?

Mr. McCARTHY. I yield.

Mr. JAVITS. I served in the other body. It is possible to bring up a Senate bill in the House as an original bill and to pass it under a suspension of the rules, even though the Committee on Rules will not allow it to go to the floor.

We cannot assume that because one Member of the House will object, that will be the end of the matter.

I served in the House for many years, as did the Senator from Minnesota. So did the Senator from Montana. I think we have seen that very thing happen on other occasions.

Mr. MANSFIELD. What the distinguished Senator from New York has said is correct; but he also recognizes the difficulties attached to those proceedings, as well.

Mr. McCARTHY. Conceding that any Member of the House might act as the Senator from New York has suggested, namely, object to the appointment of conferees, the effect of such action might be to grant to each Member of the House veto power over Senate action. To do this would be to establish a dangerous precedent.

Mr. WILLIAMS of Delaware. Mr. President, I join with the Senator from Virginia [Mr. BYRD] in expressing the hope that the amendment of the Senator from Minnesota will be rejected. I am not now directing my remarks to the merits of the amendment. I am merely joining the Senator from Montana [Mr. MANSFIELD] in pointing out the true parliamentary situation. Upon the request of many Senators on both sides of the aisle, some of us have consulted with the leadership of the House. The advice we received—and it was not in the form of a threat, but was advice given from a practical standpoint—is that if the bill is amended, it will not be accepted by the House.

Mr. MANSFIELD. The Senator from Delaware is correct. There was no threat, either implied or expressed. The advice was given on the basis of requests made, and it was the best advice possible which the leadership of the House could give us at this time.

Mr. WILLIAMS of Delaware. That is correct. I thought that should be stated. We asked for the information in order that we might relay it to the membership of the Senate.

As the Senator from Montana pointed out earlier, one technical Senate amendment has been adopted. A question was raised as to why, since we adopted one amendment, we could not adopt another. But the chairman of the committee placed in the RECORD a letter from the chairman of the House committee stating that, upon the approval of his committee, the House would accept the technical amendment only.

Mr. MANSFIELD. The Senator is correct.

Mr. WILLIAMS of Delaware. Let there be no misunderstanding. We were advised, as the Senator from Montana stated, that if the McCarthy amendment were adopted, the chances for the passage of the bill were practically zero.

Mr. SCOTT. Mr. President, on March 16, in the Committee on Finance, I offered an amendment to the Temporary Unemployment Compensation Act of 1958, calling for an extension of the existing program for a period of 6 months.

On March 20, I presented my arguments in favor of such an extension before the Senate Finance Committee. The committee did not see fit to accept the alternative which I suggested—but it is still my view that it is the most reasonable solution to the problem and will provide a very necessary adjustment period—to carry over the unemployment gap until the seasonal upturn in employment opportunity gets underway.

Mr. President, according to the latest figures I have been able to obtain, there are 508,000 unemployed persons in the Commonwealth of Pennsylvania. This is 11 percent of the Pennsylvania labor force, as well as around 11 percent of the total unemployment on a national basis.

The average number of persons receiving benefits in Pennsylvania as of January 1959, on a weekly basis, was 257,000 on the regular State unemployment compensation rolls, plus 59,700 weekly, under the temporary unemployment compensation program. This average of weekly eligibles does not appear to be diminishing, but is expected to go higher.

I do not mean to imply that I believe chronic unemployment in certain areas in Pennsylvania can be solved by temporary unemployment compensation. Nor do I favor the continuation of heavy Federal contributions to unemployment compensation or the dislocation of the present Federal-State relationship in the administration of the employment security program.

I am just as anxious as is the very able chairman of the Senate Finance Committee that we keep spending programs within the budget and reduce them wherever possible.

I do not like anything that even remotely resembles a dole for the people of Pennsylvania. We have privation in certain areas, and many family breadwinners walking the streets looking for a job; but it is a job that the workingman in Pennsylvania wants, not a dole.

He wants a tide-over out of funds to which his employment has contributed, or which State taxation will eventually repay.

Mr. President, I realize the cost of the proposed running-out program under the pending bill, can be absorbed under funds already appropriated in fiscal 1959.

To extend the existing program for a 6-month period would cost an estimated $210 million, $105 million of which would have to be appropriated for under the 1960 budget.

Undoubtedly the cost factor was a principal consideration in the committee deliberations. It is a difficult one against which to argue.

Between now and the actual termination of the temporary unemployment compensation program under H.R. 5640—June 30, 1959—we will have opportunity to observe the impact and the need for further remedial legislation. If unemployment does not improve immediately ahead, we must then find a more permanent way of dealing with the situation.

I intend to support this amendment.

Mr. LAUSCHE. Mr. President, I contemplate voting for the amendment. However, I must keep in mind that when Congress passed the Temporary Unemployment Act last year, it was done specifically with the understanding that it was a temporary measure. I remember vividly the arguments made that 1958 was a nonlegislative year so far as the States were concerned and that, therefore, it was necessary for the Federal Government to step into the gap so as to enable State legislatures in 1959 to cope with the problem.

Nineteen fifty-nine is here. State legislatures are in session. There definitely are 35 States which have unemployment compensation funds with fiscal strength capable of coping with the problems confronting them. Many of those States have refused to act; they do not want to help themselves. Yet today it was suggested that while they do not want to help themselves, Congress ought to proceed to their aid.

The State of Ohio is in excellent fiscal shape so far as its unemployment compensation fund is concerned. Thirty-four other States are similarly situated.

Some States are in bad shape. The fact that they are in bad shape was foreseeable 7 or 8 years ago.

As Governor of Ohio, I had constantly called to my attention what other States were doing. The argument was made that Ohio should follow the course of the other States.

Mr. President, the funds of those other States are now practically exhausted. They are exhausted because of mismanagement. I heard the argument made today that Congress should restore by its action fiscal stability. I warn Senators that we are on the way of doing to the Federal fund what has been done locally to the State funds because of mismanagement.

Senators might inquire why I have said I will vote for the amendment. In those States where the funds are low—I understand there are five such States—there are many people who are out of work. Those State funds cannot be immediately used to supplement or to increase payments or to extend the duration of the payments. Those States should be taken care of.

The proposed extension of 3 months will involve $105 million, but it will be on a loan basis; it will not be a giveaway. It is for that reason that I shall vote for the extension of 90 days. It is not because of the States, but because the workers in those States are innocent of what has happened.

But while we take such action, I think it is incumbent upon us to call upon the States to put their own fiscal houses in order with respect to the unemployment compensation funds. The States should proceed to ascertain whether the premiums charged are adequate, and whether the payments made are commensurate with the premiums which are being received.

Those are my thoughts on this subject, Mr. President. I regret to take the time of my colleagues at this late hour; but I would feel remiss unless I spoke now.

Furthermore, Mr. President, I wish to say that the States which are complaining about economic difficulties had better look around and see how many of them are driving industry and people away because of the unhealthy economic environment being created in those States. They are driving industry and people away; and now I am beginning to receive letters from persons who write, "Shall I remain here, or shall I move away? My bank account is dwindling, because of deficit operations. Every dollar that I paid for Government bonds is now worth only 47 cents."

Mr. President, what some States have done to their businesses and their citizens, we in the Congress are now beginning to do to the businesses and the citizens of the Nation.

The PRESIDING OFFICER. The question is on agreeing to he amendment of the Senator from Minnesota [Mr. McCARTHY]. On this question, the yeas and nays have been ordered; and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from Mississippi [Mr. EASTLAND], the Senator from Louisiana [Mr. ELLENDER], the Senator from North Carolina [Mr. ERVIN], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Texas [Mr. JOHNSON], the Senator from North Carolina [Mr. JORDAN], the Senator from Georgia [Mr. RUSSELL], and the Senator from Florida [Mr. SMATHERS] are absent on official business.

I further announce that, if present and voting, the Senator from Mississippi [Mr. EASTLAND], the Senator from Louisiana [Mr. ELLENDER], the Senator from North Carolina [Mr. ERVIN], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from North Carolina [Mr. JORDAN], the Senator from Georgia [Mr. RUSSELL], and the Senator from Florida [Mr. SMATHERS] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Vermont [Mr. AIKEN], the Senator from Utah [Mr. BENNETT], and the Senator from Nebraska [Mr. HRUSKA] are necessarily absent.

The Senator from Maryland [Mr. BUTLER] is absent on official business as a member of the Executive Committee of the Interparliamentary Union.

The Senator from Indiana [Mr. CAPEHART] and the Senator from Illinois [Mr. DIRKSEN] are absent on official business.

If present and voting, the Senator from Utah [Mr. BENNETT], the Senator from Maryland [Mr. BUTLER], the Senator from Illinois [Mr. DIRKSEN], and the Senator from Nebraska [Mr. HRUSKA] would each vote "nay."

The result was announced—yeas 52, nays 32, as follows:

YEAS—52

Anderson	Hartke	Morse
Bartlett	Hennings	Moss
Bible	Humphrey	Murray
Byrd, W. Va.	Jackson	Muskie
Cannon	Javits	Neuberger
Carroll	Keating	O'Mahoney
Case, N.J.	Kefauver	Pastore
Chavez	Kennedy	Prouty
Church	Kuchel	Proxmire
Clark	Langer	Randolph
Cooper	Lausche	Scott
Dodd	Long	Smith
Douglas	McCarthy	Symington
Engle	McGee	Williams, N.J.
Gore	McNamara	Yarborough
Green	Magnuson	Young, Ohio
Gruening	Mansfield	
Hart	Monroney	

NAYS—32

Allott	Goldwater	Robertson
Beall	Hayden	Saltonstall
Bridges	Hickenlooper	Schoeppel
Bush	Hill	Sparkman
Byrd, Va.	Holland	Stennis
Carlson	Johnston, S.C.	Talmadge
Case, S. Dak.	Kerr	Thurmond
Cotton	McClellan	Wiley
Curtis	Martin	Williams, Del.
Dworshak	Morton	Young, N. Dak.
Frear	Mundt	

NOT VOTING—14

Aiken	Eastland	Johnson, Tex.
Bennett	Ellender	Jordan
Butler	Ervin	Russell
Capehart	Fulbright	Smathers
Dirksen	Hruska	

So the amendment offered by Mr. McCARTHY, for himself and other Senators, was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

If there be no further amendment to be proposed, the question is on the engrossment of the amendment and third reading of the bill.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time.

The PRESIDING OFFICER. The question now is, Shall the bill pass? [Putting the question.]

Mr. CURTIS. Mr. President——

Mr. KUCHEL. Mr. President, I was about to move to reconsider the last vote, if the Presiding Officer had announced the result of the vote. Had the Presiding Officer announced the result of the vote?

Mr. CURTIS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. CURTIS. Had the Chair asked for the "nay" votes on the passage of the bill? We cannot hear him.

The PRESIDING OFFICER. The Chair did ask for the "nays."

The bill (H.R. 5640), as amended, was passed.

Mr. KUCHEL. Mr. President, I now move to reconsider the vote by which the bill was passed.

Mr. BIBLE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. CASE of South Dakota obtained the floor.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. CASE of South Dakota. I yield.

Mr. MANSFIELD. Mr. President, in view of the outcome of the vote——

Mr. HOLLAND. Mr. President, may we have order.

The PRESIDING OFFICER. The Senate will be in order, so that Senators may be heard.

Mr. MANSFIELD. Mr. President, in view of the outcome of the vote on the extension of unemployment compensation benefits, I think I ought to try, to the best of my ability, to make my position clear.

I made the statement yesterday, in conjunction with the distinguished minority leader, that after the vote today on the extension of the unemployment compensation benefits measure there would be no further votes; in other words, that the Members could feel free to go to their home States for the recess.

I do not know now what the situation is. By that, I mean I do not know whether there will be a conference. If there is a conference, I do not know whether there will be agreement.

I should like Senators to know I have to backtrack a little bit on what I said yesterday until it is decided what the

House and Senate conferees, if they are appointed, will do about this particular measure.

Mr. KUCHEL. Mr. President, will the Senator yield?

Mr. MANSFIELD. I am delighted to yield.

Mr. KUCHEL. Is it the opinion of the Senator from Montana that the distinguished senior Senator from Virginia will be able within a matter of the next couple of hours to enlighten my colleague from Montana and other Senators as to what fate has done to the proposed legislation in the other body?

Mr. MANSFIELD. I will say to my distinguished friend, I hope that the senior Senator from Virginia, the chairman of the Committee on Finance, who handled the bill, who is now sitting on my friend's side of the Chamber, will be in a position within the next 2 or 3 minutes or within the next 2 or 3 hours to tell us both, and to tell all our colleagues, what the situation is going to be. I am sure the Senator from Virginia does not know at this time.

Mr. KUCHEL. Assuming there is a conference, and a conference report is agreed to, would it be the understanding of the able acting majority leader that today or tomorrow, before a recess resolution is voted upon, the Senate will have an opportunity to vote on some type of report?

Mr. MANSFIELD. In the words of the Senator from Illinois, the distinguished acting minority leader is showing his usual perspicacity.

Mr. BRIDGES. Mr. President, will the Senator yield?

Mr. CASE of South Dakota. Mr. President——

Mr. BRIDGES. I should like to ask the distinguished acting leader on the Democratic side a question. As a result of the vote just cast, is it not true that the Senators who voted for the amendment pretty well killed the unemployment compensation extension? On their shoulders must rest the responsibility for the defeat of the proposed legislation, if it is defeated.

Mr. MANSFIELD. No. As one of the Senators who voted for the amendment I must disagree most emphatically, and say that those of us who voted in favor of the McCarthy amendment did so because we thought we acted in the best interests of the people.

Mr. BRIDGES. I believe the Senator acted in what he thought was the best interests of the people, but the practical effect is as I have stated, is it not?

Mr. MANSFIELD. While there is life there is hope.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. CASE of South Dakota. Mr. President——

Mr. CLARK. As one Member of the Senate I should like, on behalf of myself and on behalf of my colleagues, to express resentment at the statement of the Senator from New Hampshire. I think this body and the other body have good common sense and can proceed with a normal approach to this matter. I think the cynical approach of my friend from New Hampshire is a little out of order.

I suggest to my friend from Montana the possibility of keeping the Senate in session this afternoon long enough so that the distinguished senior Senator from Virginia may receive some word from the House as to the action taken on the Seante bill, and whether the House desires to go to conference, in which case I am sure the conferees could be appointed this evening, without the need for a yea and nay vote, and 24 hours could be saved in attempting to come to an understanding with the other body.

Mr. MANSFIELD. I will say to the Senator from Pennsylvania, that as yet no resolution for an Easter recess has been agreed to. Under the proper circumstances there would be no need for us to undertake an Easter recess. I hope we can get some action on this measure, through a conference report, and if necessary we can forgo an Easter recess.

Mr. CLARK. My point is that perhaps this matter can be resolved in the course of the next few hours. If the Senate adjourns or takes a recess within the next half hour, and the House acts in another hour, we shall have lost a day.

Mr. MANSFIELD. I think in an attempt to be cooperative we will stay in session until about 6 o'clock, at least, and perhaps longer, in the hope that something may be done. I do not intend to ask the Senate to stay in session if there is no possibility of an accommodation being reached.

Mr. CLARK. I thank my friend.

Mr. BRIDGES. Mr. President, will the distinguished Senator from Montana yield to me? The Senator from Pennsylvania made reference to me.

Mr. MANSFIELD. I yield.

Mr. BRIDGES. The Senator from Pennsylvania has referred to my colloquy with the junior Senator from Montana and has expressed his resentment because he believed it to be a cynical observation. The Senator from New Hampshire made no cynical comment. He made a very practical observation. He grants that the distinguished Senator from Pennsylvania and his colleagues who voted for the amendment, had a perfect right to do so. They were probably acting to the best of their knowledge and ability.

The Senator from New Hampshire views the situation differently. He believes that, in a practical sense, it will gravely jeopardize the extension of the unemployment insurance program. That is not a cynical approach. It is a realistic approach. The Senator from New Hampshire is not cynical in his observations. He concedes to the Senator from Pennsylvania and all other Senators the right to vote as they choose.

Mr. CLARK. I thank my friend for the happy clarification of his earlier remarks.

Mr. MANSFIELD. Mr. President, there is a point to what the Senator from New Hampshire has said. We must all decide, in our own consciences, what is best. I am sure we all proceed on that basis.

Mr. MORSE. Mr. President, in view of the fact that no Easter recess resolution has yet been agreed to, I invite the well-fed Members of the Congress of the United States presently employed—I was about to say "gainfully," but I refrain from using that word—to enter into an agreement with me to have the Senate remain in session during the entire Easter period, if necessary, until, carrying out our responsibilities, we do something legislationwise for the unemployed of the country.

I offer an invitation now to all Senators who would like to join me to line up on the right—which will also be the right side—and, when the resolution for an Easter recess comes before us, be prepared to keep the Senate in session until we do something for the unemployed. That is a very constructive suggestion, and I hope to have early enlistments.

If it should come to pass that the House of Representatives would be unwilling to assume its responsibility of going into conference quickly and giving us a report so that we can act at an early hour, I believe the course I have outlined would be appropriate.

Mr. MANSFIELD. Mr. President, let me say to the Senator from Oregon that, as usual, his suggestions are good, sound, and solid. I assure him that what he has had to suggest this time will be given every possible consideration.

OIL IMPORTS

Mr. LONG. Mr. President, I desire to discuss the subject of oil imports in considerable detail. I ask unanimous consent that I may be recognized at the conclusion of the morning hour tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE GARNISHMENT LAW OF THE DISTRICT OF COLUMBIA

Mr. LANGER. Mr. President——

The PRESIDING OFFICER. The Senate will be in order. The Senator from North Dakota.

Mr. BIBLE. Mr. President, may we have order? It is impossible for the Senator from North Dakota to be heard.

The PRESIDING OFFICER. The Senate will be in order.

Mr. LANGER. Mr. President, yesterday the distinguished Senator from South Carolina [Mr. JOHNSTON] and I introduced a bill to provide for the repeal of the law providing for garnishment in the District of Columbia. That bill is lying upon the desk until next Thursday, for Senators who may desire to add their names as cosponsors. I am in great hope that many Senators will cosponsor the bill, because it is of importance to the people of the District of Columbia.

As previously stated, garnishment proceedings cannot be conducted against a Federal employee. There is no reason why the employee of any private individual should face garnishment.

Last year there were over 48,000 garnishment proceedings. In other words, Mr. President, in every month last year there was an average of 4,000 garnishments. We can readily observe the great burden placed not only upon the courts

of the District of Columbia but also upon the officers who must serve the papers.

It should be interesting to the Members of the Senate to know that the States of South Carolina, Texas, New Jersey, Pennsylvania, and Florida do not permit garnishments by law, and the States of Maryland and California have such high exemptions that the garnishment law is ineffective.

Mr. President, Mrs. Edward C. Mazique, speaking in favor of the Rock Creek East Neighborhood League, Inc., in her appearance before the House District Committee, Subcommittee No. 3, in February 1959, testified as to the many inequities of the existing garnishment law and enumerated six specifically as follows: First, exploitations of consumers by easy credit; second, employment turnover; third, mounting expense in court budget; fourth, breakdown of family units; fifth, general intimidations of consumers; and sixth, social deterioration.

Because of the excellent preparation of the statement by Mrs. Edward C. Mazique, I ask unanimous consent that it be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LANGER. Mr. President, I hope that many of my colleagues in the Senate will carefully read the statement contained herein and the statements made by the Senator from South Carolina [Mr. JOHNSTON] and I in introducing the bill to repeal the garnishment law. I know that they will be impressed with the reasons, and should join as cosponsors on this bill which is laying on the table for additional cosponsors.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

TESTIMONY BEFORE THE HOUSE DISTRICT COMMITTEE, SUBCOMMITTEE NO. 3, HEARING ON GARNISHMENT, FEBRUARY 1959

(By Mrs. Edward C. Mazique, Rock Creek East Neighborhood League, Inc.)

To Chairman and Members of the House Subcommittee No. 3 for the District of Columbia:

On behalf of the Rock Creek East Neighborhood League, Inc., a citizens' association representing the residents of the community which extends from 16th Street to Rock Creek Park and from Colorado Avenue to Piney Branch Road NW.

Our league wishes to thank the members of the House District Committee for the privilege of appearing before you today. Especially do we wish to express our appreciation to Mr. ABERNETHY, of Mississippi; Mr. DOWDY, of Texas; and others for their demonstrated concern for the well-being of all citizens of the Nation's Capital. We commend you for the sacrifice on your part from your local District problems and national issues to act on behalf of voteless District citizens.

Our association wishes, hereby, to be placed on record as supporting the Dowdy bill, H.R. 2329, "* * * that no attachment or garnishment shall be levied on any wage, salary, or commission for personal service of the defendant, whether due and payable or not."

Under the acts of 1901 and the subsequent amendments of 1944 and 1952, garnishment is increasingly being charged as a contributing factor in (1) exploitations of consumers by easy credit, (2) employment turnover, (3) mounting expense in court budget, (4) breakdown of family units, (5) general intimidations of consumers, (6) social deterioration. To the extent that credit buying in our community threatens to become our most explosive commodity where since report it is boasted that more money is made on the paper than the actual purchases themselves.

The original act of March 3, 1901, to establish a code of law for the District of Columbia provided that a plaintiff or his agent or attorney had a just right to file a claim to what was claimed in his declaration for the recovery of specific personal property or a debt or damages "for the breach of contracts expressed or implied." Complaints that defendant had fraudulently contracted the debt or incurred the obligation respecting which the action was brought was sufficient cause for a writ of attachment and garnishment against the property of defendant necessary to satisfy the claim of the plaintiff.

The 1901 law provided, however, that plaintiff wrongfully suing by attachment or garnishment had to pay cost and damages to the defendant.

The code for the District of Columbia provided, among other things, that the property of the head of a family or household residing in the District of Columbia should be exempt from distraint, attachment, levy, sale, or execution of decree of any court in the District. Itemized possessions exempt under the above included the following: Wearing apparel, fuel for 3 months, one horse, mule, wagon, dray, mechanics' tools of trade, and such implements, $200 worth of stock or materials necessary for carrying on his business or trade. It added, in addition, that there should be exempt "provisions for 3 months' support, whether provided or growing." It might be assumed here that the District was not so commercialized in 1901 as it is today; that this clause placed agricultural and dairy products up to 3 months' supply beyond attachment. Thus, it appears that the original framers of this measure were concerned lest through some application of attachment and garnishment measures food might be taken out of the mouths of children. Moreover, this code provided, 31st Statutes at Large, page 1363, chapter 854, section 1107, under "Earnings": "The earnings, not to exceed $100 each month, of all actual residents of the District of Columbia, for 2 months next preceding the issuing of any writ or process from any court or officer of and in said District, against them, shall be exempt from attachment, levy, seizure, or sale upon such process, and the same shall not be seized, levied on, taken, reached, or sold by attachment, execution, or any other process or proceedings of any court, judge, or other officer of and in said District."

As the economy moved from a simple or semisubsistence level to a highly commercial one, a code providing for exemption of wagons, drays, food production, etc. became outdated. An amendment to the District of Columbia code of 1944, taking into consideration possible added personal or family incomes from pensions, insurances, annuities, provided that income from these sources should be considered in the totaling of $100 per month per family exemption with $60 per month exemption for single persons not heads of families. Moreover a ceiling was placed by this law on the total value of wearing apparel so that all clothing over $300 was liable to attachment. In 1952 by an act of April 15, amending again the code of 1901, it was provided that exemption of $100 as first allowed in 1901 should be raised to $200 per family.

Both the above mentioned amendments represented a possible loss of protection to consumers. The 1944 act added financial assets such as annuities, pensions, insurances into the $100 exemptions whereas other assets in 1901 such as tools, fuel, and growing provisions, we presume meaning chickens, gardens, dairy produce up to a 3-month supply were exempt. Moreover it is estimated the 1944 dollar was worth approximately one-fourth of the value of the 1901 dollar. Though a $200 exemption was granted in 1952 the dollar that year was worth about one-fifth the value of the dollar when McKinley was in the White House. I have been informed that a man could purchase a decent suit for from $5–$15 in that period whereas a similar suit today would cost $45–$100. A fair approximation of comparable protection for the consumer today would be an exemption of $500. Looking back over the application of the 1901 code and the amendments thereto it is evident that the consumer has been steadily losing ground.

In view of the above facts among others my association has asked that I appeal to you today to make no further concessions to the business interests. Our organization is firmly opposed to both H.R. 835 and H.R. 836. The latter popularly referred to as the "bar bill". The enactment of these measures would for the first time since 1901 remove the exemptions which have heretofore technically protected those of the lowest economic segment from any possible legally guaranteed abusive exploitation through credit buying.

GARNISHMENT AND THE EMPLOYER

One of the questions before us, it appears, is whether the powers of the court shall continue to be exercised in such a manner that employers are ordered to withhold salaries, wages, or other earnings for breaches of contract expressed or implied. That said collections are to take priority over all other financial considerations regardless of the fact that the contract might have been entered into by an unwitting consumer under the prompting of slick salesmen, unscrupulous merchants, and peddlers of various sorts, who, through the use of fictitious prices and violations of every ethic of the market coupled with terms of "nothing down, forever to pay," oversold the product, and otherwise took advantage of the unsophisticated consumer.

Before the Senate Subcommittee on Garnishment of the 85th Congress some employers appearing as witnesses against the operation of the existing law complained bitterly of the unbudgeted expense the system entailed for themselves and their firms, that creditor interest might be protected. Some witnesses reported firing employees rather than assume the responsibility for collection of debts from their employees as ordered by the courts. Besides this alternatives' creating a labor problem and an endless employee turnover for the firm or individual, it can contribute to general unemployment, dislocation of households, and family deterioration. For it is highly possible that, in proportion to the increase in labor supply, employers may become inclined to the termination of employees rather than comply with a court regulation which imposes such a burden.

A contract implied or expressed between a creditor and debtor as contracting partners but which has built into its structure a guarantee that a noncontracting, innocent partner shall be held equally liable for its fulfillment, appears to be an infringement upon constitutional guarantees against the denial of property without due process of law. For who can argue that it falls within the scope of civic or community responsibility when returns of such a system are so unequally balanced?

Operating under the District code of March 3, 1901, and its subsequent amendments together with numerous judicial interpretations a great portion of the entire community is currently being bled. While salesmanship tactics along with unfair financing charges, late payment penalties, devious and malevolent collection operations, repossession poli-

cies, misleading advertising, unfulfilled contracts with court-backed authority to collect from the victims at the source, is bleeding great segments of the entire community, the less privileged Negro community is rapidly approaching a state of economic hemorrhage. Though testimony 2 years ago estimated, then, that some 90 percent of garnished victims were Negro and more recently the public press restated this proportion pointing out in addition that of the 48,000 cases in 1957, 90 percent were Negro and only 10 percent were white, we protest this is not a civil rights question; this is a human rights question that threatens to involve more and more consumers, Negroes and whites, noncitizens and citizens as well in a mercantile vice as the attachment system gains increased legal authority for action.

In this connection both H.R. 835 and H.R. 836 have added something new in that they propose the setting aside of total exemptions at any economic level and authorize the legal withholding of up to $20 monthly from the below $200 per month. Twenty dollars needed for food, fuel or other basic essentials may be transferred to such overpriced luxury items as may be unloaded upon them.

Migrants from nonindustrial areas—areas not so commercialized as the District—whether Negro or white are least able to cope with the "hidden persuaders" who oversell them. Moreover when in difficulty with creditors they rarely seek the law where protection might be secured, for they seldom have the knowledge that laws have provided for their protection in such emergencies or they lack necessary funds to employ legal assistance. In some cases they experience timidity and grave fear at the mere mention of the law and other court attendants, more so after creditors have assured such defendants they were the culprits in breaching contracts. A statement of Senator PAUL DOUGLAS last June 25 before the House Judiciary Committee, hearing testimony on civil rights, applies aptly but more broadly: "It is familiar to this committee that as a group, the Negroes in the South are at the bottom of the totem pole economically, socially, and in all respects, and that in only a relatively small number of cases do they individually have the resources to prosecute these suits before the courts."

It is obvious that in our local economic arena the above conclusion as to the effectiveness of the law to the underprivileged and its involvement of a certain segment is as true here in the District as in the South with the notable exception that ten percent of the defendants in the District are white people.

So the Nation's Capital is teaching the poor a new lesson in freedom "that democracy, political or social, is no guarantee of subsistence and is an indifferent substitute for it." That consumer exploitation by creditors, like the plague, has no respect for persons and will spread in all directions unless nipped in the bud.

A glance back over the history of the interpretation and effect of the 58-year-old code reveals that the application of the law has gone far afield. While the consumer has become progressively helpless, easy creditors have gained in both legal and economic strength and their influence currently appears to be spreading horizontally as well as vertically. Complaints from neighboring citizens of the high-handed operation of District of Columbia creditors through quasi-foreign operations in surrounding Maryland, has caused the State Legislature of Annapolis to turn its attention to protective legislation for Maryland citizens who neither live nor work in Washington but who are often sued by creditors acting under District of Columbia laws denying Maryland citizens the full protection their State has provided them. This complaint of quasi-foreign operation was presented to the Senate Subcommittee on the Judiciary which heard testimony on garnishment 2 years ago. With increased economic consolidation of chain stores, business combinations of various sorts, and monopolies tied in with various systems of interstate charge accounts, the economic blight seen here can become a problem for Federal concern.

Thus, it is conceivable that an apparently insignificant piece of legislation such as the District of Columbia Code of 1901 and its two subsequent amendments on attachment and garnishment, could establish a precedent and spread throughout the country as an economic way of life to the total disadvantage of the Nation. That wherein we here in the District complain of an economic system, the operation of which snares indefinitely, as indentured servants, one segment by another, it is conceivable one section of the country can snare another in a kind of sectional bondage.

It is significant here to point out that one businessman testifying before the Senate Subcommittee on Garnishment revealed that his trade association had been informed several years ago that Washington, because of its large employed non-Government Negro population, had been singled out to become a mecca for easy creditors. A brief review of the outcome of some of the cases involving creditors and defendants points up the fact that this territory has been intensely worked for through vertical application of the garnishment law, more and more people are being caught up in the meshwork of creditors. Though we have had described recently in detail the operation of 7 merchants who entered the courts 12,000 times in 1957, there is still the question of who took in the other 36,000 cases. Besides the serious fact that there are these cases against the consumer which have been rising annually there are thousands of unrecorded victims who have suffered silently and individually untold abuses and who under threats of job loss, ignorance of consumer protection, unfulfilled contracts, intimidations of various sorts forked over payments unjustly demanded by merchants.

For the American people, generally, Washington, a pilot project for easy creditors, may have served as merely a testing ground breeding an economic system through intense vertical operation in the city proper and experimenting with horizonal operation in surrounding areas and which in time may spread nationally.

If this prospect appears needlessly alarming, one has but to turn back the dramatic application of the act and its amendments to validate the charge of creeping exploitation which has engulfed the District of Columbia. The interpretation, abuse, and misuse of the law to promote sales substantiate a charge, I believe, John Foster Dulles made before a Senate Foreign Relations Committee, that the test of any measure is not what it says but what it does. It is very evident that under this existing bill much has been done to protect the creditor and to penalize the consumer.

Therefore, we oppose again both H.R. 835 and H.R. 836 for we believe that protection for the consumer if the history of the past has taught anything, will in time work to the advantage of the merchant and to the disadvantage of the consumer.

OPPOSITION TO BILLS H.R. 835 AND H.R. 836

A study by the Washington Board of Trade for the year 1958 reports 38,000 families in the Washington area with salaries in the below $3,000 category. A conservative estimate might place 30,000 of this number of families in the $200 per month bracket, against whom garnishment charges under the exhibiting provisions cannot now technically be preferred. Enactment of either H.R. 835 or H.R. 836 would make all such persons eligible for garnishment or the withholding from their pay of up to $20 per month. The entrance of a vast new market entailing some 30,000 family units would be opened for merchant speculation with the expected proportionate number finding their way to courts for adjudication. Since in all probability major purchases by these people will be luxury or nonessential items, basic needs now met within such limited budgets will be proportionately reduced. So it's conceivable under this regulation that the 45,000 children now reported underfed in Washington may under either of these bills have less food and clothing but more television sets and bicycles and doll buggies.

Second, it is logical to conclude from the above that the expected decrease in existing cases of individual attachments from the above $200 bracket due to limitations provided in measures proposed may be more than offset by the emergence of a new set of cases arising from the below $200 people now technically and officially outside the scope of the garnishment law.

Third, whereas under the existing arrangement through several attachments applied simultaneously, defendants were sometimes forced into personal bankruptcy, under the proposed sliding scale provision of the "Bar Bill" the defendant though suffering less intensely suffers longer. So it's like the man who cuts off the tail of the dog a little at a time. With salesmen operating as they do it's logical to conclude that once snared a worker's income would thereafter be reduced by 10, 20, or 50 percent through tactics described above.

Limitations of attachments to one at a time possibly represent less of a concession to consumers anyway than a referee system for easy creditors, who were increasingly killing the goose that laid the golden egg by descending upon the defendant all at one time. Through this arrangement all could definitely and indefinitely be assured of a secured return on a long term basis. It appears, in short that this establishes "modus vivendi" which is of mutual benefit to easy creditors; stabilizing the garnishment war which sometimes develops.

We acknowledge there are built-in guarantees for the consumer as well as the merchant even under the existing law. The application of the law and the hundreds of thousands of cases heard and prosecuted can only attest to one of two things, either the consumers as a whole were fraudulently disposed people who willfully breached contracts while the collectivity of merchants were honest men, or it reveals that through ignorance of the law the consumer was helpless while the merchant possessed the necessary machinery to exploit fully the provisions of the law. For residents in the District—Negro and white—lacking in a heritage of commercialism, these complex laws can work almost to the exclusive advantage of the creditor. That H.R. 835 or H.R. 836 will offset a repetition of the application of this existing law as it has operated in the last decade is an improbability.

Our association states again, in view of these facts, its support of the Dowdy bill for the District of Columbia. This it requests not for personal or provincial reasons alone, but in humanitarian concern for the people of the United States.

GARNISHMENT: A NATIONAL PROBLEM OF THE FUTURE?

We believe attachments and garnishments represent a growing danger to America not alone for the evidence substantiated by actual cases, but for the developments it portends. Such perversion of legislation for the economic interest of the few is ill befitting the democracy of such a great Nation as the United States and is an antithesis of the spirit of the Founding Fathers. This country was largely founded by poor peoples many of whom were seeking a refuge from debtors prisons. Support of these measures

should be an announcement to the world that our human rights standards predate the colonial period.

For Washington, D.C., the citadel of democracy, the capital of the world, the mecca of foreign guests and residents, a free enterprise system which penalizes as this system has done, establishes a universal reputation that no amount of technical aid nor cultural exchange can eradicate. We have heard complaints of foreign guests and temporary residents being victimized by the operation of a system which the code of 1901 and subsequent amendments, it is believed, gave strength and encouragement.

GARNISHMENT: IMPACT ON COMMUNITY

As long as citizens, merchants, and consumers alike respect this law, officials, charged with executing the law, can act in the best interest of the community at large. But as fair sounding as the original law of 1901 appeared, and though modifications attached thereto in 1944 and 1952 were merely questionable at the time as to whether merchant or consumers or interests of both would be served, we have suddenly reached the point as substantiated by some 48,000 cases in one year which makes clear that all participants in the administration of said law are impotent, or penalized or losers save the easy creditors themselves.

It's true that many of the unwitting victims, in this case Negroes, suffer from poor business practices. It is equally true a few deadbeats would escape apprehension without court's intervention, yet it's probable that if prospective creditors tightened their system of investigation in recognition of the fact that credit will be undertaken at their own risk, the number of such nonpaying debtors might be no greater than is the case under a system which permits such demoralization that an equal number of debtors escape both the arm of the law and the creditor through public disappearance or loss of job. Moreover, creditors possess the machinery for the rating of prospective customers, which if properly used could represent a savings to the community in taxes paid for the numerous persons employed in enforcing the law for creditor benefit.

About 5 years ago my husband employed for 2 hours per day, 4 days per week a cleaning woman who was a widowed mother with two minor children. The $60 per month he paid together with a $35 allotment from her deceased husband's social security constituted her total income. She was initially referred to us by a Government agency seeking to place her where she could in addition to her job qualify for much needed medical care. The arrangement worked out fairly well for all concerned until easy creditors discovered she had increased her income through steady employment. Then there followed harassment of our home and office by the eager-beavers with abusive, violent language to both the office secretary and me, such as I have never before heard. There followed a barrage of harassment of patients who entered the office inquiring if they were, well say Mary Jones, or if they knew her. Finally, my husband was subpenaed to appear in court. After begging off himself and insisting that Mary appear in court herself, he was notified that all money was to be withheld from this widowed mother until her creditors were satisfied. Though she reported that she had already paid $90 on two mattresses, she was charged with owing $90 plus a sizable sum for a set of china which she purchased for her unfurnished room. It was near Christmas when my husband informed me that all assets were to be withheld from this woman by us. My husband's request for me to join in the support of man's inhumanity to man though officially ordered was in violation of my Christian principles and that coming at Christmas time made it worse. Promptly ignoring him I flaunted the courts and brought Mary into the house to assist with minor details as much as her poor health would permit and I paid her cash in return.

I can today admit the violation since the statute of limitations has now expired, I trust. Once the debtor had fulfilled these contracts, the harassment did not cease for these creditors' desires are insatiable. In a relatively short time Mary, who could not think fast was again snared and so were we. This was too much. As they said Mary was over 21 and this is a free country—at least these easy creditors were free to keep Mary endlessly ensnared and free to subject us to endless inconvenience and harassment.

A few months later Mary was seen on the streets dirtier and more ragged than we had known her, looking the part of a derelict. Without doubt she was hardly discharging her duties as a mother. I was informed the children were then in the hands of some welfare agency. Gentlemen, I can no longer participate in a scheme which can take advantage of people as the present one has done.

Though many victims voluntarily negotiate contracts beyond their abilities to fulfill, and though for the most part these individuals are over 21 years of age, the operation of a system which has worked as great a detriment to the well-being of the city's mass population must be immediately terminated.

We believe that neither bills H.R. 835 nor H.R. 836 will act to curtail sufficiently the evil that has descended upon us. When the operation of a law slowly but surely, acutely or chronically destroys one segment of society for the benefit and interest of another the Government must step in. For no society can remain indefinitely half enslaved and half free economically any more than politically so. Government sometimes has to protect the innocent against their own lust less the underprivileged themselves add to economic dilemmas, for as Herbert Spencer noted many years ago, "If men use their liberty in such a way as to surrender their liberty, are they any the less slaves?" "This puts the issue to be sure," as noted by the Christian Century of June 4, 1958, but it does not resolve it. "For in our times," states the Century, "measures advanced by some segments of the community to protect our liberties from surrender are conceived by others as hastening their surrender."

A WORKABLE SOLUTION

For those who doubt the efficacy of an economic system where no garnishment is permitted by law, we have several viable States without it such as Texas, New Jersey, Pennsylvania, Florida, and South Carolina. And many others though permitting garnishment have such high exemption that the law is ineffective, Maryland and California being examples of the latter.

However, we have selected for your attention today a small book entitled "Pathways to the Houston Negro Market" and a reference to a 109 page report by Prof. Henry Allen Bullock, of Texas Southern University, based on the theme that "Economic Equality Is Always a Prelude to Total Equality," published in 1956 and 1957. Professor Bullock's two reports of Negro economic participation in the economy of the South's largest city (725,000) revealed that Negroes accounted for 21.2 percent of the population and that their spending power accounted for 15 percent of the cities purchases totaling $168 million dollars per year.

Though we are informed that city is without the legal props of garnishment to bolster its economy, 53.9 percent of the Negroes own cars, 40 percent own vacuum cleaners, 86.6 percent own refrigerators and 37.6 percent own TV sets.

There are among us here in Washington those who cannot conceive of a well functioning economy without garnishment and having spent my adult life in the District I am not prepared to offer any techniques for its application. However, leadership and assistance from those States without the law should not be difficult to secure. In fact the introduction of the Dowdy bill by a representative of the Lone Star State indicates that State's willingness to cooperate with District residents.

H.R. 4585 or the Foley bill introduced on February 17, 1959, is not discussed in the foregoing, for it came on the eve of the originally scheduled hearing of February 19—too late to be incorporated into the original. However, some of our reactions to H.R. 835 and H.R. 836 hold equally true for the Foley bill, particularly those sections which will be further elaborated upon in this supplement:

Section 1104A, attachment of wages: (a) While a $50 weekly exemption; 10 percent of gross wages per month below 500 and 50 percent above $500, and restriction to one attachment at a time, unquestionably represent an improvement over the written law now the basis of the garnishment system, there are yet some questions of (a) left unanswered in the minds of laymen: "Does judgment debtor here apply to man and wife separately so that where both are employed an attachment upon both could produce 20 percent of that family's budget from two attachments simultaneously issued?"

Second, we ponder the inherent conflicts and consequences of applying (b) which states "it shall be the duty and responsibility of any employer upon whom an attachment is served * * * to withhold and pay over to the judgment creditor, or his legal representative * * * that percentage, of the gross wages payable to the judgment debtor for the pay period or pay periods ending in each calendar month to which the judgment creditor is entitled under the terms of this section until such attachment is wholly satisfied. Moreover, it is pointed out in (b) that "* * * conformity with this subsection shall be a discharge of the liability of the employer to the judgment debtor to the extent of such payments." Turning to (d) obligations of employer are defined in the following "If the employer-garnishee willfully fails to pay to the judgment creditor the percentage prescribed in this section of the wages which become payable to the judgment debtor * * * judgment shall be entered against him for the whole amount of the judgment creditor's judgment and costs, and execution shall be had thereon."

Although the Foley bill provides that judgment against employer-garnishee shall be limited to that period of failure to comply and, although employer-garnishee's failure, if proven not willful, may not have said judgment applied, these provisions for certain protection are not enough to prevent the employer's ridding himself of any such obligations and liabilities by firing the worker at the first opportunity. For as in the latter provision who is to prove willful or unwilful neglect? What will dictate the terms to be applied in determining the difference between premeditated and involuntary oversight? Is it not conceivable that some employer-garnisheers, resisting creditor's legal rights to force him into a partnership, may exploit this willful provision in passive resistance?

While the Foley bill would guarantee the continual operation of the installment system with some modifications distinctly advantageous in the long run to the creditor, he forgot to mention compensation to employers for cost to their budget. Is upholding such a law, whose benefits so narrowly apply charity? Then why should a firm's charity allotment be reduced by contributions to an easy creditor? Or is the sacrifice on the part of the employer considered a civic responsibility for the overall well-being of the community? If the historical opera-

tion of the present system has taught anything, it is that the system and its exploitation, while definitely beneficial to some was highly questionable in its benefits to the majority. History records numerous instances of legal enactments which benefited some and penalized the majority which ultimately led to severe trouble and serious repercussions. Rather than be forced into cooperation as an unincorporated partner with firms whose operations he detests, an employer may simply put his controversial employees in the streets, as an only alternative. However, there may be some employers, who though abiding by the letter of the law, will bypass the expense to their budget, passing along said expense entailed to an already overburdened employee. Who is to protect debtor victims from reduction in pay or added duties or from general intimidation? For are not judgment debtors but paroles whose technical relations to the employer is comparable in some respect to that of criminal paroles? It is a known fact that the parole system has historically led to gross abuse and an inevitable blight upon any democracy. What is to prevent some creditors and employers from entering bargains for the mutual rewards to be derived from such trapped and helpless employees? It is clear the full operation of the Foley Act together with eager beaver salesmen in an already overextended economy could combine to produce a running, endless demand upon bookkeepers as surely as social security deductions.

The failure of the Foley bill to provide compensation for employers may ultimately result in swelling unemployment rolls, employee intimidation greater welfare appropriations for distressed families and for the continual operation of a fringe merchant system. It's difficult to ascertain the abuses inherent in the Foley bill as it is in H.R. 835 and H.R. 836. Every layman, who read the series of articles which appeared in the local press recently, is aware that the consumer has increasingly paid dearly under the present District law in spite of the fact that the word of that law as originally written appeared tightly enough drawn to prevent such abuse. Moreover, the statistical figures of attachment cases and their consequences point up the threat of this city's being driven to economic destruction. The greatest significance in seeking to estimate Mr. FOLEY'S bill "is not what it says but what it's going to do that matters."

Again we urge that the Foley bill be written off as representing but a continuation of successive relaxation of terms begun in 1944 that the economic ball may be kept in the air; that as many fringe operators may be protected against bankruptcy which allows for continual policies of unfair financing, padded prices, unfulfilled guarantees and contracts. There are no wages without the employer—yet the employer is unprotected.

The whole system of spiraling installment purchases is a process that can't go on indefinitely for some where ability to pay will overtake the repayment of debts. For what is actually true and what has brought some of us here is the realization that 45,000 hungry children in this town attest to the fact that residents of the District in the lower income brackets have over-extended themselves on credit buying and there is need for severe retrenchment or consumers will be paying for gadgets, and Government agencies feeding families while easy creditors grow fat. If Mr. FOLEY'S bill were designed to restore confidence, we wish to remind supporters of that bill of what Senator JOSEPH C. O'MAHONEY, the first chairman of the Joint Senate and House Economic Committee, said last year "confidence and credit are not synonymous. * * * A credit system which is extended to the breaking point, by no down payments and eons in which to pay, will destroy confidence and ruin sound government." Witness the fact that installment debt has risen from $9 billion in 1948 to $34 billion by December of 1957 and together with noninstallment debt totaled $42.5 billion at end of first quarter of 1958.

Credit based on steady employment and payrolls rather than tangible collateral may prove to be built on quicksand, Senator O'MAHONEY maintained. Moreover, the Senator added, the installment purchasing system has operated most disastrously among those at the bottom of the economic scale who are most likely to be laid off when jobs get scarce. They are the families least likely to have financial reserves.

With finance companies freely assuming the retailers debt thus relieving the latter from the responsibility for soundness of sale, there is created an open invitation for irresponsible, fast talking fly-by-night dealers. Sound Government is at the mercy of irresponsible super-salesmen and excesses of desires for the luxuries of modern living, the Senator concluded.

Galbraith in "Affluent Society" states, we have reached the point in our history where the drive for sales, far from solving or meeting the needs of peoples, actually create problems for the whole community. Moreover, he adds, that installment credit is a potential source of great instability in the economy for consumer debt has been a contributing factor in serious recessions, social unbalance and inflation.

Any bill proposing any form of garnishment yet failing to address itself to the substance of the contract or conditions of the sale thereof will be so restricted in its interpretation and guarantees for the protection of the consumer that continued abuse may be expected.

This lengthy discourse has been projected in detail that our opposition to H.R. 835, H.R. 836, and H.R. 4585 may be fully understood and received, and that it may serve to encourage the committee to give its full support to the Dowdy bill H.R. 2329 for the reasons in summary that—

(1) The complexities of garnishment bills will continue to demand the interpretation and enforcement of the courts.

(2) Employer resistence may place jobs in jeopardy or reduce workers to a helpless state of perpetual exploitation and intimidation.

(3) The garnishment measures provide legal machinery for debt collection regardless of the conditions of sale.

(4) Continuance of system of garnishment may offer encouragement for further expansion of abuses not covered by garnishment relief.

(5) Forty-five thousand underfed children attest to the fact that the District of Columbia credit economy has overstretched itself and therefore is in dire need of retrenchment.

(6) The changeover from current short-term garnishments to longterm attachments will simply prolong the suffering.

(7) Loss of creditor's income under proposed garnishment modification might be made up in unfulfilled guarantees, unlimited interest rates, fictitious prices, and dubious conditions of sale.

(8) The garnishment diseases like other diseases, if not quarantined and eradicated today, can become a nationwide epidemic tomorrow.

In conclusion the Rock Creek East Neighborhood League, Inc., a civic association, wishes to leave with the committee two significant quotes:

Justice Nathan L. Jacobs, of the New Jersey Supreme Court, attacking recently a centuries-old doctrine, declared that, "When a legal principle no longer serves justice, it should be discarded."

Mr. John Foster Dulles, Secretary of State, appearing a few years ago before the Senate Foreign Relations Committee, was reported saying, "It's not how a measure reads but how it works."

ROCK CREEK EAST NEIGHBORHOOD LEAGUE, INC.,
MRS. EDWARD C. MAZIQUE,
Chairman, Legislative Committee.
Mr. ELBERT C. ROBINSON,
President.

A SENSIBLE AND HONEST BUDGET

Mr. HUMPHREY. Mr. President, in recent weeks one of the most spirited topics of debate and discussion here in Congress has centered on the budget for fiscal 1960. It seems that almost everyone has a decided opinion on the subject. Some claim that the administration has presented a balanced budget. Others argue that it has done no such thing. Some charge that the programs being pushed in Congress will throw the budget out of balance. Counter arguments are made that the Congress is in fact cutting back on spending.

Although statements, charges, and arguments have been flying thick and fast, I am afraid that the result to date has been only more confusion rather than clarification.

One reason for such confusion concerning the budget—both in the public mind and right here in Congress itself—is the hodgepodge fashion in which the Federal budget is presented. Anyone who has examined the budget report knows what I mean. It is a formidable physical task in itself just to wade through its thousand pages. But it is the bewildering fashion in which the budget is reported which really leads to confusion. Unless a person is a certified public accountant, it is about as difficult to make sense out of the budget report as it is to beat the New York Yankees in a world series.

To intelligently discuss the Federal budget, it is necessary first of all that it be presented in such a form that a reasonably intelligent and dexterous person can understand it.

A first step in this direction would be for the Federal Government to adopt a capital budget. By this I simply mean that the budget should make a clear distinction between operating expenditures and capital outlays.

Every businessman is familiar with a capital budget. Each year in addition to preparing a profit and loss statement, a businessman prepares a balance sheet which lists on one side his assets and on the other side his liabilities. A clear distinction is made between current operating expenditures, such as salaries, and capital outlays for items such as plants and equipment. I think that it is about time, Mr. President, that we put the Federal Government in its bookkeeping methods on a businesslike basis also. It is about time that the Government's budget clearly distinguish expenditures and investments.

I have said that if American Telephone & Telegraph Co. maintained a budget like that of the Federal Government, we would still be communicating in this country by smoke signals.

The time is long overdue that we lift the fog as to Government spending by adopting a modern day capital budget.

Today I am introducing a bill which would provide for such a budget. This is not a new proposal. It is a full 10 years since the first Hoover Commission recommended adoption of a capital budget. I quote from the Commission report as follows:

> There is, at present, constant confusion in Federal budgeting and accounting because current expenditures and capital outlays are intermingled. These two types of expenditures are essentially different in character, and should, therefore, be shown separately under each major function or activity in the budget. * * *
>
> We recommend that the budget estimates of all operating departments and agencies of the Government should be divided into two primary categories—current operating expenditures and capital outlays.

Since this recommendation by the Hoover Commission in 1949, several bills have been introduced directing the President to include a capital budget in the budget report. I have introduced such bills myself, as has the distinguished senior Senator from Oregon [Mr. MORSE] and others.

I am pleased to note that the Joint Economic Committee in its recent report for 1959 suggests that the Federal Government adopt a capital budget. The report states:

> We should also realize that a considerable amount of our national expenditures in any given year is for direct and indirect capital investments. In the Federal Government, unlike the sound accounting practices of private business, these are charged to operating expenses. Apparent deficits are, therefore, frequently not deficits at all. The adoption of sound budget principles which would separate caiptal outlays from operating charges is badly needed.

Yes, Mr. President, the adoption of sound budget principles is indeed badly needed. It is time that the Federal budget clearly distinguish between current operating expenses of the Government and capital outlays of the Government which contribute to the Nation's wealth and which in many cases are reimbursed in full with interest.

The only way by which the average intelligent Member of Congress or any other American can really make sense out of the Federal budget will be to ensure that those items which truly represent current expenditures are separated out clearly from items which genuinely represent investments upon which there will be either returns in principal and interest, or else productive public undertakings which represent real and potential income to the American public.

There is no sense in continuing to lump expenditures for old-age assistance, for example, which is a true current expenditure, with investments in FHA home mortgages, or loans to farmers and small-business men, which are heavily secured with collateral. It is time that we stopped lumping expenditures for paperclips with investments in public power projects.

A good example of this confusion are the reports on the area redevelopment bill which we passed on Monday of this week. One of the Nation's leading papers, in a front-page story headed "Senate Approves $389 Million in Aid to Jobless Areas," stated: "The Senate vote was a jolt to the administration's plan for a budget balanced at about $77 billion."

Now I am not blaming this fine newspaper for such a report, misleading as it is. Under our archaic budget reporting system the story is understandable. If we had an up-to-date capital budget system, however, the public would not have been left with the false impression that this bill was costing the taxpayers $389 million. The public would have been correctly informed that $300 million of this $389 million figure is in loans to be repaid to the Government in full with interest. Surely a distinction should be made between such loan programs and expenditures for current operations of the Government or for grants which must come out of tax revenue.

When a company makes a loan, this is considered an investment. It is not put down as an operating expenditure. When the Government makes loans, however, such as through the Small Business Administration, the Development Loan Fund, and the Rural Electrification Administration, such investments are lumped together with current operating expenditures of the Government. No distinction is made. This is not only bad bookkeeping, but it is also misleading the citizenry.

Last year in the emergency housing bill we authorized the Federal National Mortgage Association to use $1 billion with which to purchase home mortgages. Immediately the cry was raised that the Congress was spending a billion dollars. No mention was made of the fact that the Government was gaining a billion dollars in assets or that this billion dollars would be paid in full with interest. No, as far as the public knew, from newspaper reports and the charges of reckless spending, the Congress had simply spent a billion dollars for which there was nothing to show and which the taxpayers would have to pay. This, of course, is simply not the case. A capital budget would have shown in a true light that the Government in this case invested $1 billion, and gained $1 billion in assets.

A capital budget is used by business firms and by most all of our first-class cities and many States. It should also be noted that many countries such as England and Sweden use a capital budget. In these countries current operating expenses of the government and outlays for military equipment and relief measures are kept distinct and separate from capital outlays. Capital outlays, in turn, are broken down into two parts: First, outlays for nonrevenue producing public works such as public buildings, parks and monuments, and second, outlays which are revenue producing such as loan programs and power works projects.

The budget in these countries is considered balanced when tax revenues are sufficient to cover all regular operating expenses, interest payments on the public debt, and amortization of nonrevenue producing capital outlays. Self-liquidating capital outlays are excluded from the regular budget.

The U.S. News & World Report in an article in its January 16 issue entitled "U.S. Budget: How To Turn a Deficit Into a Surplus," estimates that with a capital budget we would have a surplus of $9 billion in fiscal 1960.

This is not to say that by simply juggling the account books we would thereby save $9 billion next year. The Government would be spending the same amount under the present budget system as under a capital budget accounting system, and revenues would be the same. But what a capital budget would do is give us a more realistic appraisal of Government spending and investments and we would not be lumping outright spending with revenue producing investments.

If adoption of a capital budget did nothing else, I am confident that it would at least help to dismiss the erroneous impression that Government expenditures, unlike those of private firms, and regardless of their purpose, offer no permanent achievements.

We have been lulled and propagandized into believing that there is basically something wrong and unproductive about Government spending.

When one of our great American corporations announces that it is expanding its capitalization and operating capacity through issuance of securities, we consider it an example of forward-looking business practice, but if the Federal Government announces a new program of investment in small business loans or in public works, the inevitable cry goes up of "spending."

I believe that in discussing government spending we could do with less slogans and less namecalling and engage instead in a little more rational discussion of fiscal matters. Adoption of a capital budget would, at least, be a step in this direction.

In conclusion, Mr. President, may I say that I hope this Congress will seriously consider adopting a capital budget. It was needed 10 years ago when recommended in the first Hoover Commission report. The need is greater today.

I ask unanimous consent that the article on the capital budget to which I have made reference, from U.S. News & World Report, be inserted at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U.S. BUDGET: HOW TO TURN A DEFICIT INTO A SURPLUS

Now there's a new angle on how to rescue the Federal budget: Just change the bookkeeping.

One plan: Omit Federal corporations from the budget. Another: Set up a separate budget for loans and capital outlays.

These ideas, urged by some, still draw objections from many.

This thought is dawning on some Members of Congress who have ideas for new programs that cost money: Maybe the Government's finances are not in such bad shape after all.

Back of that thought are two ideas. One is that the Government might return to the method of accounting used before 1947. Second is the idea that this country might follow budget practices of Great Britain, many other countries, and some of the States.

Idea No. 1. The first thought calls for separating financing and operating costs of Government corporations from the operating budget. This method of accounting was fol-

lowed until 1947. Under it, loans made by the Export-Import Bank, for example, or the Small Business Administration, or mortgages purchased by the Federal National Mortgage Association would be treated as assets, not as current spending.

Apply idea No. 1 to President Eisenhower's budget for the 1960 fiscal year, and what now is projected as a budget exactly in balance would become a budget with about a $6 billion surplus. The budget, in other words, would be better than balanced. Assets under this type of budget accounting would become expenditures only if sold at a loss.

That type of accounting was changed in 1947 because Congress wanted to get a firmer hold on finances of Government corporations, particularly the Reconstruction Finance Corporation, which was then making vast loans to all kinds of enterprises.

Idea No. 2. A second idea calls for setting up a separate capital budget. A form of this type of budget is used in Great Britain, where financial methods are regarded as conservative. In Britain there are two budgets, referred to as the budget above the line and the budget below the line. Operating expenses of the Government, generally speaking, are above the line and the goal is to balance those expenses with revenue. Capital expenditures of Government in many categories are carried below the line and are not necessarily balanced in any one year.

Apply a rough approximation of the British budget practice to the U.S. budget and you would have a surplus of about $9 billion in the operating budget for the 1960 fiscal year.

The two ideas, being eyed by some in Congress, suggest that there is more than one way to make a budget that is balanced.

ARE LOANS EXPENSES?

Some Members of Congress note this: If the Government buys a mortgage that helps finance construction of a house, the cost of the mortgage is listed as a current expenditure. If an individual or a bank buys a mortgage, it is listed as an earning asset. In one case the money is treated as being spent, in the other case the money is invested.

Much the same is true of the billions that go to farmers as price-support loans. When these loans are taken over by the Commodity Credit Corporation, they are reported as Government expenditures. Actually, some portions of these loans return to the Government when the crops are sold. The returns then are reported as a credit to CCC. Supporters of a capital budget propose to separate crop loans from the operating budget.

The separation also would apply to activities of the Federal National Mortgage Association, the Export-Import Bank, the Development Loan Fund, the Small Business Administration, the Rural Electrification Administration, and other Government agencies engaged in lending. The capital budget also would include Government outlays for dams and irrigation projects, atomic-energy installations, and perhaps Government buildings.

With these expenses reported in a separate budget, the day-to-day costs of operating the Government would drop sharply and the operating budget would produce a surplus.

THE OPPOSING VIEW

Those Congressmen who look with favor on a double budget, however, are sure to run into stiff opposition. Powerful groups in House and Senate believe that Congress even now does not have enough control over Government spending, fear that a capital budget would weaken that control still more.

Main objections to a capital budget are these:

However you account for money invested in assets, the fact remains that money flows out of the Treasury. It's preferable to treat this outflow as a current expenditure because the money actually is spent.

The tendency under a capital budget will be to borrow money to finance such things as public works and foreign loans. This tendency, in the opinion of those who oppose a capital budget, would add further to debt problems that already are troublesome enough.

Capital spending may be overemphasized because of pressures from various groups and areas for special benefits, such as river developments and urban-renewal projects. Opponents of a capital budget point out that these pressures would increase if the cost of a project were not reported as a current outlay.

Finally, a capital budget is said by critics to mislead officials and the public about the real state of Government spending. As a result, they argue that excessive spending may be encouraged and taxes too often reduced below adequate levels. This practice would be dangerous in times of inflation.

PROPONENTS' REBUTTAL

Supporters of a capital budget begin where the critics leave off. They make these arguments:

The true costs of Government are distorted by the budget as now reported. Government spending for such things as the Tennessee Valley Authority or the rural electrification program should be separated from the operating costs of Government. Projects such as these eventually produce revenue.

The budget that should be balanced is the budget that covers only the present and continuing costs of operating the Government.

Borrowing for such things as public housing or developing the Colorado River is held to be financially sound because the Governments gets assets for the money spent. However, critics point out that some assets are not earning assets. Their amortization would appear as spending in the operating budget.

Since Government spending for public improvements is not a waste but a purchase of assets, proponents say, a capital budget gives the public a clearer picture of what the Government is doing to add to productive capacity.

It is at this point that critics of a capital budget take sharp issue. They contend that spending by the Government already is ruinously high, that adoption of a capital budget would simply tend to encourage reckless spending.

CASES IN POINT

However, Congressmen who look with sympathy on a new type of budget can cite some present practices to bolster their arguments.

The Federal-highway program is carried on outside the regular budget. Money for new superhighways comes out of a separate fund and does not appear in the ordinary spending accounts of the Treasury. At the same time, the funds to support that spending also are treated separately. Receipts from gasoline taxes and some other levies are earmarked for the highway fund.

The Government's huge social security system, covering millions of people for old-age pensions and State unemployment insurance, also is outside the budget. Money for these programs, raised through payroll taxes, is placed in a special trust fund administered by the Treasury but not regarded as a part of ordinary Government revenues. Payments to pensioners or the unemployed under State programs are not reported as budget outlays.

Both the highway program and the social security program have their own financial bases, and supporters of a capital budget argue that there is no reason why the same system could not apply to other programs. Power dams and rural-electrification projects, for example, might be financed through revenues to be received in the future.

In any event, many Congressmen, favoring projects that carry rather high price tags, are willing to take a new look at the way the Government accounts for its income and outgo.

Mr. HUMPHREY. I also ask unanimous consent that the text of the bill which I have introduced be printed in the RECORD as a part of my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1560) to provide for the adoption of a capital budget by the Federal Government, introduced by Mr. HUMPHREY, was received, read twice by its title, referred to the Committee on Government Operations, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. This Act may be cited as the "Capital Budget Act of 1959."

SEC. 2. In transmitting to Congress the estimates called for in section 201 of the Budget and Accounting Act, 1921, as amended, the President shall separate operating expenditures from capital expenditures, using such definitions and such detail as he deems appropriate.

Mr. MORSE. Mr. President, the comments which the Senator from Minnesota has made are music to my ears. I am sure that the Senator is aware of the fact that I have a capital budget bill pending. I have made three speeches thus far in this session in support of a capital budget. I am delighted to have the Senator from Minnesota join me. I wonder whether he would give consideration to the text of my bill and look over his bill, and see whether we liberals can get together for a change and join forces on such a bill. Perhaps the Senator might find it to our mutual advantage to become a cosponsor of my bill; or, on the other hand, I might become a cosponsor of his bill. After all, it is the objective we have in mind which is important.

I have been somewhat jocular in my remarks up to this point. Seriously now I wish to say that I am delighted with the statement the Senator from Minnesota has made about the desirability of a capital budget.

It is probably a good thing to have both bills pending. It ought to give double emphasis to the proposal. The committee can compare the phraseology of each bill and decide which one it should consider and recommend, or modify both of them, or consolidate them into one bill. The important thing is that the Senator from Minnesota has added his great influence to the objective of setting up a capital budget, which, after all, is the goal we have in mind. I thank the Senator very much for his comments.

Mr. HUMPHREY. I say most respectfully that I knew the Senator had addressed himself to a capital budget proposal. I did not know, however, that he had introduced a bill. I have introduced bills similar to the one introduced today in every Congress for 10 years. I shall continue to do so until some kind of capital budget proposal is adopted.

I first introduced my bill in April 1949. Since we will not be in session the early part of April 1959, I thought that I should introduce it in the latter part of March 1959. I shall be more than happy to look at the Senator's bill. From what I have gathered from listening to his speeches, I take it that his bill is not only a capital budget bill, but also includes what might be called a developmental budget.

Mr. MORSE. That is correct.

Mr. HUMPHREY. That goes a little further than the proposal I have offered. Be that as it may, I am delighted to become an advocate of the Morse-Humphrey capital budget bill. All I can say is that if Congress does not want to take my advice, I hope it will take the advice of the Senator from Oregon, because the Senator's advice on this subject is sound and constructive.

I believe a capital budget, plus a developmental budget, is very much to the good and very much to be desired and would do a great deal to relieve many of the problems we have been confronted with this afternoon, namely those in connection with unemployment.

I shall look at the Senator's bill. Perhaps after the recess we can join in the introduction of a new bill; or I can associate myself with the Senator from Oregon, and we can push together, working in harness toward the adoption of our proposal.

Mr. MORSE. All we are asking is that the Government follow the advice of outstanding industrialists and business leaders. That is all we are presenting to the Senate in our bills and in the speeches in support of the bills. That has been the purpose of the recommendations since 1947 when I first introduced a capital budget bill in the Senate. That has been the advice of the outstanding industrial leaders of the Nation.

PROPOSED LEGISLATION TO IMPROVE MINING INDUSTRY MINERALS POLICY

Mr. ALLOTT. Mr. President, probably no industry vital to the national defense is in such a depressed condition as the mining industry. It would serve no purpose, nor could it be done accurately, to try and place the blame for this upon any one group of people or upon any one branch of the Government. The fact remains that an industry which must remain healthy and must remain active, has been going steadily down hill. The problem is larger than just how to continue extracting ore from the ground. It includes also the need to retain a wealth of know-how and competent workmen in the mining industry, and also the location and utilization of adequate reserves.

I am, therefore, introducing today three bills, which I shall discuss separately, not merely to help this segment of our economy, but to preserve for the United States an industry which must be kept healthy for the national welfare of our country. I have earlier sponsored legislation of interest specifically to the coal, beryl, chromite, columbium-tantalum, and fluorspar industries.

Mr. President, I send to the desk for appropriate reference a bill to establish a national mining minerals policy, and ask unanimous consent that it be printed in full in the RECORD upon the conclusion of my remarks on this subject, and also that it be held at the desk through March 30, so that any of my colleagues who wish to do so may join in sponsoring it.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ALLOTT. Mr. President, it came to my attention shortly after beginning my services with the Committee on Interior and Insular Affairs that there were no laws which specifically placed responsibility for the economic health of the mining industry within the purview of the Interior Department. In the endless months of consideration of various mining legislation in which the Senator from Colorado has participated in the past 4 years, one fact has stood out above all others. That is that the Federal Government has no policy with respect to its mining industry. Is the policy of the Federal Government, for example, to keep the mining industry at its highest level of productivity? And if so, with tariffs, or quotas, or subsidies? The present laws obviously deny the existence of any such policy. On the other hand, is it the policy of the Federal Government to permit, through trade agreements, or otherwise, our minerals industry to subsist on a mere crumb of such minerals as may be left from competition with cheap labor countries abroad? Surely in the minds of every rational man the answer must also be "no." Yet no one can deny that, wholly aside from the possibility of nuclear warfare, Russia could effectively grind the industrial production of this country to a slow death in short order, unless we have an economically healthy minerals industry. Such an industry must have three main qualities:

First, it must have sufficient workmen skilled in mining production to produce a substantial part of the minerals we need for our development.

Second, it must be profitable enough so that the mines we now have will not be lost through abandonment and neglect. It must be healthy enough to attract capital to keep it in this condition; and

Thirdly, we must maintain and expand our mineral reserves to protect ourselves against the events of any national emergency. I should like to point out here, lest anyone believe I am simply making "scare-talk," that with all the concern about the results to civilization from nuclear warfare, there has been too little discussion about the present submarine capability of Russia. Even short of an all-out nuclear war, our imports of strategic materials, could be brought to a halt.

Many of us believe that keeping the mineral industry in healthy condition is possible if we announce to the world that we do have a policy, a definite policy, with respect to the soundness and stability of our mining industry. It is well known that a large segment of the people object to subsidies. Equally well known are objections to quotas and tariffs, the three traditional methods used to protect a nation's industry from the raw materials and products of cheap labor. Another, and entirely different way in which we may do this is to adopt, as my bill proposes, a definite national policy of support for this industry. By doing so, we could take a great step toward the achievement of international agreements concerning production without resorting to any of the three foregoing methods. This would protect and make healthy our own industry and at the same time protect foreign countries from overproduction by underpaid labor of cheap raw materials, which undercut the market of our American metals industry.

Mr. President, it is my purpose in introducing this bill to do the following:

First. Initiate the development of a Federal policy toward minerals—telling the world that it is our intention to proceed with such plans as will make possible its economically sound and stable development.

Second. To provide for the orderly development of mineral resources and reserves for industrial and security needs.

Third. To encourage mining, minerals and metallurgical development and to provide for the more intelligent use of our mineral resources.

Fourth. To place with the Secretary of the Interior the responsibility for carrying out the broad plans of policy outlined in this act, and the responsibility to report from time to time to the Congress on the state of the minerals industry, together with the necessary recommendations to achieve the aims of this act.

It is my hope that this session of Congress will give favorable consideration to this bill as a basic point of departure from which we may build our future mining and minerals program and to provide its direction.

The attainment and execution of the above purposes will have a global effect. Other nations, knowing our our national policy, may thus develop their own resources in a more orderly fashion resulting in a greater prosperity and a healthier condition for their own national economies.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1537) to establish a National Mining and Minerals Policy, introduced by Mr. ALLOTT, was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Mining and Minerals Policy Act of 1959."

SEC. 2. The Congress declares that it is the continuing policy of the Federal Government in the national interest to foster and encourage (1) the development of an economically sound and stable domestic mining and minerals industry, (2) the orderly development of domestic mineral resources and reserves necessary to assure satisfaction of industrial and security needs, and (3) mining, mineral, and metallurgical research to promote the wise and efficient use of our

mineral resources. It shall be the responsibility of the Secretary of the Interior to carry out this policy in such programs as may be authorized by law other than this Act. For this purpose the Secretary of the Interior shall include in his annual report to the Congress a report on the state of the domestic mining and minerals industry, including a statement of the trend in utilization and depletion of these resources, together with such recommendations for legislative programs as may be necessary to implement the policy of this Act.

LEAD AND ZINC

Mr. ALLOTT. Mr. President, the lead-zinc producing industry remains in serious trouble. Most of the smaller operators are closed down and most larger firms are losing money continuously.

It seems possible, from everything I can learn, that the present difficult situation of the domestic lead and zinc producers will improve over the next year. The import quotas imposed by the President have not, as yet, had the effect that we had hoped, but several people, who are intimately connected with the domestic lead and zinc industry, have indicated that the outlook is encouraging for the next year. Certainly no domestic miner can make an honest living with the present prices of 11½ cents for lead and 11 cents for zinc. Consequently, I hope that this Congress will take the necessary steps to improve the situation if the price does not begin to move upward, in the very near future.

According to the Daily Metal Reporter for Saturday, March 7, the long-range lead and zinc outlook is encouraging. That paper quotes a preview of the 1958 annual report of the Bunker Hill Co., as follows:

> It is heartening to note that consumption of lead and zinc in Europe has greatly increased during the past few years and now exceeds that of the United States. (It continues to grow at a faster rate than in this country and yet the per capita consumption is still below our own.) * * * This indicates that within a few years increased European demand alone could absorb the current excess production of the world. Meanwhile, the necessity for protecting the domestic industry is obvious.

Mr. President, the lead-zinc industry first applied to the Tariff Commission for relief from imports on May 10, 1950. This was prior to the enactment of the escape-clause provisions. Relief was denied.

Again, on September 14, 1953, the industry applied to the Tariff Commission for relief under section 7 of the Reciprocal Trade Agreements Act. On May 21, 1954, the Commission unanimously found injury and recommended the maximum increase in duties. On August 20, 1954, because of strained international conditions, the President declined to approve that recommendation and instead initiated a program of defense stockpiling and subsequently a barter program. The barter program ended in May of 1957. The stockpiling terminated in late 1957.

Again, on September 27, 1957, the lead-zinc industry returned to the Tariff Commission, pleading for relief. In April 1958, the Tariff Commission unanimously found injury. Half of the Commissioners recommended the maximum duties. The other half of the Commission recommended the maximum duties and additionally the imposition of quotas based on 50 percent of the imports during the preceeding 5 years. While the Congress considered legislation recommended by the administration, the President suspended consideration of the Tariff Commission recommendations. Following a failure of Congress to act on that legislation, the President, on September 22, 1958, imposed quotas on lead and zinc imports based on 80 percent of the imports during an earlier 5-year base period.

Mr. President, in 1957 I was a sponsor and active supporter of S. 2376, submitted by Secretary Seaton, which would have established a graduated tariff designed to stablize the price of lead and zinc at about 17 cents per pound for lead and 14½ cents per pound for zinc. This was a companion measure to a House bill. Unfortunately, the Ways and Means Committee did not report out that bill. Because of the nature of that legislation, we could not even consider it here in the Senate, until after the other body acted on it.

Again, in 1958, I sponsored and worked hard, along with a number of other Senators, including the distinguished Chairman of our Committee, the Senator from Montana [Mr. MURRAY], and my good friends Senators BIBLE, CHURCH, DWORSHAK, and GOLDWATER, among many others, to get congressional approval of another bill submitted by Secretary Seaton, S. 4036. The Senate passed that bill by a vote of 70 to 12 on July 11, 1958. That bill would have authorized a program of production payments designed to stablize the domestic production of 355 thousand tons of lead at 15½ cents a pound and 550 thousand tons of zinc at 13½ cents a pound. The bill, as it passed the Senate, also included a second title, generally referred to as the "Allott small mines formula." That second bill would have given a slightly higher price of 17 cents per pound for lead and 14½ cents per pound for zinc, up to 100 tons per quarter, per producer. There were numerous indications that this part of the bill would have been of substantial assistance to our small lead-zinc producers.

S. 4036 also provided assistance to the tungsten, fluorspar and copper producers. Unfortunately, as my colleagues will recall, the other body declined to approve that measure when it came before them in the closing days of the 85th Congress.

As a result, our lead-zinc miners, who had first applied for relief from imports under section 7 of the Reciprocal Trade Agreements Act in 1954, for whom the Tariff Commission had twice recommended quota and tariff relief, reached a point where their backs were against the wall, where everyone recognized the injury from imports and where the various Federal agencies involved, including Congress, had passed the buck for 4 years without providing any relief. Thereafter, the President in September of last year, by Executive order under the authority of the Reciprocal Trade Agreements Act, imposed quotas on the importation of lead and zinc on a permanent basis. The quotas are based on 80 percent of the lead-zinc imports during a base period of 1951–57.

Immediately following that action, the prices of lead and zinc moved up significantly, but because of the extremely large reserves that had been collecting in this country over the last few years, the market has not, to this date, firmed up to anything like a realistic price level. There remains some question whether the 80-percent quota is adequate, but there is also some indication that the lead-zinc market will move upward. Our small lead-zinc miners, particularly, however, are still in trouble. In fact most of them are closed down. It seems to me that some immediate and temporary relief for our small lead-zinc miners is required. I, therefore, introduce for appropriate reference a bill to implement the Allott formula, which, during the last Congress was title 2 of S. 4036. This bill would provide a 1 year program of production payments on the very limited basis of 500 tons of lead and zinc per quarter from any one producer. It would authorize a payment to give lead and zinc producers the equivalent of a market price of 16 cents per pound of lead and 13½ cents per pound in the case of zinc on this very limited amount. Last year I had an official estimate that the maximum cost of the formula for lead and zinc would have been approximately $3.8 million. I believe the cost of this bill would be roughly of the same magnitude.

Mr. President, I ask unanimous consent that a table showing the sources of our domestic lead-zinc production be printed at this point in the RECORD. This table is taken from the Tariff Commission report on lead-zinc of April 1958.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE 32.—*Lead plus zinc: Mine production in the United States, by mines classified by size of output, 1956* [1]

Size of mine (in terms of short tons of recoverable lead plus zinc produced during year)	Mines		Production of recoverable lead plus zinc	
	Number	Percent of total number	Short tons	Percent of total production
Up to 499	557	80.0	27,248	3.0
500 to 999	27	3.9	18,750	2.1
1,000 to 1,999	29	4.2	41,984	4.7
2,000 to 2,999	24	3.4	61,544	6.9
3,000 to 3,999	13	1.9	46,607	5.2
4,000 to 4,999	9	1.3	41,901	4.7
5,000 and over	37	5.3	657,132	73.4
Total, all sizes	696	100.0	895,166	100.0

[1] This analysis includes all mines in the United States that produced any recoverable lead or zinc, regardless of their industry classification: hence, some production is included from mines producing ores valued chiefly for their content of metals other than lead plus zinc.

Source: Compiled from official statistics of the U.S. Bureau of Mines.

Mr. ALLOTT. Mr. President, I invite attention to the fact that this particular table, which is numbered table 32, shows that 557 of the mines in the United States, or 80 percent of the total number of mines, produce less than 500 tons of ore.

It is interesting to note in this table that in 1956 there were 696 lead-zinc mines in this country. Five hundred and fifty-seven or 80 percent of them produced only 3 percent of the total production. At the other extreme, 37 mines, or 5.3 percent of them, produced the 73.4 percent of the total lead-zinc production in this country. The production payments authorized by the bill I now introduce are designed primarily to assist the 90 percent of our lead-zinc producers who produced in 1956 approximately 16 percent of the total 900,000 short tons of lead and zinc. Of course, these payments would not be restricted to these small producers, but would be of particular importance to them. On the other hand, these payments would apply to such a small percentage of the production of this country that the effect on the domestic price, the world market price, and accordingly on the economies of our neighbors, would not be significant.

Although most of the small mines are closed, the price level provided in my bill is approximately the same which produced this industry structure.

Mr. President, if the assumption that the lead-zinc market will improve in the next year or so is incorrect, I shall be the first to admit it, as I do not profess to be a soothsayer. On the other hand, in view of the report of the Bunker Hill Co. and others, the outlook is encouraging. It seems to me that the Federal Government should give the quotas imposed by the Executive order a chance to operate, before any drastic action is taken.

In this regard, another approach to solving the lead-zinc problem will be submitted in the near future by Senator MURRAY and others—a stabilization plan for lead and zinc designed along the lines of the Sugar Act and including a directive to utilize the barter authority so far as possible. Where an extensive Government program is required, the Sugar Act approach has much to commend it. As a matter of fact, I utilized the same approach in my own S. 1285, to stabilize the fluorspar market. I plan to cosponsor that legislation. The barter provisions of that bill will probably be needed whatever approach is taken by Congress.

However, I honestly believe that unless hearings indicate that there is no possibility for the lead-zinc picture to improve, we should give the present quota program a full trial with only this limited and temporary program that I am offering to help our small miners over the very tough situation they are presently facing. On the entire mining program, I have an open mind and will give serious and thoughtful consideration to any and all proposals to stabilize the mining economy. But, I must remain true to my overriding belief that the best program we can enact is the one that will do the job with the least possible interference in the normal activities of the people and firms involved. The bill I have introduced meets that criteria.

Mr. President, I ask unanimous consent that the bill be printed in full in the RECORD, and that it remain at the desk until March 30.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD, and will lie on the desk, as requested by the Senator from Colorado.

The bill (S. 1538) to stabilize production of lead and zinc from domestic mines, introduced by Mr. ALLOTT, was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That for the purpose of this Act, the term—

(1) "Secretary" means the Secretary of the Interior;

(2) "Producer" means any individual, partnership, corporation, or other legal entity engaged in producing ores or concentrates from domestic mines and in selling the material produced in normal commercial channels;

(3) "Sale" means a bona fide transfer for value of ores and concentrates from a producer to a processing plant;

(4) "Domestic mine" means any single operating unit producing ores from properties located within the United States, its Territories, or possessions, and operating in one State or mining district;

(5) "Newly mined" means domestic material processed into concentrates or severed from the land subsequent to the effective date of this Act, but shall not include material recovered from mine dumps, mill tailings, or from smelter slags and residues derived from material mined prior to such effective date; and

(6) "Quarter" means the calendar periods commencing on the first day of the months of January, April, July, and October.

SEC. 2 (a) The Secretary is authorized and directed to make stabilization payments to producers of ores or concentrates of lead or zinc produced from domestic mines, as provided in this Act; but no such payment on the recoverable content of any such ores or concentrates shall exceed 4½ cents per pound in the case of lead, or 2½ cents per pound in the case of zinc.

(b) Such payments shall be made to any producer upon presentation of evidence satisfactory to the Secretary of a sale by such producer of newly-mined ores or concentrates of lead or zinc at a time when the market price of the material produced therefrom was (1) less than 16 cents per pound, New York, New York, in the case of common lead, or (2) less than 13½ cents per pound, East Saint Louis, Illinois, in the case of prime western zinc. The amount of any such payment shall be equal to the difference between the amount actually received by such producer from such sale and the mine share which the producer would have received if the market price of the material produced therefrom at the time of sale had been equal to the prices indicated above. The mine share, in the case of a sale of lead ores, shall be a dollar amount equal to 75 per centum of the product of the number of pounds of lead ores sold and 0.16, and, in the case of a sale of zinc ores, shall be a dollar amount equal to 55 per centum of the product of the number of pounds of zinc ores sold and 0.135.

(c) Payments under this Act shall not be made in any quarter to any producer with respect to more than (1) five hundred tons of lead ores or concentrates and (2) five hundred tons of zinc ores or concentrates.

(d) Sales of concentrates produced from ores sold to a mill or processing plant in accordance with regulations issued pursuant to this Act shall not be considered as the sales of the owner of the mill, but shall be considered as the sales of the producer of the ores.

(e) If a producer further processes the ores or concentrates of lead or zinc without effecting a sale, the equivalent and competitive market value of such ores or concentrates, as determined by the Secretary, at the time of such further processing shall be used in lieu of the amount which would have been received in the case of a sale, for the purpose of computing payments.

SEC. 3. (a) The Secretary may make such rules and regulations and require such reports as he deems necessary to carry out the provisions of this Act.

(b) The Secretary may delegate any of the functions authorized by this Act to the Administrator of General Services.

SEC. 4. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

SEC. 5. This Act shall take effect on the first day of the first quarter next following the date of its enactment, and shall terminate on June 30, 1960.

GOLD

Mr. ALLOTT. Mr. President, I introduce for appropriate reference a bill to create a limited free market for gold by prohibiting sales of gold by the Government for commercial use or for the arts, or for the purpose of lessening the price and value of gold, in order to restore to the gold industry a condition of competition in the nonmonetary market for gold. Due to the Gold Reserve Act of 1934, the Treasury may buy and sell gold at the price of $35 an ounce, plus or minus handling costs. The mining industry must pay the labor and operating costs of 1959 while facing a price for gold established by the Treasury in 1934. The depressed state of this industry today is mute evidence to the insufficiency of the price. The commercial and artistic users of gold are receiving a subsidy at the expense of the gold mining industry through the enviable position of producing for 1959 prices from raw material available at a fixed 1934 cost.

Gold has essentially two uses; as a commodity, and as money or a monetary stock. This bill is not to change the monetary gold stock of the Nation other than to restrict it from affecting the commodity price of gold by being brought into competition for the internal commercial market. The rules established by the Treasury under the authorization of the Gold Reserve Act of 1934 as to the ownership, transportation, sale or Treasury purchase price of gold would not be affected. Provisions as to importation or exportation would be unchanged. Because of this the value of the dollar in international transactions would not be influenced adversely.

The intent of this bill is with relation to the marketing of gold in its use as a commodity. The passage of this measure would enable gold produced domestically to compete for the industrial and artistic market and to establish a competitive price reflecting the expense of producing gold under the labor and operating costs of today. In this way the gold mining industries would be able to receive a price for their product commensurate with the cost of production

and a stimulus would be injected into the depressed mining industry.

Mr. President, there are again a number of bills concerning gold before the Congress. I have a great deal of interest in the bill, S. 590, introduced by Chairman MURRAY, to establish a completely free market for gold. I have some concern about the possible inflationary aspects of that bill, but if thorough investigation indicates that inflation is not a significant problem, I would support that legislation. I hope that in the ensuing discussions of the problems related to gold, if the monetary and fiscal ramifications of the Murray bill make it unpalatable to a majority of this Congress, the Congress will consider the possibility of a limited free market for gold, as provided in this bill.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD and that it remain at the desk until March 30, so that Senators who may wish to do so may join as cosponsors of it.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD, and will lie on the desk, as requested by the Senator from Colorado.

The bill (S. 1539) to prohibit sales of gold by the Government for commercial use or for the arts, or for the purpose of lessening the price and value of gold, introduced by Mr. ALLOTT, was received, read twice by its title, referred to the Committee on Banking and Currency, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That all gold held or bought by the United States Treasury, or mints, or assay offices, or by the Federal Reserve banks, shall be construed to be monetary gold. Such gold shall not hereafter be sold for commercial use or for the arts, and no gold shall hereafter be sold by the Treasury or by the Federal Reserve banks, or for the account of the Treasury or of such banks, directly or indirectly, in the United States, its Territories or possessions, for the purpose of depressing the market in gold or lessening the price and value of gold.

REQUEST FOR YEAS AND NAYS ON EASTER RECESS RESOLUTION

Mr. BRIDGES. Mr. President, I ask unanimous consent that when the resolution for an Easter recess comes before the Senate, the yeas and nays be ordered.

The PRESIDING OFFICER. Is there objection?

Mr. LONG. Mr. President, I object.

The PRESIDING OFFICER. Objection is heard.

INCREASED MAXIMUM EXPENDITURE UNDER THE SPECIAL MILK PROGRAM

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the unfinished business, Senate bill 643, Calendar No. 100, be temporarily laid aside, and that the Senate proceed to the consideration of Calendar No. 132, House bill 5247.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The CHIEF CLERK. A bill (H.R. 5247) to increase the authorized maximum expenditure for the fiscal year 1959 under the special milk program.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. JOHNSTON of South Carolina. Mr. President, I am delighted that the acting majority leader has moved to take up House bill 5247. It is necessary that the Senate act quickly on this measure, in order that some American schools may continue to provide needed milk for their school children.

Mr. MANSFIELD. Mr. President, the purpose of this bill is to increase by $3 million the maximum amount of money which may be used by the Secretary of Agriculture during the current fiscal year for the special school milk program authorized by section 201(c) of the Agricultural Act of 1949 and Public Law 85–478. The law now authorizes the use of not to exceed $75 million of CCC funds for this program during the current fiscal year. From a survey just completed by the Department of Agriculture, it appears that somewhat more money will be required to continue the program at its present level for the remainder of the fiscal year. This bill, accordingly, authorizes the Secretary to use up to $78 million of CCC funds for the program during this fiscal year. It is to be noted that the authorization is permissive. The Secretary will use the additional funds only to the extent necessary to continue the program at its present level.

Mr. KUCHEL. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. KUCHEL. First, let me say that it is my understanding that the Department of Agriculture has interposed no objection to the proposed legislation; but in order that the RECORD may be clear, I ask my friend, the able acting majority leader, to confirm this statement: Is it not true that this bill, if enacted, will not require any additional appropriation?

Mr. MANSFIELD. That is correct.

Moreover, the bill was reported unanimously by both the House and Senate committees.

Mr. KUCHEL. I thank my friend.

Mr. BRIDGES. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. BRIDGES. May I ask the Senator the explain briefly what the bill proposes to do?

Mr. MANSFIELD. I have explained that previously. The purpose of the bill is to increase by $3 million the maximum amount of money which may be used by the Secretary of Agriculture during the current fiscal year for the special school milk program previously authorized. The proposed legislation is permissive.

Mr. BRIDGES. I thank the Senator. I do not want any legislation to go through in the closing minutes of this session today unless it is unquestionably meritorious. I think probably this proposed legislation is, and I interpose no objection.

Mr. MANSFIELD. As usual, the Senator is very watchful of the public purse.

This bill was cleared with the minority leadership and the minority members of the Committee on Agriculture and Forestry before it was brought up. It is in line with our statement that we would bring up nothing for a vote aside from the unemployment compensation bill, which was the pending business. We announced that nothing of a controversial nature would be brought up.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the third reading and passage of the bill.

The bill (H.R. 5247) was ordered to a third reading, read the third time, and passed.

PUBLIC WELFARE PROBLEMS OF THE DISTRICT OF COLUMBIA—HUNGRY CHILDREN IN THE DISTRICT OF COLUMBIA

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the body of the RECORD the text of a statement I made today before a subcommittee of the Committee on Appropriations under the able chairmanship of the distinguished Senator from Rhode Island [Mr. PASTORE] concerning the school lunch program and other public welfare problems confronting the District of Columbia.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR MORSE BEFORE THE DISTRICT OF COLUMBIA SUBCOMMITTEE OF THE SENATE APPROPRIATIONS COMMITTEE, WEDNESDAY, MARCH 25, 1959

Mr. Chairman, you will recall that 2 years ago I met with your subcommittee upon an errand similar to the one I am on today. My appearance then, and my appearance today, followed hearings before the Subcommittee on Public Health, Education, Welfare, and Safety on the problems of hungry children in the District.

In preface to my recommendations, I wish to extend to you and your colleagues, my commendation for the positive action made possible by the funds supplied by you. Testimony before my subcommittee shows clearly that the assistance given by the Appropriations Committees of the House and the Senate has enabled progress to be made in the beginning of an attempt to solve the very difficult and complicated problem of poverty and its social concomitants in the District.

One good measure of accomplishment so far is the table which I now present to you contrasting relief payments and cases in January 1956 with January 1959. Reflected in these figures is the abolition of the 83 percent of need limit which formerly prevailed. This is a significant step forward in ridding our welfare program of extraneous restrictions which have no relationship to what should be our primary concern—prudent but speedy provision of adequate financial assistance to those in our population who are destitute, the aged, the fatherless, the disabled and the blind.

Relief cases and payments, District of Columbia

Type	January			
	1956	1957	1958	1959
ADC:				
Cases	2,050	2,221	2,889	3,610
Persons	8,858	9,650	12,731	16,267
Children	6,817	7,385	9,733	12,509
Average grant:				
Per family per month	$109.39	$114.08	$123.24	$146.71
Per person per month	$25.32	$26.26	$27.97	$32.56
Old age assistance:				
Cases	3,064	2,980	3,131	3,135
Average grant per month	$53.61	$56.51	$56.13	$60.09

	Monthly grant, percent change per case, 1956–59	Increase in monthly grant, 1956–59
ADC:		
Family	134.1	$37.32
Person	128.6	7.24
OAA (case)	112.1	6.48

NOTE.—In 1956 grants had an 83 percent of budgetary need limitation. In 1959 grants should reflect 100 percent of need, because of newly adopted standards.

General cost of living in the District increased, according to BLS index, from 115.9 in 1956 to 121.5 in 1958 (November data) or an increase of 5.6 points or 104.8 percent of the 1956 base.

The surplus food distribution program, made possible by funds supplied by your subcommittee, is of major importance to the 44,434 low-income individuals who are eligible.

Because of your interest, and that of your colleagues in the House, it begins to look as though some needy elementary school children will, next year, be given one square meal a day through the wise use of public funds.

I say this by way of preface, Mr. Chairman, because I believe that credit should be given where and when it is due.

I am sure however, that none of us is laboring under the misapprehension that what has been done is the complete and final answer to the problem, either in terms of quality or quantity. We have but begun to till the soil of social justice for these less fortunate human beings, the harvest of humanity to man is far in the future. Much remains to be done.

It should be a matter of common sense that a hungry child will be restless and irritable. Every parent knows that. Certainly such was my own observation with my own children when traveling across the country and we missed our regular dinner hour or when for one reason or another dinner was late at home. But in order to document the relationship which exists between nutrition and ability to learn in school, I asked the Library of Congress to search the literature of scientific investigation for published material on the problem. In the space of 2 days the Library had developed some 24 citations plus 4 masters theses devoted to the subject. The conclusions are as might be expected—that there does exist a close relationship between ability to learn and an adequate diet.

Marian C. Behr, in the School Executive, reported, for example: "Achievement tests taken before and after a lunch program was provided in school show great improvements when lunches have become a regular routine. When a county gives its schools achievements tests, the ones serving a balanced lunch to most of their children invariably have the highest scores."

Jane M. Leichsenring, in the Minnesota Journal of Education, stated: "In the St. Paul schools, where nutrition clinics for undernourished children have been a part of the program for many years, the teachers observed greater classroom achievement in 43 percent or more of the children studied, improved scholarship in 53 percent, attentiveness in 56 percent."

House Report 684, 79th Congress, in 1945, reported:

"U.S. CONGRESS—HOUSE COMMITTEE ON AGRICULTURE—SCHOOL LUNCH PROGRAM

(Report to accompany H.R. 3370, Washington, U.S. Government Printing Office, 1945 (79th Cong., 1st sess., House Report No. 684, pp. 2, 9))

"Statistical surveys, including physical and mental tests conducted under controlled conditions, have shown, as indicated in appendix A, measurable benefit to the children when an adequate lunch is provided at school, not only in their physical development, but in their educational progress. This improvement takes place on all income levels, inasmuch as an adequate lunch at school or adequate nutrition is not necessarily assured by the higher income of the parents or the rise in the national income as a whole. The increase of working mothers, consolidation of schools, greater travel time to schools, and rising scale of food costs, together with fixed incomes for many large groups, make the school lunch program, in which those who can pay are permitted to pay and those who cannot pay need not pay, the appropriate answer. It should be remembered that a child may be malnourished yet not hungry.

* * * * *

"EXHIBIT A—WAR FOOD ADMINISTRATION, COMMODITY CREDIT CORPORATION (OS)

"Effects of school lunch upon scholastic status, Camden, Mo.

	Scholastic grade points [1]			Per cent change
	Without lunch, 1938–39	Without lunch, 1939–40	With lunch, 1939–40	
Group I (52 children)	1,056	1,055	-------	−0.09
Group II (75 children)	1,614	-------	1,763	9.23

"Effect of school lunch upon attendance, Camden, Mo.

	Percent daily attendance of enrollment			Gain in per-cent attendance
	Without lunch, 1938–39	Without lunch, 1939–40	With lunch, 1939–40	
Group I (10 schools)	69.18	70.54	-------	1.36[1]
Group II (10 schools)	79.99	-------	84.34	13.35

"[1] A system of grade points was used in determining scholarship. An excellent mark was given 4 points; superior, 3; average, 2; poor, 1; failure, 0."

I do not wish unduly to prolong this line of testimony, Mr. Chairman, and I shall conclude with a citation from a study carried on in an adjoining State.

"Todhunter, Elizabeth Neige. 'Everyday Nutrition for School Children'. University of Alabama, Extension Division, 1949, pages 42–43.

"Dr. Ruth Harrell of Columbia University studied the learning ability of a group of children in Virginia. The children all lived in an orphanage where the diet was not adequate. The children were divided in two groups, matched as evenly as possible for age, height, weight, family background and IQ. Group A received a nutritional supplement in tablet form each day. Group B were also given a tablet each day but it contained no nutritive value. None of the children knew which ones were receiving the added nutrient material. In a series of objective tests, in arithmetic, word matching, writing, etc., carried out over a period of weeks, Group A in every instance had the higher average score. In this carefully controlled experiment the children with the dietary supplement showed greater learning ability as attested by their scores on all tests.

"Diet does make a difference.

"Diet makes a difference in both old and young but more particularly in the growing child."

Having laid this basis, I now pose the question: Granted that an adequate diet will improve the learning situation, to what extent ought the lunch program in the District elementary schools be expanded?

Seven hundred are now being given cold lunches on a pilot program from voluntary contributions. The Commissioners are asking that the program be limited to 1,000 children. The Board of Education asks you for funds to meet the need of 7,000 children. In arriving at your determination, I ask you to be mindful of the fact that there are, according to a study made by Gizella Huber, the economic consultant to the Junior Village project, 11,520 families with 45,775 children living in the District, whose family income is less than $3,000 per year.

A table incorporated in our hungry children hearings is of especial significance in this regard. Of 285 non-public-assistance families certified for surplus food in September, 27 families had no income because both parents were unemployed. In 48 families the mother was the head and she was unemployed and there was no income. I submit the full analysis for your inspection, with the thought that children being cared for by aunts and grandmothers whose own income is about $60 to $69 a month might very possibly need a free lunch at school.

Average monthly income of 285 non-public-assistance families certified for surplus food, September 1958

Type of family	Number of families	Average income
Families with 2 parents	155	-------
Fathers and mothers working	4	$235
Fathers only working or in the Armed Services	101	209
Fathers unemployed but getting income [1]	13	112
Mothers only working	10	91
Parents unemployed and without income	27	-------
Mother-headed families	125	-------
Mothers working and also getting support from fathers of children	5	155
Mothers working	36	145
Mothers' income from wages plus other sources [2]	9	136
Survivor benefits, unemployment compensation, etc	8	109
Absent fathers contributing	19	60
Mothers not working and without income	48	-------
Other homes	5	-------
Grandmother caretakers [3]	2	-------
Uncle and aunt caretakers [4]	1	60
Aunt caretakers working [5]	1	147
	1	69
Total number of families	285	-------

[1] 10 unemployed fathers are getting unemployment insurance or compensation; 2 are getting veteran's benefits; and 1 is getting a Government pension.

[2] Survivor benefits from deceased husbands or old age insurance of mother's parent living in the home.

[3] 1 grandmother is taking care of 3 children while the mother, who was their sole support, is in jail. Another grandmother is taking care of her daughter's 2 children. The latter does not live in the home and makes only sporadic contributions toward her children's keep. The grandmother (42 years old) is unable to work; her boy friend pays the rent.

[4] This couple is caring for 4 children whose mother deserted and whose father is in a veterans' hospital. The only income of the home is a $60 monthly veterans' benefit payment to the uncle.

[5] 1 aunt, caring for a young nephew, earns around $69 a month, her sole income. (Her husband is in jail.) She applied for public assistance, but was rated ineligible.

In these matters, I hope that the subcommittee will, as a minimum, provide the funds requested by the school authorities for this program, because in my judgment, far more than public assistance children need and can profitably use the free school lunch.

Which brings me to the second point in this area. I confess to a bias in favor of the teacher who is in daily contact with the child as being a good judge of whether the child is, or is not, in need of nourishment. I would suggest to the subcommittee that in the procedure established for determining eligibility for the lunch program that the presumption be that a child certified by the school is eligible and that he or she be given the lunches during the period that a social work investigation is carried on. In matters of this type, it is better to err upon the side of overfeeding rather than underfeeding the child. I think that there is no basic incompatibility between the school and the welfare authorities. Each supplements the work of the other.

I also wish to submit a table prepared by the Department of Agriculture showing the number of free or reduced-cost meals served children in the various States. Particularly, I feel that with this background, no criticism could be leveled at the committee if a full program were financed.

Comparison of free or reduced price meals with total meals served, by States and area, 1957–58

State	Total meals served	Free or reduced price meals	
		Number	Percent of total
	(1)	(2)	(3)
Northeast:

Comparison of free or reduced price meals with total meals served, by States and area, 1957–58—Continued

The $817,000 needed to finance the school lunch program is a large item for a tight budget. I understand that the House has approved some $266,000 for the lunch program. I urge that the full amount requested by the Board of Education for the school lunch program be allowed. In addition, I ask that the funds for this purpose be independently earmarked. Certainly any reallocation of funds which will take from the teaching staff teachers needed to reduce the number of part-time classes would be false economy. One major reason for having children well fed is so that they may profit from the education being provided. To nullify this worthy objective by providing fewer teachers is most short-sighted.

Where should the money come from? This question is basic to your work. My first answer would be from the Federal payment. Here is one Senator who does not believe that the Federal payment is adequate as it has been appropriated in the last decades. I do not share the philosophy that the payment should be geared to real-estate tax equivalents either. As the Senator from Rhode Island will recall in a floor colloquy upon the fiscal 1959 appropriation bill, I set forth my reasons for believing that the full authorized Federal payment should be appropriated. These reasons were based in part upon the limitations of the District with respect to taxing the principal employer in the District—the Federal Government. Other restrictions, such as the height of buildings which may be built, because this is the Capital of the Nation cannot be changed by the District government and hence revenue from private operators otherwise available in other areas, cannot be realized by the District government. There is the undeniable fact, that middle and upper income families whose income is derived from employment in the District yet who live in the suburbs, cannot be effectively reached by tax levied by the District. The District cannot extend its boundaries, as can other metropolitan cities. For all of these reasons and others which involve the Federal Government, I would hold that of all the impacted areas in the country, this child of the Union, deserves and should have liberal financial treatment from the Congress in the matter of a full Federal payment.

With the permission of the subcommittee, at this point in my prepared statement, I wish to digress for a moment to discuss testimony presented this morning to the Public Health Subcommittee by Mr. Shea of the Department of Public Welfare of the District.

It concerns, not the regular appropriation bill, but the supplemental bill which passed the House yesterday. Mr. Shea informs us that to live within the money provided by the supplemental it will be necessary for his department to curtail public assistance grants by 15 percent for the months of April, May, and June.

To do this would be to place on those unfortunate families, the children and the aged the burden of making up for the money that the Congress does not appropriate under an existing authorization. This is just not morally right in my opinion. We created the deficit by legislation, we ought to pay the cost. I realize that this subcommittee does not have the supplemental before it at this time, but it will be before the Senate Appropriations Committee in the near future, and I shall appreciate very much your bringing to the attention of the committee at the time it does consider the supplemental request my remarks this afternoon.

The question will be asked, Why cannot the savings be made in personnel costs rather than from the welfare budget? Testimony given to my subcommittee was to the effect that curtailment of services and an austerity program was initiated last February when it was foreseen that the present year's appropriation for welfare cost would be insufficient to meet the need. To further curtail personnel services would have the same result as the reduction in the welfare grant. It would come out of the service on a minimum basis that is now provided.

When, for example, you have 2 employees looking after 82 congenital mentally deficient hospitalized patients now in a 24-hour day, is it reasonable to suppose that you can, without inviting tragic consequences, reduce this number of employees to one?

A $12,500 item budgeted for homemaker service to families where the mother has been hospitalized or incapacitated was necessarily diverted by Mr. Shea to the welfare payment funds as part of the austerity program. What are the future costs, Mr. Chairman, of the disruption of a family in this category? If the children are taken to the District institution, testimony shows that because of overcrowding it was necessary to transfer these dependent children to a juvenile delinquent institution. Is this the training and rehabilitation we want? I ask in all sincerity, that when you consider the dollars and cents involved you keep in mind the human beings that make up the budget statistic.

I certainly feel quite strongly that wherever the Congress, by act, has increased the cost of operations, as we did when we raised the salaries of employees last session, we have a duty to provide funds to meet such costs. To place the health, education, protection, sanitation, and welfare services of a city in jeopardy through denial of funds this late in the operating year is shocking. I would certainly add my voice to those who are and will be asking for a restoration of these vitally needed funds. I hope that the House will take corrective action to restore them, but in the event that this does not occur, I trust that together with your colleagues you will seek to do so when the supplemental bill comes before your full committee.

As I have said, my first suggestion and I would urge it as strongly as I can, is that the needed funds be made available from the Federal payment using if necessary all of the authorization of $32 million. Only, if this is absolutely impossible do I advance the thought that the subcommittee explore with care other items now approved.

Particular attention may with profit, perhaps, be given to the highway construction program, badly needed though it may be. I am advised that although the Federal participation in construction and condemnation

costs make this an attractive area for expenditure, it does have the effect of removing from the tax rolls property now paying real estate taxes. A modest postponement in this area could realize, from presently existing revenues, sufficient funds to defray the school lunch program costs.

My values may be challenged by some, but I believe that our children are more important resources for the future of the Nation than would be the construction of a parking facility for State Department employees, originally asked for by the Commissioners. The cost of each program is about $800,000. Surely, if the site for a parking place is to be secured for the use of the Department of State this is a charge to be borne by the State Department appropriation rather than the District.

There are other areas in the budget for the District which are curtailed for which I would ask your sympathetic reconsideration, but I especially plead for adequate funds and employees to do the major job of taking care of our children in the schools, both educationally and nutritionally, and in the home through meeting the welfare needs for the underprivileged groups upon a basis which is at least consistent with health and decency. Prenatal clinics to reduce our shocking infant mortality rate will, I am confident, receive your attention as will the provision of a high standard of medical care for our indigent.

I appreciate having had the opportunity to appear before you.

Mr. MORSE. Mr. President, I have placed my statement in the RECORD in order to emphasize a very sorry condition which confronts the District of Columbia, caused for the most part, in my opinion, by the dereliction of Congress to perform its clear duty, due in part, as my statement points out, to a failure on the part of the Commissioners of the District of Columbia to recommend a program of the magnitude which common humanity calls for, a program to feed hungry children.

Two years ago, the Subcommittee on Public Welfare, Health, Education and Safety of the Committee on the District of Columbia, of which I am the chairman, conducted hearings which lasted several weeks. The hearings succeeded in focusing the attention of Congress and of the Nation, for that matter, on the sordid but true fact that many children in the District of Columbia were living out of garbage cans, refuse dumps, and table leavings, when they could find them, of families in their areas who threw away scraps of food.

At first it was hard to believe that such a condition existed. When the witnesses who came before my subcommittee first so testified, there was a reaction on the part of many to the effect: This simply cannot be true. But it was true. Our committee hearings demonstrated it beyond question of doubt.

It will be recalled that 2 years ago, as a part of our hearings, my subcommittee made a tour of inspection during a period of several days of some of the slum areas of the District of Columbia. We saw with our own eyes proof of the testimony which had been submitted to our committee.

Mr. CLARK. Mr. President, will the Senator from Oregon yield?

Mr. MORSE. I yield.

Mr. CLARK. I have been very much interested in the splendid statement the Senator from Oregon is making on the subject of hungry children within a stone's throw of the Nation's Capitol in the District of Columbia.

During the 85th Congress I had the privilege of serving on the Committee on the District of Columbia and on its subcommittee on Public Welfare, over which the Senator from Oregon presided with distinction as chairman. I accompanied him on the tour of which he has just spoken. I can vouch personally that every word he has said is true. It was spoken without exaggeration; in fact, it was a conservative statement of what I would not hesitate to call a sinful condition which Congress, to its shame, has permitted to continue over a period of time far longer than I care to contemplate.

Mr. MORSE. From the bottom of my heart I thank the Senator from Pennsylvania. The RECORD should show that the results which the subcommittee obtained two years ago never would have been obtained had it not been for his assistance. At first it was an uphill fight; but the Senator from Pennsylvania never failed either in the Committee on the District of Columbia, before the Committe on Appropriations, or on the floor of the Senate, to point out courageously the facts we discovered concerning this deplorable condition in the District of Columbia.

Mr. CLARK. Mr. President, I thank the Senator from Oregon for his kind words. Although I do not think they are justified by the facts—the Senator is far too kind—my interest in this subject continues despite the fact that I am no longer a member of the Committee on the District of Columbia. I should like to do everything within my power as one Senator to support the senior Senator from Oregon in the effort he is now making to further the fine work he started 2 years ago.

Mr. MORSE. I thank the Senator very much.

I desired to speak about this problem today because appropriations are pending in both Houses dealing with the question of financing such programs in the District of Columbia. As a result of the work of our committee and the action taken by Congress, some progress was made in 1957, as I said to the Subcommittee on District Appropriations today. I think credit ought to be given where it is due. The subcommittee headed by the distinguished junior Senator from Rhode Island [Mr. PASTORE] did excellent work in 1957, in that it recommended a somewhat larger amount of appropriations so as to make it possible to afford some relief to these very unfortunate fellow human beings.

As I stated in my testimony, as will be seen in the RECORD tomorrow, we still have a long way to go. Much still needs to be done in order to carry out the principle of humanity to man in the District of Columbia.

HEARINGS REVEAL MALNUTRITION IN DISTRICT OF COLUMBIA

It is about some of the facts which I presented to the Committee on Appropriations this afternoon that I wish to comment now. For the past 3 weeks, intermittently, my subcommittee has been conducting further hearings concerning the problem of the hungry children in the District of Columbia. The situation is so bad that we cannot take very much comfort from the progress which has been made since 1957. I shall let the record speak for itself, but I shall mention a highlight or two from the record as borne out by witness after witness after witness who came before my subcommittee in the past several weeks to testify. Those witnesses came from the welfare agencies, from the school system, from the neighborhood houses, and, yes, from the District of Columbia government itself.

One shocking fact which we in Congress had better consider is that a minimum of 7,000 little boys and girls of grade school age in the District of Columbia, to say nothing of several thousand more who have not reached grade school age, simply do not have enough to eat. Think of it. In the Capital City of the United States a minimum of 7,000 little boys and girls are not getting enough to eat. The record before my subcommittee leaves no room for doubt about it.

So long as I remain in the Senate and have responsibilities in connection with any committee on which I serve, and so long as such conditions exist, I intend to do everything I can to place the facts before Congress, before the District of Columbia, and before the people of the Nation. Such a condition cannot be justified by any standards.

Mr. President, it cannot be justified by the great teaching that each of us is our brother's keeper.

It was a great disappointment to me when the Commissioners of the District of Columbia made to the Congress a recommendation for an appropriation with which to finance an experimental program which would provide lunches for 1,000 of the 7,000 hungry schoolchildren. Certainly old King Solomon would not have proposed such a thing, Mr. President. I am at a loss to understand why the District of Columbia Commissioners, knowing that in the District of Columbia there are a minimum of 7,000 underfed schoolchildren, would recommend an appropriation for lunches for only 1,000 of them. Consider the rationale of that proposal; it is the old, bewhiskered one of "That this will give us an opportunity to get our feet on the ground."

Mr. President, the Commissioners should have had their feet on the ground for years, if their feet are not on the ground now.

Their argument is, "It will give us time to get our feet on the ground, so as to do a little experimental work on this matter."

Mr. President, this matter is not a complex one. It is simply a question of dollars, of providing the necessary funds for the feeding of 7,000 hungry schoolchildren. If the necessary funds are provided, those hungry children will be fed.

I say to the President of the United States, "Mr. President, this is no issue for you to talk about in terms of balancing the budget. Instead, before Easter, in the name of the Master, raise

your voice in support of the position of the Senator from Oregon that the necessary funds for the feeding of these 7,000 hungry schoolchildren must be provided."

BUDGET CONSIDERATIONS SHOULD NOT BE PUT AHEAD OF HUMAN NEED

Only a moment ago I read on the news ticker that Mr. Stans, of the Bureau of the Budget, while in North Carolina, announced to the country that the President is not going to yield on the question of balancing the budget. He said the country should stand fast against what he called special interest troopers.

I ask the President of the United States, "What is your answer to the need to feed these 7,000 hungry schoolchildren in the District of Columbia? Do you think they are 'special interest troopers?' Do you want them fed? If you do, will you join me in recommending that the Congress provide the necessary funds for the feeding of these 7,000 children?"

If we have a President who will not join in support of such a humanitarian cause, then I want the 174 million Americans to know it now; and that goes for all the rest of the budgeteers, because if the moral responsibility of the Congress is not met, then I find no difference between a budgeteer and a racketeer.

If, in the name of a balanced budget, it is proposed that we walk out on a moral responsibility such as that of feeding the 7,000 hungry schoolchildren in the District of Columbia, then let us tell the American people so.

To the Democratic leadership of the Senate let me make clear that what I say goes for them, too. For once, I should like to see in the Congress a united Democratic leadership in support of a moral issue of this kind.

Mr. President, for several years I have seen the budgeteers get by with their propaganda. So far as I am concerned, they can no longer get by with it without challenge. I intend to challenge them at every step from now on, by comparing their so-called dollar savings with the great human losses and the great losses in human values which the budgeteers will be guilty of causing, and which they will cause, if we let them get by with their failure to recognize their moral responsibilities.

I have no intention of supporting any Democratic leadership which will be a party to Dwight D. Eisenhower's sacrifice—in the name of a balanced budget—of these human values. I do not intend to support a so-called balanced budget at the expense of human welfare in the Nation, because I know that the economy of the country is strong enough to support the kind of general welfare legislation the liberal Members of this body urge the Congress to enact.

TIME FOR REDEDICATION TO HUMAN VALUES

Nor do I intend to weaken either the economic fabric or the moral fabric of our Nation by placing a dollar sign above the Cross. Any argument from any spokesman of this administration or from any leader of my party that is made in an effort to justify failing to appropriate for the District of Columbia the funds which are necessary in order to feed 7,000 hungry school children is a sinful argument at any time, but it is a particularly inexcusable argument at Easter.

So, Mr. President, I insert this testimony in the RECORD because I do not intend to let the Congress forget its responsibility. As I said this afternoon, before the Appropriations Committee, I have no intention of supporting the District of Columbia Commissioners, when, apparently under the whiplash of an economy drive from the White House, they recommend a District of Columbia budget that is totally inaedquate to meet human needs in the District of Columbia.

CONGRESS ITSELF IMPOSED FINANCIAL RESTRICTIONS ON DISTRICT

To the Congress I repeat: You cannot justify your parsimonious attitude toward the District of Columbia by failing to appropriate a fair share of the funds that are required if the cost of running the District of Columbia is to be met.

Mr. President, what are some of the politicians saying now? Just listen to them: "What about the tax rates in the District of Columbia? Why not have higher real-estate taxes in the District of Columbia?"

Are they ready to eliminate the zoning requirements which the Congress has imposed upon the District of Columbia—for example, the one which regulates the height of buildings in the District of Columbia, with the result that the owners of property in the District cannot erect buildings high enough to be as profitable economically as they otherwise would be—profitable enough to result in the payment of greater taxes?

Of course, Congress is not going to eliminate those zoning requirements; and Congress should not do so, because it has a responsibility to keep the Capital City beautiful. That is why such restrictions were imposed in the first place.

Is Congress ready to remove the restrictions which make the District of Columbia inaccessible to heavy industry? Is Congress ready to permit heavy industry, and the accompanying payrolls, to be brought into the District of Columbia, with the result that additional tax dollars will flow into this city?

Of course, to do so would be to bring over the Capital City a smoke screen different in type from that which usually hovers over it. It would be a screen of industrial smoke, instead of a screen composed of the type of forensic smoke which so much of the time hovers over this city—in fact, a good deal of it is based on the type of forensics which is indulged in by those who oppose the appropriation of sufficient funds to permit the District of Columbia to be operated in the way in which it should be operated.

No, I am not going to support the District of Columbia Commissioners in their failure to recommend funds for an adequate school lunch program. So long as I serve in the Senate, Mr. President, I shall continue to fight for fair play for the taxpayers and the residents of the District of Columbia.

THE DISTRICT PROBLEM

As I said, in substance, to the Appropriations Committee this afternoon, "Remember, this local government cannot take in the suburbs. What in our own States happen to be metropolitan areas develop in the suburbs. Before we know it, we have taken the suburbs into the city, and we have brought their tax resources into the city. We cannot do that here. The District of Columbia cannot annex Virginia and Maryland."

Yet, many thousands of the people who work in the District of Columbia sleep in Maryland and Virginia. Maryland and Virginia are their bedrooms. The District of Columbia, Mr. President, has a very difficult tax situation.

There is much unsoundness in some of the speeches being made which seek to compare the tax situation in the District of Columbia with the tax situation in areas of similar size elsewhere in the United States, because Congress has put into effect some of the restrictions which make the comparisons fallacious.

WHY SHOULD TEACHERS SUBSIDIZE WELFARE NEEDS?

Mr. President, I do not intend, either, to support any proposal which would cause the teachers of the District of Columbia to subsidize the welfare program which ought to be financed by the Congress of the United States. That is what Congress is asking them to do by the attitude now prevailing with regard to the District of Columbia budget. What are we doing? Even to feed the 1,000 children, instead of the total 7,000, it is proposed to utilize money transferred from other educational funds, which ought to go into classrooms, or into teachers' salaries, or into employing more teachers, so the teaching load could be lighter, or other needed educational costs.

It is just too bad there is no home rule in the District of Columbia, so that if any mayor or city council proposed any such atrocious suggestion, the people would be able to take care of them at the polls. We have placed ourselves in the position, Mr. President, of not being subject to any electoral discipline by the citizens of the District of Columbia. Therefore, about all they can do is come before a committee such as mine and present their evidence and their protests. Those of us who hear the evidence and the protests have an obligation to act in their behalf. That is what I have been trying to do this afternoon.

PRAISE FOR THE WASHINGTON PRESS

I have been pretty critical, now and then, of the press, both here and elsewhere; but I also have never hesitated to commend the press when I thought it deserved commendation, although I recognize, unfortunately, justifiable occasions are too rare.

I desire this afternoon to commend the local press, all three of the newspapers, for the fine job I think they are doing in getting the facts to the people of the District of Columbia and to the Congress with regard to the public welfare problem, the hungry children problem, and the educational problem.

I close this part of my remarks with the plea that from the President of the

United States on down through the Government, in every office where there is any responsibility connected with District of Columbia affairs, we be given some backing and some support for a large enough appropriation to feed the 7,000 hungry youngsters who, the record of my committee shows, are now suffering from want of food.

The evidence is overwhelming as to the cost of the failure to supply the needed food to the District of Columbia children. If anyone in our Government thinks we are saving money by not providing funds necessary for lunches to feed these youngsters, he ought to read the transcript of the testimony before our committee. Such a so-called saving produces a greater cost from the standpoint of juvenile delinquency and hospitalization resulting from illness that occurs from malnutrition.

SHOCKING TESTIMONY

Mr. President, if you want the kind of evidence that startles you, but is a fact, let me tell you that there are, in a home for 82 mentally defectives, 2 attendants. Those two attendants have to maintain a 24-hour supervision of those unfortunates.

Mr. President, do you think it would be economy to cut the number of attendants to one? And yet, without knowing the facts, I submit there are Members of this Congress who, in recent days, in speaking about District of Columbia fiscal policies, have suggested that savings ought to be made on personnel.

My answer to them is, "Put up or shut up. Where are you going to make the savings on personnel? Come on, give us the list of people who can be eliminated from their jobs in safety to good government in the District of Columbia."

Do we want to reduce the number of those two attendants at the home for the mentally defective, or do we want to justify an overcrowded situation for dependent children? This situation is so bad in the District of Columbia that the record before my committee shows we are sending dependent children in the District of Columbia—I repeat, dependent children—to homes for juvenile delinquents.

Just think of it. All Members of Congress who are parents of children ought to understand my meaning. How in the world can a Member of the U.S. Congress talk about economizing on personnel when there already are such overcrowded conditions and there is such a shortage in this whole field of public welfare work that we are now sending some dependent children to homes for juvenile delinquents because there is not enough room for them in the juvenile dependency institution?

Mr. President, could it possibly be that unexpressed and latent in the thinking of those who are arguing for false economy in the District of Columbia budget is the idea that, after all, an idiot is not a human being, or that, after all, a little dependent child can be dispensed with, or that a juvenile delinquent should not receive the rehabilitation care a moral society is expected to provide?

I would not like to think, Mr. President, that such a cold, asocial attitude could possibly exist in the breast of any Member of Congress. Yet as I conduct the hearings and have submitted to me in the record statements of attitudes which have been expressed in the budget fight for the District of Columbia I am almost forced to the conclusion that at least it is fair to say, in view of the sordid conditions which exist, that those who make an argument for economy in public welfare in the District of Columbit have walked out on their obligations.

I make this speech on this subject today, Mr. President, in the hope that it may stir up a little support from some groups in this city which in my judgment are notefully cognizant of the seriousness of the situation. I say that in appealing to the ministerial association of every church group in the District of Columbia; Catholic, Protestant, and Jew. I say to the clergy of the Catholics, of the Protestants, of the Jews, and of all other faiths who believe in a Creator, now is the time to be of great moral assistance to those in the District of Columbia who are trying to get some action from the Congress of the United States by way of a sufficient appropriation to meet these governmental needs.

I know, Mr. President, if the service groups, if the ministerial association, if the Parent Teacher Associations, if the citizens groups and all the many public-minded organizations in the District of Columbia knew how deplorable the conditions are they would make the rafters of the White House shake before they finished with their presentation of this great moral issue.

Mr. President——

The PRESIDING OFFICER. The Senator from Oregon.

ORDER OF BUSINESS

Mr. MORSE. Mr. President, I have been waiting for several days to deliver two speeches, one a relatively short one; the other a longer one. The two speeches are in the Press Gallery. Tonight I find I can deliver only the shorter speech, the one relating to the preliminary report of the Draper Committee. Tomorrow I shall deliver the longer speech on the economic plight in which I think the country finds itself. I make this comment for the benefit of the Press Gallery.

Now, Mr. President, I should like to have the attention of the Senator from Virginia [Mr. BYRD]. It has been suggested to me that the Senator from Virginia may wish to have me continue on another subject until a bill comes over from the House, but whatever may be the pleasure of the Senator, I shall be glad to cooperate.

Mr. BYRD of Virginia. I will say to the Senator from Oregon that the conferees cannot be appointed until the bill comes back from the House. The bill has not yet come from the House, though it is expected at any moment.

Mr. MORSE. I will yield the moment the Senator from Virginia asks me to yield.

Mr. BARTLETT rose.

Mr. MORSE. Mr. President, I yield to the Senator from Alaska.

SENATOR JOHNSON AS A PRESIDENTIAL CANDIDATE

Mr. BARTLETT. Mr. President, I ask unanimous consent to have printed in the body of the RECORD an article which was published in the New York Times of this morning, written by James Reston, about our distinguished majority leader, the senior Senator from Texas [Mr. JOHNSON], entitled "It Could Be JOHNSON."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT COULD BE JOHNSON—DEMOCRATIC PROFESSIONALS IN NORTH PONDER TEXAN AS A 1960 COMPROMISE

(By James Reston)

CHICAGO, March 24.—Don't count Senator LYNDON B. JOHNSON, of Texas, out of the 1960 presidential election yet. The Democratic pros in this part of the country, at least, are definitely not doing so, and they were the ones who were supposed to be more opposed to nominating Mr. JOHNSON than anybody else. Conversations with Governors Edmund G. Brown, of California, and Michael V. DiSalle, of Ohio, and Mayor Richard Joseph Daley, of Chicago, in the last few days, indicate that the pros are reaching these preliminary conclusions:

The Democratic nominating convention is clearly headed for a stalemate, with no one candidate likely to have more than 300 votes (less than half the necessary majority) on the first ballot.

Senator JOHN F. KENNEDY, of Massachusetts—and probably only Mr. KENNEDY—could upset this calculation by a series of spectacular victories in the 1960 primaries, but at least some of the men who control the big delegations in the State capitals and the large northern cities don't think he can pile up a large enough lead to avoid a deadlock.

On this assumption, the pros around here think Adlai E. Stevenson, of Illinois, Senator STUART SYMINGTON, of Missouri, and Senator JOHNSON will definitely come into the picture as compromise candidates.

NORTH WARM TO JOHNSON

The only surprising thing about this is the way the northern pros are talking about Senator JOHNSON. It was widely assumed that they were so committed to an extreme civil rights program that they would rule out a southerner who favored a moderate civil rights compromise.

In the end, this still may be true, but they are definitely not ruling him out now, and for interesting reasons. These men who control the delegations of large States such as Ohio, Illinois, and California are all keenly interested in urban development, new airports, new roads, public housing relief for the depressed areas, and social legislation.

Mr. JOHNSON has clearly impressed many of them on the way he has used his authority in these fields. They are watching him carefully to see what he does in this session of the Congress about civil rights legislation but so far they apparently feel less strongly than the liberal Democrats in the Senate about his compromise stand on the filibuster rules of the Senate.

All the publicity about Mr. JOHNSON'S political skill in the Senate has also enhanced his reputation, for the men who will be in the smoky room dealing with any deadlock that may develop at the Democratic convention will be the professionals who place higher value on the art of politics than anybody else.

A POLITICIAN'S POLITICIAN

One hears a lot of talk from these pros that JOHNSON is the kind of politician who understands another politician's problems.

The pros also seem to think that he is a tough negotiator who perhaps as well as anyone else in the Nation could deal with the problems of negotiating with the Communists.

Even Mayor Daley, of Chicago, who was one of the leaders for Mr. KENNEDY in the vice presidential race of 1956 and who will almost certainly control the Illinois delegation in 1960, gave Mr. JOHNSON a good chance for the nomination.

Like Governors Brown, of California, and DiSalle, of Ohio, he is not committing himself. Like them, too, he doubts that anyone will have more than 300 votes on the first ballot, but he rejects the idea that the North would oppose JOHNSON merely because he is a southerner.

"This would be like rejecting KENNEDY because he is a Catholic," Mr. Daley said. "I argued against this in 1956. I am still arguing against it now. But we cannot argue against anti-Catholic bigotry and at the same time be guilty of antisouthern bigotry.

"Everybody should be given a chance on his own abilities and that goes for JOHNSON as well as KENNEDY."

All this may indicate nothing more than the politician's caution about coming out for anybody too soon. As Mr. DiSalle pointed out, most of the potential candidates are in public office and therefore the element of accident over the next year could bring somebody quickly to the top or cast some of the leaders down.

Nevertheless, it is clear that the decision in the Democratic convention is going to lie not in the hands of men in Washington, but in the hands of Governors and the powerful big city mayors and bosses.

As of the moment, they are waiting and holding the line against Mr. KENNEDY, who is clearly the front runner. In the process, however, they are creating a deadlock situation and it is interesting that in the discussion about who may break a deadlock the pros around here seem to be talking even more about Mr. JOHNSON than about Mr. Stevenson.

Out in the south side of Chicago, where the large Negro vote lies, the mayor would have less trouble getting consent for either Mr. Stevenson or Mr. KENNEDY, who is probably the mayor's preference. But Mr. JOHNSON has made progress, even in the areas where most people thought he would be rejected out of hand.

RAJAGOPALACHARI'S SOLUTION TO GENEVA DEADLOCK

Mr. MORSE. Mr. President, when I was in India in 1957, at the Commonwealth Parliamentary Conference, it was my great honor to meet and confer on two different occasions with a great Indian leader, Rajagopalachari, who is recognized throughout India as probably the number one philosophical successor to Gandhi.

I am sure the distinguished Senator from Kentucky [Mr. COOPER], now present in the Chamber, shares my high appraisal of Rajagopalachari, when I say he is a man of great influence all over India, but particularly in Madras Province. For many years Rajagopalachari served in the Parliament of Madras in various positions. He is a great humanitarian. For a long time he has been one of the world leaders in calling upon Russia and the Western Powers to bring to an end nuclear testing and, for that matter, to rid their arsenals of nuclear weapons entirely.

Mr. President, there was published in the March 16, 1959 issue of the New York Times a letter to the editor written by Rajagopalachari under the heading "To Solve Geneva Deadlock: Formula Offered Permitting Powers To Void Treaty on Notice." I ask unanimous consent that this fine letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TO SOLVE GENEVA DEADLOCK FORMULA OFFERED PERMITTING POWERS TO VOID TREATY ON NOTICE

The writer of the following letter was Governor General of India, from 1948 to 1950 and one of the leaders in India's struggle for independence:

To the EDITOR OF THE NEW YORK TIMES:

Those of us who live round about the Pacific Ocean but who are not in the cold war are naturally impatient over the delay in an agreement being reached at Geneva about the suspension of test explosions.

It seems to us rather odd that we cannot be saved from being poisoned unless the two sides in the cold war agree between themselves. No one has denied the right of the noninvolved peoples to be saved from being poisoned. We feel that our rights are being totally ignored in the battle between the two parties.

But this impatience of ours does not bind us to the real difficulties in the situation as between the two sides of the cold conflict. The fears and suspicions of America are genuine. They stand in the way of an agreement being reached on this as on other issues connected with disarmament.

I write this letter in the hope that a formula on the following lines may serve to give sufficient assurance to those who fear and doubt the opposite side, while at the same time it will secure an immediate suspension of the tests:

SUSPENSION OF TREATY

Let there be a suspension by treaty without any time limit, but let a proviso be attached that any one of the nuclear powers signing the treaty shall have the right to denounce the treaty, giving a year's notice and publicly explaining the reasons justifying the step.

Those who desire a treaty of suspension for all time ought to be satisfied with such a proviso, because if there are reasons which can stand the test of public scrutiny and world judgment it would be impossible to justify the continuance of such a treaty from the point of view of national security as foreign policies now stand.

Those who are unwilling to agree to indefinite suspension but desire only a year-to-year basis should also be completely satisfied with what I have here suggested.

The principle of suspension having been accepted, any limit of time put on the suspension can only be in the interest of security against fraud.

May I appeal that this question, which affects not only America but the whole world and its health, should be decided justly and properly and not merely on the basis of giving one's self the benefit of all doubts?

C. RAJAGOPALACHARI.

MADRAS, INDIA, *March 7, 1959.*

TAXATION OF PATRONAGE ALLOCATIONS OF COOPERATIVES

Mr. MORSE. Mr. President, a number of cooperatives and individuals of the State of Oregon have written to me in recent days expressing deep concern over the administration's recent proposal relative to the tax status of earnings of cooperatives, especially those allocated to patrons and evidenced by certificates of earnings. The administration's proposal was set forth in Treasury Secretary Anderson's letter of January 19, 1959, addressed to the chairman of the Senate Finance Committee and the chairman of the House Ways and Means Committee.

In order that my colleagues may have the benefit of what I consider to be particularly well reasoned views of individuals and cooperative officials transmitted to my office, I ask unanimous consent that a series of letters and resolutions containing those views be printed in the RECORD at the close of my remarks.

The PRESIDING OFFICER (Mr. BARTLETT in the chair). Is there objection to the request of the Senator from Oregon? The Chair hears none, and it is so ordered.

(See exhibit 1.)

Mr. MORSE. I invite the attention of my colleagues to the suggestion of the local cooperatives concerning a fair and reasonable method of taxing patronage allocations. I believe it deserves serious consideration.

Mr. President, I feel, as do these constituents, that the Treasury Secretary's suggestion that so-called qualified patronage certificates must bear interest at the rate of at least 4 percent and must be redeemed within a 3-year period, would, if put into effect, seriously injure our farmer cooperatives. In fact, I believe the imposition of such requirements would make it impossible for many cooperatives to continue in business. I certainly hope that this attack on our nationwide program of farmer cooperatives will not succeed and I urge serious consideration by the appropriate congressional committees to the views expressed in the letters and resolutions that follow my remarks.

EXHIBIT 1

MOUNT ANGEL FARMERS UNION WAREHOUSE,
Mount Angel, Oreg., March 12, 1959.

Hon. WAYNE MORSE,
U.S. Senate,
Washington, D.C.

DEAR SIR: Enclosed you will find a copy of a resolution, which in itself is self-explanatory. It was passed unanimously at our membership meeting held on February 28, 1959.

To refresh your memory it may be helpful to you if we presented background to the adoption of said resolution. The Revenue Act of 1951 stated in effect that a patron of a corporation shall report as income the allocations from a cooperative at fair market value in the year in which he is notified of such allocation. Recent court decisions pertaining to the interpretation of fair market value pretty much allowed the patron to set any value to the allocation which he may desire to use.

Our members have been reporting for income tax purposes their allocations on face value in the year in which they have been notified of such allocations ever since the adoption of the Revenue Act of 1951. On allocations made prior to 1951 they have reported the income in the year such allocations have been redeemed to them in cash.

In the present session of the Oregon Legislature, similar legislation, as requested in the resolution enclosed, has been introduced at the request of the Tax Commission, and it has the backing of cooperatives and their members alike. Members of cooperatives agree to the principle that income which is

earned in any given year must be subject to tax in such year, and they maintain that it is the responsibility of the patron to pay it.

Secretary of the Treasury Anderson has requested legislation which would require that cooperatives be subject to corporate income tax, unless the cooperative paid the allocation in cash within 3 years and also paid interest on said allocation at a rate of no less than 4 percent per annum. Such legislation would cripple cooperatives to the point where it would be impossible to conduct business.

Agriculture is the second largest industry in the State of Oregon and anyone who is familiar with agriculture will concede that cooperatives have a stabilizing effect on marketing and are considered necessary in many phases of our State's agriculture.

We are confident that you will give the subject matter your serious attention, and that you will use your influence to clarify the intent of the Revenue Act of 1951 and to reject the proposals of Secretary Anderson.

Respectfully,

BERNARD H. KIRSCH, *Secretary,*

Whereas the members of Mount Angel Farmers Union Warehouse, Mount Angel, Oreg., at their annual membership meeting held on this 28th day of February 1959, consider the taxing of patronage refunds and/or allocations to patrons as intended by the "Revenue Act of 1951" to be just, sound and equitable;

Whereas there exists confusion pertaining to the taxability of patronage refunds and/or allocations of cooperatives: Now, therefore, be it

Resolved, That we, the members of Mount Angel Farmers Union Warehouse, Mount Angel, Oreg., do hereby recommend proper legislation by the present Congress to clarify and make effective the intent of the Revenue Act of 1951 to the effect that all patronage allocations of cooperatives are taxable to the patrons upon notification thereof; it is further

Resolved, That a copy of this resolution be sent to each of the Oregon Senators, and to each Representative of Oregon in the House of Representatives, and to each Member of the Senate Finance Committee and to each member of the House Ways and Means Committee.

PENDLETON GRAIN GROWERS, INC.,
Pendleton, Oreg., March 19, 1959.

Senator WAYNE MORSE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MORSE: It is likely that legislation will come up in this Congress relative to taxation principles for farm cooperatives. Recent rulings of the Internal Revenue Bureau and the courts have done nothing but create confusion.

We are 100 percent in agreement that a clarification of the farm cooperative tax principle should be spelled out by Congress in this session so that there is not this continual confusion over these principles, which are really quite simple.

Our cooperative and the members of our cooperative do not want to escape taxation. That is not the purpose of our cooperative, and that is not the purpose for which our farmers join a cooperative.

At present, all of our members are reporting their patronage refunds as taxable income in their hands in the year in which the patronage refund was declared and they were notified of this declaration. This is the one-tax or partnership-tax principle. We believe this is the sound basis for taxing cooperatives. We believe that the law should be made clear as to the method of handling these patronage refunds. We have enclosed some additional information which covers the situation of our company. In addition, we can advise you that the National Council of Farm Cooperatives office in Washington, D.C., is extremely well informed on this whole situation as it affects all good farm cooperatives in this Nation. You can rely upon Mr. Homer Brinkley in that office to give you any and all information that you may require from time to time in making a sound decision that will be fair and reasonable as far as our farm people and our farm businesses are concerned.

You will have no trouble with us, and you will get nothing but praise if you will merely stick to the principle that our farm cooperatives should be taxed on a one-tax basis just as any partnership or pseudocorporate entity insofar as patronage refunds are concerned. This can best be accomplished by all concerned with having the patronage refund made taxable in the hands of the farmer member or patron at the time that he is notified and by providing the law that the cooperative must declare and notify patrons of their patronage dividends within a reasonable period of time after the close of a year's business. A reasonable time would be within 8 months or possibly 6 months after the close of business. On any earnings that were not so declared and patrons notified, then the cooperative corporation would be subject to the double taxation on those retained earnings. But if they met this reasonable rule of declaring and notifying on the basis of true patronage, then they could exclude those earnings from the corporate income and the grower picks it up as his income, which is the partnership or pseudocorporation theory that is so well recognized by everyone.

We hope that you will work with our farm people to get this situation straightened out once and for all.

Best personal regards.

Sincerely,

JAMES HILL, Jr.
(For the board of directors.)

MEMBERSHIP AND INVESTMENT

To become a member, a person must (a) be a bona fide producer of agricultural products in the area served by Pendleton Grain Growers, and (b) must sign a membership application subject to approval of the board of directors of Pendleton Grain Growers.

This membership agreement, when executed by both interests, constitutes a contract between the farmer-member and Pendleton Grain Growers whereby the company agrees to (1) function on a cooperative basis for the mutual benefit of the members, and (2) return the net operating margin of each division or department to the members each year in direct relation to the amount of business each member has done with each department, and (3) pay the member his margin as a patronage refund in the form of cash, stock, notes or portions of each as the board of directors may determine in accordance with the bylaws.

The member in signing the membership agreement (contract) agrees to (1) abide by the bylaws and rules and regulations established by the group, (2) purchase one share of membership voting stock—$30, and (3) invest patronage earnings or refunds in the company for a reasonable period of years in order to build up his share of capital on a "pay as you earn basis".

Since the $30 membership provides only a small amount of capital, the company presently requires about 10 years of reinvested patronage earnings to furnish necessary equity capital to run the business.

In effect, Pendleton Grain Growers is nothing more than a farm partnership of some 1,200 farmers using the corporation entity as a means of administering the partnership. The purpose of this business endeavor is to improve the lot of the individual. The earnings are taxed as any partnership or "pseudo corporation"—in the hands of the partner. Consequently, Pendleton Grain Growers members report their patronage earnings as individual income as they receive notice of those earnings.

Currently, the Pendleton Grain Growers patronage earnings are paid to members each year in the following two forms:

1. Fifty percent in the form of class B stock, noninterest bearing, payable at face value on death of holder. A membership need not hold more than $5,000 of class B at any one time. The class B common stock is the member's contribution to the long-term capital of the company. It is contemplated that this stock will be held by the member as long as he is using the services of the company. (In case the member must give up his membership because he no longer farms or is leaving the area, the board of directors may approve transfer of class B stock into other securities of the company which are transferable and marketable.)

2. Fifty percent in the form of a 15-year promissory note, bearing 3 percent interest annually transferable.

Under no circumstances can a holder of any Pendleton Grain Growers security be subject to assessments.

PENDLETON GRAIN GROWERS, INC.
PENDLETON, OREG.

The farm cooperative provides a method whereby individual farmers may associate themselves into a business enterprise.

The sole purpose to such business organization is to provide business services at cost and thereby reflect additional profitmaking possibilities to the individual member's own farm operations.

The heart of this farm cooperative business association is the contract between the member and the assocation which legally describes methods of operations and legally spells out the fact that any profits made off the individual member's volume of business belongs to that member and not to the association. The tax implication consistently follows the single tax principles involved in partnerships. By law farmers are granted the corporate form as a practical method of administering these partnership contractual relationships. This principle was further recognized when Congress recently granted to small-business partnerships the right of corporate entity taxed on partnership basis.

In light of the foregoing North Pacific Grain Growers, Inc., recommends that Congress (a) establish clear and concise legislation to once and for all establish the single tax principle for farm cooperatives, and (b) establish concise law to provide that any and all patronage refunds be taxed at the face value in the farmers' hands at the date of issue or notification.

SILVERTON, OREG., *March 19, 1959.*

Senator WAYNE L. MORSE,
Washington, D.C.

DEAR SIR: This letter is to convey to you my personal opinion regarding the proposed legislation concerning farm cooperatives.

I have been entering my patronage refunds, including book credits, from farm co-ops (and incidentally, I am a member of eight different farm cooperatives), as income on my tax statement for the past 12 years. Therefore, I have been abiding by the Revenue Act of 1951, and feel that it should remain as such.

Many farm co-ops in our communities have adopted resolutions favoring the Revenue Act of 1951 as sound and just, and I as a farmer and a member of a farm cooperative, wish to add my opinion on this matter.

Thank you. I hope you will give this your consideration.

Respectfully yours,

RAYMOND WERNER.

FREEWATER, OREG., *March 12, 1959.*
Hon. WAYNE MORSE,
Washington, D.C.

HONORABLE SIR: Enclosed you will find resolution signed by 35 taxpayers who are members of Stateline Grange No. 693 and who are mostly members of co-ops who are asking respectfully that you do everything possible to block the President's idea on taxation of cooperatives.

Respectfully submitted.

IVAN MORETZ.

Be it resolved, That Congress enact legislation clearly and concisely establishing single tax liability upon patronage refunds of farmer cooperatives by taxing them at face value in the hands of the member in the year of issuance or notification, disregarding the actual or market value thereof for tax purposes; be it further

Resolved, That Congress reject any attempts to fix the interest paid or payable on such patronage refunds or the period of redemption thereof by such farmer cooperatives.

Andrew Zessin, Walter Rand, Freewater, Oreg.; Gilbert Tomlinson, Walla Walla, Wash.; W. A. Whitehead, Milton-Freewater, Oreg.; Joan Meretz, Freewater, Oreg.; Elsie Monetz, M. O. Lewis, Milton-Freewater, Oreg.; Roy E. Tomlinson, Walla Walla, Wash.; Elsa McElrath, Alpher E. Stahl, Milton-Freewater, Oreg.; Mrs. Roy Tomlinson, Walla, Walla, Wash.; Mr. and Mrs. Martin Lokkin, Claude McElrath, A. T. Moran, Ed Means, B. M. Beals, Helen C. Tunley, Ray H. Graning, Mrs. Emory Crawford, Flossie Beals, Mollie Moran, Dean Broxson, Wallace O. Goode, J. E. Frazier, Emory Crawford, Mrs. J. E. Frazier, Mrs. Lillie Hurd, Mrs. Ed Means, Hazel Lewis, Iva Rand, Minnie Whitehead, Glenn Burney, Pauline Burney, Milton-Freewater, Oreg.; Jean Tomlinson, Walla Walla, Wash.; Edna Ruth Goode, Milton-Freewater, Oreg.

Whereas there exists considerable confusion and uncertainities concerning the taxability of patronage refunds of cooperatives; and

Whereas the taxing of patronage refunds to patrons as intended by the 1951 Revenue Act is equitable, just and sound: Now, therefore, be it

Resolved, That we, the members of the Vale Grange No. 696, recomment appropriate legislation by the 86th Congress to clarify and make effective the intent of the 1951 Revenue Act that patronage allocations of cooperatives are taxable to the patrons upon notification thereof; it is further

Resolved, That a copy of this resolution be sent to each of the Oregon congressional delegation and to each member of House Committee on Ways and Means and to each members of Senate Committee on Finance.

L. H. JACOBSEN,
Master Pomona.
ULLA JACOBSEN,
Secretary.

FARMERS OIL CO.,
Mount Angel, Oreg., March 11, 1959.
Senator WAYNE MORSE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR: At a special board of directors' meeting held on March 2, 1959, the directors of the Farmers Oil Co., of Mount Angel, Oreg., an organization composed of 2,043 farmers in the Willamette Valley, discussed Secretary Anderson's tax proposal of January 19, 1959, wherein he attacks financing of farmer cooperatives.

The board of directors feel that the net savings or retained proceeds of cooperatives should be taxed as follows. If the net savings or retains were unallocated, then the cooperatives as such should be taxed, but if the retained funds are allocated to the members then each individual producer should pay the tax on his allocation, as soon as he is notified. In other word, a farmer's cooperative association in most instances is similar to a partnership and the partners should pay the tax in accordance with their participation.

The directors feel that the 1951 law provided a fair and practical solution of cooperative taxes and have so stated in a resolution adopted unanimously by the board of directors at their meeting on March 2.

We are enclosing copy of the resolution and trust you will give it your favorable consideration.

Respectfully yours,

P. F. GORES,
Secretary and Manager.

RESOLUTION ADOPTED BY BOARD OF DIRECTORS OF THE FARMERS OIL CO. AT MOUNT ANGEL, OREG., AT A SPECIAL BOARD MEETING HELD ON MARCH 2, 1959

Whereas the board of directors of the Farmers Oil Co. of Mount Angel, Oreg., in session at a special board of directors meeting this 2d day of March 1959, believe the taxing of patronage refunds and/or allocations to patrons as intended by the 1951 Revenue Act is equitable, just, and sound;

Whereas considerable confusion and uncertainties exist concerning the taxability of patronage refunds and/or allocations of cooperatives: Now, therefore, be it

Resolved, That we, the board of directors representing 2,043 farmer owners of the Farmers Oil Co. of Mount Angel, Oreg., do hereby recommend appropriate legislation by the 86th Congress to clarify and make effective the intent of the 1951 Revenue Act to the effect that all patronage allocations or cooperatives are taxable to the patrons upon notification thereof; be it further

Resolved, That a copy of this resolution be sent to each of the Oregon congressional delegation and to each member of the House Committee on Ways and Means and to each member of the Senate Committee on Finance.

FARMERS OIL CO.,
Mount Angel, Oreg., March 13, 1959.
Senator WAYNE MORSE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR: The farmers who own this organization are very much disturbed over the attack on the financing of farmer cooperatives which appears in Secretary Anderson's tax proposal of January 19, 1959.

The Secretary's proposal was discussed at considerable length at the annual meeting of the 2,043 members who own the Farmers Oil Co., of Mount Angel, Oreg., held in Mount Angel on March 7, 1959.

We are enclosing a copy of a resolution adopted unanimously by the members at their meeting.

Our producers feel that the 1951 law provided a fair and practical solution of cooperative taxes. If the net saving or retains were unallocated, then the cooperatives as such should be taxed, but if the retained funds are allocated to the members, then each individual producer should pay the tax on his allocation as soon as he is notified. In other words, a farmer's cooperative organization in most instances is similar to a partnership, and the partners should pay the tax in accordance with their participation.

We trust you will give the enclosed resolution your favorable consideration.

Respectfully yours,

P. F. GORES,
Secretary and Manager.

Whereas the members of the Farmers Oil Co. of Mount Angel, Oreg., in session at their annual meeting this 7th day of March 1959, believe the taxing of patronage refunds and/or allocations to patrons as intended by the 1951 Revenue Act is equitable, just and sound;

Whereas there exists considerable confusion and uncertainties concerning the taxability of patronage refunds and/or allocations of cooperatives: Now, therefore, be it

Resolved, That we, the members of the Farmers Oil Co., of Mount Angel, Oreg., do hereby recommend appropriate legislation by the 86th Congress to clarify and make effective the intent of the 1951 Revenue Act to the effect that all patronage allocations of cooperatives are taxable to the patrons upon notification thereof; and be it further

Resolved, That a copy of this resolution be sent to each of the Oregon congressional delegation and to each Member of the House Committee on Ways and Means and to each Member of the Senate Committee of Finance.

FARMERS OIL CO.,

Mount Angel, Oreg., March 13, 1959.
Senator WAYNE MORSE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR: You are no doubt familiar with the letter regarding taxation of cooperatives from Mr. Anderson, Secretary of the U.S. Treasury, to the chairman of the House Ways and Means Committee and to the chairman of the Senate Finance Committee under date of January 27, 1959.

The proposals as outlined in Secretary Anderson's letter would practically put cooperatives out of business. These proposals were discussed at considerable length at our board of directors' meeting held on March 2, 1959.

It is the consensus of opinion of our board that net savings or retained margins of cooperatives should be taxed. We do feel that since most cooperatives are organized similar to partnerships, their earnings should be handled in the same way. In other words, each producer should pay a tax on the income he receives from the cooperative.

In most cooperative bylaws, the producer authorizes the board of directors to withhold sufficient funds from the total amount received from the producer above actual operating costs, to furnish working capital and capital assets for the business. The so-called net savings or retains are used for that purpose and are allocated to each producer in accordance with his participation in his organization. The intent of the 1951 Revenue Act was as above stated but was not stated clearly in the law.

Our directors adopted a resolution suggesting that the 86th Congress adopt appropriate legislation to clarify and make effective the intent of the 1951 Revenue Act. We are enclosing copy of a resolution adopted by our directors—also copy of letter of transmittal that was sent to each member of the House Ways and Means Committee and to the members of the Senate Finance Committee.

The Secretary's letter was also discussed at our annual membership meeting held at Mount Angel on March 7, 1959, and the members adopted a similar resolution. We are also enclosing copy of this resolution and a copy of the letter of transmittal that went to the members of the House Ways and Means Committee and to the members of the Senate Finance Committee.

We know you are familiar with the outstanding job cooperatives are doing for farmers in Oregon and trust you will give the enclosed resolutions your favorable consideration.

We will appreciate any help you can give us in getting the 1951 Revenue Act clarified so that its intent will be carried out.

Sincerely,

P. F. GORES,
Secretary and Manager.

RESOLUTION ADOPTED BY BOARD OF DIRECTORS OF THE FARMERS OIL CO. AT MOUNT ANGEL, OREG., AT A SPECIAL BOARD MEETING HELD ON MARCH 2, 1959

Whereas the board of directors of the Farmers Oil Co. of Mount Angel, Oreg., in session at a special board of directors meeting this 2d day of March 1959, believe the taxing of patronage refunds and/or allocations to patrons as intended by the 1951 Revenue Act is equitable, just and sound;

Whereas considerable confusion and uncertainties exist concerning the taxability of patronage refunds and/or allocations of cooperatives: Now, therefore, be it

Resolved, That we, the board of directors representing 2,043 farmer owners of the Farmers Oil Co. of Mount Angel, Oreg., do hereby recommend appropriate legislation by the 86th Congress to clarify and make effective the intent of the 1951 Revenue Act to the effect that all patronage allocations or cooperatives are taxable to the patrons upon notification thereof; be it further

Resolved, That a copy of this resolution be sent to each of the Oregon congressional delegation and to each member of the House Committee on Ways and Means and to each member of the Senate Committee on Finance.

RESOLUTION BY BAKER DISTRICT, POMONA GRANGE NO. 24

Be it resolved, That Congress enact legislation clearly and concisely establishing single tax liability upon patronage refunds of farmer cooperatives by taxing them at face value in the hands of the members in the year of issuance or notification, disregarding the actual or market value thereof for tax purposes; be it further

Resolved, That Congress reject any attempts to fix the interest paid or payable on such patronage refunds or the period of redemption thereof by such farmer cooperatives.

E. V. BRADFORD,
Master.
EDITH MORIN,
Secretary.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the House had agreed to the concurrent resolution (S. Con. Res. 9) extending a welcome to the Inter-American Bar Association.

The message also announced that the House had disagreed to the amendment of the Senate to the bill (H.R. 5640) to extend the time during which certain individuals may continue to receive temporary unemployment compensation; asked a conference with the Senate on the disagreeing votes of the two Houses thereon, and that Mr. MILLS, Mr. FORAND, Mr. KING of California, Mr. SIMPSON of Pennsylvania, and Mr. MASON were appointed managers on the part of the House at the conference.

EXTENSION OF TIME FOR RECEIPT OF TEMPORARY UNEMPLOYMENT BENEFITS

The PRESIDING OFFICER laid before the Senate a message from the House of Representatives announcing its disagreement to the amendment of the Senate to the bill (H.R. 5640) to extend the time during which certain individuals may continue to receive temporary unemployment compensation, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. BYRD of Virginia. I move that the Senate insist upon its amendment, agree to the request of the House for a conference, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. BYRD of Virginia, Mr. KERR, Mr. MCCARTHY, Mr. WILLIAMS of Delaware, and Mr. CARLSON, conferees on the part of the Senate.

Mr. JAVITS. Mr. President, will the Senator yield for a question?

Mr. BYRD of Virginia. I yield.

Mr. JAVITS. First, I express my gratitude to the distinguished Senator from Virginia for his great courtesy and consideration, involving personal inconvenience on his own part, in enabling us to send the bill to conference.

Is it hoped that a conference report may be submitted this evening?

Mr. BYRD of Virginia. It is hoped that a conference report will be submitted within 30 minutes.

Mr. MANSFIELD. Mr. President, I think I should say that the Senate will be in session for at least another half hour, awaiting the submission of the conference report.

PRELIMINARY FINDINGS OF DRAPER COMMITTEE ON FOREIGN AID

Mr. MORSE. Mr. President, before the Senate recesses for Easter, I wish to take a few minutes, for the sake of the record, to comment on the preliminary conclusions of the President's Committee To Study the United States Military Assistance Program, better known as the Draper report, after William H. Draper, Jr., Chairman of the Committee.

At the time of the Draper Committee's appointment last fall, it was widely reported that this was a consequence of the letter which eight members of the Foreign Relations Committee, including myself, wrote to the President August 25, 1958. In that letter, we expressed "our deep concern over the present concept and administration" of the mutual security program. We further expressed the belief that "with respect to the less developed countries there is a serious distortion in the present relative importance which is attached to military and related aid on the one hand and technical assistance and self-liquidating economic development assistance on the other."

We urged the President to give his personal attention to this matter before submitting another year's installment of the mutual security program to Congress.

"It may be," we wrote, "that such a study will lead you, Mr. President, as it has led us, to the conclusion that the principal and most costly shortcoming in the mutual security program remains, as it has been for some time, the failure to emphasize military aid less and to stress economic aid and technical assistance more. It may be that such a study will reveal that the military and nonmilitary portions of the program are drawn up independently to an undue extent and then put together automatically in the same package."

Finally, the letter expressed "our concern that we may be pursuing a pattern of foreign aid drawn by force of habit rather than one adjusted to current international realities."

In view of the publicity surrounding the appointment of the Draper Committee, hopes were raised that it would in fact deal with these questions which are of concern not only to many Members of the Senate but to large numbers of the American people.

These hopes have not been borne out by the Draper Committee's preliminary conclusions which were submitted to the President March 17. The substance of those conclusions can be summarized very quickly:

First. The military assistance program for fiscal 1960 should be increased by $400 million, mainly for NATO countries.

Second. Economic assistance cannot be reduced, because this woud put disproportionate emphasis on the military programs.

Third. Lending for economic development at an annual rate of $1 billion "will probably be needed" by fiscal 1961.

Mr. President, a legitimate distinction is to be drawn between military assistance for the countries of NATO and military assistance for the rest of the world. The Draper Committee draws such a distinction by inference, but the Committee does not deal perceptively with the problem of military asssitance to non-NATO countries. And it implies, at least, that military assistance furnishes the principal reason and justification for economic assistance to many of these countries.

There is little, if any, evidence in the Draper Committee's preliminary conclusion that it grasps the point made by the eight Senators in our letter to the President last summer.

The Committee states that in its final report it intends to give more thorough examination to problems of economic assistance. One can only hope that it will do so, because so far its work has totally ignored the comments we made.

I am especially concerned by the implication of the Draper report that economic assistance will have to remain in proportion to the increased military aid it recommends. The economic assistance that is required to support military forces goes under the name of defense support; defense support is the measure of the extent to which a country is overmilitarized. It is the money needed from the United States to support a military establishment above and beyond the recipient's own economic capacity.

This economic assistance is not self-liquidating. It does not come under the lending for economic development.

It is blanket aid; it goes as a grant to the recipient country, to be used to support military forces.

But when we make such a grant, we lose control over the use to which it is put. Unlike the loans from the Development Loan Corporation, which are made for specific economic projects and on fixed terms, blanket economic assistance

is simply a chunk of American money turned over to another nation to use as it pleases.

I think this kind of economic aid—and I think it is a misnomer to call it aid—is the kind of expenditure that I think is responsible for much of the disrepute that the entire foreign aid program has fallen into among Americans.

As the Senator from Indiana [Mr. HARTKE] has indicated today, the administration is urging Congress to approve large sums for foreign aid, while at the same time it is urging Congress not to approve programs to relieve unemployment and the ill effects of unemployment. I am at a loss to understand how the President can, in good conscience, continue to urge blanket economic grants to foreign countries, to be used as their leaders see fit, while he opposes grants to American States for unemployment compensation benefits to the jobless.

But whether or not there is any blight here at home to worry us, I am simply opposed to the continual waste of our money through a foreign aid program that fails to meet the real need of people abroad.

When the eight Democrats wrote to the President last fall, we hoped he would respond to our concern by revamping the mutual security program.

Instead, he has turned over the matter to a committee heavily dominated by professional military men, men whose answer to our appeal has been a recommendation that the present overemphasis on military aid and defense support not be reduced, but be increased.

That is the impression I have gotten from this preliminary report of the Draper Committee. So far, it has dealt only with NATO countries, but its emphasis that blanket economic grants to these countries continue so as to shore up the increased military aid the Committee calls for, goes in the exact opposite direction we urged the President to take last fall.

His refusal to give serious consideration to our warning that foreign aid should be modernized is not going to do the program any good with Congress, and certainly not with the American people.

DRUMS BEING BEATEN FOR FOREIGN AID

Mr. President, as a member of the Senate Foreign Relations Committee, I intend to speak out, when the economic and military foreign aid program gets before the Senate, in regard to some of the shortcomings, waste, inefficiency and maladministration of aspects of the military and economic foreign aid program.

Let me say today, because I believe the American people need to be warned, that a propaganda job is being done on American public opinion.

This administration, I am satisfied, has deliberately undertaken to create the impression in this country that any Member of Congress who raises doubts about some phases of the military and economic aid program, or dares to suggest that economies within that program may save hundreds upon hundreds of millions of dollars, is in some way, somehow endangering the security of the United States.

That is a plain misrepresentation of the facts. Of course that is nothing extraordinary for the Eisenhower administration to do. It has been guilty of misrepresenting the facts so many times during its life it is to be expected that once again an attempt will be made to do this kind of "snow job" on American public opinion.

Once again there is a terrific drive among the editors of the country, by and large, to aid and abet the White House and the State Department and the Pentagon in beating the drums and waving the flag for military and economic aid.

I will never be silenced or influenced by the propaganda machinery of the Eisenhower administration or any other administration. As a member of the Foreign Relations Committee who has worked closely with the problem of economic and military foreign aid for many years, I say there is a waste of hundreds of millions of dollars in the military and economic aid program of this Government. The General Accounting Office, the House Government Operations Committee and other congressional committees have revealed it time and again.

I am in favor of military and economic aid. However, I am in favor of good military and economic aid, efficient military and economic aid, and military and economic aid which is designed to accomplish its objectives.

It was 3 years ago that we spent $240,000 of taxpayer money for a series of studies to be conducted by experts, such as known and recognized authorities from the University of Chicago, the Massachusetts Institute of Technology, Columbia University, and the Brookings Institution.

ADMINISTRATION AND CONGRESS CONTINUE TO IGNORE EXPERTS

However, as we read the recommendations of the President of the United States for a continuation of his blanket proposals for military and economic foreign aid, we come to the conclusion that he and his advisers apparently have never read those reports. The members of the Committee on Foreign Relations know the truth of what I say. They know what those studies brought forth. They support my contention that there is great waste in the military and economic foreign aid program.

Therefore I am justified in severely criticizing the President of the United States when he uses the prestige of his office to seek to block, in the name of a balanced budget, the passage of general welfare legislation in Congress, and yet proposes to send to us a military and economic foreign aid program which includes tremendous waste of taxpayer dollars.

It is said, in reply to the position of those of us who believe we should take a very careful look at military and economic aid requests, and to squeeze out the water of waste, "You must not interfere with the President and the Secretary of State in the field of foreign policy. And you must not touch a hair on the head of the foreign aid program they recommend."

My answer is "tommyrot." My answer is that, under the Constitution, it is the obligation of Congress, exercising its power of check, to challenge inefficiency and waste and maladministration of the military and economic foreign aid program.

Therefore I intend to challenge it. I intend to vote for the best military and economic foreign aid program we can get through Congress. However, I have a duty to do all I can do in an effort to make it the best program.

In my judgment there is no basis in fact for the recommendation of the Draper Committee that the military aid program should be increased by $400 million. Rather, more than $400 million ought to be saved from the present military aid program and then we should transfer the savings to where they can be best used; perhaps to NATO, if that is the proper place.

ROLE AND FINANCING OF NATO NEEDS REEXAMINATION

However, NATO has almost become a sacred political cow in these precincts. NATO has almost become untouchable in congressional consideration. Let me say, however, that NATO needs a close examination by Congress, because I am satisfied that a part of the $400 million which the Draper Committee is asking to be added to the NATO budget could be saved from the present NATO budget.

I was one of the earliest and stanchest supporters of NATO. But that does not mean I think it should never be reexamined, once agreed to.

Times change; needs change. Other parties to NATO are finding this to be true, and are acting accordingly.

We should also make it clear to some of our allies within NATO that we look with a rather jaundiced eye on some of their manipulations of recent years in regard to NATO practices, such as those of France. In my judgment, the policies of France in connection with NATO would have a hard time withstanding an impartial public inspection. I have in mind the transfer of troops to support France's colonial policies, with the use of NATO equipment, in respect to French national problems, not NATO problems at all.

TIME TO STUDY DEFENSE NEEDS IS NOW

No, Mr. President, I do not believe in worshiping even the most sacred political cows. We had better take a long, hard look, even at NATO. Oh, I know a hue and cry would be raised that this is no time, with the Berlin crisis confronting us, to suggest that perhaps everything is not exactly right and hunkydory in connection with military and economic foreign aid.

My answer is: This is exactly the time to do it. This is the time to make corrections and improvements in the foreign military and economic programs which will strengthen the United States and thereby strengthen our allies, so that we will be in a better position to meet the Berlin crisis and the next crisis which will be raised by the Russians, because if anyone thinks this is the last crisis, he has not made much of a study of Russian policies and strategy.

My feeling is that the military organization at the Pentagon Building is having a field day with Congress and the people of the country by using the Berlin crisis for stuffing the military budget far beyond the amounts which are needed.

So I think it becomes the clear duty of the members of the Committee on Foreign Relations to examine in minute detail the recommendations of the President concerning military and economic aid, and to examine in minute detail what I consider to be the obviously slanted recommendations of the Draper Committee.

COMMON DEFENSE IS ONLY JUSTIFICATION FOR MILITARY AID

Let us look at some of the general grants in military aid which the United States has been making for the past 10 years or more. Have they produced much good in many places? As chairman of the Subcommittee on Latin-American Affairs of the Committee on Foreign Relations, I can say that, in my judgment, there has been great waste of both military and economic aid in many parts of Latin America. In fact, I think most of the military aid to Latin America ought to be stricken completely. I do not believe it can be justified on the basis of the rationale that the Pentagon Building always uses, namely, that the money needs to be granted to Latin-American countries for hemispheric defense, because it will not do us any good for hemispheric defense. If we become involved in a nuclear war, the military appropriations to Latin America will be of no defense value.

The interesting thing is that most of the Latin-American governmental leaders to whom I talked are honest enough to tell me so. The entire Committee on Foreign Relations had that fact brought to its attention last July, when a couple of members of the Parliament of Chile came to the Capitol and had lunch with the committee. A former member of the Chilean Senate asked, "Why do you send us military aid? Why do you send military aid to Latin America. What good do you think it does you? Do you not recognize that for the most part it is used to stir up trouble in the individual countries to which it goes, and to stir up trouble among the Latin-American countries themselves?"

I believe that in part our problem of bad relations with Latin America is due to the fact that we have made a serious mistake in sending military aid, by and large, to Latin America. Certainly it has been inexcusable for us to send any of it to any dictator in Latin America, whether it was Batista, of Cuba, Jimenez, of Venezuela, or Trujillo, of the Dominican Republic, or others.

I shall not vote for a dollar of military aid to a single totalitarian regime in Latin America. Senators may remember that I led the fight last year, both in committee and on the floor, against such a program. I shall do so again this year. An exceptionally good case will have to be made to justify any so-called military aid, even for police protection purposes, in any other country.

But that is one place where a lot of water can be squeezed out of the Eisenhower military foreign aid program, and the taxpayers are entitled to it. When that is done, it will not weaken the security of our country in the long run; our security will be strengthened.

As the former senator from Chile pointed out to us, what we should be doing is to try to arrange with Canada, to our north, and with our Latin American neighbors to the south, an international compact whereby it will be agreed that all of us, acting in concert, will stand ready and willing at all times to protect the territorial integrity of any Latin American country which is threatened by an attack from without. That is the first step which we should take. I think his point is undeniably correct.

OUR MONEY SHOULD GO INTO ECONOMIC PROJECTS

Then he said, "Lend us the money which you are now sending to Latin America for military aid. Lend it to us for specific economic projects which will help to raise the standard of living of the people in the area where the project is to be constructed."

The only fault I can find with his suggestion is that it makes common sense. In this field, I have almost reached the conclusion that if one wants to get action from Congress, one should follow the President's example and propose a military aid program which does not make sense, or an economic aid program which in many particulars has no sense connected with it.

The money which now is going into military aid ought to be lent to Latin American countries for specific improvements or specific projects on a line-of-credit basis, to be drawn upon as the projects are constructed.

Let us look at some of our military aid in other parts of the world outside NATO. Go to those countries and look at the results. If it were not such a tragic waste of the taxpayers' money, it would really be high humor. But it is not humor; it is a sad thing. Because the military in this country have been able to influence this administration to such an extent that millions and millions of the taxpayers' dollars are being poured down a drain hole, so to speak, the program ought to be labeled "military aid waste."

I shall vote for some cuts in that kind of military aid. There were more members of the Committee on Foreign Relations last year who supported cuts in this field than there were the year before.

I am hopeful that despite all the propaganda the administration is pouring out about the Berlin crisis, this year a majority of the Senate Committee on Foreign Relations will apply the pruning knife to Dwight D. Eisenhower's military-aid budget, and also in some respects in regard to his economic assistance budget, and will make the savings which I believe will strengthen the foreign policy of the Nation, and also will be useful in stopping what I consider to be the inexcusable shortsightedness of the President of the United States in regard to some domestic economic problems.

Mr. President, at this time I shall yield the floor, provided it is understood—and I ask unanimous consent for this purpose—that on tomorrow, immediately following the speech of the Senator from Louisiana [Mr. LONG], I shall be recognized, to make my second speech.

The PRESIDING OFFICER (Mr. BARTLETT in the chair). Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. MORSE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate stand in recess, subject to the call of the Chair.

The PRESIDING OFFICER. Is there objection?

There being no objection, at 6 o'clock and 16 minutes p.m., the Senate took a recess, subject to the call of the Chair.

At 6 o'clock and 26 minutes p.m. the Senate reassembled when called to order by the Presiding Officer (Mr. MANSFIELD in the chair).

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed, without amendment, the following joint resolutions of the Senate:

S.J. Res. 47. Joint resolution providing that certain communication activities at the IX Plenary Assembly of the International Radio Consultative Committee to be held in the United States in 1959 shall not be construed to be prohibited by the Communications Act of 1934 or any other law; and

S.J. Res. 73. Joint resolution extending an invitation to the International Olympic Committee to hold the 1964 Olympic games in the United States.

The message also announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 5640) to extend the time during which certain individuals may continue to receive temporary unemployment compensation.

Mr. MORSE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. COTTON in the chair). Without objection, it is so ordered.

ORDER FOR ADJOURNMENT UNTIL 10 A.M. TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate concludes its business today, it stand in adjournment until 10 o'clock tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXTENSION OF TIME FOR RECEIPT OF TEMPORARY UNEMPLOYMENT COMPENSATION — CONFERENCE REPORT

Mr. BYRD of Virginia. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 5640) to extend the time during which certain individuals may continue to receive temporary unemployment compensation. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER. The report will be read for the information of the Senate.

The legislative clerk read the report.

(For conference report, see House proceedings of today).

The PRESIDING OFFICER. Is there objection to the present consideration of the conference report?

There being no objection, the Senate proceeded to consider the report.

Mr. JAVITS. Mr. President, will the Senator from Virginia yield for a question?

Mr. BYRD of Virginia. I yield.

Mr. JAVITS. Was there any support on the House side among the conferees for the amendment, adopted by the Senate, which had been offered by the Senator from Minnesota [Mr. McCARTHY]?

Mr. BYRD of Virginia. I believe there was one Member who was in favor of it. I should say, first, that all the conferees on the part of the Senate signed the report.

Mr. JAVITS. I assume that includes the Senator from Minnesota [Mr. McCARTHY], who was one of the sponsors of the amendment.

Mr. BYRD of Virginia. Yes. All the managers on the part of the House also signed the report. When the motion was made that the Senate recede from its amendment, the Senator from Minnesota [Mr. McCARTHY], of course, voted against the motion. I believe one Member of the House voted against it. Mr. FORAND was not present, but his proxy was held by Chairman MILLS.

Mr. JAVITS. How many conferees on the part of the House were present?

Mr. BYRD of Virginia. There were five conferees on the part of the House and five conferees on the part of the Senate. The Senator from Minnesota made a very strong plea for the adoption of his amendment. However, the House, by a vote—I think it was a vote of 4 to 1—refused to agree to it. The conference did adopt the so-called technical amendment.

Mr. JAVITS. I understand the conference report has already been adopted by the House. Is that correct?

Mr. BYRD of Virginia. That is correct.

Mr. JAVITS. Am I correct in my understanding of the present situation, that if the program should end on the 1st of April, it would be necessary to dismantle the administration of the program; and that even if it were reestablished in 10 or 15 days, it might be extremely difficult, from a technical standpoint, and also very costly? Is that correct?

Mr. BYRD of Virginia. The program provides that those who are on the rolls as of April 1 will be continued to July 1.

Mr. JAVITS. I do not believe the Senator from Virginia quite understood my question. Let us suppose we do not adopt the conference report. I believe those in charge of the program feel that the dismantling operation would have to start at once and that it would be very difficult and costly to restore the operation even if we should pass a bill in 10 or 15 days.

Mr. BYRD of Virginia. The Senator is entirely correct. The personnel, as I understand, would have to be dismissed on April 1.

Mr. JAVITS. I gather, then, that both the Senator from Virginia and the Senator from Minnesota advise that the Senate concur in the report.

Mr. BYRD of Virginia. Yes.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. BYRD of Virginia. I yield.

Mr. MANSFIELD. We are faced with the situation, in other words, where it is this or nothing. Is that correct?

Mr. BYRD of Virginia. The Senator is entirely correct.

Mr. JAVITS. May I ask one further question?

Mr. BYRD of Virginia. I yield.

Mr. JAVITS. I understand that the Committee on Finance has under consideration questions dealing with Federal standards for unemployment compensation. Is that correct?

Mr. BYRD of Virginia. The Ways and Means Committee of the House has such questions under consideration. Hearings have been scheduled to start on April 7 with respect to the establishment of Federal standards.

Mr. JAVITS. We in the Senate cannot act until the House acts; is that correct?

Mr. BYRD of Virginia. It is.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The report was agreed to.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the House had agreed to a concurrent resolution (H. Con. Res. 110) establishing that when the two Houses adjourn on Thursday, March 26, 1959, they stand adjourned until 12 o'clock meridian, Tuesday, April 7, 1959, in which it requested the concurrence of the Senate.

EASTER ADJOURNMENT

The PRESIDING OFFICER laid before the Senate House Concurrent Resolution 110, which was read, as follows:

Resolved by the House of Representatives (the Senate concurring), That when the two Houses adjourn on Thursday, March 26, 1959, they stand adjourned until 12 o'clock meridian, Tuesday, April 7, 1959.

Mr. BARTLETT. Mr. President, I move that the Senate concur in the concurrent resolution.

The motion was agreed to.

PROGRAM FOR TOMORROW

Mr. HOLLAND. Mr. President, I should like to address an inquiry to the acting majority leader, as to what his plans are for tomorrow.

Mr. MANSFIELD. I will say to the distinguished Senator from Florida that to the best of my knowledge, there will be no votes tomorrow. Three speeches are scheduled. The Senate will meet at 10 o'clock in the morning. At the conclusion of the business of the Senate, an adjournment will be taken until April 7.

Mr. HOLLAND. I take it that tomorrow's session will be in the nature of an Easter eve meeting; is that correct?

Mr. MANSFIELD. Yes; the Senator may leave now, if I gather what he is driving at.

UNEMPLOYMENT COMPENSATION

Mr. HART. Mr. President, I ask unanimous consent that there be printed in the RECORD at this point an editorial entitled "Shame on Them," published in the Detroit Times of March 23, 1959. It is pertinent in the light of the colloquy which occurred between the senior Senator from Michigan [Mr. McNAMARA] and Senators on the other side of the aisle as to what the situation is in the Michigan State capital.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SHAME ON THEM

Republican performance in the cash crisis at Lansing borders on disgrace.

With our State being jeered from Maine to California, GOP legislative representatives are compiling a record of obstructionism, senseless jealousy and inaction.

They utter promises of no payless paydays in State government, no school closings, no hungry welfare families, but do nothing to prevent it.

They refuse to support Governor Williams' proposal to use the veterans' 50-million-dollar trust fund, yet offer no alternative for averting fiscal disaster.

Their talk of bipartisan cooperation has been exposed as a sham, judging from last Thursday's events in the House.

Republicans wanted Democrats to take the blame for "tampering" with the politically sacrosanct Veterans' Trust Fund. Democrats squirmed for weeks trying to avoid it, but when the chips were down, they met the challenge, almost to a man.

With the exception of 10 courageous Republican house members, the GOP did not.

Speaker Don Pears, a leader in phony bipartisan talkathon, hid behind the privilege of not voting. Republican floorleader Allison Green voted "No," though he admitted later he cannot offer a better solution.

Republican representative Harry Phillips of Port Huron capped the fiasco, saying:

"If the State's condition is so bad we have to rob the veterans, then let's go bankrupt and start all over."

Representative Phillips' remarks moves us to raise these questions:

Is this the party struggling to regain prestige and power wrested from them by a militant opposition?

Is this the party trying to convince voters theirs is the party of responsibility?

Is this the Republican answer to Michigan teachers, State employees and families on relief who face payless paydays in the next 60 days?

We earnestly hope not.

If it is Governor Williams and the Democrats they are after, the Republicans cannot lick them in the legislative chambers. They have to do it at the polls.

From where we stand, the Republicans do not have a chance until action replaces inertia and adult reasoning is substituted for kindergarten politics.

ADJOURNMENT TO 10 A.M. TOMORROW

Mr. KUCHEL. Mr. President, pursuant to the order previously entered, I move that the Senate adjourn until 10 o'clock tomorrow morning.

The motion was agreed to; and (at 6 o'clock and 48 minutes p.m.) the Senate adjourned, the adjournment being, under the order previously entered, until tomorrow, Thursday, March 26, 1959, at 10 o'clock a. m.

NOMINATIONS

Executive nominations received by the Senate March 25, 1959:

U.S. COURT OF CUSTOMS AND PATENT APPEALS

Eugene Worley, of Texas, to be chief judge of the U.S. Court of Customs and Patent Appeals, vice Noble J. Johnson, retired.

Arthur M. Smith, of Michigan, to be associate judge of the U.S. Court of Customs and Patent Appeals, vice Eugene Worley, elevated.

U.S. MARSHALS

M. Frank Reid, of South Carolina, to be U.S. marshal for the western district of South Carolina for the term of 4 years. He is now serving in this office under an appointment which expired March 16, 1959.

Hobart K. McDowell, of Texas, to be U.S. marshal for the northern district of Texas for the term of 4 years. He is now serving in this office under an appointment which expired April 2, 1958.

IN THE AIR FORCE

The officers named herein for appointment as Reserve commissioned officers in the U.S. Air Force under the provisions of section 8351, title 10, United States Code, and section 8381, of Public Law 861, 85th Congress.

To be major general

Brig. Gen. Lewis A. Curtis, AO729140, New York Air National Guard.

Brig. Gen. Howard F. Butler, AO403692, Tennessee Air National Guard.

To be brigadier general

Col. Barnie B. McEntire, Jr., AO396288, South Carolina Air National Guard.

Col. William R. Sefton, AO668649, Indiana Air National Guard.

Col. Howard T. Markey, AO442531, Illinois Air National Guard.

Col. Willard W. Millikan, AO885404, District of Columbia Air National Guard.

Col. Raymond L. George, AO426384, New York Air National Guard.

Col. Jack W. Stone, AO164956, California Air National Guard.

Col. Ross C. Garlich, AO397879, Missouri Air National Guard.

Col. Jack Parsons, AO396885, Alabama Air National Guard.

POSTMASTERS

The following-named persons to be postmasters:

ALABAMA

Louise R. Fulford, Faunsdale, Ala., in place of A. P. Moseley, resigned.

Talton A. Shaw, Jr., Langdale, Ala., in place of Glenn Draper, deceased.

ARIZONA

Evelyn M. Linnane, Sanders, Ariz., in place of R. W. Cassady, resigned.

ARKANSAS

Mae R. Willis, Watson, Ark., in place of R. H. Willis, retired.

CALIFORNIA

John W. Henry, Altadena, Calif., in place of E. B. Cardiff, retired.

Leland E. Stuart, Courtland, Calif., in place of F. F. Howard, deceased.

Robert S. Dart, Lincoln, Calif., in place of R. W. Miner, resigned.

Minnie P. Lynn, Rio Oso, Calif., in place of J. E. Butler, resigned.

COLORADO

Linton L. West, Blanca, Colo., in place of W. A. Simmer, deceased.

Neil K. Clay, Hotchkiss, Colo., in place of G. H. Duke, Jr., deceased.

CONNECTICUT

Emeline T. Slaiby, Lakeside, Conn., in place of R. M. Monroe, resigned.

Nelson A. Potter, Windham, Conn., in place of J. M. Potter, retired.

Arthur Manzi, Woodbury, Conn., in place of P. F. Cassidy, removed.

FLORIDA

Charles A. Lee, Windermere, Fla., in place of A. S. Given, retired.

Fred H. Bekemeyer, Winter Garden, Fla., in place of E. M. Henderson, transferred.

GEORGIA

Alson C. Snyder, Jr., Hartwell, Ga., in place of F. S. White, deceased.

Willard W. Mann, Riverdale, Ga., in place of W. T. Young, retired.

Cecil Hancock, Royston, Ga., in place of R. C. Ayers, retired.

IDAHO

Walter P. Kahler, Mackay, Idaho, in place of Mildred Richards, retired.

ILLINOIS

Lester W. Black, Downers Grove, Ill., in place of R. W. Schultz, resigned.

John P. Schmucker, Joliet, Ill., in place of J. W. Lowrey, retired.

Clyde H. Steffee, Mundelein, Ill., in place of C. E. Teson, retired.

INDIANA

Robert E. McKain, Carthage, Ind., in place of J. E. Porter, removed.

George L. Reitz, Chrisney, Ind., in place of R. T. Jones, deceased.

Norval W. Chamness, Marshall, Ind., in place of H. E. Delp, retired.

William J. Leonard, Monroeville, Ind., in place of J. E. Meyer, retired.

Harold H. Scott, Monterey, Ind., in place of C. A. Good, retired.

Cleson D. Weldy, Wakarusa, Ind., in place of Vern Hahn, deceased.

Charles E. Carey, Whitestown, Ind., in place of E. M. Miller, retired.

IOWA

Verle E. Meggers, Independence, Iowa, in place of C. V. McDonald, transferred.

Thomas W. Gidley, Jr., Malvern, Iowa, in place of S. P. Mulholland, deceased.

Kathleen V. Toms, Mingo, Iowa, in place of R. E. Russell, retired.

Bessie M. Waterhouse, Oakville, Iowa, in place of C. M. Sexton, resigned.

KANSAS

Frances L. Warkentine, Auburn, Kans., in place of Ina Cellers, retired.

Paul B. Rhoades, Cawker City, Kans., in place of Joe Wierenga, resigned.

William D. French, Eureka, Kans., in place of R. L. Marlin, resigned.

KENTUCKY

Kermit L. Tussey, Cynthiana, Ky., in place of J. M. Magee, retired.

George Morgan, Jenkins, Ky., in place of M. H. Vaughan, retired.

LOUISIANA

Pauline S. Jones, Angie, La., in place of L. G. Nagel, retired.

Claude T. Cox, Vivian, La., in place of S. O. Wilson, deceased.

MAINE

Philip E. Plante, Machias, Maine, in place of E. H. Parlin, retired.

Bert A. MacKenzie, Orono, Maine, in place of H. E. Rice, retired.

MARYLAND

Charles E. Whittle, Fort George G. Meade, Md., in place of C. A. Bechtold, retired.

MICHIGAN

Lewis H. Bishop, Cass City, Mich., in place of C. V. Muntz, transferred.

Morris E. Parish, Coopersville, Mich., in place of R. A. McLellan, resigned.

Kenneth D. Kerswill, Gladwin, Mich., in place of J. L. Heslop, deceased.

Kenneth E. Scripsma, Holland, Mich., in place of Harry Kramer, retired.

MINNESOTA

Marguerite D. Manders, Big Falls, Minn., in place of M. J. Peterson, resigned.

Marvin E. Michelson, Buffalo Lake, Minn., in place of J. G. Williams, transferred.

William E. Kieren, Gilbert, Minn., in place of Herman Frajola, retired.

Charles H. Bordwell, Keewatin, Minn., in place of O. A. Olson, retired.

MISSOURI

Harold R. Bond, Cairo, Mo., in place of H. H. Reynolds, retired.

Clarence W. Yarnell, Clarksburg, Mo., in place of Margaret Stephens, retired.

James G. Litzler, Dudley, Mo., in place of G. M. Edmundson, resigned.

Joe M. Keefhaver, Edgerton, Mo., in place of G. W. Miller, deceased.

Chester P. Sulser, Ellington, Mo., in place of R. G. Carter, deceased.

NEBRASKA

Paul D. Coder, Wellfleet, Nebr., in place of L. J. Henry, transferred.

NEW JERSEY

John R. Wert III, Hopewell, N.J., in place of M. J. McAlinden, retired.

William B. Conkright, Towaco, N.J., in place of P. N. Mazziotta, deceased.

NEW MEXICO

Roy W. Harman, Carrizozo, N. Mex., in place of H. E. Kelt, retired.

NEW YORK

Myron F. Blakeney, Buffalo, N.Y., in place of J. R. Hawn, deceased.

Edwin Craft, Ellenville, N.Y., in place of J. E. Gilleran, deceased.

Elaine L. Bruce, Moira, N.Y., in place of C. C. Young, deceased.

Roscoe C. Odell, Pleasantville, N.Y., in place of L. D. Olmstead, deceased.

NORTH DAKOTA

Melvin L. Tofteland, Antler, N. Dak., in place of J. B. Wright, transferred.

OHIO

Loyal Lee Andrews, Greentown, Ohio, in place of F. L. Diffenderfer, retired.

Orvile C. Hoover, Salem, Ohio, in place of L. D. Beardmore, deceased.

Richard J. Swain, South Zanesville, Ohio, in place of J. E. Kassel, retired.

OKLAHOMA

Virgil R. Hughes, Blanchard, Okla., in place of T. J. Lucado, Jr., resigned.

James R. Henderson, Lindsay, Okla., in place of B. M. Luton, Jr., deceased.

OREGON

Roger J. Thompson, Cutler City, Oreg., in place of H. V. Crane, deceased.

PENNSYLVANIA

Eugene W. Mather, Benton, Pa., in place of D. E. Hartman, retired.

Paul R. Faux, Butler, Pa., in place of J. B. Murrin, deceased.

Antoinette M. Klarman, Folsom, Pa., in place of E. M. Goodwin, retired.

Merl W. Seavers, Hershey, Pa., in place of D. S. Graeff, retired.

Edna V. Loeffel, Lemont Furnace, Pa., in place of A. J. Haught, deceased.

Elmer C. Maurer, New Berlin, Pa., in place of J. S. Seebold, retired.

Irvin V. Diffenderfer, New Holland, Pa., in place of C. F. Yost, retired.

Margaret T. Silvis, Pleasant Unity, Pa., in place of I. F. White, deceased.

William J. Zepp, York Springs, Pa., in place of P. E. Trump, resigned.

SOUTH CAROLINA

Edward F. Cross, Cross, S.C., in place of M. C. Rodgers, removed.

Monroe H. Hutto, Montmorenci, S.C., in place of J. L. Berrie, deceased.

TENNESSEE

Maggie L. Bell, Auburntown, Tenn., in place of J. F. McKnight, deceased.

VIRGINIA

William W. Thomas, Dryden, Va., in place of G. E. Orr, removed.

Martin Luther Garraghty, Goode, Va., in place of J. S. McCauley, retired.

WASHINGTON

Merle R. Johnson, Trout Lake, Wash., in place of C. M. Langfield, resigned.

WEST VIRGINIA

George B. Jordan, Ripley, W. Va., in place of H. E. Starcher, removed.

WISCONSIN

William G. Brown, Delafield, Wis., in place of T. A. Lowerre, retired.

WYOMING

Leo M. Buckley, Lander, Wyo., in place of L. J. Vaughn, retired.

Harold V. Baas, Sheridan Wyo., in place of J. R. Gage, resigned.

CONFIRMATIONS

Executive nominations confirmed by the Senate March 25, 1959:

POSTMASTERS

ALABAMA

Thomas E. Fischer, Plantersville.

ARKANSAS

Ferrell S. Tucker, Caraway.

KANSAS

Roland D. Kesler, Quinter.

KENTUCKY

John F. Murdock, Covington.

OKLAHOMA

Henry A. Hewett, Durant.
Jim J. Loftis, Frederick.
Jack H. Justice, Maysville.

PUERTO RICO

Luis Domenech, Isabela.
Efrain Poupart, Las Piedras.

SOUTH CAROLINA

Robert B. Nickles, Donalds.
Thomas T. Adkins, Marietta.

WASHINGTON

Monty Fraser, Othello.

HOUSE OF REPRESENTATIVES

WEDNESDAY, MARCH 25, 1959

The House met at 12 o'clock noon.

Rev. Vladimir L. Tarasevitch, St. Procopius Abbey, Lisle, Ill., offered the following prayer:

O Lord, our God, who in creating man to Your image and likeness, have endowed him with certain inalienable rights of life, liberty, and the pursuit of happiness, mercifully grant that our long-suffering Byelorussian brothers may soon enjoy all these rights, so that they may worship You, their Creator and Redeemer, in peace and freedom. Help them to remain faithful to You. Lighten their heavy burden. Enkindle in them the hope of deliverance. Save, O Lord, Your people and bless Your inheritance.

Bless, O Lord, the United States of America, the bastion of freedom and hope of the oppressed. Inspire its leaders to pursue the cause of peace and justice with courage. Grant, O Lord, peace in our days. To You with the Father and the Holy Spirit all honor and glory. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed without amendment concurrent resolutions of the House of the following titles:

H. Con. Res. 15. Concurrent resolution providing for the printing of the "Code of Ethics for Government Service" as a House document; and

H. Con. Res. 109. Concurrent resolution extending the felicitations of the Congress to the Commonwealth of Massachusetts on the 100th anniversary of the establishment of the Superior Court of Massachusetts.

The message also announced that the Senate had passed a joint resolution and a concurrent resolution of the following titles, in which the concurrence of the House is requested:

S.J. Res. 73. Joint resolution extending an invitation to the International Olympic Committee to hold the 1964 Olympic games in the United States; and

S. Con. Res. 9. Concurrent resolution extending a welcome to the Inter-American Bar Association.

EXTENDING A WELCOME TO THE INTER-AMERICAN BAR ASSOCIATION

Mr. FASCELL. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the resolution (S. Con. Res. 9) extending a welcome to the Inter-American Bar Association, and ask for its immediate consideration.

The Clerk read the title of the resolution.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

Mr. GROSS. Mr. Speaker, reserving the right to object, is this going to cost any money?

Mr. FASCELL. It will not, I am very happy to inform the gentleman from Iowa. This just extends a very hearty welcome to the Inter-American Bar Association holding its 11th convention in Miami, Fla.

Mr. GROSS. I thank the gentleman. I withdraw my reservation of objection, Mr. Speaker.

Mr. FASCELL. Mr. Speaker, it was my pleasure and privilege to introduce House Concurrent Resolution 80, a companion bill to Senate Concurrent Resolution 90 sponsored by our able, distinguished Senator GEORGE A. SMATHERS.

House Concurrent Resolution 80 was unanimously approved by the House Committee on the Judiciary yesterday. I take this opportunity to assure the committee members of my appreciation and gratitude for their prompt and favorable action on my bill, and for their many courtesies extended me in connection with this legislation.

The resolution which is before us today and which will be adopted by this body extends well-deserved recognition and welcome to the Inter-American Bar Association which is holding its 11th conference at Miami, Fla., in April of this year.

This organization, composed of professional men interested in the field of international and comparative law, has made and will continue to make a significant contribution to hemispheric solidarity and understanding. Congress cannot discuss the Inter-American Bar Association without paying tribute to William Roy Vallance, the secretary general. He has performed outstanding service for 40 years in the Legal Adviser's Office of the U.S. Department of State, terminating his service in 1957. He was one of the founders of the Inter-American Bar Association in 1940, bringing together a group of representatives of 20 bar associations in 13 countries to start the association. He has been president of the Inter-American Bar Association and his personal efforts and contributions mark a significant achievement in individual efforts to improve Inter-American understanding.

The present president of the Inter-American Bar Association is the Honorable Cody Fowler, of Tampa, Fla., a distinguished Floridian, former president of the American Bar Association.

Past presidents of the Inter-American Bar Association include the Honorable Joseph A. Moynihan, of Detroit, presiding circuit judge of Michigan; and Hon. Robert G. Storey, dean of Southern Methodist Law School, Dallas, and a former president of the American Bar Association.

The vice presidents of the association are presidents of the National Bar Associations which are members. In other

words, the president of the principal bar association in each country is a vice president of the Inter-American Bar Association. The vice presidents are:

Alfredo Guaglia, Buenos Aires, Argentina.

Alcides Alvaindo, La Paz, Bolivia.

Trajano de Miranda Valverde, Rio de Janeiro, Brazil.

Raul Varela, Santiago de Chile.

Jesus Maria Yepes, Bogota, Colombia.

Fernando Baudrit Solera, San Jose, Costa Rica.

Jose E. Gorrin, Havana, Cuba.

Olegario Helena Guzman, Ciudad Trujillo, Dominican Republic.

Alfonso M. Mora, Quito, Ecuador.

Alfonso Almengor Rodriguez, Guatemala, Guatemala.

Ramon E. Cruz, Tegucigalpa, Honduras.

Jesus Rodriguez Gomez, Mexico City, Mexico.

Enrique Cerda, Managua, Nicaragua.

Eduardo Valdes, Panama, Panama.

Salvador Villagra Maffiodo, Asuncion, Paraguay.

Ulises Montoya Manfredi, Lima, Peru.

Charles S. Rhyne, Washington, D.C.

Jose Arlas, Montevideo, Uruguay.

Celestino Gonzalez Mata, Caracas, Venezuela.

Obviously, these men are some of the outstanding men in the hemisphere. Other association officers are Dr. Miguel S. Macedo, of Mexico City, treasurer, and assistant treasurer, Charles R. Norberg, of Washington, D.C.

Since its organization in 1940, the association has held 10 conferences of lawyers in this hemisphere that have brought together voluntarily at their own expense, large groups of lawyers averaging about 500 in number. At these conferences, held both in Latin America and in the United States, outstanding Americans from both North and South, have participated. Among the many were such men as Alben W. Barkley, former Vice President of the United States, the late Senator Arthur H. Vandenberg, and former President Herbert Hoover.

The Florida Bar Association, the Dade County Bar Association, and the University of Miami are the host for this 11th conference to be held in Miami, Fla., April 10 to 19, under the presidency of Cody Fowler of Tampa. We in Florida are honored that the association is holding this important 11th conference in our area which has always prided itself in its efforts and achievements in Latin American understanding and hemispheric solidarity. We are all confident that the meeting will be an outstanding success. The reports and discussions on some 75 topics which will be presented at the conference by leaders of the legal profession in each of the nations of this hemisphere will have far-reaching effects, not only in the legal profession, but also in promoting understanding, cooperation and good will among the peoples of the hemisphere.

This resolution therefore, Mr. Speaker, will express to the lawyers and to the peoples of the other nations of this hemisphere, the interest of the Congress of the United States in the success of this meeting in Miami of the Inter-American Bar Association, extending to them a hearty welcome and wishing them continued success in their efforts.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

The Clerk read the resolution, as follows:

Whereas the Inter-American Bar Association will hold its eleventh conference at Miami, Florida, during the month of April 1959; and

Whereas the purposes of the association, as stated in its constitution, are to establish and maintain relations between associations and organizations of lawyers, national and local, in the various countries of the Americas, to provide a forum for exchange of views, and to encourage cordial relations among the lawyers of the Western Hemisphere; and

Whereas the high character of this international association, its deliberations and its members can do much to encourage cordial relations among the countries of the Western Hemisphere: Now, therefore, be it

Resolved by the Senate (the House of Representatives concurring), That the Congress of the United States welcomes the Inter-American Bar Association to the United States, and wishes the association unparalleled success in its eleventh conference; and be it further

Resolved, That a copy of this resolution be transmitted to the Secretary General of the Inter-American Bar Association.

The concurrent resolution was concurred in.

A motion to reconsider was laid on the table.

A similar House resolution was laid on the table.

GREEK INDEPENDENCE DAY

Mr. BRADEMAS. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. BRADEMAS. Mr. Speaker, today, March 25, is the 138th anniversary of the beginning of the struggle of the people of Greece for their independence from the Ottoman Empire. On March 25, 1821, the Greek War of Independence began when the archbishop of Patras raised the flag of freedom in the monastery of Aghia Lavra and the people of Greece dedicated themselves to the attainment of their liberty.

Today, with the peoples of the world who believe in political freedom threatened on every hand by the tyranny of Soviet communism, I believe that we should all reflect on the long battle for independence of Greece, where the democratic ideals on which our own country is founded were born.

To mark the occasion of Greek Independence Day, I have today introduced in the House of Representatives the following resolution:

Whereas the democratic ideals that have made the United States of America the greatest free nation in the world were born many centuries ago in Greece; and

Whereas these ideals have kindled in the hearts of the people of Greece the determination that no sacrifice is too great for the cause of freedom and democracy; and

Whereas in every country people of Greek origin celebrate March 25 as Greek Independence Day, this day marking the beginning on March 25, 1821, of a 7-year struggle of the people of Greece to win their independence from the Ottoman Empire; and

Whereas free men in every nation rejoice that the principles of domocracy are again firmly established in the land of their birth: Therefore be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States be authorized and requested to issue a proclamation designating March 25 of each year as Greek Independence Day and that he invite the people of the United States to observe such day with appropriate ceremonies.

THE PENDING FAIR TRADE BILL

Mr. ALGER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. ALGER. Mr. Speaker, I take this opportunity to tell my colleagues that yesterday and today, in the RECORD, they will see a series of studies by myself on the pending fair trade bill, H.R. 1253. I took a lot of punishment for this House on the fair trade matter last fall, and, as a result of the hearings of the subcommittee which I faithfully attended and the studies that I made at that time, I have some information to which I wish to call your attention. I believe that the fair trade bill is antithetical to everything that the Members of this House stand for, regardless of political party, whether they are liberal or conservative in outlook.

I simply state that fair trade, as presently conceived, would destroy free enterprise, is unconstitutional, and would certainly violate State law.

STUDIES AND INVESTIGATIONS BY COMMITTEE ON AGRICULTURE

Mr. SMITH of Virginia, from the Committee on Rules, reported the following privileged resolution (H. Res. 216, Rept. No. 253) which was referred to the House Calendar and ordered to be printed:

Resolved, That H. Res. 93 authorizing the Committee on Agriculture to make certain studies and investigations is amended by inserting on page 3, line 6, after "United States," the words "or outside the United States by subcommittees of not to exceed five members,".

Mr. SMITH of Virginia. Mr. Speaker, so far as I know, there is no opposition to this resolution and, as the House is about to take a recess, I ask unanimous consent for the immediate consideration of House Resolution 216.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

Mr. HALLECK. Mr. Speaker, reserving the right to object, and I shall not object, the gentleman from Virginia has

spoken to me about this. I should like to express the hope that after the Committee on Agriculture has had the opportunity to look at some of the agricultural problems down there, they might take a look at them in this country.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

The Clerk read the resolution.

The resolution was agreed to.

A motion to reconsider was laid on the table.

BRETTON WOODS AGREEMENTS ACT

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules I call up House Resolution 217 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4452) to amend the Bretton Woods Agreements Act, and all points of order against said bill are hereby waived. After general debate, which shall be confined to the bill, and shall continue not to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Banking and Currency, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio [Mr. BROWN], and pending that I yield myself such time as I may consume.

Mr. Speaker, House Resolution 217 makes in order the consideration of H.R. 4452, to amend the Bretton Woods Agreements Act. This resolution provides for an open rule, waiving points of order, and 2 hours general debate.

The bill would authorize the U.S. Governor of the International Monetary Fund to request and consent to an increase of $1,375 million in the quota of the United States. The U.S. Governor of the International Bank for Reconstruction and Development would also be authorized to vote for increases in the capital stock of the Bank and, if such increases become effective, on behalf of the United States to subscribe to 31,750 additional shares of stock under the articles of agreement of the Bank.

The bill provides for public debt transaction to finance the additional subscriptions in both the Fund and the Bank. Of the $1,375 million increase in the U.S. quota in the Fund, 25 percent, or $344 million, is payable in gold. The balance will be held by the Fund in non-interest-bearing notes, to be used only at such times as the Fund may need cash to meet drawings by its members. The increase in the subscription to the Bank is not expected to result in any payments from the United States to the Bank.

The Bretton Woods Agreements Act of 1945 authorized membership by the United States in both the Fund and the Bank. The two institutions represent a basic effort to deal with long-range international financial and economic problems. Both institutions have been outstandingly successful. The Bank has assisted in the economic growth of less developed countries through sound loans to finance development projects. The Fund has been able to bring about greater stability in foreign exchange markets and greater freedom in international payments transactions and has been able to promote the adoption of sound fiscal, monetary, and foreign exchange policies. The Fund and the Bank have become major instruments of international cooperation in the free world.

There has been increasing evidence that the resources of these two institutions should be enlarged. Reports made to the Board of Governors by the Executive Directors, authorized in resolutions adopted at the annual meeting of the Governors at New Delhi, India, in October 1958, recommended increases in the quotas of the Fund and in the authorized capital of the Bank, and also in the subscriptions to its capital stock.

In his message to the Congress on February 12, 1959, the President stated, "For the well-being of the free world and in our own interest, it is essential that the proposed increases in the resources of the Bank and the Fund take place."

I urge the adoption of House Resolution 217.

Mr. BROWN of Ohio. Mr. Speaker, I yield 15 minutes to the gentleman from Iowa [Mr. GROSS].

Mr. GROSS. Mr. Speaker, I take this time to get some information about this bill. I am not necessarily opposed to the rule. I expect that the rule will be voted and probably the bill passed regardless of any opposition I may offer to it.

I take this time to ask some questions to get some information that I do not find in the report. I wonder if someone on the committee will tell me whether this $1,375 million is to be charged to the Federal debt.

Mr. ASHLEY. The entire amount is to be charged to the Federal debt.

Mr. GROSS. This then is an increase of $1,375 million in the Federal debt of this country, which now stands at some $286 billion?

Mr. ASHLEY. The gentleman is correct.

Mr. KILBURN. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from New York.

Mr. KILBURN. This is in this year's budget.

Mr. GROSS. Let me say to the gentleman I am not concerned with what is in this year's budget. I am concerned about the Federal debt of this country and the burdens that the children of today and the children of tomorrow are going to have to meet. This is an addition of $1,375 million to the already staggering debt of this country.

As to defaults, I understand the record of these loans so far is quite good. Is that correct?

Mr. ASHLEY. That is correct. The gentleman is talking about loan funds now?

Mr. GROSS. Yes.

Mr. ASHLEY. Yes, the record is extremely good.

Mr. GROSS. There are no defaults of any consequence up to this point, but what does the gentleman think would happen if we pulled the pin on some of the giveaways, on the Development Loan Fund, and other similar programs? What does the gentleman think would happen to these loans if we pulled the pin on this free business; this giveaway stuff?

Mr. ASHLEY. I think the gentleman is not informed on the purpose of the Development Loan. Its purpose is simply to stabilize on a short-term basis the currencies of the countries which are members of the Bretton Woods Agreements Act.

Mr. GROSS. The Bank for Reconstruction and Development is in this bill?

Mr. ASHLEY. That is right.

Mr. GROSS. What would happen to those loans? Let me ask the gentleman the same question with respect to them.

Mr. ASHLEY. With respect to the Bank, the increase in our subscription does not go into the debt, that is, it does not increase our public debt either this year or next year.

Mr. GROSS. The gentleman very well knows that this loan structure would go down like a house afire if we ever pulled the pin on this foreign-aid business. Let me ask the gentleman this question: What is our quota?

Mr. KILBURN. Mr. Speaker, will the gentleman yield with reference to his last statement?

Mr. GROSS. Yes; and then I will address a question or two to the gentleman.

Mr. KILBURN. I do not think your statement was correct. These loans would not go down like a house of cards. The only loans that might be affected would be where the Government went down because these loans are secured by collateral.

Mr. GROSS. Let me ask the gentleman this question: What is our quota in this Bank and in the Fund?

Mr. KILBURN. It is 28 percent in one and 26 percent in the other.

Mr. GROSS. What are the quotas of all the other countries? In other words, then we are putting in one-fourth of all the money that goes into this Bank and Development Loan Fund; is that correct?

Mr. KILBURN. That is right.

Mr. GROSS. We are putting in one-quarter of it?

Mr. KILBURN. Yes.

Mr. GROSS. What is the matter with the other countries that they do not come up with more money?

Mr. KILBURN. We do not put ours in unless 75 percent of the other countries come up with theirs.

Mr. GROSS. Seventy-five percent—then that makes us a one-third stockholder; does it not?

Mr. KILBURN. No; because they all came up with theirs previously and I expect they will this time.

Mr. GROSS. Oh, I see. But on the basis of 75 percent, we could become more than a one-third stockholder.

Mr. KILBURN. These things are uncertain.

Mr. GROSS. I am sure of that. Now I would like to ask this question. How much does the United States borrow from the International Monetary Fund?

Mr. ASHLEY. The United States has not borrowed from the fund.

Mr. GROSS. Then we put the money up for the benefit of others; is that correct?

Mr. ASHLEY. The gentleman must try to understand that the purpose of this is to help stabilize the currencies of countries that are allies of the United States and to help these countries that are the bulwark of the free world against communism. We have not borrowed dollars from the Fund to stabilize our own currency.

Mr. GROSS. Are they not doing a pretty good job of that now with the Development Loan Fund and all the other handouts?

Mr. ASHLEY. Yes. The answer to that is this has proved a remarkably effective weapon in stabilizing the currencies of member countries.

Mr. GROSS. How much further do you want to go in throwing the money of this country all over the world?

Mr. ASHLEY. I would answer the gentleman in this fashion, that the quotas of the contributing countries to the Fund were based upon a period prior to 1944. Import and export trade has expanded tremendously since then, just as the currencies of the member countries have increased. It is for these reasons, among others, that the increase in the Fund is necessary.

Mr. GROSS. Would the gentleman say that the currency of the United States is stable?

Mr. ASHLEY. It is relatively so—yes.

Mr. GROSS. I see. Then we do not need any help from this Fund.

Mr. ASHLEY. Not at the present time.

Mr. GROSS. What countries do we have to help stabilize their currencies? What are some of the countries?

Mr. ASHLEY. If the gentleman will read the report, he will soon learn.

Mr. GROSS. Well, let us say Britain and France—they are a couple of the countries; are they not?

Mr. ASHLEY. Why, of course. As a matter of fact, the Fund proved to be a godsend just following the Suez crisis.

Mr. GROSS. Yes, and they started the crisis of Suez; did they not?

Mr. ASHLEY. Well, does that mean they are no longer our allies? What would the gentleman from Iowa have?

Mr. GROSS. They brought about the crisis at Suez; did they not?

Mr. ASHLEY. I would question that.

Mr. GROSS. Sure, then they turn around and come to this Fund for help; is that not correct?

Mr. ASHLEY. I do not think that is correct. I think Nasser brought on the Suez crisis. England did not.

Mr. GROSS. Who invaded Egypt; was it Nasser?

Mr. ASHLEY. I thought we were trying to converse about the Monetary Fund and not about these other matters.

Mr. GROSS. No. What I am saying is this, Britain and France created the crisis, then turned around and came to this Fund and the American taxpayers for help.

Mr. ASHLEY. I would answer the gentleman by saying that most certainly there are member countries who might become involved in crises, and subsequently are able to go to the Fund for assistance; yes, that is true.

Mr. GROSS. And the United States investors are not going to be very much interested in either of these ventures unless another $1,375 million is put in the kitty. Is that not right?

Mr. ASHLEY. No; that is not right. The fact of the matter is that these investments have proven extremely sound on an international market.

Mr. GROSS. Let me read to you from the CONGRESSIONAL RECORD:

> The Bank has been issuing bonds at the rate of $497 million in 1957 and $633 million in 1958. At this rate, the funded debt of the Bank will exceed the amount of the U.S. backing sometime in the next 2 years, depending on the volume of loans made by the Bank. American investors are therefore beginning to ask about an increase in the size of U.S. Government guarantee.

What do these investors get out of it? How are they paid? What income do they derive from it?

Mr. ASHLEY. Is the gentleman talking about the Fund or the Bank?

Mr. GROSS. I am talking about either one of them; I do not care. Take the Loan Fund; take the Bank for Reconstruction and Development.

Mr. ASHLEY. A great deal of their financing is done by refinancing; that is, the Bank is able to sell bonds to finance its operations.

Mr. GROSS. What do the investors get?

Mr. ASHLEY. What does the bondholder get?

Mr. GROSS. I wish the gentleman would tell me something about it. What interest is paid?

Mr. ASHLEY. I understand that the bonds pay about 4¼ percent. It depends upon the market, of course.

Mr. GROSS. How much? Did the gentleman say how much?

Mr. ASHLEY. In the neighborhood of 4¼ percent.

Mr. GROSS. Four and one-fourth percent; they do pretty well. How much do the Governors of this Bank get?

Mr. ASHLEY. As a salary?

Mr. GROSS. Yes.

Mr. ASHLEY. I cannot tell the gentleman that.

Mr. GROSS. Do they pay Federal income taxes on those salaries?

Mr. ASHLEY. I presume so, yes.

Mr. GROSS. Does the gentleman know whether they do or do not?

Mr. ASHLEY. I will say to the gentleman that I presume they do.

Mr. GROSS. Of course, the gentleman knows that U.S. employees of the United Nations do not; they pay taxes but then they are reimbursed. I would like to know the situation in this connection.

Mr. Speaker, I intend to offer an amendment to this bill at the proper time to provide that all members of the Fund meet their increased quotas before any money is put in by the United States. I think that is only fair. We are not borrowing money from the Fund. The people who are utilizing this Fund are 67 foreign countries, and until and unless they come in we should not put up our part. The bill provides that the United States may not put up its share until after 75 percent of the increased quotas are met by other countries. That is not good enough for me. All the foreign countries who are members of this Fund should come in and put up their money since they are the direct beneficiaries.

Mr. MASON. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield.

Mr. MASON. Section 2 of the bill states:

> Strike out "of $950,000,000"; strike out "$4,125,000,000," and insert "such amounts as may be necessary."

What does that mean?

Mr. GROSS. That is a good question. Perhaps the gentleman from New York [Mr. KILBURN] can answer, or someone on the other side of the aisle. Will the gentleman explain that?

Mr. KILBURN. It just means as much as is necessary to subscribe to the stock if we have to subscribe to it, 31,000 shares.

Mr. GROSS. Will the gentleman, while he is on his feet, explain to me this wording on page 1 of the bill:

> The United States Governor of the Fund is authorized to request and consent to an increase of $1,375,000,000 in the quota of the United States.

By this language he is required first to request and then to consent. I always thought that a request presumed consent. What is the meaning of that language?

Mr. KILBURN. That is in the Fund.

Mr. GROSS. I am talking about the words "request and consent." What kind of language is that?

Mr. KILBURN. I suppose it means exactly what it says.

Mr. GROSS. To request and consent to $1,375,000,000. I hope the gentleman can make something out of that.

Mr. BOLLING. Mr. Speaker, I yield the balance of my time to the gentleman from Massachusetts [Mr. O'NEILL] and ask unanimous consent that he may be permitted to speak out of order.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. O'NEILL. Mr. Speaker, as you know, it is neither a pleasant nor an easy task to take the floor of this great House to eulogize a departed colleague. It is not pleasant because it reminds us that we have lost a friend. It is not easy because a man's lifework cannot be expressed in a few words. It is still more difficult when that person continues to live on in the hearts and memory of so many people.

I speak today, Mr. Speaker, of a departed colleague who served four terms in this Congress at various times and who once served as a member from the

district that I represent, the late and lamented James Michael Curley, former mayor of Boston and former Governor of the Commonwealth of Massachusetts.

He died last November just a few days before his 84th birthday. His body lay in state on Beacon Hill in the Hall of Flags at the statehouse. It is estimated that more than 100,000 viewed his body, and over 500,000 people spilled out of the cathedral and onto the streets to watch the cortege on its way in funeral procession.

I could not help but think as the funeral wended its way along the streets of Boston, in which Jim Curley was born and brought up, of the eulogy in "The Last Hurrah", a story that is said to have been the life of Jim Curley. Actually it was a eulogy when the author said:

> To have lived a long life, to have left the lot of many of those around you a little bit better than it once was, to have been genuinely loved by a great many people, and to have died in God's good grace, is no small thing to have happened to any man.

Truly in the annals of American city politics never has there been a more controversial figure than James Michael Curley. Born of immigrant parents, living in the teeming tenement district where the masses lived who had come from Ireland because of a great potato famine, working at driving trucks, as laborers and as hod carriers for coolie wages, he thought the plight of his fellow men could best be served if he entered public life. He had a long and glorious and yet a turbulent career. He was elected as a member of the Boston Common Council in 1900 and 1901. He served in the State house of representatives in 1902 and 1903; member of the Boston Board of Aldermen from 1904 to 1909; member of the Boston City Council in 1910 and 1911; elected to the Congress of the United States and served from March 4, 1911, until his resignation effective February 4, 1914, having been elected mayor of Boston. He served as mayor of Boston from 1914 until 1918, and by that time, under our law, you were unable to succeed yourself as mayor. He was elected mayor in 1922 and served until 1926; reelected in 1930 and served until 1934; elected Governor of Massachusetts in 1935 to 1937. Came back to the Congress of the United States for the 78th and 79th Congress in 1943 and 1947. He was reelected mayor of Boston again in 1946 and served until 1950. He was a Democratic national committeeman from 1941 until the time of his death. He served over 60 years in public life for the city, the State, and the Nation.

James Michael Curley served both his constituents and the people of the United States when he represented the 11th Congressional District of Massachusetts. Many have described him as "the big man, with the big heart, for the little people." James Michael Curley would never agree with such a description of himself simply because he did not believe that there were such beings as little people. For to him, each and every person, regardless of their state in life, shared equally in the dignity and individuality of God's perfect power of creation. This is not to say that Governor Curley failed to acknowledge the differences experienced by men because of varying natural possessions or physical wealth. His very beginnings in this world were object lessons in the poverty that he struggled long and hard and with considerable success to destroy. The fruits of his life's work are acclaimed today by many thousands of grateful families who no longer—but at one time knew—only hunger and need.

James Michael Curley at a very early age dedicated himself to a career of helping others. Had he directed his energies and his talents to other endeavors, this man with the silver tongue could easily have lived and died very rich in material things. Instead he gave his life to the people of his city, State, and Nation. And now, some months after his death, James Michael Curley, I say to you, Mr. Speaker, that there is not enough money in the banks of Boston combined that is capable of matching the priceless love for him that has been deposited in the hearts and minds of so many people.

Even before his death, James Michael Curley was a legend. Merely some of the stories told about him and by him would take several days to relate.

I remember some incidents myself of having met him along the way. I recall one day when he was at a meeting of bankers in Boston, and one of the bankers turned and spoke to Mr. Curley. It was interesting to note the background of this man. His father had been a banker and his father before him had been a banker and his son was a banker. And, he turned to Mr. Curley and said, "Mr. Curley, I understand that your father was a hod carrier. Why didn't you follow his profession?" Mr. Curley just looked at the gentleman and he said, "Yes, and I understand that your father was a gentleman." He was always one of a quick tongue. I remember one night when he was campaigning for a seat in Congress, and the man running against him was on the platform and he said, "I want to go to Congress because," he said, " I want to make my wife the wife of a Congressman." Curley turned to him and said, "The best thing for you to do is to drop dead and let your wife marry one." He was always quick on the tongue.

Here is a person, as I said, who was loved by many. I recall in 1936 when I was first elected to the legislature, having met Jim Curley at that time as a young fellow of 22, he said to me, "The true, quick, sure way of success in politics is to remember this. You will have literally hundreds of people over the course of years ask you for favors. Some of them may be great, some of them may be small; some of them may be important, some of them may be ridiculous; some of them may be easy, some of them may be hard. But remember, the person who asks you for the favor, to him it is the most important thing in the world, and treat them all alike. You will be able to take care of more of the small ones than you will of the large ones, but you will make as many friends doing the small ones as you will doing the large ones."

And I have found through the years that it was indeed a great bit of advice.

Mr. BURLESON. Mr. Speaker, will the gentleman yield?

Mr. O'NEILL. I yield to the gentleman from Texas.

Mr. BURLESON. Perhaps Mr. Curley somewhat paraphrased a statement of earlier times, but I recall in his book the rich philosophy so apropos to the public officeholder. He wrote, "There go the people. I am their leader. I must follow them." This suggests to me that as people demand of Washington today, their demands fall on attentive ears. As more services of various kinds are added, the Federal Government becomes bigger and more expensive.

Mr. O'NEILL. I thank the gentleman. Books have been written about Jim Curley; movies have been made about this legendary figure who, not so long ago, stood here in this Congress and who today lives in the hearts of so many people throughout the Nation. Some may ask, What is the measure of his greatness? The answer to such questions can be found in the story told to me by a very close friend.

Several years ago a dinner was being given in the main ballroom of one of the city's best hotels to honor a distinguished Bostonian. Seated at the head table was the then Republican Governor of Massachusetts as well as many notable figures of both political parties. The principal speaker of the evening was addressing a very attentive audience when in walked James Michael Curley who, at the time, was neither an officeholder nor a candidate. The speaker paused, looked in the direction of the former Governor, mayor, and Congressman, and like one, the whole audience and head table, led by the speaker, stood in a thunderous ovation to a man who could never be a has-been. As the crowd sat down, my friend noticed that the man seated beside him, a very successful Boston surgeon, had tears in his eyes. Since the doctor was not noted for his emotions, my friend inquired if there was something wrong. "No," the doctor replied. "I was just thinking of many years ago when that man made possible everything I am today."

The surgeon told how at the age of 16 he had gone to the then Mayor Curley for help. The doctor's mother was a widow and in ill health; his two older sisters, then in their 20's, were, because of the times, out of work. The boy's 23-year-old brother was studying to be a priest, but was about to leave the seminary to try and help overcome the family's heavy debt. Unknown to his family, this 16-year-old boy one day stood with the people who every morning lined up at the Curley home to seek help from their mayor. With great sympathy, the city's chief executive heard this young boy's story of his family's hardship. Within the day Mayor Curley found employment for the sisters, reduced the family debt to practically nothing, and in return asked but one favor. With a quaver in his voice, the prominent surgeon told my friend of

that request. "Tell your brother to stay in the seminary and ask him and your good family, when they have time, to please say a prayer for me."

Mr. Speaker, during a long lifetime of serving his people, James Michael Curley again and again did for others what he had done for that boy and his family. Such deeds are and will continue to be the measure of greatness for a leader whose battles were waged and won in a city, State, and Nation all of which today are more than just a little bit better because of James Michael Curley.

Like all leaders, Governor Curley neither expected nor enjoyed the unanimous support of all segments of the community. Like most of us, his every waking moment was not filled with perfect deeds, yet in the balance of things his was a most successful life, successful in that it benefited so many others while he himself experienced family troubles that would have stagnated the ordinary man.

My words today can contribute but little, if anything, to the love and memories that linger on in the hearts and minds of thousands, most of whom were "little people" to all the world, but not to James Michael Curley.

Mr. MACDONALD. Mr. Speaker, will the gentleman yield?

Mr. O'NEILL. I yield to the gentleman from Massachusetts.

Mr. MACDONALD. Mr. Speaker, I join my colleagues in paying tribute to the late James M. Curley who passed away in November 1958.

Although word of Jim Curley's passing was not unexpected at the time, for he had been seriously ill, I know that it still came as a shock to his many friends throughout the country. Certainly it caused mourning in thousands of homes in Boston and elsewhere throughout Massachusetts.

Jim Curley had a colorful career as Congressman, mayor of Boston, and Governor of Massachusetts. If one could sum up in a single sentence the chief characteristic of Jim Curley, I believe that sentence would read: "His was a generous and courageous heart."

Jim Curley had experienced both victory and defeat during his long and eventful years, but after any temporary defeat, he always came back fighting courageously. And when the final defeat came, as it must to all men, he went down fighting.

Jim Curley was one of the most powerful political and humanitarian figures in the history of the State of Massachusetts. He was a rugged individualist with a strong personality.

He was endowed by nature with many praiseworthy qualities. He was an orator of exceptional eloquence. He could be sharp in criticism, quick in repartee, and was brilliant in his choice of words. Few men exceeded him either in ability or in the fighting spirit he displayed in the causes he supported. He was a man of courage, who fought with all his heart for the principles in which he believed.

In a State which plays the political game hard, Jim Curley was the author of some of the most important chapters of struggle and contest. The Commonwealth of Massachusetts will long remember him as a dedicated family man, a stalwart champion of the underprivileged, and a man who became a legend in his time.

To the members of his devoted family, I join my colleagues in extending my deep sympathy at their great loss.

Mr. LANE. Mr. Speaker, will the gentleman yield?

Mr. O'NEILL. I yield to the gentleman from Massachusetts.

Mr. LANE. Mr. Speaker, James Michael Curley was his name, and a strong name it was, befitting the man who made it famous in Boston and in Massachusetts and in the provinces beyond. In the course of his very active life, there were a few times when he was knocked down, but they could not keep him there. With his great vitality and his greater spirit, he always bounced back.

He had the foresight to come out for Franklin D. Roosevelt, and to oppose the conservative leaders of the Democratic Party in Massachusetts. He was defeated in his efforts to become a delegate to the national convention, and the conservatives breathed easier. Came the convention where, to everyone's surprise, and with infinite relish, Jim Curley popped up again, this time as Senor Curley, delegate from Puerto Rico. How he managed this is less important than the striking fact of Curley's resourcefulness and determination.

From that time on, no one ever took Jim Curley for granted. To the consternation of his enemies, he predicted that he was going to live to the ripe old age of 125, and he said it so convincingly that some people began to believe that he might win out over the laws of nature.

He grew up in Boston where the challenge of politics gives an added zest to the air. From the time that he was a young "shaver" he was fascinated by the excitement of politics, its drama, and the opportunity it offered to sharpen one's talents and one's skill.

It was no easy field of combat. Jim Curley was in it every minute of his life, for decade after decade. It was taking its toll of his tremendous energy. The body, however, could not keep up with his eternal spirit. He passed away in November 1958, after a long and eventful career as Congressman, several-times mayor of Boston, and Governor of Massachusetts.

Thousands and thousands of people in an unbroken line passed through the Hall of Flags in the statehouse for one last look at their old friend. "My adopted family" he would say, if he could see the grateful people for whom he had done so much. Truly he was the champion of the little man, fighting the rich and powerful in order to push through legislation that would open up more doors of opportunity for the poor, the unfortunate, and the immigrants who needed a helping hand to start their new lives in this strange land.

They never forgot the friend who was by their side when they needed him most. The depth and sincerity of their grief was moving evidence of the affection in which he was held by the thousands who came to pay their last respects. They remembered the handsome son of Irish parents who delighted the crowds at street-corner rallies in the old days. They followed him upward through the years for he was the symbol of their own striving—educating himself by his studies of the classics; developing the cultured voice that gently chided the patricians of Beacon Hill; outwitting the vested interests who opposed any change; breaking the barriers that stood in the way of human dignity and human potentialities.

He led them and the Democratic Party which spoke for them, out of the minority wilderness into the bright sunshine of majority support and successive mandates of public confidence. Every Democrat in Massachusetts owes more than he can ever repay to the grand old man of Bay State democracy whose memory we honor today.

Jim Curley has gone but his name, his personality, his achievements live on, glowing and immortal.

Mr. O'NEILL. I thank my colleague.

Mr. Speaker, I yield to the gentleman from Massachusetts [Mr. BURKE].

Mr. BURKE of Massachusetts. Mr. Speaker, I wish to join in this eulogy, together with my colleagues from Massachusetts, on the life of James M. Curley. There is hardly anyone in political life in Massachusetts who has not been touched by the activities of James M. Curley over the past 50 years. I knew James M. Curley. In some campaigns, I supported him and in a few, I opposed him. But, there was something about James M. Curley, something about his activities, his life, his interest in the poor, his interest in the small people that created an impression on everyone. I recall on many occasions when James M. Curley would visit the Boston City Hospital going into the maternity wards and insisting that proper care be given to the mothers of Boston. Curley's life was a rich life. We who were privileged to know him liked him because of his humaneness. He was a controversial figure. His monuments are all over the Commonwealth of Massachusetts. The great East Boston Tunnel, several of the buildings of the Boston City Hospital, many of the schools in the city of Boston were built under the administration of James M. Curley. James M. Curley will live in the hearts of the people of the city of Boston and the State of Massachusetts for many years to come.

Mr. O'NEILL. I thank my colleague.

Mr. Speaker, I yield to our distinguished majority leader, the gentleman from Massachusetts [Mr. MCCORMACK].

Mr. MCCORMACK. Mr. Speaker, on November 12, 1958, 8 days before his 84th birthday, James M. Curley, one of America's outstanding and dramatic political figures, died in Boston, Mass. James M. Curley was the son of God-loving parents, both of whom were born in Ireland. Jim Curley rose from humble birth to high position.

His whole life was mainly devoted to the art and science of government in the field of elected public office. He was one of the most gifted men I have ever

met, a man of extraordinary ability through self-education, one of the most eloquent orators for decades in American public life, notable legislator as well as an outstanding public executive and administrator. Jim Curley never forgot he was a man of the people. He never forgot the sick, the poor, the afflicted, the underprivileged. Throughout his whole life as city legislator, mayor, Congressman, Governor, he fought in their behalf.

The monuments to his name and leadership in public service are too numerous to mention. Jim Curley was loved by countless tens of thousands of persons. During a public career of well over 50 years Jim Curley had 20 victories at the polls, councilman, alderman, State representative, Congressman on two different occasions and from two different congressional districts, the last one from a district in which he did not live, showing the respect and love the people had for him; mayor of Boston several times, and Governor of the Commonwealth of Massachusetts.

Tens of thousands of persons were the recipients of his kindness. He never turned a deaf ear to an appeal for help from those less fortunate than himself.

Jim Curley was truly a remarkable man. As mayor of Boston and Governor of Massachusetts he gave the people of the city and the State the most effective and highest type of administration possible. As mayor and Governor he was a public leader who gave both humane and businesslike administration. As a legislator he was a sound progressive, using his great talents, his vision, and courage, to make his city and his State and our country a better place in which to live.

Jim Curley has left indelible imprints upon the pages of the history of Boston, of Massachusetts, and of the United States. The best evidence of the widely held love for Jim Curley is the tens of thousands of persons who filed past his bier while it lay in the Hall of Flags in the statehouse of Boston, Mass., and who watched his funeral procession from the statehouse to the cathedral, and from the cathedral to the cemetery. Hundreds of thousands of persons viewed with regret and many with tears his funeral procession.

I admire very much the many fine qualities of Jim Curley. It will be a long while before one like Jim Curley will again come across the political horizon of our country.

To Mrs. Curley and to the late Governor's sons I extend my deep sympathy in their bereavement.

Mr. O'NEILL. Mr. Speaker, I am very grateful to my colleagues for their kind words today.

Mrs. ROGERS of Massachusetts. Mr. Speaker, will the gentleman yield?

Mr. O'NEILL. I yield to the gentlewoman from Massachusetts.

Mrs. ROGERS of Massachusetts. Mr. Speaker, it is with great appreciation, admiration, and respect that I speak of the Honorable James M. Curley today. He was in Congress when my late husband John Jacob Rogers was here, and my husband was devoted to him, devoted to his ability, his humor, his kindness, and his friendliness.

One of the respected qualities of James Michael Curley was his love and devotion for his family. On occasions my husband would remark, Congressman Curley had to break away from the dinner event early in order to return home to be with his wife who was an invalid. For many years, until the death of Mrs. Curley this love and devotion had priority over all that concerned James M. Curley. Later on when he married again this same love of family was generously given to the second Mrs. Curley and all of the children.

During his eventful lifetime, Governor Curley experienced many moments of sadness, more, much more, it would seem, than should extend to any man. During these times, his great heart was called upon to bear the loss not only of his beloved first wife but the misfortune of losing several of his children, in some instances almost simultaneously. Two of his children were buried at the same time.

James Curley was a man of the people. He believed in the mission of man on this earth. He believed in the brotherhood of man. He was everyone's friend. His greatest earthly pleasure was in giving pleasure to others and helping to make the burdens of his fellow man lighter and more easily to bear. He was respected by people because he loved people and was constantly extending a helping hand.

In addition to his kindness, Governor Curley also was very charitable. He gave away to others much that he gained during his life. He was always helping somebody.

Governor Curley was extremely kind to women, particularly those who earned their way in life. Always helping, he would do all he could to have their pay increased. He helped them to have better working conditions and more necessary comforts during working hours. He listened to their problems and made their difficulties of primary concern to him. He was particularly thoughtful in his efforts for all of the women employed at the statehouse in Boston regardless of their job or station. They considered him their friend.

James M. Curley was an exceptionally able man. With a keen intellect he observed and studied people. Through his own efforts he developed himself. In his early years in politics he came to know the value of being able to eloquently debate issues and persuade others. As his great voice developed his knowledge of human affairs broadened and at the top of his career he was recognized as one of the greatest orators America had ever produced. As he addressed an audience from the podium, his voice was rich, inspiring, magnificent.

Although the career of Governor Curley was in politics, it was his love of people and his deep desire to help his less-fortunate fellow man that endeared this man to countless numbers. Many considered him their protector. Many knew he would not permit them to be the subject of advantage for others. He would not allow people to be downtrodden. He would only permit people to be treated as human beings. Because "Jim" Curley believed in the people, they believed in him. When death came to "Jim" Curley, a little bit of a countless many also died.

Governor Curley was a fighter. In his many battles, however, he was the greatest always when he was fighting to help the people, the people who had so much faith in him. In his matured years James M. Curley was a man of kindness and understanding based upon a broad knowledge and comprehension of many problems. Experience was his great teacher. To know was his constant desire. To help was his dominant purpose.

A human being was God's work and James M. Curley believed the human being worthy of all effort. No man was unimportant. Every man was important. Every person possessed some talent, something of value, something to give to his other fellow men. Because of these beliefs James M. Curley constantly worked to improve and raise up the dignity of human beings. His work for his fellow man is his monument for eternity.

In addition to being a fighter James M. Curley possessed a great sense of humor and a gentleness as soft as a cloud. I remember I went to Governor Curley one time to seek his help in assisting me in the creation of a State park in Lowell, Mass. With great pleasure he gave me help. He knew this park not only would be beneficial to the city of Lowell, but it would also be a feather in my hat in the political campaign then in progress. He seemed to enjoy the full meaning.

Although I do not want to be personal I cannot refrain from saying he tried to help me with every matter I brought to his attention. Likewise he never asked me to do anything except to help people. Will you help this person, or will you do what you can for another? Always it was for the benefit of people he asked for help. I am proud to say I always did the very best I could.

When James M. Curley went to the statehouse for the last time, he came that the people he loved could pay their respects to him. This they did in a long single column, hour after hour, countless numbers, filed by him just to say "goodby" and "thanks." Here, indeed, was the evidence of the great respect and appreciation so full and so great in the hearts of the people. Here was their champion. Here was their statesman. Here was their orator. Here was their fighter. Here was their man. I know I express their thoughts with mine in saying James M. Curley was a great statesman, a great American, and one of the kindest men I have ever known.

Mr. O'NEILL. Mr. Speaker, I am very grateful to my colleagues for joining with me in paying reverence to the memory of a former Congressman from the 11th Congressional District of Massachusetts and in paying this tribute to James Michael Curley. Also in expressing to his wife and family our heartfelt sympathy and condolences.

A new era has grown up. James Curley was the last of the so-called city bosses. His legend will live on for years.

The many monuments that he built, the city hospitals, the bridges, the roads, will live on as everlasting monuments to his memory. But, more important than that—we have stressed it but little here today—James Michael Curley, who once was a great figure in these Halls, was one of the outstanding orators in the last 50 years of American history. He was a silver-tongued, golden-voiced orator. There is hardly a school in America of higher education that does not use the speeches of James Michael Curley in their teaching. They are using these recorded speeches as instruction to the youth of America. These will be in existence when the buildings and other legends are gone. They will still have the voice of Curley on these records in the schools of higher education to teach the youth of America.

May God have mercy on the soul of James Michael Curley.

Mr. DONOHUE. Mr. Speaker, I am pleased to join with my colleagues in expressing tribute to the greatness of the late James Michael Curley, one of the most distinguished sons in the history of our Massachusetts Commonwealth.

There are Members here who served with Governor Curley, not only in this body, but at other levels of State government, and who knew him better than I. No one could help but be tremendously impressed by the testimony they have recited here in revelation of the great soul and spirit of this remarkable man.

His leadership in and his achievements for the progress of social justice in the service of his State and Nation will be his everlasting monument in our political history. His personal nobility in concern for and consideration of the poor and unfortunate will be forever remembered in the minds and hearts of his home people. We join our prayers that his soul may rest in peace.

Mr. PHILBIN. Mr. Speaker, Gov. James Michael Curley was a great invincible fighter for the ordinary man whose lot he worked so hard for years to improve.

He was a man of superb and extraordinary gifts, one of the most famous orators of our day, a highly gifted administrator, and an unsurpassed tenacious public advocate.

He had the courage of a lion and a warmth of human kindness and loyalty that endeared him to his friends and all those who knew him.

A beloved and valued colleague in the Congress, I had occasion to know and observe the warm personal qualities of Governor Curley and his great zeal for human betterment. The future will bring greater luster to his colorful personality and outstanding public career.

May he find rest and peace in his eternal home.

GENERAL LEAVE TO EXTEND REMARKS

Mr. O'NEILL. Mr. Speaker, I ask unanimous consent that all Members who desire to do so may have 5 legislative days in which to revise and extend their remarks in the RECORD on the life and character of the late James Michael Curley.

The SPEAKER pro tempore (Mr. ALBERT). Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

AMENDING BRETTON WOODS AGREEMENTS ACT

Mr. BOLLING. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER pro tempore (Mr. ALBERT). The question is on the resolution.

The resolution was agreed to.

Mr. SPENCE. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4452) to amend the Bretton Woods Agreements Act.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R 4452, with Mr. MACHROWICZ in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. SPENCE. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, this bill provides for an amendment to the Bretton Woods Agreements Act. I was a member of the conference at Bretton Woods in 1944. It was an inspiration to me to see the nations gathered together in the common undertaking for the advancement of their economic well-being and the redevelopment of the countries that had been torn by war. At that meeting 39 nations signed that agreement. Since then 29 other nations, 68 nations all together, have joined the Bretton Woods Agreements Act. Practically all of the free nations of the world are engaged in working out their problems through the instrumentality of this act.

Mr. Chairman, under that Act the International Monetary Fund was organized to stabilize international exchange and to facilitate the international trade of the world. The International Bank for Reconstruction and Development was formed. For 12 years these organizations have operated within the authorized capital fixed by the original agreement. They have made a shining success. They have lost no money by bad debts, and now, at a meeting at New Delhi, these nations have agreed that their quotas to the Fund and their subscription to the stock of the Bank should be increased. Our quota to the Fund has been increased by $1,375,000,000. One-fourth of that amount, it is provided, shall be paid in gold, $344 million, and that is all the immediate cash payment that is involved in the program provided for by this bill. The balance of the subscription to the Fund is provided in noninterest-bearing obligations of the U.S. Government. These obligations will only be used in case of an emergency, such as the condition that arose when the Suez Canal was closed, which cast a great burden on the Fund.

At the end of 1958 the Fund had $2.3 billion, but against that amount there are commitments of $900 million and there are withdrawal privileges of $1.1 billion. It is very improbable that those withdrawal privileges will be used, but in case of emergency this balance is entirely inadequate to permit the Fund to carry on its ordinary operations.

The resolution provides for an increase in our quota to the Fund and our subscription to the stock of the Bank. The resolution does not provide for any immediate cash outlay to the Bank. The subscription to the Bank is for shares of capital stock. We subscribe to 31,750 additional shares of the capital stock of the Bank, which is used as a guarantee for the obligations which the Bank issues and sells in the private markets of the world. The Bank, by reason of the manner in which it has been administered, has the confidence of the business interests of the world, but as the amount of the Bank's outstanding obligations approaches the amount of the guarantee fund, it becomes increasingly difficult to sell the Bank's obligations in the private market.

That is the proposition that has been brought to us for our decision. Without the passage of this bill these great institutions who are the symbol of success could not operate as we would like them to do. These organizations were formed under the leadership of America. They have been nurtured by our country and the leadership of these organizations makes America the leader of the finances of the world. It is inconceivable that anybody would want to defeat this bill, or to hamper it in any way. When we speak for the Fund we speak for the free nations of the world. To do anything that would bring any doubt about our course of conduct, that would cast the slightest scintilla of doubt that we intend to carry out our obligations to the fullest extent, would weaken us with these nations.

We are in a critical time now, probably the most critical time the world has experienced. We want the good will of our allies. We must have it. Anything that will disturb them about our help and our faith in this matter will hurt us, I think, in our international relations. Let us not do anything that will allow our enemies to make it a vehicle of propaganda.

I hope you will pass this bill without amendment, and I feel sure you will.

Who recommends the bill? Sixty-eight nations of the world recommend the bill and are interested in it. The National Advisory Council recommends the bill. The President of the United States pleads for the bill. The Committee on Banking and Currency reported the bill without a dissenting vote.

When this Fund was founded the imports of all the free nations of the world were $27 billion, but today their imports are $100 billion. This has been to some extent due to the assistance the Fund has given to international trade by stabilizing world currencies and reducing restrictions on international exchange.

Not only does the Bank render a great service by the loan of money, it gives technical assistance and advice to the nations it serves.

These organizations were founded on faith and courage and vision. As the prophet of old is quoted in the Good Book, where there is no vision the people perish.

I hope that no destructive amendments will be offered to this bill, and I hope if they are, little consideration will be given to them. We are playing with fire if we do not let this bill go through as is. We are playing with fire because our enemies are masters of propaganda and deceit and they can use it to our detriment.

I ask you to vote for the bill as is, without amendment. If you do that, I am sure you will be rendering a service to your people and your country that cannot be overestimated.

Mr. KILBURN. Mr. Chairman, this is a good bill. As the chairman has said, it helps in the world situation, but it also helps this country. It helps our industry and our employment.

Mr. Chairman, I now yield 10 minutes to the ranking member of the subcommittee that considered this bill, the gentleman from New Jersey [Mr. WIDNALL].

Mr. WIDNALL. Mr. Chairman, today the House has an opportunity to vote on H.R. 4452 embodying authorization increasing the U.S. quota in the International Monetary Fund and its subscription to the International Bank for Reconstruction and Development. This will be done by amendment of the Bretton Woods Agreements Act of 1945.

It should be called to your attention that 68 countries have subscribed to the articles of agreement of the Bank and Fund and both institutions have served with remarkable success for more than 12 years. While these two institutions are included in the same act, they each have different fields of activity, of real importance and vital impact on the world economy.

The International Monetary Fund assists countries to maintain or achieve stable and convertible currencies, free of exchange restrictions.

The International Bank aided materially in the reconstruction that took place following World War II and now has an important place in financing economic development in the member countries through long-term loans.

Under the terms of the Bretton Woods Agreements Act, Congress must authorize increases in the U.S. quota to the Monetary Fund and in the subscription of capital to the International Bank.

Today's bill embodies the first approach to member governments for additional resources since the institutions first began their operation in 1946.

Secretary of the Treasury Robert B. Anderson, testifying before the House Banking and Currency Committee, stated:

> It is our view that these recommended increases together with the proposed increases in the subscription and quotas of the other members should be sufficient to permit these bodies to continue their useful work in the foreseeable future.
>
> The increase in our subscription will involve a present cash outlay by the United States that is large but is a relatively small proportion of the total new subscriptions. No budgetary provision is needed in the case of the Bank, while in the case of the Fund the entire additional quota of $1.375 billion is included in the budget, only the gold payment of $344 million really represents an immediate cash expenditure.

It should be pointed out after the capital contribution, these institutions have been self-supporting. Expenses are defrayed out of income earned.

In the operation of the International Bank, many lose sight of the fact that it constitutes a great force for peaceful progress amongst the free nations. At a time when the world is aroused by conflicts in many areas and as the West Berlin deadline, arbitrarily set up by the Communists approaches, it is important that not only our defense establishment be in order and ready to move at the first sign of aggressive action, but it is extremely important that our economic weapons be ready and able to meet the pressures and stresses created in a world at crisis stage.

I would like to quote further a few statements made by Secretary Anderson that should be borne in mind by the House in voting on this legislation. The International Monetary Fund does not finance long-run development programs nor is it intended to provide long-range economic assistance to improve the standards of living of its member countries. In simple terms, the Fund is a short-term credit institution which assists the monetary authorities of the member countries to carry out sound financial policies.

The resolution proposed by the Fund for action by the governments can be summarized very briefly. It is proposed to increase the quotas of most countries by 50 percent. This would increase the United States quota by $1.375 billion from $2.75 billion to $4.125 billion. Very small quotas will be adjusted to bring them up to a reasonable level. The quotas of three countries—Canada, Germany, and Japan—will be increased substantially more than 50 percent. The proposed increase in the quota of the United States does not mean that the Fund will spend these new resources at once. The United States will pay one-quarter of its quota increase in gold, the balance will be held in non-interest-bearing demand notes which will not represent the cost to the United States until such time as the Fund cashes them.

I say again it is important to remember there have been a number of years in which the Fund returned more dollars to the U.S. Treasury than it took out for new drawings.

With respect to the International Bank, the reconstruction phase of the Bank's activities is over. It succeeded very importantly in the reconstruction of France, Denmark, Luxembourg, and the Netherlands.

Mr. WIER. Mr. Chairman, will the gentleman yield?

Mr. WIDNALL. I will yield to the gentleman from Minnesota.

Mr. WIER. Would the gentleman kindly point out the difference between the moneys in this Export-Import Bank and the funds that were in controversy here yesterday in connection with the development loan program? Could India, for example, participate in both?

Mr. WIDNALL. It is my understanding that a country could participate in both activities.

Mr. WIER. What is the difference? Why would not one bill in this field be sufficient to serve all purposes?

Mr. WIDNALL. This is an operation controlled entirely by the 68 member countries under the Bretton Woods Agreement. The Development Loan Fund, as I understand its operation, has an entirely different composition.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. WIDNALL. I yield to the gentleman from Iowa.

Mr. GROSS. Is not the real difference between the two that operations under this program conform to some extent with banking policy, whereas the Development Loan Fund is a soft money operation, and loans made under it are never going to be collected? This operation would be in trouble if we pulled the pin on this foreign aid grant program, the Development Loan Fund operations and all the rest of the giveaway programs. If Congress ever regains its sanity and stops that business, then there will be real serious problems in this setup.

Mr. WIDNALL. That is certainly a matter of controversy in the Congress. I, frankly, believe there is soundness in the operation of these two funds, that they have added much to the development of the world in a peaceful and progressive manner.

I want now to continue. There are a few more remarks by Secretary Anderson:

> Each loan follows a period of intense study, engineering examination, and negotiation. The loans which the Bank has made have been sound and the Bank has had no defaults. Some short-term issues have been sold entirely outside of the United States to foreign investors, largely central banks, which have used the Bank's funds in the form of dollar investment of their monetary reserves. Moreover, foreign private investors have purchased the Bank's bonds for ordinary investment purposes, in the same way as have American investors. The Bank estimates that approximately 60 percent of its bond financing has come from American investors and the balance from abroad.

Investors have recognized that the Bank has operated prudently and that its loans have been sound. This has done much to establish the high quality of the Bank's bonds. However, the ability of the Bank to sell its bonds to institutional and individual investors depends in large part on the fact that back of the Bank's own assets is the contingent liability of the member governments to meet the obligations of the Bank through possible calls on the uncalled 80 percent portion of the capital. In other words, this 80 percent portion of the Bank's capital constitutes a guarantee undertaken jointly and severally by all the member governments to supply dollars or other currencies needed to meet the Bank's obligations in the unlikely event that the Bank falls short.

It is most important that this legislation be expeditiously passed by the Congress and that the U.S. contribution be made at once to instill full confidence in the other free nations.

Mr. HALEY. Mr. Chairman, will the gentleman yield?

Mr. WIDNALL. I yield to the gentleman from Florida.

Mr. HALEY. Of this amount, $1,375 million, by which we are going to increase the Fund, how much is payable immediately in gold?

Mr. WIDNALL. $344 million.

Mr. HALEY. That has the effect of depleting the gold supply of this country. Can the gentleman tell me how much of the gold we now hold in the approximate amount of $22 billion has gone out through this method of the United States having to pay foreign governments in gold, if demanded?

Mr. WIDNALL. I do not have that figure. Perhaps the committee can furnish that figure.

The CHAIRMAN. The time of the gentleman from New Jersey has expired.

Mr. KILBURN. Mr. Chairman, I yield the gentleman 5 additional minutes. I think it is twice that—$688 million.

Mr. WIDNALL. Twice the amount carried in this authorization.

Mr. KILBURN. This is a 50 percent increase. What we have put in before is $688 million.

Mr. HALEY. What I am inquiring about is how much of the gold reserves of this Nation, approximately $22 billion, is pledged to other governments that can come in and demand payment in gold.

Mr. KILBURN. I do not think there is any to other governments. This goes into the Fund under the pending bill.

Mr. WIDNALL. The contribution in gold after this bill is passed, after this pledge is made, would be $688 million, plus $344 million, or a little over $1 billion.

Mr. HALEY. That, however, is just from the funds that have gone out through this method. The point I am trying to clarify in my own thinking is this: Out of the $22 billion of gold held by the Federal Government, how much is pledged to other nations? When they accumulate dollars, how much of that gold is pledged to other nations?

Mr. KITCHIN. Mr. Chairman, will the gentleman yield?

Mr. WIDNALL. I yield to the gentleman from North Carolina.

Mr. KITCHIN. I have been informed, and this may help answer the question of the gentleman from Florida, that there is approximately 70 percent of the gold reserve of the United States now committed to foreign deposits, foreign countries, foreign governments for industry, leaving 30 percent of our total gold reserve committed to our own use. If I am accurate, that will give you a basis on which to predicate an answer to the question of the gentleman from Florida. His question is this: The additional $344 million in gold to be paid into this fund—that is the question—depletes that 30 percent of reserves retained for our own purposes.

Mr. WIDNALL. I do not have the complete figures the gentleman has given me. I have not seen those figures before. But these funds of the Internattional Monetary Fund are available to all of the member countries, which includes the United States. We have the right of participation in that fund the same way the other member countries have.

Mr. HIESTAND. Mr. Chairman, will the gentleman yield?

Mr. WIDNALL. I yield to the gentleman from California.

Mr. HIESTAND. I think I may have the answer to the gentleman's question. None of this money is pledged to any foreign country, none is committed. In my judgment, those are not quite the right terms to use. It is true other countries have a claim on our gold due to international relations and trade, but that does not have anything to do with this particular matter. There presently is in the Treasury $20,442 million of gold. If we pay out this $344 million we will still have $20 billion, so percentagewise it will reduce it not much.

Mr. WIDNALL. When you refer to claims of foreign governments on our gold, may I say that we have the same claim on any gold that they furnish to the fund.

Mr. HALEY. Mr. Chairman, will the gentleman yield further?

Mr. WIDNALL. I yield.

Mr. HALEY. That may be true, but of the reserve funds or the reserve gold that we have now in this country, what I am trying to determine is how much is pledged. Now, remember that a government acquiring dollars can demand payment in gold and I, as an individual, cannot. What I am trying to determine is how much of the gold reserve that we have now is pledged or could be called on by other governments and make the United States pay in gold. Does the gentleman have that figure?

Mr. WIDNALL. I do not have that figure, although someone on the committee may have the information.

Mr. HALEY. It is my understanding that we have now in Fort Knox $22 billion in gold, and that foreign governments, by reason of building up dollar reserves, now could call on the Federal Government for approximately $11 billion of that gold reserve; is that correct?

Mr. WIDNALL. I do not know, and I have not seen that figure stated.

Mr. HALEY. The great Committee on Banking and Currency of this House ought to be able to furnish the House with that information, because I think it is important.

Mr. HIESTAND. Mr. Chairman, will the gentleman yield?

Mr. WIDNALL. I yield to the gentleman from California.

Mr. HIESTAND. Percentagewise, $344 million is relatively small as compared to the many, many billons of reserve; that is, percentagewise, and that is what you were asking particularly about. It will not affect the percentage much. True, we would rather not have anything paid out. This money is invested in the International Fund, and the Bank has always paid its bills and all of its interest. Our contingent liability is "just in case."

Mr. WIDNALL. The operation of the Fund has had a great stabilizing influence on the economies of the free world, throughout all the member nations.

Mr. BENNETT of Michigan. Mr. Chairman, will the gentleman yield?

Mr. WIDNALL. I yield to the gentleman from Michigan.

Mr. BENNETT of Michigan. I would like to ask the gentleman this question. Now, this is with respect to the International Bank. As I understand, we have subscribed and are obligated to pay in some $3,125 million. We have subscribed to the capital stock in the amount of $3,125 million. Now, the effect of this bill is to double the amount of capital stock which we shall subscribe for and which we would likely be obligated to pay in the event that it was necessary because of default of the Bank's obligations, is that not true?

Mr. WIDNALL. That is right.

Mr. BENNETT of Michigan. Now, the total capital of the Bank is $10 billion, as I understand it. The total loans that the Bank has made up to now amount to about three billion something. Now, my question is this: Why is it necessary to subscribe and obligate this country to double up its capital stock subscription at a time when the capital stock of the Bank is at least three times over and above what its present loan obligations are?

Mr. WIDNALL. Because the projects in connection with the operation of the Bank are such that it is felt that it is needed, by way of additional guarantees, in order to provide full confidence, full faith and credit for the sale of the bonds in the future by the International Bank.

Mr. BENNETT of Michigan. Is it true that in actual practice the only capital that means anything, the only capital subscription that means anything, is the capital that we ourselves have subscribed to, and the loans are about equal to the capital we have obligated ourselves to subscribe to at the present time?

Mr. WIDNALL. No; I do not believe that is true. I believe there are very responsible governments that have met their quotas and have met their obligations in connection with the operation of the Bank and they are working together in a very fine manner.

Mr. BENNETT of Michigan. I just want to get this clear. It is the amount of capital we have subscribed to that this country would be liable for in the event of default on these obligations by other countries?

Mr. WIDNALL. That is right.

The CHAIRMAN. The time of the gentleman from New Jersey has expired.

Mr. SPENCE. Mr. Chairman, I yield such time as he may consume to the gentleman from Georgia [Mr. BROWN].

Mr. BROWN of Georgia. Mr. Chairman, I rise in support of H.R. 4452. This bill is needed to maintain effective operation of two institutions which have a 13-year record of solid accomplishment in promoting world monetary stability and assisting world economic development. Both of these objectives are important elements in building strong and prosperous economies in the nations of the free world.

These objectives are important, too, to our own economy, and particularly to our farmers and laborers who produce for export. The International Monetary Fund and the International Bank for Reconstruction and Development help substantially in building world markets for American exports.

If it were not for the International Monetary Fund, trade among nations would be very much more difficult than it is today. For many years, most of the countries of the world have faced repeated dollar shortages, and have had to ration their dollars through various restrictions on trade and payments. One of the principal goals of the Fund is to do away with these rationing systems, so that all of the currencies of the member countries may be converted freely. While we still have a long way to go in reaching that goal, the member countries have been able to relax their restrictions considerably, knowing that the Fund stands ready to help them in time of trouble, as it helped Britain during the Suez crisis. If the Fund had not been available, these countries would have been forced to impose further restrictions that would have interfered seriously with world trade and would have sharply cut down the market for American exports.

The Bank, too, builds markets for our products. One example of the immediate effect in stimulating exports from this country was given by the Secretary of the Treasury in answer to questioning during our hearings. He informed us that through June 30, 1958, $1,342,700,000 of the loan funds disbursed by the Bank had been used by the borrowers for imports from the United States.

Both the Fund and the Bank are operated on a sound, businesslike basis. They pay their expenses out of the income received in their operations. No loan from the Bank is in default, and no member country is in arrears on repayments of its drawings from the Fund. Income for each institution has been sufficient to permit the Bank and the Fund to build up sizable reserves against losses.

Our committee heard witnesses representing the administration, business groups, farming, labor, and banking. These witnesses were unanimous in supporting this legislation, and I urge the House to act favorably on it.

Mr. SPENCE. Mr. Chairman, I yield 5 minutes to the gentleman from Indiana [Mr. BARR].

Mr. BARR. Mr. Chairman, it can often be a very confusing thing for a freshman Member of this Congress to determine the financial responsibility of this Nation to the rest of the world. Frankly, I have been very confused in the last few days as to what our responsibility is. I often get the uneasy feeling that maybe we are kidding ourselves that this Nation by itself can defend the whole free world or can rebuild the whole free world. I do know, however, that with the cooperation of 68 nations all over the world we can get this job done.

To me the concept of working alone in this field of financial responsibility to the world today is out of date, it is outmoded. We have a clear responsibility to the world. We do not intend to back off from it. But in this instance, Mr. Chairman, we are picking up our share, and every little country in this Fund is throwing in their money and, incidentally, their gold. Take a little country like Afghanistan. Their contribution is $10 million to this Fund, and they are going to increase it. And they are paying $2½ million in their own gold.

This is the kind of cooperation, this is the sort of movement in world responsibility that I can understand. It is the sort of thing I can tell the people in my district and which I think they will understand. So it is a real thrill and a real privilege for me to be able to support this bill.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. BARR. I yield to the gentleman.

Mr. GROSS. The gentleman hopes that they will take care of their increased quotas, does he not?

Mr. BARR. Yes, sir.

Mr. GROSS. The gentleman hopes they will.

Mr. BARR. May I say this, that this agreement goes in effect when 75 percent of the nations have agreed to the increase, when they have paid in their funds and the Fund is ready to go.

Mr. GROSS. If the gentleman will yield further, why not 100 percent of the nations, the 68 member nations?

Mr. BARR. May I suggest this to the gentleman? I certainly do not have his experience, I know that, but I suggest there is a historical precedent. The United States came into being when 9 States out of the 13 ratified the Constitution. When we have an amendment to the Constitution it goes into effect when three-fourths of our States ratify that amendment.

Mr. GROSS. Mr. Chairman, will the gentleman yield further?

Mr. BARR. I yield.

Mr. GROSS. And I doubt that that involved the $1,375 million as contained in this bill.

Mr. BARR. That is very possible, sir.

Mr. KILBURN. Mr. Chairman, I yield 2 minutes to the gentleman from Michigan [Mr. HOFFMAN].

Mr. HOFFMAN of Michigan. Mr. Chairman, it is a wonderfully fine experience to be here, hear and learn so much about the people of the free world. Sometimes it causes a fellow to wonder why we do not have more freedom here at home.

By special messenger, I received a notice on Friday, March 20, at 4:10 p.m., that there would be a hearing this morning to consider the bills to amend the Unemployment Act of 1946, but no list of witnesses accompanied the notice, and, subsequently, I had been given to understand that only Mr. Galbraith would be called as a witness today.

The incident that causes this outburst, or whatever you want to call it, is the fact that, after we had been given to understand there would not be any more subcommittee hearings before we started the Easter vacation, except to hear one witness this morning, I yesterday afternoon received the following notice:

EXECUTIVE AND LEGISLATIVE REORGANIZATION SUBCOMMITTEE OF THE COMMITTEE ON GOVERNMENT OPERATIONS, HOUSE OF REPRESENTATIVES—HEARINGS ON BILLS TO AMEND THE EMPLOYMENT ACT OF 1946; HEARING ROOM 1501–B, NEW HOUSE OFFICE BUILDING, 10 A.M.

WEDNESDAY, MARCH 25, 1959

Congressman HENRY S. REUSS, of Wisconsin.

Senator JOSEPH S. CLARK, JR., of Pennsylvania.

Congressman BYRON L. JOHNSON, of Colorado.

Prof. John Kenneth Galbraith, Harvard University.

Dr. Gardiner C. Means, consulting economist.

THURSDAY, MARCH 26, 1959

Congressman CHARLES E. BENNETT, of Florida.

Congressman WALTER H. JUDD, of Minnesota.

Mr. Leon Keyserling, former Chairman, Council of Economic Advisers.

Mr. Stanley Ruttenberg, director, Department of Research, AFL–CIO.

This notice caught the minority members by surprise, for Mr. BARRY, a member of the subcommittee—as the chairman was advised—is in California; Mr. BROWN, the other Republican member, had arranged his schedule to leave Washington with the foregoing information in mind; and I, member ex officio of the subcommittee but interested in the proposed amendments, and as one who was on the committee when the bill was written in 1946, could not, because of previously scheduled hearings, attend.

It happens that the Subcommittee of the Committee on Education and Labor, which is trying to write labor legislation and of which I am a member, had scheduled a hearing for this morning. So, if there are not as many Members here on the floor as there should be, that is one explanation. We are trying to get around, first to one committee hearing and then another, called by our Democratic friends, so some just cannot be here when we should be here.

This morning, when we asked for the names of individuals who might be interested in the proposed legislation and who had been notified, we were not, as I recall, advised that anyone in particular had been notified, but that a general notice had gone out. It is evident that some who are interested in the adoption of this type of legislation were notified but I failed to receive any information that anyone who might logically be opposed to it was given any notice.

I am not asking that we give any money to anybody in the United States or elsewhere. I am just asking the very fine Democratic leadership to have a little consideration for us, give us a chance, give some of the Republicans a chance to sit in on some of these committee hearings.

Why all the rush? Five of the witnesses are Congressmen. Four others are experts, so called, professionals who have appeared more than once in advocacy of spending programs.

Time and again last year, I dropped my own work, hiked upstairs to the committee room, just to create a quorum, but,

unless we can be shown a little consideration, I am all through with running to hearings in which I am not interested just so one can be held.

As a Republican, I have a certain interest in reciprocity which, in my book, does not mean dancing all the time to one tune.

The CHAIRMAN. The Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Bretton Woods Agreements Act is amended by adding at the end thereof the following new section:

"SEC. 16. (a) The United States Governor of the Fund is authorized to request and consent to an increase of $1,375,000,000 in the quota of the United States under article III, section 2, of the articles of agreement of the Fund, as proposed in the resolution of the Board of Governors of the Fund dated February 2, 1959.

"(b) The United States Governor of the Bank is authorized (1) to vote for increases in the capital stock of the Bank under article II, section 2, of the articles of agreement of the Bank, as recommended in the resolution of the Board of Governors of the Bank dated February 2, 1959, and (2) if such increases become effective, to subscribe on behalf of the United States to thirty-one thousand seven hundred and fifty additional shares of stock under article II, section 3, of the articles of agreement of the Bank."

SEC. 2. Section 7(b) of the Bretton Woods Agreements Act is amended by striking out "of $950,000,000", and by striking out "not to exceed $4,125,000,000" and inserting in lieu thereof "such amounts as may be necessary."

Mr. GROSS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GROSS: On page 2, after line 12, insert a new section which shall provide as follows:

"SEC. 3. The amendment made by this Act with respect to section 16(a) shall not become effective until each member of the Fund has notified the Board of Governors of the Fund, in writing, that it consents to and has complied with the increase in its quota, notwithstanding the provisions of paragraph (ii) as proposed in the resolution of the Board of Governors of the Fund dated February 2, 1959."

Mr. GROSS. Mr. Chairman, the distinguished gentleman from Kentucky [Mr. SPENCE], in addressing the House a few moments ago, said that this country is the leader of finance throughout the world. Maybe so. We know this country is the leader of the world in total national debt.

The gentleman from Kentucky also implied that unless this bill was passed, and in the sacred form in which the committee brought it to the House, we might hurt the sensitivities of some of our so-called foreign friends. It is about time we gave some consideration to the sensitivities of the taxpayers of the United States and the people who are going to have to pay this Federal debt of ours, if it is ever paid.

Cut it as thin as you want to, this bill provides for an increase of $1,375 million in the Federal debt. I said $1,375 million would be added to the Federal debt of this country.

Yesterday this House passed a bill—I did not vote for it—to provide $100 million for uncollectible loans to foreign countries, so that in two consecutive days you have loaded onto the debt of this country approximately a billion and a half dollars.

What does my amendment do? It simply provides that the increased quotas to this International Fund shall be subscribed by all of the other 67 countries before this country puts up any money. That is all that it does. Is there anything unfair about that? Who benefits from this Fund? We do not borrow from it although we are borrowing all kinds of money these days and paying increasingly high rates of interest. This Fund, I am told today, is for the benefit of the 67 other countries. Oh, sure, we can borrow from it. I do not know why we do not do so if we can get the money cheaper. Let me repeat that my amendment simply says to these other countries, "You come in when you increase your quotas, and if, and when, you do so, we go on from there." Is there anything wrong with that? The contention has been made that this $1,375 million ought to be rammed through the House and through the Congress before the end of this fiscal year so that it will not appear in the budget next year—the same subterfuge that was used yesterday to increase the foreign giveaway program—"Get it in this year's spending so it will not rupture next year's budget." I am not interested in that. If these countries come in before July 1 with their increased quotas that will be fine and the United States contribution will be in this year's budget. If they decline to come in before July 1, then it goes into next year's budget—and that is exactly where it ought to go under the circumstances.

Mr. Chairman, I urge the adoption of the amendment. It is fair. It is time that all these foreign countries took the lead in demonstrating their good faith and willingness to do something for themselves. Let them just once take the initiative in this business of putting up the money.

Mr. SPENCE. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, this amendment would make it possible for any member of the Bank and the Fund to sabotage the whole program. Under this amendment we could not agree to put our quota into the Fund unless and until all of the rest of the members of the Fund and the Bank have agreed to put in their quota. We have assumed the leadership in the Fund and in the world, and it is our proud position. This could be a very abrupt way of striking down American leadership and sabotaging both of these most useful institutions that have rendered such wonderful service to their countries and to our country as well.

Mr. Chairman, I hope the amendment will be voted down.

Mr. KILBURN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I agree with our chairman. This is a very bad amendment, for the reason that one little country, perhaps, if it does not come in, could ruin the whole deal. I hope the amendment will be defeated.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa [Mr. GROSS].

The question was taken; and on a division (demanded by Mr. GROSS), there were—ayes 22, noes 72.

So the amendment was rejected.

Mr. HAYS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. HAYS: On page 2, after line 12, insert the following new section:

"SEC. 3. The amendments made by this act shall become effective on July 1, 1959."

Mr. HAYS. Mr. Chairman, this amendment is the same amendment which was adopted in the other body and is part of the bill as passed by the other body. What it does, very simply, is to make this money come out of the budget for fiscal 1960.

If the bill is passed in its present form and the conferees can get the other body to agree to the language as it now stands, then the money would come out of this year's budget and would further unbalance that budget which is already unbalanced, as near as we can find out, by some $12 or $13 billion.

In other words, this would be part of the conglomeration that is being put in on the theory that by the time of the election in 1960 nobody will remember how badly this budget was unbalanced, or who unbalanced it. The committee is going to argue that this would be a 3-month delay and the Fund cannot wait. I will anticipate that and tell you that the Fund can wait because it is only a 3-month wait. If we go ahead and pass the bill with this amendment, then the other countries will understand that we are going to be participating and they can go ahead and be getting their share up, so it will not delay them on the ground that they do not know what the United States is going to do.

This will be an act of fiscal responsibility. This will be an act which will prevent someone from pointing the finger at you new Members especially and saying you are budget busters, because this puts the money in the 1959 budget when everybody knows it should be in the 1960 budget, so it can be found out whose request it was that unbalanced the budget.

Mr. VANIK. Mr. Chairman, will the gentleman yield?

Mr. HAYS. I yield.

Mr. VANIK. Mr. Chairman, although I am in support of this legislation, I want to take this opportunity to associate myself with the remarks of my distinguished colleague from Ohio [Mr. HAYS]. I am also in support of his amendment to delay the spending authority until after July 1. He is 100 percent right.

There is no apparent urgency which requires the spending authority before July 1. Congress will be in session and can provide funds at any time if any emergency need should arise in the intervening time. As a matter of fact there is practically no possibility that the concurring authority of other na-

tions will be available by July 1, 1959, or even January 1, 1960. Three quarters of the 68 participating member countries must provide their approval. Up to the present time only 2 or 3 of the necessary 51 member nations have made any progress with necessary approval.

The proposed amendment indicates full support of the Bretton Woods agreement and merely assesses the expenditure to the appropriate fiscal year. Although the administration is seeking approval of the authorization to spend in the 1959 fiscal year, it does not contemplate or expect to spend a single penny of these funds until the 1960 fiscal year—and this expenditure belongs properly in the 1960 budget.

In 1960 politics are more likely to be balanced than the budget. The President is seeking a political balance of the 1960 campaign year budget by overspending in the hopelessly overspent 1959 budget. On Tuesday, Congress cut out over a quarter billion dollars from his deficiency appropriation bill. The President now seeks to shift $1,375 million from proposed 1960 spending to the 1959 budget plus an additional contingent liability for $2.6 billion or a total of $4 billion.

Shifting these 1960 expenditures to the wrecked 1959 budget is another example of Eisenhower phony thrift and budget-juggling.

Mr. ASHLEY. Mr. Chairman, I rise in opposition to the amendment, not because the majority on the subcommittee or the full committee believes this to be an issue above politics, but because it is not the kind of political issue that makes much sense.

As my colleague has pointed out, there can be no doubt that this is a political issue. The important thing to remember, Mr. Chairman, is that this additional quota in the Monetary Fund is political for two reasons, not just one: First, it is political because the item was contained in the President's budget message, and anything in the President's budget message is bound to be political.

I say this is particularly true when an item calling for an appropriation of $1,375 million is tucked into an already unbalanced 1959 budget in order to preserve a tenuous balance for fiscal 1960.

But the issue also has political implications, it seems to me, that are deeper. The continued strength and preservation of the United States is a common, nonpolitical goal to which all of us on both sides of the aisle are dedicated. It is the method by which we pursue this goal, this purpose, that is bound to differ, and hence bound to assume a political connotation.

Every member of the Committee on Banking and Currency has been, from the start, of one mind that the Monetary Fund has performed an essential economic function with truly remarkable success over a period of 12 years. Every member of the committee is likewise of one mind that continued operation of the Fund is essential and that the quota increase called for in the bill before us is needed to continue to strengthen the currencies and economies of the various countries participating in the Bretton Woods Agreements Act.

Now, Mr. Chairman, agreement on the substance of the measure before us and on its essential character as a weapon in the cold war in which we are engaged must surely outweigh the politics which concerns itself with trying to hide an expenditure in an already unbalanced budget or which tries to embarrass the President by making him put it in a later budget which—also for political purposes—he has claimed would be balanced.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. ASHLEY. Not at this point.

Mr. HAYS. At any point?

Mr. ASHLEY. Yes.

Mr. HAYS. Let me know when you come to that point.

Mr. ASHLEY. I say, Mr. Chairman, to downgrade the essential substance of the measure before us to the level of purely partisan politics that has been introduced would be a great mistake.

My colleague from Ohio has said that we can wait for this money to be made ready; that is, it can be made ready after the beginning of the next fiscal year. That may be true, but I think the much more important point is that the United States is trying to set an example for the rest of the world and to demonstrate its willingness to take leadership without becoming mired in partisan politics a year and a half before an election.

Now I yield to the gentleman from Ohio.

Mr. HAYS. Right there, the fact that we pass a bill demonstrates our willingness, does it not?

Mr. ASHLEY. It depends on what the bill contains.

Mr. HAYS. If we pass a bill saying we are going to do it on July 1, that demonstrates our willingness, does it not?

Mr. ASHLEY. It seems to me we are derogating from our purpose.

Mr. HAYS. The gentleman says this is an attempt to embarrass the President. Hiding this in the present year's budget is an attempt of who to embarrass whom?

Mr. ASHLEY. I may say to the Committee, in reply to the gentleman from Ohio, that any time we have an unbalanced budget to the tune of some $13 billion, it is the taxpayers of America who are embarrassed and the future generations who will have to pay the bill. That is the answer to the question. I do not think it makes any difference whether this expenditure goes into the fiscal 1959 or fiscal 1960 budget. What I think is more important is that we show the free countries of the world, with whom we are allied in purpose to counter Soviet communism, that we are ready to assume leadership on an unselfish basis.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

(By unanimous consent (at the request of Mr. HAYS) Mr. ASHLEY was allowed to proceed for 2 additional minutes.)

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. ASHLEY. I yield to the gentleman from Ohio.

Mr. HAYS. What the gentleman is saying, in effect, is that the budget is already out of balance $13 billion this year, so another $1,375 million does not really mean much, because it is going to be about $15 billion anyway.

Mr. ASHLEY. On the contrary, I will have to correct the gentleman.

Mr. HAYS. You correct me if I am wrong. That is the way I read it.

Mr. ASHLEY. No. We questioned the Secretary of the Treasury on that point. With the inclusion of this $1,375 million the anticipated deficit is $13.1 billion or $13,100,000,000.

Mr. HAYS. That is the anticipated deficit, but I will lay the gentleman a little wager it will be bigger than that.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. ASHLEY. I yield to the gentleman from Iowa.

Mr. GROSS. I was delighted to hear the gentleman say that it is going to be the taxpayers of today and tomorrow who are going to be embarrassed with this kind of legislation.

Mr. ASHLEY. Yes.

Mr. GROSS. I am delighted to have the gentleman emphasize that.

Mr. RHODES of Arizona. Mr. Chairman, will the gentleman yield?

Mr. ASHLEY. I yield to the gentleman from Arizona.

Mr. RHODES of Arizona. I am pleased that the gentleman made the statement he did about partisan politics in this matter. The gentleman will agree with me, I am sure, that if there is any embarrassment on account of an unbalanced budget, if there is any political embarrassment, it applies not only to the party in control of the administration but to the party in control of the Congress.

Mr. ASHLEY. I agree with the gentleman, and I point out to the people on my side of the aisle it is we who may be especially embarrassed, because we would have to answer the charge that it was the Democrats who threw the 1960 budget out of kilter. I do not think we should be put in that kind of a position.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. ASHLEY. I yield to the gentleman from Massachusetts.

Mr. McCORMACK. While I am supporting the bill reported out of the committee, purely to go to conference in connection with the differences between the House and the Senate, I think the record should clearly show that there is no real necessity for this so far as this fiscal year is concerned, because Mr. McCloy, in appearing before the Senate committee, in response to questions on this subject, said: "I do not anticipate any emergency within the next 3 months that I can say makes it impelling that you do so." Now, while I think the committee used judgment under the circumstances, I think the record should clearly show that this matter is for the next fiscal year and that the administration is bringing it forward in view of the large deficit, because they figure that it is more convenient this year than next year.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. REUSS. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I recognize that the provocation suffered by my friend the gentleman from Ohio [Mr. HAYS] and others, has been great, and that he very understandably does not relish the barrage of charges made recently about the people on this side being spenders, budget busters, and so on. I, however, oppose his amendment, however well intentioned it may be, because I believe it will unnecessarily hobble the administration in the carrying out of our foreign policy.

I call the attention of the House to the fact that in the committee report on this bill we of the committee made it clear that we did not want the Secretary of the Treasury to pay this money out improvidently. We said on page 5:

> The committee recognizes the desirability of prompt action in this matter, but at the same time the committee notes that the resoluion of the Board of Governors invites the members to comply as soon as possible with the procedure for notice and payment of these increases in the Fund, but no country is bound to make this payment until 30 days after the Board's resolution takes effect, which may not occur until after June 30.

Then we went on to say that the Secretary of the Treasury, in making his timing, should take into account such factors as the current debt management difficulties and other issues raised by adding to the national debt; and should, in effect, not govern himself by any supposed necessity to get the amount into this year's budget.

Personally, I do not think that the 1960 budget is a serious exercise by the administration in responsible budgeting. If the sun shines and we have agricultural abundance, the budget is going to be out of balance. If the Congress does not vote an additional gas tax bill for the fellow who wants to take his family out for a Sunday drive, the budget is going to be out of balance. If the Congress decides to provide adequate funds for health and homes and education, the budget is going to be out of balance.

But, be that as it may, I hope that the people on this side of the aisle, on the Democratic side of the aisle, will follow what has always been the policy of the Democratic Party—to do nothing ever which might in any way make difficult the administration of our country's foreign policy. And, if in the face of the aggravation and provocation that we receive from the other side, it makes us have to behave like Mordecai at the King's gate, so be it.

Mr. Chairman, I hope the amendment will not pass.

Mr. WIDNALL. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I fully support the views expressed by my colleague, the gentleman from Ohio [Mr. ASHLEY], and my colleague from Wisconsin [Mr. REUSS]. In case anyone might think that this might be a Machiavellian approach by the administration to this year's budget, it should be called to the attention of the House that the proposal for the authorization contained in this bill was first made in August of 1958.

Then in the fall of 1958 the member nations met in New Delhi, India, and decided upon the program and the quotas that should be met by the 68 member nations. I feel that we would do our country a great disservice if we did not meet our responsibilities promptly.

The proposed amendment would delay the subscription payments until all member nations have met their quotas on July 1. The purpose of the amendment is to throw the expenditure in fiscal 1960 budget. That is completely irresponsible action. This comes at a time when the Western World is facing a potential Berlin crisis within the next 60 days. I think it would be most unfortunate if the House would throw this roadblock by changing the effective date of the legislation. This bill would be one of the most effective tools of the Western World assuring against international financial repercussions that might develop out of the Berlin situation. One of the greatest benefits which flows from the International Monetary Fund is the intangible factor of confidence which the institution has instilled in international finance. It is beyond me to understand how a responsible Congress could shortsightedly and deliberately cripple this intangible factor of confidence which is so important in operations of the International Monetary Fund.

The responsibility for not having the full resources of the Fund available in a time of need and crisis will rest squarely on the shoulders of any who would support such potentially dangerous restrictive action.

Mr. Chairman, I urge the House to vote down this amendment.

Mr. BROWN of Georgia. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I am opposed to this amendment. To withhold payments authorized by the bill to a later date will detract from our standing as the financial leader of the free nations of the world. Such action could not help but confuse our friends of the free nations who are members of these two great international financial institutions for most of them do not understand our legislative procedures.

What useful purpose would be served to defer these payments—I know of none. Are we justified in taking this action in light of world conditions? Take the Berlin crisis, we all hope that it may be resolved without serious complications but we cannot say at this time that this situation will not produce serious financial strains throughout the world. One thing we do know—the Communist leaders are mighty good at stirring up trouble, and they would be happy to have something like this for propaganda purposes.

I believe that the increased U.S. subscription to the Fund and Bank must be made available at once. We are not in this alone for 68 nations of the free world are members of these 2 institutions. Our actions will greatly affect the speed of the other nations to approve these increases.

Every witness appearing before the Banking and Currency Committee agreed with the provisions as written in the bill and as reported by the committee. The names of these expert witnesses are Hon. Robert B. Anderson, Secretary of the Treasury; Hon. T. Graydon Upton, Assistant Secretary of the Treasury; Mr. Frank Southard, Jr., U.S. Executive Director of the International Monetary Fund; Hon. C. Douglas Dillon, Under Secretary of State;

Mr. Eugene S. Gregg, Vice Chairman, U.S. Council, International Chamber of Commerce; Mr. Herbert H. Harris II, Assistant Legislative Director, American Farm Bureau Federation; Hon. John J. McCloy, chairman of the board, the Chase Manhattan Bank, representing the American Bankers Association; Mr. Stanley H. Ruttenberg, representing AFL–CIO; Mr. W. D. Kerr, president, Investment Bankers Association of America; Mr. William S. Swingle, president, National Foreign Trade Council;

Mr. Charles P. Taft, general council, Committee for a National Trade Policy; and the U.S. Chamber of Commerce.

I again say I am opposed to this amendment and urge you to vote it down.

Mr. GROSS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, earlier this afternoon I asked a question as to the salaries paid the top officials of this Bank and Fund. No one seemed to know the answer. In the intervening time I have been reliably informed that the two top officials receive, one, $30,000 a year, and the other $20,000 a year, and that both salaries are tax-exempt, in that both pay Federal taxes, but they are reimbursed from funds of the bank and international funds. That is in keeping, apparently, with the way the United Nations is operated—tax-free salaries.

Now with respect to the pending amendment, I have read the report of this committee backward and forward, and I find nothing to indicate that there is anything urgent about the effective date of this bill. If someone can cite me the language in the report which shows any real degree of urgency, I should be glad to hear it.

Mr. SPENCE. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, if there is some feeling among the members of the Democratic Party that they will make any capital by the adoption of this amendment, I think they are very wrong. I have a deep interest in the Democratic Party. I have been a member of it probably as long as anybody in the House, and I would like to see it succeed always. But I hope we will not resort to methods such as this to succeed.

It is a very different matter for the Secretary of the Treasury to delay the payment of this money than for the Congress of the United States to direct him not to pay it for 3 months. Those 3 months may be a critical period in the world's history. During those 3 months we may want all the friends we have everywhere in the world. We do not know what the effect of the adoption of this amendment will be, but I am confident it will not be good. It is an interference in our international relations; it is merely an attempt to make some political capital.

The amendment is not justified under the circumstances. The budget is the President's budget. What he puts into it is his responsibility and not that of the Congress. I hope the amendment will be voted down.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio.

The question was taken; and on a division (demanded by Mr. HAYS) there were—ayes 36, noes 86.

So the amendment was rejected.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. MACHROWICZ, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 4452) to amend the Bretton Woods Agreements Act, pursuant to House Resolution 217, he reported the bill back to the House.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken, and the Speaker announced that the ayes appeared to have it.

Mr. HAYS. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. The Chair will count. [After counting.] One hundred and ninety-nine Members are present, not a quorum.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 315, nays 57, not voting 62, as follows:

[Roll No. 24]

Mack, Wash.	Rivers, S.C.	Zelenko
Martin	Rostenkowski	

So the bill was passed.

The Clerk announced the following pairs:

Mr. Hébert with Mr. Martin.
Mr. Brewster with Mrs. Weis.
Mr. Anfuso with Mr. Broyhill.
Mr. Multer with Mr. Barry.
Mr. Buckley with Mr. Allen.
Mr. Bonner with Mr. Osmers.
Mr. Davis of Tennessee with Mr. Hess.
Mr. Bailey with Mr. Taylor.
Mr. Dingell with Mr. Simpson of Pennsylvania.
Mr. Baring with Mr. Lafore.
Mr. Loser with Mr. Hosmer.
Mr. Carnahan with Mr. Fino.
Mr. Zelenko with Mr. Frelinghuysen.
Mr. Jones of Alabama with Mr. Mack of Washington.
Mr. Celler with Mrs. St. George.
Mr. Boykin with Mr. Bow.
Mr. Aspinall with Mr. Pillion.
Mr. Herlong with Mr. Mumma.
Mr. Holland with Mr. Dooley.
Mr. Landrum with Mr. Short.
Mr. Porter with Mr. Withrow.
Mr. Morrison with Mr. McDonough.

Mr. MOULDER changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

The doors were opened.

Mr. SPENCE. Mr. Speaker, I ask unanimous consent to take from the Speakers' table the bill (S. 1094) to amend the Bretton Woods Agreements Act, strike out all after the enacting clause, and substitute the provisions of the bill just passed.

The Clerk read the title of the Senate bill.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

The SPEAKER. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. SPENCE: Strike out all after the enacting clause of the bill S. 1094 and insert the provisions of H.R. 4452 as passed.

The amendment was agreed to.

The bill was ordered to be read a third time, and was read the third time.

The bill was passed.

A motion to reconsider was laid on the table.

A similar House bill (H.R. 4452) was laid on the table.

CANNON'S PROCEDURE IN THE HOUSE OF REPRESENTATIVES

Mr. GARY. Mr. Speaker, I ask unanimous consent for the immediate consideration of the joint resolution (H.J. Res. 301) providing for printing copies of "Cannon's Procedure in the House of Representatives."

The Clerk read the joint resolution, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That there shall be printed and bound for the use of the House one thousand five hundred copies of "Cannon's Procedure in the House of Representatives", by Clarence Cannon, to be printed under the supervision of the author and to be distributed to the Members by the Speaker.

SEC. 2. That, notwithstanding any provision of the copyright laws and regulations with respect to publications in the public domain, "Cannon's Procedure in the House of Representatives" shall be subject to copyright by the author thereof.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

ADJOURNMENT RESOLUTION

Mr. McCORMACK. Mr. Speaker, I offer a concurrent resolution (H. Con. Res. 110) and ask for its immediate consideration.

The Clerk read the concurrent resolution as follows:

Resolved by the House of Representatives (the Senate concurring), That when the two Houses adjourn on Thursday, March 26, 1959, they stand adjourned until 12 o'clock meridian, Tuesday, April 7, 1959.

The concurrent resolution was agreed to.

A motion to reconsider was laid on the table.

SIGNING OF ENROLLED BILLS AND JOINT RESOLUTIONS

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that notwithstanding the adjournment of the House until April 7, 1959, the Clerk be authorized to receive messages from the Senate and that the Speaker be authorized to sign any enrolled bills and joint resolutions duly passed by the two Houses and found truly enrolled.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

MOTIONS TO SUSPEND THE RULES, AND CALLING OF THE CONSENT AND PRIVATE CALENDARS

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that on Wednesday, April 8, 1959, it shall be in order for the Speaker to entertain motions to suspend the rules notwithstanding the provisions of clause 1, rule XXVII, that it shall be in order to consider business under clause 4, rule XIII, the Consent Calendar rule, and that on the same date the Private Calendar may be called.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

Mr. GROSS. Reserving the right to object, Mr. Speaker, can the gentleman give us some indication of the legislation that is to be called up under suspension?

Mr. McCORMACK. There is no legislation in mind now, except that if during the recess something should arise where early action is necessary right after the recess is over, it can be brought up under suspension of the rules. Whatever it is, of course, it will be cleared by and through the minority leader.

Mr. GROSS. It would be of an emergency nature?

Mr. McCORMACK. It would have to be of an emergency nature; yes.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

CALENDAR WEDNESDAY BUSINESS

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the business in order on Calendar Wednesday, April 8, 1959, be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

DOCUMENTARY EVIDENCE IN POSSESSION OF THE HOUSE OF REPRESENTATIVES

Mr. McCORMACK. Mr. Speaker, I offer a resolution (H. Res. 224) and ask for its immediate consideration.

The Clerk read the resolution as follows:

Whereas by the privileges of this House no evidence of a documentary character under the control and in the possession of the House of Representatives can, by the mandate of process of the ordinary courts of justice, be taken from such control or possession except by its permission: Therefore be it

Resolved, That when it appears by the order of any court of the United States or judge thereof, or of any legal officer charged with the administration of the orders of such court or judge, that documentary evidence in the possession and under the control of the House is needful for use in any court of justice or before any judge or such legal officer, for the promotion of justice, this House will take such action thereon as will promote the ends of justice consistently with the privileges and rights of this House; be it further

Resolved, That during any recess or adjournment of the 86th Congress, when a subpena or other order for the production or disclosure of information is by the due process of any court of the United States served upon the Clerk of the House of Representatives, or any officer or employee of the House, directing appearance as a witness before the said court at any time and the production of certain and sundry papers in the possession and under the control of the House of Representatives, that the Clerk of the House, or any such officer or employee of the House, be authorized to appear before said court at the place and time named in any such subpena or order, but no papers or documents in the possession or under the control of the House of Representatives shall be produced in response thereto; and be it further

Resolved, That when any said court determines upon the materiality and the relevancy of the papers or documents called for in the subpena or other order, then said court, through any of its officers or agents shall have full permission to attend with all proper parties to the proceedings before said court and at a place under the orders and control of the House of Representatives and take copies of the said documents or papers and the Clerk of the House is authorized to supply certified copies of such documents that the court has found to be material and relevant, except that under no circumstances shall any minutes or transcripts of executive sessions, or any evidence of witnesses in respect thereto be disclosed or copied, nor shall the possession of said documents and papers by the said Clerk of the House be disturbed or removed from their place of file or custody under said Clerk; and be it further

Resolved, That a copy of these resolutions be transmitted by the Clerk of the House to any of said courts whenever such writs of subpena or other orders are issued and served as aforesaid.

The resolution was agreed to.

A motion to reconsider was laid on the table.

LEGISLATIVE PROGRAM

Mr. HALLECK. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. HALLECK. Mr. Speaker, I have asked for this time in order to inquire of the majority leader as to the program, particularly as to whether we might expect some action today on the extension of the Temporary Unemployment Compensation Act; and then also what might be scheduled for tomorrow and after the recess.

Mr. McCORMACK. If the other body passes the extension of the Temporary Unemployment Compensation Act, it will have to be brought up either today or tomorrow. We hope to bring it up this afternoon, if it is acted upon in the other body. On the basis of information that I have, and of course I am not predicting the action of the other body, but on the basis of information I have, in all probability it will be a technical amendment over which there will not be much difficulty. Is that not the gentleman's recollection on that?

Mr. HALLECK. So I understand so far as the amendment is concerned, and it would seem to me in the interest of time which, of course, is important in the present situation, we probably could agree to the amendment of the other body and send the bill to the White House.

Mr. McCORMACK. There is a reasonable expectation that it may be acted upon today, and if it is messaged over in time, we will be able to dispose of it. If not, it would have to be acted upon tomorrow because this law will expire while we are in recess. I believe the law expires on April 1; is that not correct.

Mr. HALLECK. That is correct.

Mr. McCORMACK. So far as further legislative business is concerned, the next order of business is House Joint

Resolution 257 which relates to the meeting of the International Radio Consultative Committee.

So far as the week after next is concerned, there will be nothing on April 7. So far as I can see now, there will be no legislation on April 7 and the whole week after that. Without definitely committing myself, I cannot see any major legislation beyond April 7.

On Wednesday, of course, under the unanimous-consent request previously made, the Consent Calendar will be called and the Private Calendar will be called, and also any suspensions in line with the colloquy that the gentleman from Iowa [Mr. GROSS] and I had a few moments ago. I am not definitely saying there will be any suspensions and I do not want any Member to be under a misapprehension, I am simply saying that the leadership as of this moment does not see any, but it is a precautionary measure that the leadership thinks it is wise to invoke in the event that anything should develop. Of course, if anything should develop, I will do everything that I can to alert the membership and, of course, my friend, the gentleman from Indiana will do likewise to alert the membership before the recess is over.

Mr. HALLECK. That is what I was going to suggest, if something should arise and come up for consideration on Wednesday under suspension or under any other procedure for that matter, the gentleman would, of course, confer with me so that we could get notice of it out to the offices of the Members and through the press so that everyone would know in advance what the situation is.

Mr. McCORMACK. I think the Members can rely on the fact that if anything is to come up, the leadership will give sufficient notice in advance so that they may be advised before the recess is over.

As to Thursday and the balance of the week, I cannot see anything. But, I would like to make the usual reservation—outside of Tuesday, April 7, when I said there would be no legislation—that any further program would be announced during that week. As usual I will give as much advance notice to the Members as I can. But again I want to say that projecting my mind at this time, I cannot see anything that might come up that week or at least anything of great importance.

I might add that as of now all rules have been considered and when we dispose of this other bill today, the House will have done a remarkable job by the passage of these important bills that we have taken up.

As majority leader I want to congratulate the membership on both sides for the outstanding work the House has done so early in the session. After disposition of the next order of business on the program every rule reported by the Committee on Rules will have been taken care of, and the bills made ir order by them acted upon.

As I said, it cannot be expected that they can act upon recent requests made to them, but I know that immediately after the recess the Rules Committee will give its usual fine cooperation to the leadership.

AUTHORIZING CERTAIN FREE COMMUNICATION SERVICES

Mr. BOLAND. Mr. Speaker, by direction of the Committee on Rules I call up the resolution—House Resolution 212—and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the joint resolution (H.J. Res. 257) providing that certain communication activities at the IX Plenary Assembly of the International Radio Consultative Committee to be held in the United States in 1959 shall not be construed to be prohibited by the Communications Act of 1934 or any other law. After general debate, which shall be confined to the joint resolution, and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interstate and Foreign Commerce, the joint resolution shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the joint resolution for amendment, the Committee shall rise and report the joint resolution to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the joint resolution and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. BOLAND. Mr. Speaker, I yield 30 minutes to the gentleman from Idaho [Mr. BUDGE] and yield myself such time as I may use.

Mr. Speaker, I know of no opposition to the rule. It provides for the consideration of a noncontroversial resolution which does not require the expenditure of any Federal funds.

Mr. Speaker, I reserve the balance of my time.

Mr. SPRINGER. Mr. Speaker, this resolution was given a very complete airing in the committee, and I believe all of the objections were worked out.

No Federal funds are involved and no security is involved.

Many of my colleagues on the floor have asked why it is necessary to have separate legislation by the Congress on this matter. This is due to the provisions of the Communications Act of 1934. Under that legislation telephone and telegraph companies are precluded from providing free service and the Federal Communications Commission is not authorized to license aliens to operate radio stations under any circumstances. The exemptions provided for in this legislation would be temporary, for the duration of the Assembly. The Ninth Assembly of the International Radio Consultative Committee will be a major international conference. The Committee is a permanent organization of the International Telecommunications Union, which is a special agency of the U.N. This conference will discuss a range of technical problems involving radio and the radio spectrum, including the problem of recommending radio frequency which would be suitable for communication with space vehicles. In addition there will be an attempt to develop standards for color television and to make possible the international exchange of color television programs.

In all such past conferences, the host governments have extended the free services to official participants.

In our case, the U.S. common carriers would not be required to render free services, but they could provide the free services if they chose to do so.

Recently, the Federal Communications Commission issued an authorization for an amateur radio station to be constructed on the site of the conference. The operation of the station would be subject to special rules and regulations as the FCC believes is necessary and required.

This conference has the approval of the State Department and the Federal Communications Commission.

This resolution came unanimously from the committee. I know of no substantial objection that has been made by any Member of the House. I trust the resolution will be approved.

Mr. BUDGE. Mr. Speaker, I know of no opposition on this side to the adoption of the rule.

The SPEAKER pro tempore. The question is on the resolution.

The resolution was agreed to.

Mr. HARRIS. Mr. Speaker, I call up House Joint Resolution 257, providing that certain communication activities at the IX Plenary Assembly of the International Radio Consultative Committee to be held in the United States in 1959 shall not be construed to be prohibited by the Communications Act of 1934 or any other law, and ask unanimous consent that the resolution may be considered in the House as in the Committee of the Whole.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

The Clerk read the resolution as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That nothing in the Communications Act of 1934, as amended, or in any other provision of law shall be construed to prohibit (1) common carriers subject to such Act from rendering free communication services to official participants in the IX Plenary Assembly of the International Radio Consultative Committee (CCIR) to be held in the United States in Los Angeles, California, in 1959, or (2) qualified official participants in such assembly from operating any amateur radio station licensed by the Federal Communications Commission to be operated at such assembly, but any such rendition of services or operation of an amateur radio station shall be subject to such rules and regulations as the Federal Communications Commission may deem necessary.

Mr. HARRIS. Mr. Speaker, I move to strike out the last word.

Mr. Speaker, I ask unanimous consent to insert my own statement in the RECORD at this point as to the purpose of the legislation and to include therein a letter from the Federal Communications Commission regarding the resolution, as to the security limitations and protection we have, together with the petition

that was filed by the organization seeking this authorization.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. HARRIS. Mr. Speaker, the purpose of the legislation is, first, to permit U.S. common carriers subject to such regulations as may be issued by the FCC to render free telephone and telegraph service to official participants at the IX Plenary Assembly of the International Radio Consultative Committee—CCIR—to be held in the United States in Los Angeles, Calif., from April 1 to April 30, 1959; and second, to permit qualified official participants in the Assembly to operate, subject to such regulations as may be issued by the Federal Communications Commission, an amateur radio station which the Commission has licensed to be located at the Assembly site.

Under the provisions of the Communications Act of 1934, as amended, telephone and telegraph companies are precluded from providing free services and the Federal Communications Commission is not authorized to license aliens to operate radio stations.

To exemptions provided for in this legislation would be temporary for the duration of the Assembly.

The Ninth Plenary Assembly of the International Radio Consultative Committee will be a major international conference. The Committee is a permanent organ of the International Telecommunications Union which is a specialized agency of the United Nations.

The conference has been called for the purpose of discussing a wide range of technical problems involving radio and the radio spectrum including the problem of recommending radio frequencies which would be suitable for communications with space vehicles; detailing technical requirements for stereophonic broadcasting; and developing standards for color television to make possible the international exchange of color television programs.

When such a conference is held it is customary for the host government to extend the courtesy of free telephone and telegraph services to official participants. In most of the countries of the world, telecommunications services are government-owned and operated and it is a simple matter for the foreign governments to furnish free telephone and telegraph services for official participants to these conferences.

There is a precedent for this legislation in that the 80th Congress in 1947 by joint resolution authorized the rendering of similar free services by U.S. common carriers for official participants in the Atlantic City Conference.

It should be pointed out that the U.S. common carriers would merely be authorized and would not be required to render free services, and it should further be noted that this legislation would not involve any expense to the Government of the United States.

The purpose of the legislation further would be to permit qualified official participants at the Assembly to operate amateur radio equipment located at the site of the Assembly, and to communicate with their colleagues in their own countries. The Federal Communications Commission recently issued an authorization for such an amateur station, and the operation of this station would be subject to such rules and regulations as the Federal Communications Commission may deem necessary.

The purpose of this amateur station is to demonstrate to the official participants in the conference the latest amateur radio equipment produced by American manufacturers.

The Department of State and the Federal Communications Commission are supporting this legislation which also has the approval of the Bureau of the Budget.

The matter of security, of course came up in connection with the operation of a radio station by aliens. We have a letter which I received from the FCC and I ask authority to put it in the RECORD. It clearly explains how security is provided and we do not have to worry about that phase.

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D.C., March 17, 1959.

Hon. OREN HARRIS,
Chairman, House Interstate and Foreign Commerce Committee, House of Representatives, Washington, D.C.

DEAR CONGRESSMAN HARRIS: We have been informed that certain questions have arisen in connection with your committee's consideration of Senate Joint Resolution 47 and House Joint Resolution 257, identical joint resolutions providing that certain activities at the IX Plenary Assembly of the International Radio Consultative Committee to be held in the United States in 1959 shall not be construed to be prohibited by the Communications Act of 1934, or any other law.

The resolutions contain two separate aspects, they being amateur and common carrier exemptions. The information concerning the amateur provision will be dealt with first. As stated in the comments forwarded to the House committee an authorization for an amateur station was recently issued to be located at the site of the CCIR conference (K6USA). Mr. Raymond E. Meyers is to be the trustee of station K6USA, and he will have the responsibility of always having present a U.S. licensed amateur operator for the purpose of controlling the transmitter, to supervise the operations of the amateur station and to take control thereof should it become necessary. The primary reason for having a licensed U.S. amateur operator present at all times is so that the foreign delegates will be made familiar with our operating requirements. The delegate users of the station will be licensed amateurs of their own countries. It is presently proposed that the certification of the qualifications of a foreign operator will reside in the discretion and judgment of the supervising U.S. licensed amateur. It will be necessary to waive the following parts of the Communications Act of 1934, as amended: Sections 301, 308(b), 319(a), and 310(a)(1). It will also be necessary to waive the provisions of section 12.28 of part 12 of the Commission's rules and regulations.

Enclosed you will find a copy of a petition for waiver of section 12.28 of part 12 of the Commission's rules. The petition sets forth the procedure that will be followed in the operation of the station (K6USA) should the waiver be granted.

The provision dealing with U.S. common carriers is similar to that enacted in 1947 for the Atlantic City Radio Conference. The resolution will permit all private telecommunications companies to provide free services to officials at the conference. It is our understanding that during the 1947 conference delegates were given one 12-minute call without charge. It cannot be stated at this time whether or not the same practice will be followed for the 1959 conference. It must be emphasized that this s permissive and not mandatory legislation. The carriers may give the free service but they will not be under any compulsion to do so if the proposals become law. The common carrier provision of the resolution will require the waiver of the following parts of the Communications Act of 1934, as amended: Sections 201, 202, 203, 204, 205, and 210. It will also be necessary to waive the provisions of parts 41 and 61 of the Commission's rules and regulations.

Very truly yours,

EDGAR W. HOLTZ,
Associate General Counsel.

BEFORE THE FEDERAL COMMUNICATIONS COMMISSION, WASHINGTON, D.C.—IN THE MATTER OF PROPOSED WAIVER OF SECTION 12.28 OF THE COMMISSION'S RULES, PART 12, TO PERMIT QUALIFIED FOREIGN PARTICIPANTS IN THE IX PLENARY ASSEMBLY OF THE CCIR, TO BE HELD IN LOS ANGELES, CALIF., DURING THE MONTH OF APRIL 1959, TO OPERATE THE SPECIAL EVENTS RADIO STATION K6USA USING TELEGRAPHY, AND TELEPHONY

1. Petitioner, Raymond E. Meyers, trustee for the Los Angeles Area Council of Amateur Radio Clubs, is holder of a special events amateur radio station license with the call letter of K6USA. This license was obtained for the express purpose of participation in the U.S. State Department sponsored IX Plenary Assembly of CCIR and assisting the Government-Industry Committee in the presentation, and operation, of an amateur radio station on a 24-hour basis throughout the month of April 1959. The Government-Industry Committee was of the opinion that such a project would be of extreme interest to our visiting dignitaries and delegates to CCIR.

2. The proposed conditions to the waiver, if granted, would permit our foreign delegates to the Plenary Assembly, guests of our State Department, to participate in the operation of special events amateur radio station K6USA. This would serve as a means to permit our visitors to better understand amateur radio as we in the United States enjoy this hobby, and tend to better world democracy and understanding of the amateur. The proposed conditions of the waiver requested are as follows:

(A) The foreign operator will be required to display his foreign amateur license, or otherwise establish his amateur qualifications to the satisfaction of the trustee, or his agents, before he will be permitted to operate special events amateur radio station K6USA.

(B) All operation of station K6USA by such foreign operators will be under the direct supervision of an amateur operator of the appropriate class, currently licensed by the Commission.

(C) All transmissions of K6USA will be in plain language and, if in a foreign language, those station identifications which are required by the Commission's rules will be made in the English language.

Dated March 9, 1959.

Respectfully submitted.

RAYMOND E. MEYERS,
Petitioner.

Mr. SCHENCK. Mr. Speaker, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from Ohio.

Mr. SCHENCK. In discussing this legislation in our committee, my biggest

reservation was whether or not these amateur radio operators operating transmitters, said operators being citizens of other nations, the material that they transmit is subject to proper rules of security. I wonder if the chairman feels now, having received this letter from the Federal Communications Commission and his other communications from the State Department and others, is satisfied himself that these proper security measures will be taken, have been taken, and will apply?

Mr. HARRIS. I am thoroughly satisfied that adequate measures will be taken. I might read just one sentence from the letter which has just been received from the Commission:

Mr. Raymond E. Meyers is to be the trustee of station K6USA, and he will have the responsibility of always having present a U.S. licensed amateur operator for the purpose of controlling the transmitter.

Mr. SCHENCK. I thank the gentleman.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from Iowa.

Mr. GROSS. I want to say to the gentleman that I am more than pleased to hear from him that this is one international meeting that is not going to cost the taxpayers any money. I wish that more resolutions concerning international meetings came from his committee instead of the Committee on Foreign Affairs. I thank the gentleman for yielding.

Mr. SPRINGER. Mr. Speaker, I move to strike out the last word.

Mr. Speaker, this resolution was given a very complete airing in the committee, and I believe all of the objections were worked out.

No Federal funds were involved and no security is involved.

Many of my colleagues on the floor have asked why it is necessary to have separate legislation by the Congress on this matter. This is due to the provisions of the Communications Act of 1934. Under that legislation telephone and telegraph companies are precluded from providing free service and the Federal Communications Commission is not authorized to license aliens to operate radio stations under any circumstances. The exemptions provided for in this legislation would be temporary, for the duration of the Assembly. The Ninth Assembly of the International Radio Consultative Committee will be a major international conference. The Committee is a permanent organization of the International Telecommunications Union, which is a special agency of the U.N. This conference will discuss a range of technical problems involving radio and the radio spectrum including the problem of recommending radio frequency which would be suitable for communication with space vehicles. In addition there will be an attempt to develop standards for color television and to make possible the international exchange of color television programs.

In all such past conferences, the host governments have extended the free services to official participants.

In our case, the U.S. common carriers would not be required to render free services, but they could provide the free services if they chose to do so.

Recently, the Federal Communications Commission issued an authorization for an amateur radio station to be constructed on the site of the conference. The operation of the station would be subject to special rules and regulations as the FCC believes is necessary and required.

This conference has the approval of the State Department and the Federal Communications Commission.

This resolution came unanimously from the committee. I know of no substantial objection that has been reached by any Member of this House. I trust the resolution will be approved.

Mr. HARRIS. Mr. Speaker, the Senate has passed an identical resolution, Senate Joint Resolution 47, and I ask unanimous consent to substitute the Senate resolution for House Joint Resolution 257.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

The Clerk read the Senate joint resolution, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That nothing in the Communications Act of 1934 as amended, or in any other provision of law shall be construed to prohibit (1) common carriers subject to such Act from rendering free communication services to official participants in the IX Plenary Assembly of the International Radio Consultative Committee (CCIR) to be held in the United States in Los Angeles, California, in 1959, or (2) qualified official participants in such assembly from operating any amateur radio station licensed by the Federal Communications Commission to be operated at such assembly, but any such rendition of services or operation of an amateur radio station shall be subject to such rules and regulations as the Federal Communications Commission may deem necessary.

The joint resolution was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar resolution (H.J. Res. 257) was laid on the table.

FORTY-FIRST ANNIVERSARY OF THE DECLARATION OF INDEPENDENCE OF BYELORUSSIA

Mr. MICHEL. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. MICHEL. Mr. Speaker, today is the 41st anniversary of the Declaration of Independence of Byelorussia, and since the Byelorussian people in their occupied homeland are forbidden to observe national holidays of special significance to them, the American citizens of Byelorussian descent are again joining with other Byelorussians in the free world in the commemoration of this most memorable day in the history of the Byelorussian people in order to keep alive the spirit of freedom of the Byelorussian people and to encourage them to further their resistance against the Communist rulers of their country.

It was on March 25, 1918, when the people of Byelorussia proclaimed their land a free and independent republic. The young Byelorussian National Republic, however, did not flourish very long. Her territory was turned into battlefields between the rallying forces first of Russia and Germany and then Russia and Poland, and the tragedy befell again.

At the Treaty of Riga in 1921 Byelorussia's body was cut in two. The eastern two-thirds of her territory was occupied by Russia, where, in order to acquiesce the feelings of the Byelorussian people, the so-called Byelorussian Soviet Socialist Republic was established to take the place of the rightful government of the Byelorussians, which was forced into exile. The western one-third was occupied by Poland.

By the 1939 agreement between Ribbentrop and Molotov, Russia obtained the right of taking over the western part of Byelorussia from Poland up to the Curzon Line and did occupy it soon thereafter. In 1944 Byelorussia's territory was reoccupied by Russia again and it is known to us today under the name of the Byelorussian Soviet Socialist Republic. However, only one-half of the ethnographical territory of Byelorussia found its way within the boundaries of the present day Byelorussian Republic. The rest of it was distributed by Russia among the peoples' republics f Poland, Lithuania, Latvia, Ukraine, and, of course, Russia.

The Russian domination, however, has not destroyed the love of liberty that still burns in the hearts of the Byelorussian people. Until the present day they have shown signs of their disapproval of the Communist ideologies and the rule of the Kremlin despots, hoping that sooner or later the day will come again when the Russian Empire will fall apart and they will be able to restore their freedoms and political independence within the lawful boundaries of their ethnographical territory.

Mr. Speaker, it is altogether fitting and proper that we take special note of this 41st anniversary of the Declaration of Independence of Byelorussia, particularly at a time when the same issue of freedom versus slavery is so fresh in our minds over the Berlin crisis. I am sure all of us here today share the hope of all our good American citizens of Byelorussian descent that some day their relatives and friends will be free of Russian bondage to enjoy the fruits of liberty which bloom so bountifully for us in these great United States.

NINETEEN HUNDRED AND SIXTY-FOUR OLYMPIC GAMES

Mr. MORGAN. Mr. Speaker, I ask unanimous consent for the immediate consideration of the resolution (S.J. Res. 73) extending an invitation to the International Olympic Committee to hold the 1964 Olympic games in the United States.

The Clerk read the title of the resolution.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

Mr. GROSS. Mr. Speaker, reserving the right to object, will the gentleman explain the resolution?

Mr. MORGAN. Mr. Speaker, this resolution gives official endorsement to an invitation to hold the 1964 Olympic games in Detroit. The Olympic games in 1960 are to be held in Rome, Italy. Detroit has sought the Olympic games for the last 12 years. A similar resolution passed the House in 1949 and again in 1955. The International Olympic Committee will meet next month in Munich, Germany, to decide where the 1964 Olympic games will be held and that is the reason for asking immediate action on this resolution.

Mr. GROSS. I understand that this will not cost the Government any money.

Mr. MORGAN. This will not cost the Government a dollar.

Mr. GROSS. The gentleman has that assurance?

Mr. MORGAN. Yes. We have a letter from the chairman of the Detroit Olympic Committee assuring the Senate Foreign Relations Committee that there will be no Federal money asked for the Olympics in Detroit in 1964.

Mr. GROSS. The people of Michigan are a little different than the people of Chicago; is that not correct?

Mr. MORGAN. That is correct and, of course, the circumstances are different.

Mr. BENTLEY. Mr. Speaker, will the gentleman yield?

Mr. MORGAN. I yield to the gentleman.

Mr. BENTLEY. Mr. Speaker, even though we in Michigan are not in an enviable position financially, nevertheless we feel we can take care of these games on our own.

Mr. GROSS. I appreciate it.

The joint resolution was ordered to be read a third time, and was read the third time, and passed, and a motion to reconsider was laid on the table.

By unanimous consent, a similar House joint resolution (H.J. Res. 300) was laid on the table.

AUTHORITY TO DECLARE A RECESS TODAY

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that it may be in order for the Speaker for the remainder of the day to declare a recess.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

AIR FORCE ACADEMY

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

Mr. ROGERS of Colorado. Mr. Speaker, the State of Colorado is now the site for the Air Force Academy. We were delighted in the success that was made by this Academy particularly in athletics last year. Business, civic leaders, and labor officials have authorized the incorporation of the Air Power Command, a nonprofit organization to immediately raise funds for the establishment of a museum in connection with the Air Power Memorial Stadium to be located in the greater Denver area. This resolution has been adopted by the Colorado Legislature and reads as follows:

Whereas mayors, city and town councils, county commissioners, junior and senior chambers of commerce, trade organizations, and business, civic, and labor officials of the greater Denver area, on the night of March 5, 1959, in joint meeting, by resolution and unanimous vote, authorized the incorporation of the Air Power Command as a nonprofit fund raising organization, with instructions to proceed immediately to raise funds on a local and national basis for construction of a 60,000- to 75,000-seat Air Power Memorial Stadium to be located in the greater Denver area; and

Whereas the greater Denver area is the largest center of population in the State of Colorado, and thus, from the standpoint of revenue, transportation and year-around use, is the logical location for a stadium of this size; and

Whereas since the people of the United States will be asked to finance the stadium on a donation basis, the people of Colorado must assure all donors that their moneys will be used wisely in building an Air Power Memorial Stadium which will be used throughout the year and not just 5 or 6 days; and which will truly be a living monument to the heroes of airpower, from the Wright brothers to the missile and rocket age and from Gen. Billy Mitchell to Capt. John Ferrier—for all the world to see, enjoy, and use for all types of civic and sports events; and

Whereas all profits from the use of the Air Power Memorial Stadium shall be carefully distributed to local and national charitable organizations—demanding that the stadium facilities must be rented and utilized as much as possible to insure maximum earnings; and

Whereas the Air Power Memorial Stadium, while intended primarily for use by the U.S. Air Force Academy, by its magnitude, will also encourage early entry and usage of professional football, major league baseball, large conventions, possible world sports meets, and many large conventions, possible meets, and many other events to attract millions of additional visitors to our great State of Colorado: Now, therefore, be it

Resolved by the Senate of the 42d General Assembly of the State of Colorado, That the members of the State Senate of the General Assembly of the State of Colorado on behalf of the people of Colorado, feeling it is in the best interests of the State, hereby endorse, authorize, and support the program of the Air Power Command, as a nonprofit corporation, to bring into reality through a national fund raising campaign, an Air Power Memorial Stadium in the greater Denver area.

BOYS' TOWNS OF ITALY

Mr. RODINO. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. RODINO. Mr. Speaker, tomorrow a distinguished visitor from Rome will arrive in Washington to begin a tour of the United States in celebration of the 15th anniversary of Boys' Towns of Italy.

Princess Gabriella Pacelli, niece of the late Pope, accompanied by her American-educated daughter Ursula, will be received at the White House by Mrs. Eisenhower. The First Lady's gracious gesture in meeting with the Roman princesses is one more indication of the great interest this country has always shown in a wonderful humanitarian project—Boys' Towns of Italy.

I, myself, have visited several of the nine Italian Boys' Towns. I have seen the dramatic results of American generosity in extending hands across the sea to salvage the young victims of war. Over 30,000 boys, each one a potential juvenile delinquent, have been turned, almost without exception, into useful citizens, thanks to the work of these model self-governing communities.

In more recent years, Boys' Towns have been credited with combating the malignant forces of communism. And, in the last few years, a Girls' Town, located near Rome, has been added, thanks largely to the efforts of motion-picture star Linda Darnell, who, like me—like every visitor to Boys' Towns—was inspired by the fine things she saw.

Princess Pacelli is coming here as a good-will ambassador for a cause with which she has been closely identified since its beginnings on the shattered streets of Italy. In those early days of heartbreak and discouragement, the princess worked by the side of Monsignor Patrick Carroll-Abbing, the remarkable Irish priest who founded Boys' Towns.

The Monsignor, then a Domestic Prelate to the Vatican, gathered together wandering, homeless boys of postwar Italy and fed them. He saw his work grow from a cellar refuge—Shoe Shine Hotel—founded on Christmas Eve, 1944, to its present stature of 9 Boys' Towns scattered throughout Italy, the newly founded Girls' Town, and 30 nurseries in poverty-stricken southern Italy.

President Eisenhower has called the success of Boys' Towns of Italy a "tribute to the great heart of the American people." Former President Truman has said of it, "I cannot think of a more practical philanthropy nor one that breathes more deeply the spirit of true Christian brotherhood than this work."

Boys' Towns of Italy was founded by an Irish priest. His work has inspired thousands of Americans differing in religion, national background, politics and professions, in a common effort towards a better world.

American labor has joined hands with American management to give generously to this great cause. Boys' Town of Pozzouli, for example, was sponsored by Local 48 of the International Ladies' Garments Workers' Union. Boys' Town of Palermo was a project of a committee of the men's clothing industry of New York. American names are scattered throughout this project. My own state of New Jersey is responsible for one

of the buildings at Boys' Town of Rome. And throughout that community one finds such names as the Connecticut, Massachusetts, California and Maryland Buildings and the Pennsylvania Farm.

It is most appropriate that we welcome Princess Pacelli and her daughter at a season of the year that spells hope, peace, and brotherhood for Christians throughout the world and for men of good faith everywhere.

ESPA REPORTS ON IMPORT RESTRICTIONS FOR RESIDUAL FUEL OIL

Mr. LANE. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the weekly letter issued by the Empire State Petroleum Association, Inc., in New York, which deals principally with the problem of mandatory import restrictions on residual fuel oil and other finished products.

The letter follows:

MARCH 20, 1959.

To ESPA Members:

The President's proclamation on import restrictions for residual fuel oil and other finished products is already creating havoc among nonimporting distributors who can easily find themselves unable to get sufficient supplies to maintain existing contractural relations with their customers. Unless quickly corrected, this situation can cause irreparable damage to many fuel oil distributors and their customers.

Since the Government has restricted residual imports to the historical level of 1957, utterly disregarding contractual obligations distributors may have made since then, it is obvious that much harm can result from these regulations.

Because of the nature of the product, imports of residual fuel oil have historically been confined to a few actual importers. However, the large volume of these imports flowed downstream to many distributors. The resulting impact of restrictions on the small businessman was completely overlooked or ignored by Government.

The circumstances now facing many distributors are similar to those existing during regulation by the Petroleum Administration for War. The principal difference is that the present restrictions are not based upon emergency conditions such as we faced during the war days. The salvation of the small oil business at that time was the guarantee by the Government of a historical supply position to all segments of the industry.

Unfortunately, the present program seems only to protect the historical position of the direct importers who were in business in 1957. This is in direct contrast to the measures taken by the Government to protect the competitive position of the refiners who did not import crude oil in the past, regardless of whether their assigned quotas can be used or not.

We are sure that the disastrous effects of residual restrictions were not foreseen by Government when the President included residual in his program of import restriction. The pressure for residual restrictions was completely political and had no economic basis nor would the lack of such restrictions affect "national security" one iota.

The corrective measures necessary, distasteful as they may be, require the creation of further controls which would guarantee nonimporting fuel oil distributors a historical position with both offshore and domestic suppliers of residual fuel oil.

Or better still, the simplest and surest way of correcting this situation is to immediately eliminate residual fuel oil restrictions as a part of the program.

Meanwhile, we urge every member to examine his residual fuel oil supply contract and commitments in order to develop measures necessary to protect his business and to submit to this office all factual evidence of hardship.

The latest press reports indicate that import quotas given some 76 refineries who have never been in the business of importing will carry a premium as high as $1 per barrel. Trading is said to have forced the price up to $1 from 60 cents several days ago. Allocations granted the new quotaholders aggregate approximately $31 million annually or an average of something like $400,000 to each of the new refiners.

Inasmuch as these are, for the most part, inland plants, the only benefit they can have for the refiner is for the purpose of trading. Trades are said to take the form of an exchange for domestic crude with a cash bonus, or a bonus in the form of finished or unfinished products of one kind or another.

Speaking editorially in our monthly magazine for October 1958, under the heading—"Are Import Restrictions Necessary? A Plea for the Consumer"—ESPA spoke of the proposed quota plan as "A gravy train if there ever was one."

As the program now works out, there seems to be little reason for changing our mind.

Prices: Heating oil prices are quiet at both the gulf and New York Harbor. However, discounts of 0.15 cents per gallon for kerosene and No. 2 fuel are said to be available at Philadelphia.

Gasoline prices are reflecting rising interest at the gulf and residual is showing strength.

Anchor Oil Corp., Mobilheat distributor at Corona, N.Y., advertises "Landlords of multiple dwelling cold water flats: 500 gallons free of Mobilheat fuel oil plus regular $50 Minneapolis-Honeywell electric clock thermostat—free—if you order here before March 15. These gifts are yours with the installation of our oil burner at new low prices. No money down, 5 years to pay."

Insurance program: All members attending our annual meeting at the Hotel Astor in New York City, should plan to attend the membership meeting at 11 a.m. on Monday morning, April 6, at which Mr. W. T. Chamberlain will speak on our new insurance program. This program means money to you and you cannot afford to miss it.

Texas allowable: Texas Railroad Commission has reduced the allowable production for the month of April to a figure 107,214 barrels daily below the permitted production for March. The new allowable involves an 11-day production schedule.

Degree days for the week ended March 15 and for the accumulated period September 1–March 15, as compared to normal and to the same period a year ago, are set forth below for a number of east coast points:

Location	Week ended Mar. 15			Cumulative (since Sept. 1)		
	This year	Last year	Normal	This year	Last year	Normal
Buffalo	258	245	234	5,524	5,220	5,297
Rochester	269	246	235	5,654	5,348	5,391
Syracuse	266	243	226	5,758	5,328	5,191
Albany	273	226	235	5,924	5,350	5,583
Binghamton	254	237	220	5,594	5,201	5,228
Boston	236	175	200	4,843	4,199	4,570
New York	197	181	178	4,243	3,952	4,070
Philadelphia	176	171	159	3,967	3,789	3,755
Total	1,929	1,724	1,687	41,507	38,387	39,085

The Texas Co., through its board of directors has voted to change the name of the company to Texaco, Inc., subject to ratification by the stockholders at the annual meeting, April 22.

In view of the trademark "Texaco," it is pointed out by the company that changing the name would be beneficial in its marketing and advertising programs and in its relations with the public at large.

Tidewater has announced the purchase of F. D. Koehler Co., Inc., of Staten Island. Koehler has been a Tidewater distributor in the Staten Island area for more than 45 years. With the purchase, Tidewater acquired 27 retail outlets, a number of commercial accounts, a substantial fuel oil business, and a water terminal, as well as dispensing and other equipment.

Supply and demand: There is nothing startling in the inventory changes during the week. Gasoline stocks advanced moderately and distillate inventories were subject to some reduction. Distillate stocks are now ahead of a year ago at all points east of California.

The latest review of the petroleum situation by the Chase Manhattan Bank states that the outlook for March is good. That month in 1958 witnessed temperatures slightly colder than usual. This year, the accumulation of degree days in March thus far indicates the month may prove somewhat colder than last year. If so, a favorable gain for distillates can be expected. Also, economic activity will be greater this year and that should generate higher demand for petroleum.

On the residual picture, the bank says: "With domestic production of residual fuel becoming increasingly inadequate, imports are the sole alternative. Consumers, with specialized burning equipment and storage facilities, cannot switch to other fuels except at great cost. For them, the failure to import a sufficient volume of residual fuel would constitute a distinct hardship."

HARRY B. HILTS,
Secretary.

Crude runs, product production, stocks and demand, week ending Mar. 13, 1959

District	Daily crude runs	Up or off from previous week	Average, prior 4 weeks	Average, March 1958

SLOW DISASTER IS WORSE THAN SUDDEN DISASTER

Mr. HECHLER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

Mr. HECHLER. Mr. Speaker, when a flood, drought, fire, hurricane, earthquake or other catastrophe strikes, the President of the United States may designate certain areas as disaster areas eligible for disaster assistance by the Federal Government. The Federal Disaster Act of 1950 (Public Law 875, 81st Congress) provides for the maximum mobilization of Federal assistance to alleviate suffering and damage in these disaster areas.

Today in many areas of the Nation, economic disaster has stricken the people. There is acute suffering and hardship in my State of West Virginia as thousands have exhausted their unemployment benefits; children cannot go to school because they are hungry, husbands are committing crimes to go to jail so their families can receive relief, human beings are trying to live on surplus commodities on diets worse than prisoners of war receive, small businesses are closing their doors, and our younger people are roaming the country looking for jobs. These people want to work rather than receive a dole. They are hardy and independent people and are not looking for handouts. Yet, Mr. Speaker, we face a situation which is even more serious than the great depression of the 1930's. Even though the New Deal legislation has furnished an economic cushion against severe hardship, the economic conditions are now worse and the cushion is worn bare.

Mr. Speaker, when a natural disaster such as a hurricane, flood, or earthquake strikes, the Federal Government can move in and help. The compassion of people everywhere is aroused. The Red Cross rushes to the scene to assist those stricken. I submit, Mr. Speaker, that slow disaster is worse than sudden disaster because we do not have the means to cope with it, and the long-range effects on human morale are more serious.

I believe we must move quickly to pass the Area Redevelopment Act. Even if the President vetoes this act, as he did last year, we must rally to pass an effective act over his veto. But above and beyond that, Mr. Speaker, I hope that we may take the necessary action to accord the same legal status to economic disaster areas as we now do to those areas stricken by natural disasters.

GREEK INDEPENDENCE DAY

Mr. O'NEILL. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. O'NEILL. Mr. Speaker, it is a privilege and an honor for me to take the floor of the House today to salute on their Independence Day the gallant people of our great ally, Greece.

These are the proud and worthy descendants of those cultured Greek people who had formed their independent state and had lived in orderly freedom centuries before the peoples of the West had any notion of freedom as we understand it today. The ideas and ideals of freedom and independence, as dreamed and cherished, understood and prized, were first conceived and realized by the Greeks of ancient classical days in all their glory.

But the Greeks who brought forth this ideal state were not always free. There were long periods of subjugation, when on more than one occasion the entire population of many parts of the country was massacred. While this was done to discourage uprising against the existing order, nothing could cause these wonderful people to falter in their valiant efforts to again attain their freedom. They tried again and again, and the last attempt, begun on March 25, 1821, 138 years ago, was fortunately and eventually crowned with glorious success.

Since those days Greeks have been free in Greece and masters of their destiny, but they still have had their anxious and parlous days. Towards the end of World War II Greece was in danger of losing its independent existence. The combination of Communists and partisans was almost too much for the Greek Government to cope with, and were it not for the firm stand taken by the United States of America that country could very well have become another Moscow satellite.

Like all other Americans, I am proud that our country had a hand in forestalling such a calamity. Today Greece is a bastion of freedom and democracy in the Balkans against the forces of Communist totalitarianism. The bonds of friendship between the people of the United States and the people of Greece are strong and lasting. Together we join in happy celebration on this, the anniversary of their independence.

GREEK INDEPENDENCE DAY

Mr. O'HARA of Illinois. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. O'HARA of Illinois. Mr. Speaker, Greeks always have been, throughout their long and glorious history, a wonderful people, and have worked wonders in many walks of life. From their earliest days in their ancient land they were first in the arts and literature, and in the sciences as well. They held the lead in the study and understanding of nearly all human affairs, and they were the true pioneers in statesmanship and in the art of government.

Other countries and other peoples can claim firsts in other phases of human activity, but we in the West gladly recognize Greece as the birthplace of our civilization with its democratic doctrines and institutions, and the Greeks as its creators.

The ideas of freedom and liberty and national independence had their origin in the Greek mind. The Greeks prized these ideas as the noblest of human aspirations, and cherished them as the sinews of their spiritual life. Independence of mind, and of the spirit; individual, communal and national freedom they regarded as first prerequisites of self-respecting and free peoples.

These are the same ideas for which our Founding Fathers fought and died, and which the West is prepared to safeguard and defend against all comers today.

Unfortunately Greeks by themselves were not able to cope with their powerful

adversaries in the past. As a result, they lost their national independence long ago, and from mid-15th century until the early 19th, they were held down in their ancient land by Ottoman sultans. In the early 1820's they revolted against their oppressors, and began the rebellion of March 25, 138 years ago, which eventually led to their complete independence in 1827.

That revolt, led by a brave band of Greek patriots on that historic day, marks the brightest spot in modern Greek history, and has become their national holiday.

Neither the attainment of Greek independence, nor its preservation was easy. It was attained against heavy odds, and it is safe to say that without the effective aid and decisive intervention of certain Western Powers, it could not have been attained at that time. But the badly needed aid given by all sympathizers and well-wishers of Greece made Greek independence certain. Nor has the safeguarding of that independence been easy, particularly during the last decade or so.

In the last war Greece fought brilliantly and bravely on the side of democracies, and suffered at the hands of the Axis. Toward the end of that war, when liberation was in sight, Greece was plagued by Communist partisans, who came very close to dragging her into the Stalin totalitarian camp. But the timely and resolute British aid, fully backed and then effectively supplemented by this country under the Truman doctrine, saved the Greeks from communism and thus safeguarded Greek independence.

It is no exaggeration to say that, soon after the last war, when Greek independence was in grave danger, our material aid conveyed through the Truman doctrine, and our moral support were of decisive importance. Even though it cost us more than a billion dollars to do it, I am glad to say that we were in a position to render such aid for a great cause and thereby gain a valuable ally, a true bastion against communism in the Balkans, in our unrelenting struggle against forces of oppression and totalitarianism.

Greeks have shown their appreciation in many ways, particularly in the part they played in the Korean war, and in the vigorous stand they have taken today against communism. In their fight for freedom and independence they are prepared to fight all comers.

On this 138th anniversary of Greek Independence Day I join all Americans of Greek descent and wish all Greeks peace and happiness in their ancient homeland.

PUBLIC OPINION POLL OF 15TH CONGRESSIONAL DISTRICT

Mr. CHAMBERLAIN. Mr. Speaker, I ask unanimous consent that the gentleman from Ohio [Mr. HENDERSON] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. HENDERSON. Mr. Speaker, for the past 4 years, I have conducted a poll of the public opinion of the 15th Congressional District of Ohio on certain national issues. The expression of interest which has been so evident in the responses to the surveys has been very gratifying to me. The answers I have received are a valuable indicator of general trends of thinking in southeastern Ohio and I wish to call the attention of the Members of Congress to the results which I have obtained. In the past, these results have been of considerable interest to other Members of Congress and to various executive departments and agencies of Government.

The 15th Congressional District which I have the honor to serve here is diverse in its interests, embodying both urban and rural communities and the points of view which are likely to be found in such areas. In the sense that these seven counties are similar in outlook to many other congressional districts, I believe it is possible to generalize fairly that the findings from this poll represent the same shadings of attitudes found throughout much of the Middle West as well as other regions of the Nation.

The questionnaire was distributed through the mails and many cooperating newspapers in the district with every effort exercised to assure that a random sample of opinion would be obtained without deference to any particular political or social philosophy. This sample of opinion reflects the tabulation of approximately 5,000 questionnaires which were returned to my office before March 24.

It is not possible to reflect the hundreds of separate and thoughtful comments explaining in detail the feelings of the people on particular issues. These, of course, have greatly added to the value of the poll. However, I shall attempt to summarize the main currents of thinking which were obtained not only in the tabulated answers but in the comments as well.

From this poll, it is evident that the overriding issue in the minds of southeastern Ohioans today is the matter of Government economy. In response to my question, "Would you favor efforts to balance the Federal budget, even though it might mean no additional Government programs and no expansion of most of the existing nondefense programs?" 69.6 percent of those answering indicated their support. Even more notable was the result of answers to the question, "Would you support anti-inflation legislation which would place Government controls on prices, wages, and rents?" Although the tabulation showed 48.7 percent in favor, 45.6 percent opposed, and 5.7 percent undecided, hundreds of those voting "Yes" qualified their answer by explaining that while Government controls were odious, inflation and taxation had reached such proportions that Government action was advisable. In these replies, the effect of Government spending as a stimulus to inflation was not overlooked and the Congress received heavy criticism for continuing to vote new and costly programs.

The U.S. policy opposing Communist expansion in Berlin, Formosa, and Lebanon was overwhelmingly endorsed with 89.6 percent favoring it. With respect to the admission of Communist China to the United Nations, 84.6 percent opposed any such recognition. This shows virtually no change in the feelings expressed by the people of the district over the past several years.

Another notable finding pertains to the attitude expressed on the present agricultural program. In 1958, my poll asked the question "Do you favor ending agricultural controls and the accompanying termination of price supports?" At that time, 65.16 percent of those answering expressed their opposition to controls and price supports. To test the sentiment today, I asked the same question this year to find the poll indicating the opposition had grown to 75.5 percent. These expressions were accompanied by comments, mostly from farmers, vigorously criticizing the cost of the farm support program and pointing to its failure to assist operators of family-sized farms.

The complete review of the results of the poll is as follows:

	Percent		
	Yes	No	Undecide
1. Are you in favor of the admission of Hawaii as a State?	83.6	9.5	6.9
2. Do you believe the Government should permit tests of pay TV plans?	23.4	67.3	9.3
3. Would you favor efforts to balance the Federal budget, even though it might mean no additional Government programs and no expansion of most of the existing nondefense programs?	69.6	25.3	5.1
4. Would you support anti-inflation legislation which would place government controls on prices, wages, and rents?	48.7	45.6	5.7
5. In the public versus private power discussion, do you believe the Federal Government should construct more electric power producing facilities and expand the Tennessee Valley Authority?	27.1	64.4	8.d
6. Do you believe Communist China should be admitted to the United Nations?	10.5	84.6	4.9
7. Do you agree with the present stand of the United States opposing Communist policies with respect to Lebanon, Formosa, and Berlin?	89.6	4.6	5.8
8. Do you favor legislation requiring public disclosure of the records of employee welfare and pension funds of labor unions?	92.4	5.4	2.2
9. Do you believe the U.S. program for the exploration of outer space is proceeding fast enough?	67.4	19.7	12.9
10. Should Congress act to make veterans who were drafted in peacetime eligible for education, housing, and mustering-out pay benefits similar to those granted World War II and Korean war veterans?	35.7	59.8	4.5
11. Do you favor Federal aid for school construction even though it would require a tax increase or deficit financing?	34.1	61.4	4.5
12. Are you in favor of a Federal gasoline tax increase to keep the road construction program at its present rate?	40.2	55.5	4.3
13. Do you believe the present 10 percent tax on telephones should be removed even though it means a loss of Federal revenue?	48.7	47.5	3.8
14. Do you favor ending agricultural controls and the accompanying termination of price supports?	75.5	18.2	6.3

THE PUERTO RICAN FEDERAL RELATIONS ACT

The SPEAKER. Under previous order of the House, the Resident Commissioner of Puerto Rico [Mr. FERNÓS-ISERN] is recognized for 10 minutes.

Mr. FERNÓS-ISERN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include an official copy of an English translation of Joint Resolution No. 2, adopted by the Legislative Assembly of the Commonwealth of Puerto Rico and approved by the Government of Puerto Rico on March 19, 1959.

The SPEAKER. Is there objection to the request of the gentleman from Puerto Rico?

There was no objection.

Mr. FERNÓS-ISERN. Mr. Speaker, Joint Resolution No. 2 of the Third Regular Session of the Third Legislative Assembly of the Commonwealth of Puerto Rico, approved March 19, 1959, embodies highly commendable proposals. Nine years ago the 81st Congress enacted Public Law 600, in the nature of a compact. Upon its acceptance by the people of Puerto Rico, it enabled them politically to organize themselves under a constitution of their own adoption, and within terms of relationship set forth in the compact. The people of Puerto Rico accepted the terms of compact and proceeded to adopt a constitution, which created the Commonwealth of Puerto Rico. The constitution of the Commonwealth of Puerto Rico was approved by the Congress under Public Law 447 of 1952, and on July 25, 1952, the Commonwealth of Puerto Rico was proclaimed.

Under the provisions of Public Law 600, a Puerto Rico Federal Relations Act was provided for. It consists of a number of provisions of the Organic Act of Puerto Rico of 1917 which were not then repealed, but were continued in force and effect. Such provisions refer to the political and economic relations of Puerto Rico with the United States. The new body politic created in Puerto Rico now functions within the framework of those provisions and the relations thereby established.

After 7 years of the Commonwealth's success, and in the light of experience, we are now in a position to reexamine the provisions of the old Organic Act maintained in force and effect by Public Law 600. The language in those provisions was enacted 42 years ago. It must be read and interpreted now in the context of a new situation created in 1952. It is not surprising, therefore, that the language of such provisions of law may now appear in places anachronistic, and in others superfluous, inapplicable or inadequate. Nor is it surprising that it may need clarification in some instances in order to avoid conflicts of interpretation from which litigation may arise and in fact has arisen. The experience of 7 years has also shown that the creation of the Commonwealth, of which achievement I think both the Congress and the people of Puerto Rico should feel so proud, was not—as no human creation can be—devoid of imperfections which changing times make it the more necessary to correct. The purpose of Joint Resolution No. 2 of the Legislative Assembly of the Commonwealth of Puerto Rico is to seek such clarification and modification as time and experience now counsel.

The legislative assembly, by its joint resolution, has requested me to introduce legislation to seek such clarification and modification. I believe that the position taken by the Legislative Assembly of the Commonwealth of Puerto Rico, by its joint resolution, which the Governor of Puerto Rico has approved, is sound and appropriate. I support it. Consequently, in response to the request of the Puerto Rican Legislative Assembly, on March 23, I introduced H.R. 5926.

It is not my purpose to enter here into the details of H.R. 5926, but I do wish to call attention that, in order to carry out the wishes of the people I represent, as set forth in the joint resolution, the objectives sought are best attained by rewriting and reenacting the Puerto Rico Federal Relations Act. Piecemeal amendments would be tedious, confusing, cumbersome and unsatisfactory. H.R. 5926 would substantially reenact the Puerto Rico Federal Relations Act, with adequate clarification and a few modifications, in up-to-date language.

The purpose of my addressing the House today is not to discuss the bill. I wish, instead, to avail myself of this opportunity to make clear the significance of H.R. 5926, and how it relates to the position of the Commonwealth of Puerto Rico concerning its future. This seems to be the more important and necessary, since changes in the relationship of Puerto Rico to the United States, of a profound and transcendent nature, not envisaged by the Commonwealth of Puerto Rico, are at times mentioned as possible goals for Puerto Rico. This has occurred more often since the 85th Congress adopted an enabling act for the people of Alaska to organize themselves into a State and to be admitted into the Union, and because this year another enabling act of the same nature has been adopted for the Territory of Hawaii. In the opposite direction, proposals have been heard for the dissolution of the bonds now uniting Puerto Rico to the United States in order that the Commonwealth of Puerto Rico might become an independent republic.

The Commonwealth of Puerto Rico is not seeking either such profound and transcendent change, much as we realize the great honor that statehood would mean and much as we respect the independence of peoples who have so chosen. H.R. 5926 has nothing to do with either of these two propositions for a change of status for Puerto Rico.

For 60 years Puerto Rico has been living within the U.S. political system. Its status, in the beginning, was that of an unincorporated territory, a new concept evolved in the U.S. political system since the turn of the century. This came about as a result of the Treaty of Paris of 1899, and subsequent legislative enactments by the Congress and interpretations and decisions by the Supreme Court of the United States. Such creation was necessary as a consequence of the acquisition of sovereignty over territories inhabited by peoples of different historical backgrounds and cultures not intended, at that time at least, for incorporation into the United States. The territories, acquired at that time as a result of the Spanish-American War and so referred to, were the Philippines, Puerto Rico, and Guam.

During those 60 years, through a series of legislative enactments, in normal and natural evolution from the chrysalis of an unincorporated territory; from "the people of Puerto Rico," and from "citizens of Puerto Rico entitled to the protection of the United States," Puerto Rico and its people have evolved into a self-governing Commonwealth, associated with the United States in accordance with terms of relationship accepted by the people of Puerto Rico as offered by the Congress through a law enacted in the nature of a compact. The citizens of Puerto Rico are citizens of the United States.

As may be seen, the Commonwealth is the result of a long period of progressive and careful adjustments during which new political concepts have developed in the light of historical, cultural, and economic realities. And I may say for the people whom I represent that they have found political dignity in a democratic life, and security under sound political institutions, in the Commonwealth. It gives them an opportunity to overcome the very serious economic and social problems with which they struggle, distressing problems so serious that a few years ago they appeared almost unsolvable. They are making gallant progress now in overcoming poverty, unemployment, want, and need. They know that it would be entirely unrealistic for them to even attempt to alter fundamentally the present framework of relationships, thus endangering and indeed probably sacrificing many social and economic gains already made. In the case of independence, it might even prove tragic. On the other hand, the people of Puerto Rico are a proud people. They cherish the hope that, as they grow economically, they may progressively accept and undertake greater responsibilities within their association with the United States. By the same token, they would not seek changes in relationships which, as far as they now can see, would pose very complex problems, economic and otherwise, as might be the case with statehood. They know also that the concept of commonwealth is not static. Rather, it is a dynamic concept. Therefore, the people of Puerto Rico do not wish to deviate from their present path and thereby endanger accomplished gains. It is on the basis of these concepts, and no others, that I bring to Congress the expressed will of the people of Puerto Rico, in accordance with Joint Resolution No. 2 of the Legislative Assembly of the Commonwealth of Puerto Rico, and reflected in H.R. 5926.

COMMONWEALTH OF PUERTO RICO,
DEPARTMENT OF STATE,
San Juan, P.R.

I, N. Almiroty, assistant secretary of state of the Commonwealth of Puerto Rico, do hereby certify that Jose Luis Vivas, who au-

thorizes the attached translation into English of Joint Resolution No. 2 (H.J. Res. 1510), is director of the translation division of the Department of State of Puerto Rico, and that his signature thereon affixed is genuine.

In witness whereof, I have hereunto set my hand and affixed the great seal of the Commonwealth of Puerto Rico, at the city of San Juan, this 19th day of March, A.D. 1959.

[SEAL] N. ALMIROTY,
Assistant Secretary of State.

COMMONWEALTH OF PUERTO RICO,
DEPARTMENT OF STATE,
San Juan, P.R.

I, Jose Luis Vivas, director of the translation division of the Department of State of Puerto Rico, hereby certify: That this is a full, true, and correct translation of Joint Resolution No. 2, of the third regular session of the Legislature of the Commonwealth of Puerto Rico, approved on March 19, 1959.

Witness my hand this 19th day of March 1959.

JOSE LUIS VIVAS,
Director, Translation Division.

[H.J. Res. 1510]

JOINT RESOLUTION No. 2

Joint resolution to propose to the Congress of the United States of America clarifications and modifications of the Puerto Rican Federal Relations Act

Whereas the Commonwealth of Puerto Rico is a creative contribution to the American system; and

Whereas it is a basic characteristic of the Commonwealth of Puerto Rico to develop and perfect itself gradually within its new form of permanent association to the Federal Union; and

Whereas, the Constitutional Convention of Puerto Rico unanimously approved the following in its resolution No. 23: "The people of Puerto Rico reserve the right to propose and to accept modifications in the terms of its relations with the United States of America, in order that these relations may at all times be the expression of an agreement freely entered into between the people of Puerto Rico and the United States of America;" and

Whereas the special commission of this high body charged with consideration of amendments to the Federal Relations Act and the Constitution has held public hearings at which views about the clarification and modification of the part of the compact constituted by the Federal Relations Act have been amply expressed; and

Whereas such hearings point to the advisability of proposing to the Congress of the United States certain changes in the Federal Relations Act in order to clarify the nature of the Commonwealth and to modify its relationship to the Federal Union to the extent that experience shows is feasible and desirable: Now, therefore, be it

Resolved by this legislative assembly:

SECTION 1. To request the Resident Commissioner in the United States to propose to the Congress of the United States of America the following clarifications:

1. The Commonwealth of Puerto Rico should be adequately described in the Federal Relations Act so that it may in no way be classified as a "possession" or "territory".

2. Consistent with the fundamental principle of full local self-government for the people of Puerto Rico, it should be made clear that Federal laws applicable in Puerto Rico shall apply in the same way as they may be made applicable in the several States.

3. The Federal Relations Act should be cleared of all language which may result confusing, inadequate, obsolete or inapplicable.

SEC. 2. To request the Resident Commissioner to propose to the Congress the following modifications:

1. All excise taxes collected in Puerto Rico on articles produced for export to the United States should be imposed by the Commonwealth of Puerto Rico: *Provided,* That if such excises were lower than those imposed by the Federal Internal Revenue laws on similar articles, the Federal Treasury shall collect the difference at the port of entry, so preserving a competitive equality between such products.

2. A means should be provided by which the Commonwealth of Puerto Rico may, at its request, be included in or excluded from United States commercial treaties.

3. An adequate formula should be devised by which the Commonwealth of Puerto Rico may gradually assume, as its resources may warrant, such Federal responsibilities as are compatible with the principle of permanent association.

4. Judgments of the Supreme Court of Puerto Rico should be reviewed by the Supreme Court of the United States in the same manner as are the judgments of the State supreme courts.

5. The debt margin provision, as proposed to the Congress of the United States of America in Joint Resolution No. 1 approved by the Governor of the Commonwealth of Puerto Rico on June 23, 1958, should be removed from the Federal Relations Act.

SEC. 3. Copy of this resolution should be forwarded to the President of the U.S. Senate, the Speaker of the U.S. House of Representatives, and to the Resident Commissioner of Puerto Rico in the United States.

SEC. 4. This joint resolution shall take effect immediately after its approval.

Approved March 19, 1959.

Mr. SAYLOR. Mr. Speaker, will the gentleman yield?

Mr. FERNÓS-ISERN. I am happy to yield to the gentleman.

Mr. SAYLOR. I want to congratulate the Commissioner on his excellent statement. I think the experiment which was tried 7 years ago when Public Law 600 was passed establishing the new relationship between the people of Puerto Rico and the United States is a new concept in world history. I want to commend the people of Puerto Rico for having worked diligently for 7 years trying to perfect their way of life under this new status. I sincerely believe that now is the time for the Congress to take another look at our Commonwealth Act and to correct some of the imperfections that 7 years of experience and growth have shown to be necessary.

Mr. FERNÓS-ISERN. I thank the gentleman from Pennsylvania.

THE MAKING OF A PUBLIC SERVANT

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and to include therein an article by Staff Writer Michael Mok, which appeared in the Washington Sunday Star of March 15, dealing with the career of Mr. Roger Warren Jones, and referring to his splendid accomplishments as a Civil Service Commissioner and in the Bureau of the Budget. I know Mr. Jones to be a very fine man because I worked with him when he was connected with the Budget Bureau.

The SPEAKER pro tempore. Is there objection to the request of the gentlewoman from Massachusetts?

There was no objection.

(The matter referred to follows:)

OUR NEW CIVIL SERVICE CHIEF—THE MAKING OF A PUBLIC SERVANT

(By Michael Mok)

Roger Warren Jones would have been a college professor if his money had held out.

But he ran out of cash and gave up his studies for a $1,700-a-year temporary Government job.

Last week he was sworn in as Chairman of the Civil Service Commission with the salary of $20,500.

Mr. Jones was born in West Hartford, Conn., on February 3, 1908. He is the son of Henry Jones, a lawyer of some prominence in the typewriter manufacturing town 20 miles west of Hartford.

He attended the Gilbert School in nearby Winstead, Conn., and then followed the family tradition by going to Cornell University. While in Ithaca, he majored in English; found time to manage the Cornell musical clubs, and rose to the rank of battalion commander of the ROTC.

"I was a devotee of organ recitals at Cornell—I don't think they had many I missed," Mr. Jones said. Highest on his list of favorite composers is Bach, but he confesses complete ignorance of modern music.

"I simply don't understand the mathematics of modern music," he said.

WAS ENGLISH TEACHER

After Cornell, Mr. Jones got a job teaching English, history, and military subjects at the Coral Gables (Fla.) Military Academy. He held this post for about a year before moving to New York City, where he became a salesman for the Doubleday Book Co.

There he ran into Dorothy Heyl, daughter of a Bureau of Standards physicist, whom he had known at Cornell. Dorothy was then taking a master's degree at Columbia in library science.

Mr. Jones had entered the book business with an idea of making publishing his career, but:

"One of the things that went to hell in a hand basket during the depression was the book business." This realization took him to Columbia, where he received a master's degree in English while continuing to sell books part time.

He then decided to quit Doubleday to work full time for a doctorate to fit himself for a teaching career.

"I was particularly interested in the contribution of political writing to American literature," Mr. Jones explained. "Starting with the Mayflower Compact, the inaugural speeches, Lincoln's Gettysburg Address—I didn't think anyone had properly evaluated the impact of American political writing on our letters."

THEN THEY RAN OUT OF MONEY

On the 1st of February 1930 he married Dorothy Heyl, and the couple took a small apartment near the university. But they ran out of money, and in the fall of 1932, moved in with his family. Until December 1933, they divided their time between in-laws, while Mr. Jones did the best he could with such things as occasional tutoring jobs.

His first contact with Federal service came on December 12, 1933, when he accepted a 30-day temporary appointment to write a special report for the Central Statistical Board.

This led to a series of temporary appointments with the Board, until Mr. Jones—who began as a CAS–5 (clerical, administrative and fiscal, grade 5)—equivalent to GS–5, then the starting grade for college graduates—began taking examinations.

Before long the Central Statistical Board had become part of the Bureau of the Budget, 15 years had passed, "and all of a sudden I realized I was a career man."

SERVED IN ARMY

In the meantime there were three children: Cynthia, now Mrs. John Hodges, of Cumberland, Md.; Roger, studying for his master's degree in public administration at Cornell; and Edward, currently an airman on active duty with the Air Force in England.

When World War II came, Mr. Jones—then a Reserve infantry captain—was called to active duty, where he stayed for "3 years, 9 months, and 20 days." He spent almost all of this period with the Munitions Assignments Board in Washington and on his return to the Bureau, took up his old duties as a "13" his prewar grade.

He continued to rise, and when the supergrades were established, Mr. Jones moved into that category. In March 1958, he was named Deputy Director of the Bureau of the Budget, at his present salary of $20,500 a year.

"My main job there was to ride herd on the President's executive programs," he said. But when it seemed there was no further for him to go, Mr. Jones felt it was time for a change.

"I wasn't going to sit there until I got bureaucratic barnacles on my hull—so I moved."

Mr. Jones, who is blue-eyed and has white hair the color of a dandelion when it's going to seed, feels that by and large, "career people serve best in staff jobs."

"Chairman of the Civil Service Commission is the sort of common sense, administrative job which appeals to me.

"This is the kind of a job I've been trained to do over a quarter of a century," Mr. Jones said. "It demands a knowledge of government structure, and the sort of contacts I have developed with the executive and legislative branches for a long time."

THE GOOD BUREAUCRAT

Mr. Jones believes that the good bureaucrat—a term he doesn't like, but which he can listen to without flinching—should "avoid extreme partisanship."

"There's nothing wrong with taking sides, but that's not the way I am," he said. "It's possible to perform first-rate staff work without feeling like a political eunuch," Mr. Jones said.

The new Chairman lives with his wife in a Dutch Colonial house in Chevy Chase. Its location was chosen by his children.

"When we were buying it, they were going to three different schools, and they insisted that it be an equal distance from each of them," Mr. Jones explained.

Mr. Jones gets up in his five-bedroom house every morning at 6:30 a.m. His breakfast does not boast much variety.

"Just to show you the sort of rut a man can get in," he said, "three times a week I have cereal, and three times a week, eggs. On Sunday I let myself go, and just have whatever I feel like."

When Mr. Jones, who wears the blue rosette of the President's Award for Distinguished Federal Service in his buttonhole, had to attend breakfasts at the White House, he wasn't at all happy.

"Early morning is a thinking time for me," Mr. Jones said. "I don't dare get started on office work in the evening or I get overstimulated and can't sleep."

LIKES LONG WALKS

He tries to take a long walk every night and on weekends drives to a part of the nearby country he doesn't know, "and just starts walking."

Besides simply puttering, his interests outside his work are few. He tries to keep up with literature, but rereads old favorites rather than looking for new worlds to conquer." He has just ended a tour as vestryman with All Saints Episcopal Church, and Mrs. Jones, now that the children have gone away, is working with the Wheaton branch of the Montgomery County Public Library.

Among Mr. Jones' other interests is the Washington Institute of Mental Hygiene and the United Givers Fund, on whose board of directors he has served.

Somewhat shy about his outside interest, Mr. Jones explained that "when you're a grandfather, you just don't have the energy you once had."

Mr. Jones believes that every civil service employee must live by three rules:

"He's got to remember he's a public servant * * * he must be dedicated.

"He must have complete faith in the Constitution—he must believe in the tripartite arrangement of our democracy, and never feel that any branch is junior to the others.

"He's got to believe that X number of Americans can't be wrong when they elect a President," Mr. Jones said.

"The good staff man—bureaucrat if you like—must develop a lot of expertise about the programs he carries out. Regardless of the political direction of the administration, its leaders should be able to expect a loyal, capable staff."

THE BIG JUMP

Mr. Jones, who has weathered several changes of administration, and showers of interoffice memorandums, feels secure in his roomy office at Eighth and F Streets, although he realizes full well he has made a big jump from staff to command.

Mr. Jones paused for a moment and looked from the snapdragons on his conference table to the picture of the President on the wall.

"For one thing, I know that I can't go popping off with a visceral reaction every time anyone puts a tough question to me now," Mr. Jones said.

"I suppose the Chairman of the Civil Service Commission has to become a sort of a symbol."

A TRAIN OF POWDER

The SPEAKER. Under previous order of the House, the gentleman from Kansas [Mr. REES] is recognized for 10 minutes.

Mr. REES of Kansas. Mr. Speaker, I believe Members of Congress will be interested in reading an impressive and timely sermon delivered by Dr. Theodore Henry Palmquist, pastor of the Foundry Methodist Church in Washington on Sunday, March 15. It is one of the best. I consider it of sufficient importance that Members of Congress and others will want to read it. Here is what Dr. Palmquist said:

During the Lenten season we have been sharing together "The 'Isms' That Crucify Christ"—beginning with "Ecclesiasticism"; then "Nationalism," "Opportunism," "Secularism," and this morning "Militarism." Next Sunday the subject will be "Neutralism"; and Easter morning, "Pessimism," with the text, "Why seek ye the living among the dead?"

Dr. Goodspeed once said that he felt that when Jesus said, "Father, forgive them for they know not what they do," He was referring to the soldiers whose duty it was to crucify Him, to drive spikes through His hands and plunge a spear into His side. They were just carrying out orders—for to obey without question is always the duty of a soldier.

On the 30th day of September, 1938, a lone plane dipped out of the fog and landed at Heston Airdrome in London; and an old man with a black umbrella stepped out of the plane onto the ramp. They handed him a microphone, and he spoke to millions, saying, "My good friends, this is the second time in history that we have brought back from Germany to Downing Street peace and honor." The people cheered because they hated war; they knew its price and longed for peace. For months they had been subject to the battering tension of Hitler and his war of nerves and their spirits were exhausted. But 6 months later they realized that appeasement is not peace. It only made the war more certain than ever.

We are not very different from those who met Sir Neville Chamberlain on that damp and cold night in September 1938; for we, too, long for peace more than anything else in the world—though it must be a peace with some degree of permanence. We know that peace so often has only been the uneasy interval between wars; it's date used to be told by a calendar; now it is clocked by a stopwatch.

We are confronted with an imperialistic program of expansion by leaders who talk of peace and then seize that which can only be obtained through war and threats of war. I think of the man who was called a fool, who stood and watched troops march by—and he asked, "Where do they come from?" And some one said, "From peace." "Where are they going?" "They are going to war." "Why?" "To kill the enemy—burn the cities—and win the peace." And the so-called fool replied: "They come from peace—they go to war to get peace; why don't they stay with peace in the first place?"

In the 44th chapter of Genesis, the 18th to 24th verses, we read a story of sons who were jealous of their brother and sold him into slavery; and he rises to become the ruler of that country. The plague strikes the country where the jealous brothers live, and they come pleading that they may buy corn—not recognizing their brother as the ruler. But he, in turn, recognizes them; and so he says, "You must bring your youngest brother Benjamin with you to prove that you are not spies." And when they went back to tell their father of the requirements, his heart was broken, because he had always believed that the son who had been sold was dead; and now another one of his sons might meet the same fate. So he sent one of the brothers back to interview the ruler and plead for the youngest brother in the family.

There are three sentences in his appeal that I would like to share with you this morning, because I think they give some light on this very difficult problem of militariam. The first, when he says to the ruler, "Ask not for him, seeing that the father's life is bound up in the lad's life." He had caught the contagion of his father's compasion; and he had moved from the contagion of passion and jealousy to the contagion of compassion and love.

Passions go with war; compassion goes with peace. Those who are bound to the passions of war have only three alternatives to offer. They have offered them down through the centuries. First, preventive war. It has often been waged—Germany against Russia—Russia against Finland. They reason and say, "Well, since war is going to come sooner or later it had better be undertaken when we are prepared and when we have the balance of power." In the past years there have been many who suggested that this be our method in dealing with Russia and Red China. But Bismarck once said "Preventive war is like a man who, being afraid of death, commits suicide."

In the second place, those bound by the passions of war offer what they call qualified appeasement. That appears to be largely what happened at Teheran, Yalta, Potsdam—leaving Russia in control of much of Europe and dividing the world by an Iron Curtain,

and leading us into an armament race which may still bring bankruptcy to the whole world.

The third is to quarantine the aggressor. If a nation is not playing fair, and tries to control and swallow its neighbors, it must be recognized as a menace and isolated. This seems to be our method of dealing with Red China. This, of course, brings only temporary and qualified peace, built on a foundation of antagonisms and supported only by power. And in a world where many nations now have the power to destroy our whole civilization, and our weapons are becoming more and more destructive, this is an imposible approach. There is no use to bury the hatchet if you leave the handle sticking out for someone to trip over.

Strange and odd as it may seem, we must move from passion to compassion. That is our only hope. Judah, pleading before Joseph, was turned from hatred and jealousy toward his brother Joseph because of the consciousness of his father's suffering and his father's love. That is true in family relations. How is affection generated in the sons of a family? By mere nearness? Well, then the people in tenement districts of New York and Chicago ought to be very congenial. Those who ride in the New York subways, then, ought to be very close companions. But you know that nearness sometimes only sharpens rivalry.

When a boy goes wrong and the family is dishonored by his deeds, what is the motive for taking him back into the fold? Someone in the family will say, "Remember how mother loved him." So they see the broken brother as the broken-hearted mother would have seen him. So with us. There are so many to whom we must extend the hand of good will—but doing it we must not look at them, but look at God; for we love in order to be worthy children of an all-loving Father.

The view of the world from the street level does not stir affection. We are always looking at our enemies as the embodiment of all the ugly traits in human nature—they are of low breed—they are beastly. We need to get a new concept of who our enemies really are to understand the power of indoctrination to which they have become slaves—to oppose not the man but the evil in man.

So Judah said to Joseph, "The father's life is bound up in the lad's life." The love of the father gave to him a new love for his brother Benjamin.

In the second place, he said, "I will become surety for the lad unto his father." How much we need to do that today—to become a guarantee—surety—for our children, as we work for a better world.

This matter of surety is a sobering business. So many say, "I never go anybody's bond." But a parent does. When he gives a name to the child he underwrites that child; he becomes the guarantor who is responsible. Whatever damage the child may inflict, the parent has to pay. It is so with a teacher. She faces her class which is made up of new creatures, no one child is like another. There are no standardized parts in our universe. Sometimes we say, "You've never seen such a baby." And that is true. When you handle a child you are handling an irreplaceable piece of china. When a teacher or a parent fails, all the world is poorer, because a personality that never can be duplicated is lost.

That was the attitude of Jesus, as He went surety for the human race. At His baptism He accepted responsibility for the welfare of all men and so created Christ's life underwriters, whose attitude is not grudge, but gratitude—guarantee. Abraham Lincoln, in his Gettysburg address, which will live forever, has these well-known lines: "It is rather for us here to be dedicated to the great task remaining before us, that from these honored dead we take increased devotion to that cause for which they gave their last full measure of devotion; that we here highly resolve that these dead shall not have died in vain."

The tragedy is that many have died in vain. In the First World War we went out saying that we were going to save the world for democracy—we were going to "fight a war to end war." But we only sowed the seed for the most colossal war in history. In the Second World War we fought for the four freedoms—to lay the foundation of a new international cooperation for justice and peace. But now look at ourselves. We do not know what the day may bring. Did they die in vain? Of course, that is something the living must answer—the dead cannot. We must move from grudges to gratitude to guarantee.

Monday night I spoke in Gary, Ind. The minister there had been very active in the Air Force in the last war. He said, when it was over he came home, and they offered him his same old job. And he said, "No; I must do something more specifically directed toward the building of a better world for my 8-year-old daughter and my 6-year-old son."

There is a cemetery in North Assam where lie buried the American boys who died in India and in Burma. Over the entrance to the cemetery are these words: "Tell them that we gave our todays for their tomorrows." We must do the same. Not grudges, but gratitude and guarantee.

Not passion, then, but compassion—"His life is bound up in the lad's life." That is equally true of God. Not grudge, but gratitude, guarantee—"I will become surety for the lad unto my father." We must express our gratitude by building a better world—"we gave our yesterdays for their tomorrow."

The third, finally, Judah says: "Let me abide as the bondsman to my Lord, instead of the lad; and release him." Judah offers to make good his bond by offering his own life for the lad's life. So many brave words have been spoken about peace in which we have put our trust, but the solemn pledges have not been made good. We need not words but works.

At the signing of the Briand-Kellogg Peace Pact outlawing war they said "Let us dedicate our signatures to those who died in the great war." But before the ink was dry we had moved away from our signatures. Our word was not our bond.

As Christians, then, I suggest:

First. We must contribute a faith that peace is possible. People are always saying, "You can't change human nature—there will always be war." We need a faith that removes mountains, even the mountains of militarism.

Second. Peace is expensive. We think so often that good things are free. I think of the man who went into the drugstore just before the 11 o'clock hour on Sunday morning, put down a 10-cent piece and said, "I want two nickels." And when the druggist gave him the two nickels he said, "I hope you will enjoy the sermon." We sometimes think that good things ought to be free; but I remind you that peace is expensive—but not as expensive as war. World War II, merely in terms of dollars, cost an amount that would have made it possible for us to give every family in the world a 6-room house, fully furnished, with an automobile; and to every town of 5,000 people or more a hospital and a library; and have enough money left over to pay the expenses of all the librarians, all the doctors, all the nurses, for the next hundred years. "Why spend ye money for that which is not bread? Why labor for that which satisfieth not?"

Third. We must cultivate a spirit of national self-criticism. There is nothing inconsistent about loving and also being critical of your country. That's the heart of a real family—a family both loves and is critical one of the other. When love becomes so blind that we cannot distinguish between our virtues and our vices, then, we are much too blind.

Fourth. We must attempt to disassociate as much as possible the patriotic spirit and the military spirit. It is just as patriotic to live for your country as to die for it. It is tragic that too often the patriotic and the military have been bound together in our national traditions—in our songs—in our stories—in our statues—until patriotism has become glorified violence. In France, they built a mighty tomb for Napoleon but only a small statue for Louis Pasteur. Napoleon left a trail of blood and destruction; Pasteur, a trail of healing. I say this in behalf of those who died, that they shall not have died in vain.

Finally, we must enlarge our concept of patriotism. The first patriot was a man who loved his family; then he became part of a clan. He was loyal to both. He became part of a tribe. He was loyal to all three. He became part of a nation. He became loyal to all four. The thirteen Colonies, when they began, were conscious only of their own State, and not of the Nation. But Henry Clay lived to say one day: "I know of no south, north, east, or west, but one Nation under God."

When Edith Cavell was led before the firing squad, she said, "Patriotism is not enough." Love of country must be a door through which we pass into a new appreciation of all humanity. The only wars of tomorrow will be global wars—and they will only be stopped by global concern. "If ye love them that love you, what reward have you? Do not even the publicans the same?"

Not passion, but compassion. Not grudge, but gratitude—guarantee. Not words, but works. Dr. Wallace Petty took a group of college students one time to hear Dr. Kagawa, when he was trying to bring about real healing after the war. They came away, most of them, saying, "Well, I could not understand him very well—he seemed only to be repeating platitudes." Then one boy said, "But did you notice the heavy lenses on his glasses? He has trachoma and is going blind. And he contracted trachoma by sharing with the poor in the city of Tokyo. Let's not forget that." And then he added: "I guess that when a man is hanging from a cross for what he believes to be true he doesn't have to say very much."

We need less talk and more dying for the truth of Christ. Amen.

THE JACKSON FAMILY CASE

The SPEAKER. Under previous order of the House the gentleman from West Virginia [Mr. STAGGERS] is recognized for 5 minutes.

Mr. STAGGERS. Mr. Speaker, I think it is entirely proper, indeed timely, and, in fact, even emergent that we take a moment from the matters of state and give attention to a subject which takes over the newspaper headlines today. It is the sad restatement of the facts and circumstances pertaining to the murder of the Jackson family, from the time they were forced from their automobile on Sunday, January 11, 1959, until all the bodies were discovered this past weekend.

It is imperative, I believe, that more police be assigned to the job of hunting and capturing the murderer who is still at large—more Federal, State, and local officers.

If the capture of this person, who so coldbloodedly kidnaped and murdered Mr. and Mrs. Carroll V. Jackson and their two little daughters, and crudely

buried their bodies in Virginia and Maryland, is not brought about soon, there is no doubt but that the lives of others may be in jeopardy.

As long as the killer is at large, no man's family and children will be safe. Sufficient officials must be assigned to the case—and now.

History has shown that in times such as these, with so much unemployment and with the morale of depressed persons so low, crime hits the highest peak. We must do all within our power to at least safeguard the lives of the citizens and their families. We owe this protection to the innocent.

CONSERVATION AND WISE USE OF FOREST RESOURCES OF WEST VIRGINIA

Mr. STAGGERS. Mr. Speaker, the economic depression which has fallen so heavily on portions of my State casts a dark shadow over many communities at this Easter season. The southern Appalachian area, particularly the coal-mining centers, shows evidence of deep-rooted economic sickness. In seeking ways to alleviate this situation and contribute toward a permanent solution, conservation and wise use of our forest resources must be recognized as an important factor.

It appears that we have not fully appreciated the important contribution to be made by renewable resources in the form of forests and related natural resources. Our mountains were originally covered with lush stands of spruce, pine, and a great variety of valuable hardwood trees, with high commercial and esthetic value.

Over in the Commerce Department at Washington a special clock ticks off the arrival of a new American every 11 seconds. The rapid expansion of our population along the eastern seaboard emphasizes the growing public dependence on forests in this early settled part of our Nation. Almost 700,000 recreation visits were reported by the Monongahela National Forest in my district last year. As the workweek becomes shorter, and paid vacations more widespread, this use of mountain forest areas will undoubtedly expand.

One of the important features of this program, from the standpoint of West Virginians, is the multiple-use policy under which its resources are administered. Timber from the forest is harvested as a crop under the principle of sustained yield, which guarantees continuing supplies of wood and other forest products. The same forest area is open to the general public for hunting and fishing and thousands of visiting nimrods enjoy these sports on land where they are welcome guests. Areas suitable for public camping, picnicking and swimming are being dedicated to these uses, further enhancing the value of the forest to the public. Watershed values are maintained to provide local communities with clean, clear water suitable for domestic and industrial uses. The result of this multiple-use operation is to bring people and business to the rural areas in and adjacent to the forests, and the local economy is consequently enriched. Often the timber from the national forest serves as raw material for important local industry that provides wages for the residents. One encouraging example of this is in Tucker County where a recently established charcoal plant serves as a market for large quantities of low-grade wood. Removal of this material from the second-growth forest under good conservation practices is, in effect, a thinning and weeding operation and becomes an important step in good forest management.

Thirteen million board feet of timber were harvested on the Monongahela National Forest during the last 6 months of 1958. This brought an average stumpage price of $9.19 per thousand board feet but the total value of harvested timber when processed represents many times this amount. The cutting, hauling, sawing, and conversion to finished lumber, furniture, and other items has provided employment for hundreds of workers. Thus a sustained-yield forest provides a continuing source of raw material with stable employment for dependent people. This is a wholesome influence in any community.

Recently the U.S. Forest Service, in cooperation with State and industry foresters, completed an exhaustive analysis of the Nation's timber situation. The report has been released in a volume entitled "Timber Resources for America's Future." This study, one of the most thoroughgoing of its type ever undertaken, projects the Nation's timber growth and population growth forward to the years 1975 and 2000. It indicates that we face a shortage of timber to meet the needs of our growing country, unless action is taken promptly.

With unemployment in many rural forest areas, it seems logical that preparation to meet this coming shortage is one of the most practical ways in which to put people to work. This would involve a number of steps, some of which could provide immediate employment opportunities. The first logical step would be the development of a forest road system to provide better access to mountain forest areas. This would permit removal of presently available wood and provide for thinning and weeding young forests that are already growing in many areas. It would also provide access for planting idle acres. Timber growing is a long-term basis. In meeting shortages for the year 2000, a tree planted in 1959 is worth far more than one planted in 1999.

Work at the Fernow Experimental Forest in Tucker County, W. Va., indicates that a thrifty, well-stocked hardwood forest can grow 500 board-feet per acre per year. Assuming an average value of $15 per thousand as the value of this timber on the stump, the forest manager will net $7.50 per acre per year from growth in his woodlot. Properly managed, many thousands of acres of West Virginia's mountain forests can be made to yield a profit to the owner plus wages for workers in the woods and in adjacent communities, and under sustained yield, this renewable forest resource can provide raw material for the indefinite future.

The United States, with about 9 percent of the world's forest area, is using about half of the world's timber. In meeting future needs, the United States cannot depend upon massive acreage. We must, instead, utilize scientific management to provide the abundant raw materials we need from our forests.

Under skilled guidance good forest management can help to solve our economic problems in West Virginia, and in other parts of the Nation.

RECESS

The SPEAKER. The Chair is going to declare a recess subject to the call of the Chair, but the bells will be rung 15 minutes before the House reassembles.

Thereupon (at 3 o'clock and 21 minutes p.m.) the House stood in recess subject to the call of the Chair.

AFTER RECESS

The recess having expired, the House was called to order by the Speaker at 5 o'clock and 10 minutes p.m.

FURTHER MESSAGE FROM THE SENATE

A further message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed without amendment a bill of the House of the following title:

H.R. 5247. An act to increase the authorized maximum expenditure for the fiscal year 1959 under the special milk program.

The message also announced that the Senate had passed, with an amendment in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 5640. An act to extend the time during which certain individuals may continue to receive temporary unemployment compensation.

TEMPORARY UNEMPLOYMENT COMPENSATION

Mr. MILLS. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 5640) to extend the time during which certain individuals may continue to receive temporary unemployment compensation, with a Senate amendment thereto, disagree to the Senate amendment, and ask for a conference with the Senate.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas? [After a pause.] The Chair hears none, and appoints the following conferees: Messrs. MILLS, FORAND, KING of California, SIMPSON of Pennsylvania, and MASON.

Mr. MILLS. Mr. Speaker, I ask unanimous consent that it may be in order for the conference report on the bill H.R. 5640 to be considered at any time it is filed.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

RECESS

The SPEAKER. The House will stand in recess subject to the call of the Chair.

Accordingly (at 5 o'clock and 12 minutes p.m.), the House stood in recess subject to the call of the Chair.

AFTER RECESS

The recess having expired, the House was called to order by the Speaker at 6 o'clock and 14 minutes p.m.

FURTHER MESSAGE FROM THE SENATE

A further message from the Senate by Mr. McGown, one of its clerks, announced that the Senate insists upon its amendment to the bill (H.R. 5640) entitled "An act to extend the time during which certain individuals may continue to receive temporary unemployment compensation, disagreed to by the House; agrees to the conference asked by the House on the disagreeing votes of the two Houses thereon, and appoints Mr. BYRD, Mr. KERR, Mr. MCCARTHY, Mr. WILLIAMS of Delaware, and Mr. CARLSON to be the conferees on the part of the Senate.

TEMPORARY UNEMPLOYMENT COMPENSATION

Mr. MILLS submitted the following conference report and statement on the bill (H.R. 5640) to extend the time during which certain individuals may continue to receive temporary unemployment compensation:

CONFERENCE REPORT (H. REPT. NO. 257)

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 5640) to extend the time during which certain individuals may continue to receive temporary unemployment compensation, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate and agree to the same with an amendment as follows: In lieu of the matter proposed to be inserted by the Senate amendment insert the following: "That paragraph (1) of section 101(a) of the Temporary Unemployment Compensation Act of 1958 (42 U.S.C. 1400) is amended—

"(1) by striking out 'April 1, 1959' and inserting in lieu thereof 'July 1, 1959'; and

"(2) by adding at the end of such paragraph the following: 'Payment of temporary unemployment compensation under this Act to any individual shall be made only if such individual had exhausted all rights under the unemployment compensation laws referred to in paragraph (3) before April 1, 1959, and his first claim under this Act was filed before April 1, 1959, in States in which unemployment compensation is paid on the basis of flexible-weeks, before April 5, 1959, in States in which unemployment compensation is paid on the basis of calendar-weeks, and before April 7, 1959, in States in which unemployment compensation is paid on the basis of statutory or payroll weeks.' "

And the Senate agree to the same.

W. D. MILLS,
AIME J. FORAND,
CECIL R. KING,
RICHARD M. SIMPSON,
NOAH M. MASON,
Managers on the Part of the House.

HARRY F. BYRD,
ROBERT S. KERR,
EUGENE J. MCCARTHY,
JOHN J. WILLIAMS,
FRANK CARLSON,
Managers on the Part of the Senate.

STATEMENT OF THE MANAGERS ON THE PART OF THE HOUSE

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 5640) to extend the time during which certain individuals may continue to receive temporary unemployment compensation, submit the following statement in explanation of the effect of the action agreed upon by the conferees and recommended in the accompanying conference report:

Under section 101(a)(1) of the Temporary Unemployment Compensation Act of 1958 temporary unemployment compensation is payable only for weeks of unemployment beginning April 1, 1959.

Under the bill as passed the House, such compensation was payable for weeks of unemployment beginning before July 1, 1959, but only if the individual's first claim under the Temporary Unemployment Compensation Act of 1958 was filed before April 1, 1959.

The bill as passed the Senate provided that such temporary unemployment compensation was payable for weeks of unemployment beginning before July 1, 1959 (without regard to when the individual's first claim under such act was filed).

Under the conference agreement, payment of temporary unemployment compensation under the Temporary Unemployment Compensation Act of 1958 may be made to an individual for weeks of unemployment beginning before July 1, 1959, but only if such individual had exhausted all rights under the unemployment compensation laws referred to in section 101(a)(3) of such act before April 1, 1959, and his first claim under such act was filed—

(1) Before April 1, 1959, in States in which unemployment compensation is paid on the basis of flexible-weeks;

(2) Before April 5, 1959, in States in which unemployment compensation is paid on the basis of calendar-weeks; and

(3) Before April 7, 1959, in States in which unemployment compensation is paid on the basis of statutory or payroll weeks.

W. D. MILLS,
AIME J. FORAND,
CECIL R. KING,
RICHARD M. SIMPSON,
NOAH M. MASON,
Managers on the Part of the House.

Mr. MILLS. Mr. Speaker, in accordance with the prior directive of the House, I call up the conference report on the bill (H.R. 5640) to extend the time during which certain individuals may continue to receive temporary unemployment compensation, and ask unanimous consent that the statement of the managers on the part of the House be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

The Clerk read the statement.

Mr. MILLS. Mr. Speaker, I yield myself 5 minutes.

Mr. Speaker, the conferences on the part of the House bring to the House a conference report which represents largely the bill that passed the House a few days ago. It will be recalled, when the bill passed the House, we extended for a period of 3 months or until June 30 the time within which payments under the TUC could be made for the benefit of those individuals who had exhausted their claims under the State Unemployment Compensation systems prior to April.

Just about the time we were acting, Mr. Speaker, on the bill, I was advised by representatives of the Department of Labor that we had not been as precise as we should have been in the definition of eligibility for these continued payments. It was suggested that we might adopt an amendment in this body in connection with the passage of the legislation. I did not have the time to get the committee together to consider an amendment. This amendment was brought up in the Finance Committee of the other body when that body considered the bill, H.R. 5640, and this more precise definition of eligibility was included. We bring the bill back to the House with the conferees on the part of the House agreeing to this amendment of the other body, which is technical in nature.

The conferees of the other body receded from an amendment subsequently adopted on the floor of the Senate, so that there is this one amendment to the bill as it passed the House. I can assure you, Mr. Speaker, it is a technical amendment. It is required because in some States, it is necessary to wait a week from the time of exhaustion of benefits under the State program before a person can file for benefits under TUC. Thus, under the bill that passed the House, these people who had exhausted their benefits and were eligible for benefits prior to April because of that provision of State law could not file prior to April 1, and thus become eligible for benefits during the extended 3-month period. We thought it fair and equitable that those people should be treated in those States just as they would be treated in other States where they could file for TUC at the time of exhaustion of benefits.

GENERAL LEAVE TO EXTEND

Mr. MILLS. Mr. Speaker, I ask unanimous consent that the gentleman from Pennsylvania [Mr. SIMPSON] and others desiring to do so may extend their remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. SIMPSON of Pennsylvania. Mr. Speaker, I have joined with the distinguished chairman of the Committee on Ways and Means in urging the House to

agree to the conference agreement to H.R. 5640. The conference agreement includes a Senate amendment which is technical in nature and would merely clarify the eligibility status of applicants for temporary unemployment compensation during the phasing out period. It is desirable that expeditious action be taken on this legislation so that it may be signed into law and become operative. A Senate floor amendment which would have provided a straight 3-month extension of the existing temporary program, without any provision for phasing out, was deleted in conference.

Mr. MILLS. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER. The question is on the conference report.

The conference report was agreed to.

A motion to reconsider was laid on the table.

SALES OF TIMBER FROM MILITARY AND NAVAL RESERVATIONS

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Virginia [Mr. ABBITT] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. ABBITT. Mr. Speaker, on Monday I introduced H.R. 5957, which provides for payments to States for the benefit of local governments based upon the proceeds of sales of timber located on land within military and naval reservations. The bill has been referred to the Armed Services Committee and I have requested the chairman to give the matter early consideration.

This is a general bill and would apply to timber sales from any Army, Navy, Air Force, or Marine reservation in the country.

I believe that such legislation is needed as a means of returning to the localities some of the great losses they have suffered by decreased tax revenues as a result of vast Government holdings for military purposes. The language of the bill follows that used years ago in providing for the same type of distribution of timber receipts from sales within the national forests. The precedent established in that legislation can well apply here and I believe it is only just and proper that it do so.

Few Americans, I am sure, realize what a vast acreage the military agencies hold in this country. Millions of acres are being used for various purposes—and, more importantly, countless acres are lying virtually unused because of deactivation. Yet, it is from these deactivated reservations that often timber is cut. The counties wherein these reservations are located are in the position of not being able to return the lands to the tax rolls because the Government claims they are necessary for possible mobilization requirements; yet they see timber being cut and profits being made from it.

It seems to me that it is only fair that the counties or other political subdivisions share in these proceeds. My bill would provide for this.

Although I could cite many instances, I am most familiar with the situation in my own congressional district, where Camp Pickett is situated. Camp Pickett covers an area of some 45,000 acres. This is divided among three of our counties—Nottoway, Dinwiddie, and Brunswick. When Pickett was built, the Government took 25,432 acres in Nottoway County, 13,246 acres in Dinwiddie County, and 6,990 acres in Brunswick County. All of this was productive land and was listed on the tax rolls of the respective counties. The purchase price was $1,181,405.

Now this land is lying virtually unused; the Government will not release it; and there is little likelihood of its being utilized to any great extent in the foreseeable future. The counties thus are deprived of tax revenues and the situation is pressing when the governing bodies of these areas must meet expanding needs with their base of revenue depleted. I assume the same situation could be found in many other places in the country.

I trust that this bill will be given full attention and that something can be done during this session to correct the situation.

GREEK INDEPENDENCE DAY

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Massachusetts [Mr. BOLAND] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. BOLAND. Mr. Speaker, March 25 of the year 1821 is a grand and glorious landmark in the long history of the Greek people. On that day, 138 years ago today, a band of brave and courageous Greeks rose in revolt against their Ottoman oppressors and proclaimed their national independence. After suffering for almost 400 years under the tyranny of the Turks, they thus successfully attained their goal. In the ensuing life and death struggle, which lasted more than 6 years, they fought against formidable odds, often their backs to the wall. Finally, with the aid of their friends and sympathizers, they brought independent Greece into existence in 1827.

Since then Greece has had more than its share of misfortunes and miseries, especially during the two world wars. During the last war, and the years following the end of that war, Greeks came perilously close to losing their independence. When all of her neighbors in the Balkan peninsula were ruthlessly victimized by Soviet communism, Greece remained, thanks to the British and American aid, the lone outpost of freedom and independence in the entire Balkan area. Today she is a strategic bastion of the free world against communism. On this 138th anniversary let us all hope that she will face all dangers threatening her with firm determination and courage that have characterized Greeks throughout their long and glorious history.

THIRTEENTH ANNIVERSARY OF THE STRATEGIC AIR COMMAND

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Massachusetts [Mr. BOLAND] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. BOLAND. Mr. Speaker, the Strategic Air Command, known by its clipped designation, SAC, is the long range nuclear striking arm of the United States Air Force.

The 8th Air Force Headquarters are located in my district at Westover Air Force Base in Chicopee Falls, Mass. The 8th Air Force is an integral part of our defense and attack force. It projects, not only the eastern seaboard of this Nation but performs its strategic part in preserving the peace of the world.

Mr. Speaker, I personally know some of the team that constitutes the 8th Air Force. I make it a point to visit the Westover Air Force at frequent intervals and to witness the work that is done there. I can attest to the dedication of both military and civilian personnel that makes this great air base so important a part of the country's defense posture and its strength.

The value of SAC is recognized by the entire free world. Sir Winston Churchill's words sums up the respect that the world has for SAC:

> The United States Strategic Air Command is a deterrent of the highest order and maintains ceaseless readiness. We owe much to their devotion to the cause of freedom in a troubled world. The primary deterrents to aggression remain the nuclear weapon and the ability of the highly organized and trained U.S. Strategic Air Command to use it.

Mr. Speaker, I congratulate SAC on its 13th anniversary. May SAC continue to preserve the peace through the maintenance of a combat ready force of poised strategic air power.

Under unanimous consent to extend my remarks in the body of the RECORD, I include an article that appeared in the Springfield, Mass., Daily News on March 19:

> SAC'S 13TH ANNIVERSARY TO BE MARKED SATURDAY—COMMAND LEADER GEN. T. S. POWER ALSO OBSERVING START OF 31ST YEAR AS COMMISSIONED OFFICER
>
> WESTOVER AIR FORCE BASE.—The Strategic Air Command celebrates its 13th birthday Saturday and its leader, Gen. Thomas S. Power, this month enters his 31st year of service as a commissioned officer.
>
> General Power took command of SAC—this Nation's most potent deterrent force—in August 1957. The high leadership came after a distinguished service and combat

record beginning when he was commissioned a second lieutenant in February 1929.

SAC got its start in March, 1946 at Bolling Field, Washinton, D.C., and Gen. George C. Kenney, World War II chief of Far East Forces was made commander. He was followed by colorful Gen. Curtis E. LeMay, who stepped up a rank in the Air Force hierarchy and was succeeded by General Power.

General Power first saw combat flying with the 304th Bomb Wing in North Africa and Italy. He later was made bomb wing commander of the 314th Bomb Wing and moved his fleet of B–29's to Guam as part of the 21st Bomb Command.

From Guam, General Power led and directed the daring large scale fire raids on Tokyo, March 9, 1945.

General Power was appointed deputy chief of operations for Gen. Carl Spaatz, commander of the U.S. Strategic Air Force in the Pacific.

During the "Crossroads" atom bomb tests at Bikini Atoll in 1946 General Power was assistant deputy task force commander for air on Admiral Blandy's staff.

The concept of SAC as America's global striking force was then taking shape and following other assignments General Power, in 1948, was chosen as SAC vice commander. He worked with General LeMay for 6 years building up the mighty power of SAC.

In 1954 General Power was named commander of the Air Research and Development Command but in 1957 when General LeMay was named vice chief of staff of the Air Force, General Power returned to SAC as commander with four stars.

Under his command are three combat air forces in the United States, three oversea air divisions, and an overseas air force.

In training, SAC uses a unique system. Crews are designated by their proved proficiency. A select crew is tops. There are other classifications—lead crew, combat ready crews, and noncombat ready crews, depending on the degree of training.

In internal SAC affairs, General Power recently told Congress that vigorous action should be taken to: "improve SAC housing, authorize alert pay for SAC crews, provide more spot promotion, improve advancement, and boost base exchange and commissary privileges.

"Serious consideration," he said, "should be given to increase benefits to those crews that are on alert, a monetary benefit, call it inconvenience pay or what."

He also said there should be greater career advancement opportunities. He said it is difficult "to get these men pushed up."

The general reported many of the items in the fiscal 1960 budget will implement his suggestions except in the housing area. The housing program, he said, "is not going as fast as I would like to see it go."

BUTLER COUNTY, KY.

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Kentucky [Mr. NATCHER] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. NATCHER. Mr. Speaker, our family farms are vital to the economy of the United States. We must look to the family farms for food and fiber required by a growing population. Unfortunately, many owners of our small farms still have small net incomes, and by reason thereof it is extremely difficult for them to maintain an adequate standard of living for their families. It is a recognized fact that agriculture must prosper if the Nation is to prosper. The American farmer has the right to demand a standard of living in keeping with the contribution he makes to the national economy. We have approximately 4,600,000 farms in this country, yet 1.5 million farm families have cash income from all sources of less than $1,200 a year. Since modern farm problems are complex, and changing conditions in agriculture demand constant experiment with policies and programs, there seems no easy answer as to the best method of meeting the challenge in areas of low farm income. But the owners of family-size farms must have their interests fully protected. It is imperative that we save the small farmer, and, in my opinion, one of the most effective ways to accomplish this purpose is by means of the rural development program.

In 1955 the Congress was asked for funds and authority to allow the Department of Agriculture to be of service to rural development programs going forward under State leadership. Under the rural development program we have as our main objectives increased income for small farmers and efforts toward making the land provide a higher level of living; better management of timber resources on farms in order to produce higher income for the owners; credit needs for small farmers and our farm people afforded full information on job opportunities in their immediate vicinities provided it should become necessary for them to supplement their farm incomes; acceleration of vocational training for our young people, and better health services with improved nutrition. These objectives are basic to total economic improvement. Pilot counties were designated in many States. The three such counties in Kentucky are Butler County, Metcalfe County, and Elliott County. In these three pilot counties committees were formed to direct rural development and adapt programs to local conditions. The Federal Government contributes funds for technical aid, credit, and research for the rural development program. Proper rural development programs are accelerating the movement toward more industry, more efficient-size family farms, and the supplementing of income for farm people.

The initial impact of the rural development program has been partly responsible for many improvements in Butler County, Ky. It has aided in many accomplishments, namely, a new health unit, an increase in local employment, erection of three modern buildings on the main street of Morgantown, the county seat, a new post office building to be erected in the near future, construction of new homes and business houses, improvement of roads and schools, a building erected for use as a meeting place for the rural development group, improvements generally in living conditions on the farms and better acceptance and use of farm programs offered throughout the county, as well as overall progress in the city of Morgantown.

The citizens of Butler County, Ky., are convinced that the rural development program is the soundest approach yet devised to gaining long-range economic development and growth in our rural towns and communities. They realize that the program's effectiveness depends on their continuing interest. The business and professional men of Morgantown are to be commended for the part they have played in this program. As leaders in their community, they have given of their time, advice, and experience. And certainly mention should be made of the cooperation of G. Guy Cook, owner and editor of the Green River Republican, and his son, William Cook. Through the medium of their newspaper, these gentlemen have rendered assistance of untold value in the advancement of the rural development program.

The success of the rural development program in Butler County is recognized not only in the Second Congressional District and throughout Kentucky, but has spread far and wide. Paddy Keenan, county agent of County Coven, Ireland, after spending a week in Butler County, wrote a letter to the Green River Republican in which he said:

> Coven lies toward the north of Ireland. It's a county with little other resources except what the land can grow—and the lakes. The lakes are full of fish. * * *
>
> Come to think of it, County Coven, Ireland, is very like Butler County, Ky. Except for one thing. Butler County has something they call a rural development program.
>
> For the past week I have spent the time going around looking at the fruits of this program. I am amazed at the results. I am amazed that a bare 2 years could yield so beautiful a harvest.

Mr. Keenan has well summarized the opinions of representative groups from localities throughout the United States who have visited Butler County. Though formerly designated as a low income county agriculturally, due to recent achievements Butler County is well along the way toward a departure from that category. We have witnessed an example of success so far as the rural development program is concerned, and likewise the citizens of Butler County have set a splendid example of time and effort successfully spent in saving small farms, and their owners from economic downfall.

It was our Founding Fathers who, in signing the Declaration of Independence, were willing to attach their signatures to a dream. Indeed this great country of ours has gone forward because of great leaders who had the conviction of things not seen. The true American dream is prevailing in Butler County—it has been accepted not as an heirloom but as a pronouncement.

BILLIONS FOR OTHERS AND THE "TRICKLE DOWN" FOR OUR OWN CITIZENS

The SPEAKER. Under the previous order of the House, the gentleman from

Ohio [Mr. LEVERING] is recognized for 15 minutes.

Mr. LEVERING. Mr. Speaker, it is painful for me to have to criticize U.S. policies which, in my judgment, work to the detriment of our own people. I would much rather discuss constructive, forward-looking programs which I can debate on their merits.

Yet, as we all know, there are times when we must face up to the facts of an inequitable situation and, if nothing else, exercise the good old American prerogative of complaining about it. There is an old saying: "The squeaking wheel is the one that gets the grease." Another is: "Out of sight, or out of hearing, out of mind."

Just a few short weeks ago, the people of Ohio, Pennsylvania, Indiana, and other midwestern States were suffering from floods. The people of my own 17th District of Ohio had two very tragic situations in the course of the first 2 months of this year, underscoring to them the necessity for planning to work in the sunshine to prevent the harmful, tragic effects of water on the rampage in time of rain or melting snow.

It is not necessary, I think, for me to recount the enormous damages caused in the recent floods in my district, and in Ohio generally. But I hold in my hand a recent leaflet issued by the American Red Cross. It is entitled "Midwestern Floods, January–February 1959," and some of the photographs in this publication are those of people in my own neighborhood of the 17th District.

This publication shows that, through Red Cross alone, a grand total of $2,424,485.97 in disaster relief had to be spent. This figure of $2.4 million, of course, is merely a drop in the bucket as to the total loss suffered by the people of the various areas. When we take into account the furniture that was ruined in thousands of homes, the electrical fixtures and other accouterments of any home that were ruined in the thousands of homes, the houses that actually were washed off their foundations, the roadways that were rutted and gutted, and the business inventories damaged or lost by the swirling waters, we can understand that this emergency, temporary relief spent by the Red Cross is merely a token of the total loss.

It was estimated authoritatively by several careful spokesmen that the damages in Ohio alone ran more than $100 million. This, of course, is not counting the loss of lives—34 in the January flood alone—and the exposure and illness to which many thousands of persons were subjected because they had to flee their homes in bitterly cold weather.

As I have said before the damage caused by water on a rampage is utterly incalculable. But insofar as we can calculate it, the total amount of loss runs into astronomical figures as we know.

Naturally, as soon as the rivers and tributaries began to recede after the January flood, our people went to work to see what could be done to prevent a recurrence of this type of catastrophe.

We were informed, for instance that the flood control measures that had been taken had saved at least $65 million in damage in our area, although, as we all know, the various reservoirs and other flood control measures that have been taken in other years have cost only a fraction of this sum. In other words, we knew that we ought to get busy and to make sure that needed projects are carried out, for we believe that the time to prepare for rain and flood is when the sun is shining.

As I investigated the various flood control areas in Ohio, I came up against the fact that the President has adopted a policy of "no new starts," on such projects.

Accordingly, I wired the President from my district on February 20, asking him to take into consideration the possibilities of further damage to my people and their homes, in case of floods, and urging him to release the ban on new projects which could be undertaken by the Army Engineers.

I received, on March 18, 1959, a letter from Mr. Staats, Deputy Director of the Bureau of the Budget, under the Executive Office of the President, to this effect:

> You may be sure that the flood losses suffered in Ohio and elsewhere are a matter of deep personal concern to the President. The expeditious planning and construction of works to reduce danger from floods are an important part of his program.
>
> However—

And I might say, Mr. Speaker, that it is these "howevers" in the letters we get that throw us many times. Sometimes, it is an "on the other hand" that makes life miserable for us, too. But I continue to read from Mr. Staats' letter—

> However, with the large number of water resources projects placed in a construction status during the past several years, Federal spending for programs of this type will reach the highest level in history during the coming fiscal year. The President, after weighing the desirability of a further acceleration of these programs against the urgent fiscal requirements of national defense and other essential programs, decided that initiation of construction of all new water resources projects should be deferred until after fiscal year 1960.
>
> You urge that funds be made available for the initiation of planning on additional authorized flood control projects. Funds for advance planning on authorized projects are included in the budget as a lump-sum amount. The allocation of funds from this amount to specific projects is made by the Chief of Engineers with the approval of the Secretary of the Army. The extent to which such funds should be used for new planning starts is therefore a matter for determination by the Chief of Engineers.
>
> The President appreciates receiving your views on this important matter and I can assure you that they will be given full consideration in future budgetary recommendations to the Congress.

Mr. Speaker, it is most difficult for me to explain to my people in the 17th District such a turndown from the President, for I am sure that they, who have suffered greatly and know the value of a dollar and the value of their possessions, simply cannot understand why he would reject our pleas for use of our own tax money.

As my people know, the President is putting great pressure on me, and every other legislator on Capitol Hill, to vote to appropriate almost $4 billion—in addition to the billions already available—for foreign aid for fiscal 1960. Just the other day, my people could read in the newspapers about how President Eisenhower, standing with the President of Mexico at Acapulco, agreed to bear a great part of the cost of a new $100 million Diablo Dam on the Rio Grande near Del Rio, Tex. This new international dam, which will supplement the huge Falcon Dam project on the same waterway, will be 250 feet high and 6½ miles long.

As noted, the President does not mind obligating the tax money of the people of my district to be spent to help the Mexicans and the Texans—and there is not anything wrong with the Mexicans and the Texans, in my humble judgment—to the tune of some $50 million, and the administration does not hesitate to pressure us on the Hill to appropriate huge sums for foreign aid, but when it comes to some little projects out in my district, the answer, in a nutshell, is "Thumbs down."

The situation, of course, is not going to rest there. Our people can and will work together to take whatever steps we can to help ourselves. We have been working on plans for a conservancy district. Perhaps in some ways we can help ourselves, and, of course, it always has been our intention to do so. Yet, the fact remains that on the big jobs, we simply must have Federal assistance, for the huge machinery, the huge capital, and the various adjuncts of flood control planning require Army Engineer assistance. It is unrealistic for anyone to think that a local community, by its own efforts, can guard against floodwaters that may originate far from the community itself.

Also, Mr. Speaker, I will be forced to take a long, hard look at the foreign aid appropriations before I vote for any of them, if I do vote in favor of them. The attitude that we should be solicitous of nations far removed from our country, while people right in our heartland are subjected to floods that can be prevented, is inconceivable to me.

It is incredible to me that the President should take a stand on this issue that, in my humble judgment, is so penny wise and pound foolish. The simple truth is this Army engineering work should be carried on apace. It is unbelievable to me that anyone would let a fiscal year, or any other artificial, man-made fiscal device stand in the way of undertaking needy public improvements that can save the people incalculable money, time, expense, and possible suffering.

Such an attitude could be compared only to a bookkeeper in a frontier fort who tells the people that they cannot use any more powder this month to fire at the marauding Indians, since they are already over the budget for the month. Protection against the ravages of nature is elemental good sense. If there are men to do the work, and machinery available, and resources to be used, then, in my judgment, it is inexcusable to delay the work on the excuse that it is not the right fiscal year for it. Nature does not ask us what fiscal year we are operating in before dumping snow, ice, rain, or hail on our land. I find it very hard to believe that men can get so insulated from actualities and realities as not to understand that the people of this country are not interested as much in what fiscal year they are operating as they are in taking the steps necessary to guard them against the hazards posed by floods or other natural disasters. Bookkeepers are useful. But in a time of crisis people do not stop to make entries while they are trying to save the home they have worked a lifetime to build, or to save their children and loved ones.

We must give precedence to people over fiscal years and bookkeeping, and particularly on flood control measures so vital to our people and to our Nation.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. KOWALSKI, from March 26 to April 5, on account of official business, attending the Armed Services Committee visit to Germany.

Mr. COAD (at the request of Mr. SMITH of Iowa), for 2 days, on account of illness.

Mr. WAMPLER, from March 26 to April 5, 1959, on account of official business—Armed Services Committee.

Mr. MAILLIARD, for the week of April 6, on account of official business—official committee hearings in New York.

Mr. CHAMBERLAIN (at the request of Mr. HALLECK), for Thursday, March 26, 1959, on account of official business with the House Armed Services Committee.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. FERNÓS-ISERN, for 10 minutes, on today.

Mr. REES of Kansas, for 10 minutes, on today, to revise and extend his remarks and to include extraneous matter.

Mrs. ROGERS of Massachusetts, for 5 minutes, today.

Mr. HIESTAND, for 60 minutes, on April 13.

Mr. LINDSAY, for 15 minutes, on March 26.

Mr. METCALF (at the request of Mr. ALBERT), for 30 minutes, on Thursday, April 9.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. RANDALL and to include extraneous matter.

Mr. RODINO.

Mr. DIXON.

Mr. ALGER in 12 instances.

(At the request of Mr. CHAMBERLAIN, the following Member, and to include extraneous matter:)

Mr. HALPERN.

(At the request of Mr. ALBERT and to include extraneous matter the following:)

Mr. MULTER in two instances.

Mr. SMITH of Iowa.

Mr. BURKE of Massachusetts.

Mr. COOLEY.

Mr. DADDARIO.

ADJOURNMENT

Mr. ALBERT. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to.

Accordingly (at 6 o'clock and 22 minutes p.m.) the House adjourned until tomorrow, Thursday, March 26, 1959, at 12 o'clock noon.

REPORT OF COMMITTEE ON COUNTERPART FUNDS

Mr. BURLESON. Mr. Speaker, the Mutual Security Act of 1958, chapter IV, section 401(a), requires the Committee on House Administration to publish in the CONGRESSIONAL RECORD, within 10 legislative days after receipt, the consolidated report of each committee of the House using foreign currencies—counterpart funds—during the preceding year. Accordingly, there is shown herein a supplemental report of the House Committee on Armed Services:

MARCH 19, 1959.

Counterpart funds

CARL VINSON,
Chairman, Committee on Armed Services.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

761. A letter from the chief Scout executive, Boy Scouts of America, transmitting the 49th Annual Report of the Boy Scouts of America for the year 1958, pursuant to the act of June 15, 1916, entitled "An act to incorporate the Boy Scouts of America, and for other purposes" (H. Doc. No. 101); to the Committee on Education and Labor and ordered to be printed with illustrations.

762. A letter from the Acting Secretary of Agriculture, transmitting a draft of proposed legislation entitled "A bill to repeal section 8f of the Agricultural Adjustment Act of 1933, as amended"; to the Committee on Agriculture.

763. A letter from the Assistant Secretary of the Interior, transmitting a report certifying that an adequate soil survey and land classification has been made of the lands to be served by the Collbran project, Colorado, under the change in development plan, and that the lands to be irrigated are susceptible to the production of agricultural crops by means of irrigation, pursuant to Public Law 172, 83d Congress; to the Committee on Appropriations.

764. A letter from the Secretary of the Army, transmitting a draft of proposed legislation entitled "A bill to set aside and reserve Memaloose Island, Columbia River, Oreg., for the use of the Dalles Dam project and transfer certain property to the Yakima Tribe of Indians in exchange therefor"; to the Committee on Interior and Insular Affairs.

765. A letter from the Director, Bureau of the Budget, Executive Office of the President, transmitting a draft of proposed legislation entitled "A bill to amend certain laws of the United States in the light of the admission of the State of Alaska into the Union, and for other purposes"; to the Committee on Interior and Insular Affairs.

766. A letter from the Governor, Canal Zone Government, transmitting a draft of proposed legislation entitled "A bill to amend the Canal Zone Code by the addition of provisions relative to the certification of public accountants, and the regulation of their practice"; to the Committee on Merchant Marine and Fisheries.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. SMITH of Virginia: Committee on Rules. House Resolution 216. Resolution to amend House Resolution 93, without amendment (Rept. No. 253). Ordered to be printed.

Mr. HALEY: Committee on Interior and Insular Affairs. H.R. 2493. A bill directing the Secretary of the Interior to convey certain property in the State of New Mexico to the Pueblo of Santo Domingo; with amendment (Rept. No. 254). Referred to the Committee of the Whole House on the State of the Union.

Mr. MILLS: Committee of conference. H.R. 5640. A bill to extend the time during which certain individuals may continue to receive temporary unemployment compensation (Rept. No. 257). Ordered to be printed.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. KASTENMEIER: Committee on the Judiciary. H.R. 2100. A bill for the relief of John F. Carmody; with amendment (Rept. No. 255). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. House Joint Resolution 322. Joint resolution for the relief of certain aliens; with amendment (Rept. No. 256). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ABERNETHY:

H.R. 6032. A bill to bring employees of Agricultural Stabilization and Conservation county committees within the purview of the Civil Service Retirement Act and the Federal Employees' Group Life Insurance Act of 1954; to the Committee on Post Office and Civil Service.

By Mr. ADAIR:

H.R. 6033. A bill to provide for the denial of passports to persons knowingly engaged in activities intended to further the international Communist movement; to the Committee on Foreign Affairs.

By Mr. BELCHER:

H.R. 6034. A bill to authorize the Director, Office of Civil and Defense Mobilization, to approve a financial contribution for civil defense purposes to the State of Oklahoma; to the Committee on Armed Services.

By Mrs. BOLTON:

H.R. 6035. A bill to provide for the denial of passports to persons knowingly engaged in activities intended to further the international Communist movement; to the Committee on Foreign Affairs.

By Mr. BROOMFIELD:

H.R. 6036. A bill to amend the Internal Revenue Code of 1954 to allow a deduction from gross income for certain amounts paid by a teacher for his further education; to the Committee on Ways and Means.

By Mr. CHIPERFIELD:

H.R. 6037. A bill to provide for the denial of passports to persons knowingly engaged in activities intended to further the international Communist movement; to the Committee on Foreign Affairs.

By Mr. DENT:

H.R. 6038. A bill to amend section 162(a) of the Internal Revenue Code of 1954 to permit the deduction of certain expenses by members of State legislatures; to the Committee on Ways and Means.

H.R. 6039. A bill to provide for unemployment reinsurance grants to the States, to revise, extend, and improve the unemployment insurance program, and for other purposes; to the Committee on Ways and Means.

By Mr. DERWINSKI:

H.R. 6040. A bill to provide for the discontinuance of the Postal Savings System; to the Committee on Post Office and Civil Service.

By Mr. DIXON:

H.R. 6041. A bill to extend for 6 years the Sugar Act of 1948, as amended; to the Committee on Agriculture.

By Mr. DORN of New York:

H.R. 6042. A bill to prohibit unjust discrimination in employment because of age; to the Committee on Education and Labor.

H.R. 6043. A bill to encourage the development and expansion of privately owned tramp shipping operations under the United States flag, and for other purposes; to the Committee on Merchant Marine and Fisheries.

H.R. 6044. A bill to eliminate discriminatory employment practices on account of age by contractors and subcontractors in the performance of contracts with the United States and the District of Columbia; to the Committee on the Judiciary.

By Mr. EVINS:

H.R. 6045. A bill to change the name of Kentucky Lake to Kentucky-Tennessee Lake; to the Committee on Public Works.

By Mr. FLYNN:

H.R. 6046. A bill to amend section 21 of the Second Liberty Bond Act to provide for the retirement of the public debt; to the Committee on Ways and Means.

H.R. 6047. A bill to amend the National Cultural Center Act to provide that the building to be constructed for the performance of symphonies and operas shall be named the Woodrow Wilson Memorial Hall and to provide for a library of the performing arts, and for other purposes; to the Committee on Public Works.

By Mr. HOLLAND:

H.R. 6048. A bill to amend section 162(a) of the Internal Revenue Code of 1954 to permit the deduction of certain expenses by members of State legislatures; to the Committee on Ways and Means.

By Mr. HUDDLESTON:

H.R. 6049. A bill to amend section 11 of the Clayton Act to provide for the more expeditious enforcement of cease and desist orders issued thereunder, and for other purposes; to the Committee on the Judiciary.

By Mr. IRWIN:

H.R. 6050. A bill to amend the National Cultural Center Act to provide that the building to be constructed for the performance of symphonies and operas shall be named the Woodrow Wilson Memorial Hall, to provide for a library of the performing arts, and for other purposes; to the Committee on Public Works.

By Mr. JACKSON:

H.R. 6051. A bill to provide for the denial of passports to persons knowingly engaged in activities intended to further the international Communist movement; to the Committee on Foreign Affairs.

By Mr. JONES of Alabama:

H.R. 6052. A bill to amend section 377 of the Agricultural Adjustment Act of 1938, as amended, to provide for the extension of the automatic preservation of acreage history provision, with certain modifications; to the Committee on Agriculture.

By Mr. JUDD:

H.R. 6053. A bill to provide for the denial of passports to persons knowingly engaged in activities intended to further the international Communist movement; to the Committee on Foreign Affairs.

By Mr. KARTH:

H.R. 6054. A bill to continue until the close of June 30, 1960, the suspension of duties on metal scrap, and for other purposes; to the Committee on Ways and Means.

By Mr. KASEM:

H.R. 6055. A bill to amend section 1552, title 10, United States Code, and section 301 of the Servicemen's Readjustment Act of 1944 to provide that the Board for the Correction of Military or Naval Records and the Boards of Review, Discharges, and Dismissals shall give consideration to satisfactory evidence relating to good character and exemplary conduct in civilian life after discharge or dismissal in determining whether or not to correct certain discharges and dismissals; to authorize the award of an exemplary rehabilitation certificate; and for other purposes; to the Committee on Armed Services.

By Mr. KING of Utah:

H.R. 6056. A bill to extend for 6 years the Sugar Act of 1948, as amended; to the Committee on Agriculture.

By Mr. MERROW:

H.R. 6057. A bill to provide for the denial of passports to persons knowingly engaged in activities intended to further the international Communist movement; to the Committee on Foreign Affairs.

By Mr. MOORE:

H.R. 6058. A bill to provide for the expansion of the national cemetery at Grafton, W. Va.; to the Committee on Interior and Insular Affairs.

By Mr. MURRAY:

H.R. 6059. A bill to provide additional civilian positions for the Department of Defense for purposes of scientific research and development relating to the national defense, of such Department, and for other purposes; to improve the management of the activities to the Committee on Post Office and Civil Service.

By Mr. O'BRIEN of New York:

H.R. 6060. A bill to amend the so-called Buy American Act to provide that the Congress shall have the right to disapprove certain contracts entered into by agencies of the Federal Government for the purpose of acquiring articles, materials, or supplies from abroad; to the Committee on Public Works.

By Mr. OLIVER:

H.R. 6061. A bill to amend the Veterans' Readjustment Assistance Act of 1952 to make the educational benefits provided for therein available to all veterans whether or not they serve during a period of war or of armed hostilities; to the Committee on Veterans' Affairs.

By Mr. PELLY:

H.R. 6062. A bill to require that each civilian employee of the Federal Government in any reduction in force shall be granted opportunity of filling any vacant position of the same grade in his agency for which he is qualified; to the Committee on Post Office and Civil Service.

H.R. 6063. A bill to amend the Federal Reserve Act to authorize the establishment of 13 Federal Reserve districts; to the Committee on Banking and Currency.

By Mr. PIRNIE:

H.R. 6064. A bill to authorize the Commandant of the Judge Advocate General's School to award appropriate degrees and credits; to the Committee on Armed Services.

By Mr. REES of Kansas:

H.R. 6065. A bill to provide additional civilian positions for the Defense Department for purposes of scientific research and development relating to the national defense, to improve the management of the activities of such department, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. SIMPSON of Pennsylvania:

H.R. 6066. A bill relating to the deduction for income tax purposes of contributions to charitable organizations whose sole purpose is making distributions to other charitable organizations, contributions to which by individuals are deductible within the 30 percent limitation of adjusted gross income; to the Committee on Ways and Means.

By Mr. SHELLEY:

H.R. 6067. A bill to amend section 4544 of the Revised Statutes of the United States to provide that, if the money and effects of a deceased seaman paid or delivered to a district court do not exceed in value the sum of $2,500, such court may pay and deliver such money and effects to certain persons other than the legal personal representative of the deceased seaman; to the Committee on Merchant Marine and Fisheries.

H.R. 6068. A bill to clarify the legal status of employer or joint industry contributed apprenticeship funds and other joint or individual apprenticeship activities; to the Committee on Education and Labor.

By Mr. SMITH of Iowa:

H.R. 6069. A bill to amend the Fair Labor Standards Act of 1938 so as to increase from $1 to $1.25 the minimum hourly wage prescribed by section 6(a)(1) of that act; to the Committee on Education and Labor.

By Mr. TOLL:

H.R. 6070. A bill to amend section 162(a) of the Internal Revenue Code of 1954 to permit the deduction of certain expenses by members of State legislatures; to the Committee on Ways and Means.

By Mr. TOLLEFSON:

H.R. 6071. A bill to require that each civilian employee of the Federal Government in any reduction in force shall be granted opportunity of filling any vacant position of the same grade in his agency for which he is qualified; to the Committee on Post Office and Civil Service.

By Mr. BREWSTER:

H.R 6072. A bill to amend section 854 of title 10, United States Code (art. 54 of the Uniform Code of Military Justice), to provide for a verbatim transcript of the proceedings of the trial in all general and special courts-martial; to the Committee on Armed Services.

By Mr. FOLEY:

H.R. 6073. A bill to authorize the payment to local governments of sums in lieu of taxes and special assessments with respect to certain Federal real property, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. BRADEMAS:

H.J. Res. 325. Joint resolution providing for the issuance of a proclamation designating March 25 as Greek Independence Day; to the Committee on the Judiciary.

By Mr. RAINS:

H.J. Res. 326. Joint resolution proposing an amendment to the Constitution of the United States reserving to the States exclusive control over public schools; to the Committee on the Judiciary.

By Mr. RODINO:

H.J Res. 327. Joint resolution relating to the Italian American War Veterans of the United States, Inc., under certain laws of the United States; to the Committee on Veterans' Affairs.

By Mr. SHELLEY:

H.J. Res. 328. Joint resolution to authorize the reimbursement of not more than two employees in the office of each Member of the House of Representatives for travel to the Member's congressional district, and to authorize payment of additional mileage allowance for Members of the House of Representatives; to the Committee on House Administration.

By Mr. DOYLE:

H. Res. 225. Resolution to print as a House document a pamphlet containing a biographical sketch of each signer of the Declaration of Independence and the Constitution of the United States, and to provide for printing additional copies; to the Committee on House Administration.

By Mr. POWELL:

H. Res. 226. Resolution expressing the sense of the House of Representatives with respect to the struggle of the African peoples for independence and nationhood, and recognizing April 15, 1959, as African Freedom Day; to the Committee on Foreign Affairs.

MEMORIALS

Under clause 3 of rule XXII, memorials were presented and referred as follows:

By the SPEAKER: Memorial of the Legislature of the State of Texas, memorializing the President and the Congress of the United States relative to requesting a continuation of brand inspections by the Texas and Southwestern Cattle Raisers Association which affords a feeling of security to all cattle and livestock owners in the State of Texas; to the Committee on Agriculture.

Also, memorial of the Legislature of the State of Texas, memorializing the President and the Congress of the United States relative to requesting the Secretary of the Interior to direct a careful examination of the Texas Trans-Pecos area and the consequent location of one of the five facilities mentioned at Pecos, Tex.; to the Committee on Interior and Insular Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ALBERT:

H.R. 6074. A bill for the relief of John Thompson; to the Committee on the Judiciary.

By Mr. BAKER:

H.R. 6075. A bill for the relief of Ikram Yusuf Dughman; to the Committee on the Judiciary.

By Mr. BENTLEY:

H.R. 6076. A bill for the relief of Gilbert Coty; to the Committee on the Judiciary.

H.R. 6077. A bill for the relief of Elmer Rusch; to the Committee on the Judiciary.

By Mr. BREWSTER:

H.R. 6078. A bill for the relief of Mrs. Socoro Vazquez Pena; to the Committee on the Judiciary.

By Mr. FARBSTEIN:

H.R. 6079. A bill for the relief of Lem Hong and May Hong; to the Committee on the Judiciary.

By Mr. LANE:

H.R. 6080. A bill for the relief of Forrest E. Decker; to the Committee on the Judiciary.

By Mr. McINTIRE:

H.R. 6081. A bill for the relief of M. Sgt. Emery C. Jones; to the Committee on the Judiciary.

By Mr. MONTOYA:

H.R. 6082. A bill for the relief of George Louis Richard, also known as Georges Louis Khattar; to the Committee on the Judiciary.

By Mr. ROGERS of Colorado:

H.R. 6083. A bill for the relief of Mary V. Jones; to the Committee on the Judiciary.

By Mrs. ROGERS of Massachusetts:

H.R. 6084. A bill for the relief of J. Butler Hyde; to the Committee on the Judiciary.

By Mr. TABER:

H.R. 6085. A bill for the relief of Najla Malti, Hanna Malti, Fadwa Malti, Constantin Malti and Marie Malti; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

134. By Mr. DOOLEY: Resolution of the Westchester County American Legion, Department of New York, opposing any trade concessions or increase in trade with the Soviet Union; to the Committee on Foreign Affairs.

135. By Mr. KASEM: Petition of Federal civil service employees from the 25th District of California, petitioning passage of an equitable subsidized health and hospitalization insurance program as embodied in H.R. 726 and H.R. 764; to the Committee on Post Office and Civil Service.

136. By the SPEAKER: Petition of the city and county clerk, Honolulu, T.H., expressing sincere appreciation for having voted to admit Hawaii into the sisterhood of States; to the Committee on Interior and Insular Affairs.

EXTENSIONS OF REMARKS

Jefferson-Jackson Dinner Address by Hon. Thomas J. Dodd, of Connecticut

EXTENSION OF REMARKS
OF
HON. JOHN O. PASTORE
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, March 25, 1959

Mr. PASTORE. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD remarks made by the Senator from Connecticut [Mr. DODD] at the Jefferson-Jackson Day dinner on March 19, 1959, at the Statler Hilton Hotel in Hartford, Conn.

The people of Connecticut were truly honored to have such capable and efficient speakers on this outstanding and memorable occasion. Among these outstanding orators were numbered our own majority leader, LYNDON JOHNSON, and the junior Senator from Connecticut [Mr. DODD].

There being no objection the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. THOMAS J. DODD AT THE JEFFERSON-JACKSON DAY DINNER, MARCH 19, 1959, STATLER-HILTON HOTEL, HARTFORD, CONN.

I will be brief tonight because we all want to hear LYNDON JOHNSON. First of all, I wish to express my gratitude to Senator JOHNSON for making the sacrifice that he has had to make in order to be here with us tonight.

It is not an easy thing for the majority leader of the U.S. Senate, in the midst of a busy legislative week, to add extra hours to his day to help make this happy occasion for Connecticut Democrats a successful and memorable one.

ONE OF HISTORY'S GREAT SENATORS

This willingness to make an extra effort, this self-sacrifice for the good of our party, are two of the qualities that have made LYNDON JOHNSON one of the truly great Senators in American history.

I do not say this lightly. I believe that LYNDON JOHNSON is in the tradition of six or eight truly great Senators of American history. In recent years he has carried a burden that no other Senator has ever carried.

FACED WITH DANGER

In 1953 the Democratic Party was faced with a great danger. For the first time in 20 years we were without a President in the White House to give leadership and unity to our party.

We had lost a crucial election after a campaign against us that was marked by bitterness, slander, and misrepresentation. Many feared that we would reply in kind, following the doctrine of "an eye for an eye and a tooth for a tooth." Many feared that we would act in the spirit of blind opposition that so often characterized our opponents in previous years. Others feared that we would lapse into irresponsibility, drift, and sectional division. But none of this happened. And one of the main reasons it didn't happen is that we had a leader in the U.S. Senate who, through the tireless exercise of all the skills of political leadership welded our party together, chartered a course of progress and constructive action, and let us along the path of responsible opposition that put patriotism above partisanship.

SHOULDERS GREAT RESPONSIBILITY

LYNDON JOHNSON today is shouldering a greater responsibility than any legislative leader in our long history.

In a time of continuing national and international crises, we have a national administration that too often seems tired, weary, and unequal to the task. Therefore, more and more the mantle of leadership has fallen upon the majority leader in the Senate. And he is meeting this challenge with a masterful leadership that has no parallel in the annals of the Senate.

TIME FOR PROGRESS REPORT

This is the first time that Connecticut Democrats have gotten together at an occasion like this since shortly after our great election victory of last November.

You have all been following the remarkable performance which our party is making on the State scene. And tonight I would like to take a few minutes to make a report to you on how we are meeting our campaign promises on the national scene.

Normally at this stage of the legislative year, only 2 months since the opening of Congress, there is very little to report. Normally at this time of year no major bills have been acted upon. Normally legislation is still in the bill drafting stage, or in the committee stage.

But these are not normal times. Last year we promised the people of this country prompt and vigorous action on many fronts. How are we fulfilling that promise?

PROMISES AND PERFORMANCE

We said that we would pass a housing bill that would bring us much closer to our goal of a decent home for every American—and we have done it.

We said that we would move ahead in clearing away the Nation's slum areas and getting the urban renewal program in high gear—and we have done it.

We said that we would provide a system of airports and air facilities equal to our national need in this jet age—and we have done it.

We said that we would add another star to our flag, the bright star of Hawaii—and we have done it.

We said that we would carry forward programs of loans for needed economic development all over the world—and today we did it.

We said that we would lay before the American people the grim facts of our national military posture—and we are doing it.

We said that in vital matters of foreign policy we would stand shoulder to shoulder with the President of the United States and present a firm and united front against Communist tyranny—and we are doing it.

We said that we would put through a great nationwide program that would revitalize depressed areas and put regions of chronic unemployment back on their feet—and next Monday we are going to do it.

JUST THE BEGINNING

And this is just the beginning.

We are going to see to it that our military leaders have the weapons they need to protect our freedom.

We are going to pass a foreign aid bill that is worthy of a country of our wealth, our ideals, and our moral values.

We are going to pass a Federal aid to education bill that will take a giant step toward the kind of education that America needs if it is to preserve its world leadership in this space age.

We are going to pass a labor bill that will drive the racketeers and hoodlums out of the labor movement and help organized labor to be what the overwhelming majority of its leaders and members want it to be: Clean, dedicated, and progressive.

We are going to continue the progress in the field of civil rights that we started with the Civil Rights Act of 1957.

I say these things not out of vague hope, but out of confidence and conviction.

ON THE MARCH

The Democratic majority in the Senate and the House of Representatives is on the march, all along the line. We are determined to face up squarely to our Nation's problems and to meet them head on. We have the leadership, we have the will, and we have the votes to give the people of this country a record of achievement that will dwarf anything in its past history. And we are going to do it.

When I stand before you a year from now at our next Jefferson-Jackson Day dinner, I will be able to tell you that these things have been accomplished.

THE TASK AHEAD

I think that on an occasion like this we can be excused for a little pride in our own party, to which we have devoted a great portion of our lives. I think we can be excused for blowing our own horn a little tonight.

But tomorrow and in the weeks and months ahead let us all remember the great trust that is reposed in us, the great responsibilities we all share, the staggering burdens we must carry in our State, in our country, and in the world.

And, humbled by the dimension of this task, let us do the very best we can to write a record that will stand to our credit, and to our party's credit, in the history books of free men in distant generations.

This task is not a partisan one. Our goals have been shared by great leaders of both parties throughout our national history. And so it is not inappropriate on this celebration in honor of Jefferson and Jackson to quote the words of a great Republican President, Theodore Roosevelt, who spoke for today as for his own era when he said: "We see, across the dangers, the great future and we rejoice as a giant refreshed, as a strong man, girt for the race. The greatest victories are yet to be won, the greatest deeds yet to be done. * * * There are in store for our people, and for the causes we uphold, grander triumphs than have ever yet been scored."

So-Called Fair Trade Is Unconstitutional

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. ALGER. Mr. Speaker, the Fair Trade Act (H.R. 1253) violates free enterprise by limiting or eliminating competition. The manufacturer can set prices on the sale of his product by the retailer, providing that Congress sets aside the antitrust law. This in itself is strange since the purpose of antitrust law is to protect businesses and con-

sumers by preventing price conspiracies. Fair trade has been called unconstitutional by many States. Now the question facing Congress is the question brought up by fair trade. Can Congress constitutionally delegate power to private persons, granting to a certain class of citizens privileges not equally given to all citizens. The constitutionality of the act has never been squarely tested in the Supreme Court.

Maybe it is time we stopped letting the Court interpret and define our intent. Let us reaffirm our belief in free enterprise and antitrust protection—not accept price fixing and the planned economy of H.R. 1253, the so-called fair trade bill.

Address by Secretary of Agriculture Benson at Cornell University's Annual Farm and Home Week Meeting

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, March 25, 1959

Mr. KEATING. Mr. President, I have consistently supported proposals looking toward greater flexibility in Federal farm programs and toward greater freedom for our farmers. The people of this Nation look with more and more disfavor upon the huge cost of our present farm subsidy program. I am convinced that the farmers of America are as anxious as anyone to get the Government off their back and to operate in a free economy to the maximum extent possible.

Secretary Benson yesterday delivered a most timely address on farm problems at Cornell University's annual farm and home week meeting. I was particularly impressed by his reference to the results of a poll of farmers all across the land just completed by a national farm magazine. The results of this poll showed that 55 percent of our farm population want no supports, no controls, no floors, free market prices; get the Government clear out, while only 22 percent wanted more Government price help. These views should not be ignored by Congress in considering new farm legislation.

Mr. President, I ask unanimous consent that the text of Secretary Benson's excellent speech be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SECRETARY OF AGRICULTURE EZRA TAFT BENSON, ANNUAL MEETING FARM AND HOME WEEK, CORNELL UNIVERSITY, ITHACA, N.Y., MARCH 24, 1959

I feel most deeply honored and privileged to be with you again on the occasion of your farm and home week. And yet my job in being here is mingled with a certain regret. In extending his invitation Dean W. I. Myers reminded me that this would be the last farm and home program that he would plan as dean of the College of Agriculture here at Cornell. I am sure I speak for all of us when I say that the prospect of Dean Myers' retirement cannot help but fill us with a sense of impending loss.

He is truly one of the outstanding agricultural leaders in the history of this land. Nearly all of his life has been devoted to agriculture. He has been teacher, researcher, administrator, Government official, and adviser. But above all, he has been, and he is, a farm man, and a man loved and honored by farmers. Since 1953 Dean Myers had been chairman of the National Agricultural Advisory Commission, and I can personally testify that he has been a tower of strength standing for the best interests of American farmers.

I find it impossible to set down in words all that I would like to say about the devotion, the energy, the intelligence, the untiring zeal of this agricultural statesman in his service to agriculture—yes, and I find it equally impossible to express the gratitude, admiration, and affection which I personally have for him.

My hope, and I am sure your hope also, is that his retirement will not take him away from us but that it will free him for an even broader and equally fruitful service to the cause of American agriculture.

The last time I was here for your annual farm and home week was exactly 5 years ago today—March 24, 1954. What tremendous changes we have seen in these 5 years—what heavy problems have been faced by the Nation and the Nation's agriculture.

I can think of no better place to make a frank appraisal of our challenges and opportunities in agriculture than here on the campus of this great land-grant university from which so many distinguished leaders have come.

There are many approaches to most problems—but few solutions. Sometimes solutions can be reduced to a formula. Is there a formula which can help us solve our farm difficulties? I know this is an oversimplification, but someone recently suggested to me a broad formula which might be expressed like this: Necessity, plus sound economics, plus constructive politics, equals the solution to the farm problem.

Surely there is no question as to the necessity of a solution to the problem. It is no longer merely desirable, it is essential, to do something to reverse the mounting accumulations of farm surpluses of a few crops and the heavy costs which threaten our agriculture with creeping regimentation and contribute to a serious threat against the solvency of our Nation. Let me just give you some dramatic examples of three of the six so-called basic crops on which we urgently need fundamental changes in the old laws.

Wheat is our number one commodity problem. We cannot continue with the old outmoded wheat program as it now exists. Harvested wheat acreage has been cut by over 20 million acres since 1949—yet, under artificial pricing, combined with good weather, we now have by far the greatest wheat surplus in all history.

By July 1960 the carryover of wheat will be about 1½ billion bushels—enough to supply our normal domestic requirements for 2½ years. We will have $3½ billion tied up in wheat alone.

We have spread the wheat belt all over America. Wheat acreage has increased in areas of high cost, while acres have been cut back in areas where production is most efficient. This doesn't make sense.

Tobacco and peanuts are in trouble too. We have the best quality tobacco in the world, but we have been pricing ourselves out of export markets. The world's largest tobacco market used to be in Winston-Salem, N.C. Now it's in Southern Rhodesia in Africa.

Farmers are producing more peanuts than consumers will buy at the prices at which peanuts for food must be supported—note I said must be—under the old obsolete law still on the books.

Equally important, the farm program is costing too much—it is staggering—it is indefensible.

Our total investment in price supported commodities is now $9 billion. It will probably exceed $10 billion by the end of the next fiscal year.

It is estimated that during the next fiscal year we will spend more than $1 billion—one billion dollars—just for storage, transportation, and interest on these Government-held surpluses.

These are facts.

The commodities are there, the investment has been made. No matter how we later dispose of them, whether by sales for cash with an export subsidy, sale for foreign currencies, or by outright donation to needy people, the cost to the taxpayers will be great.

Can any economist or columnist, can any spokesman for agriculture, can any Member of Congress, can any farmer, or any other citizen, deny these facts? I leave the answer to you.

No thinking person can question the necessity for a solution.

Nor can anyone seriously doubt the need for sound economics. It would not seem appropriate for me, on this campus, to discuss the economics of the farm problem with you. You are aware of it, and further you have demonstrated not only an awareness but a determination to help resolve rather than compound the problem.

So we come to the political element. Since Government has assumed responsibility in the economic field of agriculture, the most baffling—and perhaps unfortunately the most powerful factor in this formula—is politics. Any Government is a political system.

It is apparently impossible for a Secretary of Agriculture to deal effectively with the present critical problems of agriculture always on the basis of just necessity or just economics—he must sometimes face up to the politics.

If we are to have sound farm programs, we must have sound politics accompanied by sound economics.

There is nothing disgraceful in the word politics or in the word politician. Politics is the art of government and good politics makes for good government. The very foundation of this Government was a document divinely inspired that was drafted and adroitly handled by politically educated men to become an instrument for freedom. What we must strive for in the political factor of the formula is to have political action governed by the economic facts. And this is where the failures have occurred.

I think it must be admitted that in the past there has been an overemphasis on political approaches to farm problems which are basically economic.

Agriculture must not be sacrificed on the political auction block. Agriculture is neither Republican nor Democrat. It is American.

Let us be candid. Both major parties share responsibility for the situation in which we now find ourselves. But more important is the responsibility for getting to the solution.

No one has more concern than I about the cost of these farm programs. This Secretary of Agriculture has been administering, and is still required to administer, within the straightjacket of outmoded laws the most costly, irrational, hodgepodge program ever patched together. It is the result of 25 years of political attempts to solve economic problems, seemingly with an assiduous determination to pretend that economics does not exist.

Do you think that as a farmer, the son of a farmer, yes, the grandson of a farmer, and

as a former county agent, and now as a spokesman for farmers, I enjoy for one minute the distinction of administering the third largest item in the Federal budget? Of course not.

But be assured, I would not hesitate to defend this program if it were serving the best interests of our farm families and the people of the Nation. The truth of the matter is that these stupendous surpluses and heavy costs are not only sapping the vitals of free agriculture, they are also a threat to the solvency of this Nation.

The Secretary of Agriculture is subject to many pressures and cross fires. Opposition to change—to sound economic solutions to economic problems—has been almost unbelievable. My opponents can't agree on a constructuve solution of the farm dilemma. Really, the only general agreement among my opponents is this: "Let's saddle Benson with all of the ills of agriculture, and especially with the cost of the mess we helped to make for him."

There seems never to be a lack of self-appointed so-called agricultural experts. Sometimes they seem to get away with their strategy of being against everything and everybody, while offering nothing positive or constructive as alternative.

It is this type of disservice to the American people, and particularly to the American farmer, that makes it most difficult to inject common sense into farm programs. This is destructive politics in action.

With smokescreens of distortions and half-truths, those who would shirk responsibility for obvious failures seek to obliterate the facts. But a rising crest of informed and aroused public opinion is beginning to penetrate the confusion.

Throughout this great Nation farmers and other thoughtful citizens know that obsolete farm laws, which produce chaos at great costs, must be changed.

Our farmers deserve sound programs. They have made an immeasurable contribution to our national standard of living—to the point that our people are the best fed, the best clothed, the best housed people in the world.

Our farmers face serious problems that are not of their own making.

Take the cost-price squeeze. Between 1939 and 1952 the index of prices paid by farmers, including interest and taxes, more than doubled. From 1952 to January 1959 the level rose only 4 percent. But the damage had already been done. This has created problems for our farmers that they are powerless to control. It has affected, and will continue to affect adversely, net farm income. I have the greatest sympathy for our farm people. I say we must assist them with sound programs.

If the voices of 20 million farm people in America could be crystallized into one voice, it would, I feel sure, demand more freedom for farmers.

That voice would say:

"Give us more freedom to plant so that we can run our farms efficiently.

"Give us more freedom to market so that we can increase our incomes.

"Give us more freedom to meet our competition so that we can expand our markets.

"Give us more freedom from Government interference so that we may again be independent and self-reliant."

Strong evidence that farmers increasingly want more freedom is found in the results of a poll of farmers all across the land which is just being announced.

One of the largest national farm magazines invited farmers to tell Congress what to do about price-support programs.

In replying to that poll, 55 percent voted for "no supports, no controls, no floors, free market prices; get the Government clear out."

This is a significant increase over the 50 percent who in a similar poll a year ago favored getting the Government out of farming.

Another 15 percent favored emergency supports only "to prevent disaster from a huge crop or sudden loss of markets; floors set at, say, 50 percent of parity, or 75 percent of the average 3-year market price and no production controls."

Another 8 percent wanted adjustment supports "such as 90 percent of the average 3-year market price, permitting gradual adjustment to normal markets and moderate production control when necessary to ease adjustments."

Only 22 percent wanted more Government price help. This breaks down into 14 percent who favor a return to supports at 90 percent of parity or more than 8 percent who asked for production payments.

This nationwide poll showed that 8 out of 10 of the farmers want greater freedom and less Government in farming.

Yes, the voice of the American farmer calls in louder and louder tones for more freedom to act, and less Government interference.

If this is what farmers want what are we waiting for, what is Congress waiting for? We've made our recommendations. Why don't they act?

Farmers recognize that the old basic crop legislation, still on the books, is outmoded and fails of its objective. It has placed ineffective bureaucratic controls on farmers, destroyed markets, piled up surpluses, and imposed heavy burdens on taxpayers. It does not fit the needs of our small farms comprising 56 percent of all our farms.

Despite our repeated recommendations over a period of years, the old program is still in effect on a very few crops with only slight changes. It's certainly not our program. Congress has never permitted our program to become effective. Our program has never really been tried. The present program was devised during the great depression and revised during war and recovery from war. Today we have neither depression nor war.

But we do have a rapidly changing dynamic agriculture, which is undergoing an irreversible, technological revolution. Our farm laws must be revised to cope with current conditions.

In January, the President again recommended to the Congress forthright changes in our farm price supports. He urged that price supports no longer be related to a standard 45 years old, but to a percentage of the average market price during the immediately preceding years.

If the Congress still prefers to keep existing parity standards, the President urged that the Secretary be given discretion to establish the support level for all commodities in accordance with guidelines fixed by law. This is now permitted for all of the 250 commercially produced commodities except for 16 for which supports are mandatory.

Either of these changes would be constructive. Under either course, the surplus could be reduced, the cost cut, production controls relaxed and markets developed. Our farm people could make more of their own decisions. The Government could resume its proper function of promoting farm research, expanding and developing markets, protecting soil and water resources, improving farm credit, and so on. We would help stabilize markets, not price ourselves out of them.

Congress recognized the need for farm program revision last year by passing the Agricultural Act of 1958. This act made some limited changes in the programs for corn, cotton, and rice. Now we need prompt and effective action in behalf of procedures of the other three basic crops, wheat, tobacco, and peanuts.

Wheat particularly is in an extremely critical position.

Either we must clamp down with more rigorous controls on wheat producers than we have ever had before—more controls than Congress has ever been willing to impose—or we must move toward market expansion and greater freedom to produce and compete.

More controls means stopping up the loopholes, increasing the penalty for overplanting, setting acreage and marketing quotas at levels that would balance supply and demand for wheat for dollars.

That is one approach—more controls—more regimentation.

Incidentally, if we followed the formula in the old law the national allotment for wheat this year would be zero, no wheat production at all.

A far better approach, I believe, would be to provide wheat growers with a program that moves toward freedom to produce and compete for markets.

The issue here is not a partisan one. The necessity cannot be denied. The economics is clear. Constructive politics can prevail. The issue is whether or not the Government's role with respect to agriculture is to be one that makes sense.

The American people deserve a program that makes sense. The poll I referred to shows that most of our farmers want it.

We must be on guard, however, lest the difficulties of the present program be used as an excuse to involve agriculture in something worse and in even greater trouble.

One bill now before the Congress is described as a measure under which "excessive and burdensome Federal control on agriculture will be eliminated, and under which American agriculture will be restricted to a free enterprise basis."

The words in this Talmadge-Brannan approach are appealing, but the reality is appalling.

This bill would provide for production payments on the basic crops.

In view of the facts available and the studies that have been made, I cannot see how such a plan can seriously be advocated unless as a political gimmick that might last for another election.

Studies by career economists show the production payment program could cost annually about $5.4 billion, for payments for the basic commodities alone. If expanded to all the major commodities, the cost would be well above $10 billion a year.

Congress refused to adopt such a program when submitted by my predecessor, Secretary Brannan. The scheme would:

1. Require drastic controls of production to keep costs within reason.

2. Limit opportunity of new farmers to enter into the production of these crops.

3. Unless extended to livestock (which would boost the cost even higher) it could create extremely serious problems for livestock, poultry, and dairy producers.

4. It would lead to international repercussions if U.S. surpluses were dumped on world markets.

5. Most fundamental of all, it would make farmers dependent for much of their income on direct payments from the Federal Treasury.

This would be a long step toward a fully socialized agriculture.

All this is not only the farmers' battle for realistic farm programs. It is the battle of every citizen—every businessman, every taxpayer, every housewife, every consumer, every person interested in the future of this country.

Our present costly farm programs contribute to unbalancing the budget—and this contributes to the threat of inflation. That is of utmost concern to every citizen. No Nation can go on indefinitely living beyond its income and cheapening the value of its currency.

I am intensely concerned about this. The course of inflation is subtle. Its ends are destructive. It mounts quietly, almost un-

seen in the short-term view, but it is utterly devastating over time.

The President has called for tight reins on Government spending, and for a balanced budget. He has called upon all of us, as citizens, for self-discipline in our economic actions, both as individuals and as groups. Government alone cannot win the battle against inflation. To win it—and we must win it—will require the united efforts of the American people, business, labor, banking, agriculture, and all economic groups.

Our expanding Federal Government has boosted the average family's tax bill from $120 to $1,600 a year. How much further can we go in this direction?

Many pressures are now being exerted to add more billions to Federal spending in the coming fiscal year, and beyond, billions that can bring on further deficits and inflation.

Contrary to what some people would have us believe, the Federal Treasury is not a bottomless grab bag which never needs to be conserved or replenished. To act as though there is no limit to what the Treasury can spend is an open road to the destruction of private enterprise, and its replacement by a socialistic economy.

I am firmly convinced that most Americans would never turn willingly to socialism. But a great many may unknowingly be led down that road by the lure of Government handouts, of deficit spending, of inflation, to the point where private enterprise is destroyed.

We cannot spend ourselves into prosperity. Nor can we preserve our prosperity and our free enterprise system by following a reckless policy of spending beyond our income in peacetime.

We must have a tax policy which is not confiscatory and a budget policy which prevents inflation. The Nation must have sound farm programs—just as it must have sound banking and finance—and sound wage and price policies.

The necessity for further revision of our farm programs is obvious. The direction in which we should go is clear. The economics of the farm problem are simple.

We need less Government in farming. Quit trying to fix prices unrealistically from which flow the twin evils of production for Government warehouses and Government control of farmers. Emphasize markets, increased efficiency, and competitive selling. Eliminate Government's stranglehold on agriculture.

This is the solution.

Congress must not postpone longer the action needed. The existing, outmoded farm laws must be changed. Until Congress acts, agriculture will be burdened with too much Government, too much politics, and too little commonsense.

The days ahead for America are sobering and challenging. They will demand the faith, prayers, and loyalty of every one of us. Our challenge is to keep this Nation strong—strong economically, strong socially, and above all, spiritually strong—if our way of life is to endure. There is no other way. Only in this course is there safety for our Nation. God grant that we may meet the challenge.

Fair Trade Will Bankrupt Those It Should Help

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. ALGER. Mr. Speaker, in 1906 the United States brought a civil action to enjoin the National Association of Retail Druggists from conspiring to control the marketing of drugs and proprietary medicines by fixing prices and by blacklisting price cutters. In 1907 this case was ended by consent decree enjoining the further operation of the combination.

Today, the druggists' Washington lobbyists are still at it. I cannot believe the druggists back home understand what is being asked in their name.

Fair Trade (H.R. 1253), we are told, is their legislative need; that Congress must set aside the antitrust protection for businessmen and consumers alike and permit manufacturers to set retail prices by decree, regardless of a free market economy.

All right, forget the consumer. How about the retail druggists or other retailers? This fair trade law supposedly to help and protect them will bankrupt them. How? By holding an umbrella over the big stores, chains, and department stores who can handle their own brand or trademarked items. While the small retailer must sell at the manufacturers' stipulated prices, the big stores can undercut them, free to price as they please.

A further irony, the manufacturer, after setting the price of his trademarked item, can even make the same product for the big merchant who can set his own price below the manufacturer's comparable trademarked item. Of course, at the outset, the manufacturer will do fine; he is protected either way. And the small retailer? He will go broke. The fair trade law would prevent his setting his own prices to protect himself.

Action, Not Talk, in Education

EXTENSION OF REMARKS
OF
HON. WILLIAM J. RANDALL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. RANDALL. Mr. Speaker, we here in America hear a lot to the effect that there is not enough money appropriated for, nor enough emphasis placed upon the education of our youth. There results charges and countercharges being thrown back and forth much like a tennis ball being batted back and forth between two tennis players. Whether these differences in viewpoints will be resolved in this or a subsequent session of this Congress, and whether or not the facts will be so conclusively established that there may come to pass some Federal assistance to the schools of our country without restrictive punitive provisions, no one can foretell. Notwithstanding, there is a sidelight to this whole matter of youth education which came to my attention in the city of St. Louis on Saturday, March 21, 1959, which I think is worth making known by an entry in the CONGRESSIONAL RECORD.

There in St. Louis at a regional conference of delegates of the United Steel Workers of America, involving several States, I witnessed the award of several scholarships by that organization which to me was both a refreshing and a delightful experience.

For the reason that I had not theretofore known of the existence of these scholarships provided by these trade unions and for the further reason I am of the belief there may be many others not advised of this effort by trade unions to make a separate and additional contribution over and above their other well-known efforts in the field of education, I thought it would not be anything but appropriate that the following observation be entered, describing what I saw and heard, and to provide you with a few of the details that may be interesting concerning the plan and its operation as follows:

It is generally recognized that America's trade unions have been in the forefront of efforts to establish and strengthen universal free public education for our children. But not too generally known is the fact that most legitimate trade unions today express a continuing interest in the education of our youth beyond the high school.

A good example of how labor groups help in a meaningful and effective way in the education of our children can be found in the Kansas City area which counts among its residents a substantial number of members affiliated with district 34, United Steelworkers of America, AFL–CIO. This union, for 11 years now, has been making available to the high school graduates of steelworker families an annual scholarship which enables a student to complete 4 years of college or university training. Two such awards in this district are offered every year and the value of these scholarships has just recently been raised to $4,000 for each recipient.

This is not a narrow, highly restricted award. Winners are chosen by an impartial panel of educators from a prominent university on the basis of a competitive examination. Those given the scholarship are free to pursue higher education in any accredited college or university of their own choosing. Furthermore, they are free to select a course of study leading to a bachelors degree in whatever field they desire.

One of the two awards given by this union in 1959 is going to Gary Paul Agin, the 18-year-old son of Mr. and Mrs. George Agin, 6642 Indiana Avenue, Kansas City, Mo., whose score in the examination was among the upper half of 1 percent of all recent college entrants. Young Agin became eligible to compete for the scholarship because his father is employed at the Sheffield Steel Co. in Kansas City and he has been a member of local 13 of this union for the past 22 years.

Indicative of the scholastic aptitude of this young man is the fact that he has an enviable record of achievement as a student at the Southeast High School in Kansas City, Mo. He is a member of the National Beta Club, a national honor society organization, and was a finalist in the national merit scholarship competition. Additionally, Mr. Agin is the editor in chief of his high school annual yearbook "The Crusader." He has also served as president

of the high school debating club and in his junior year at this school was the winner of a University of Washington achievement award. This youngster's interest in worthwhile things extends beyond the school and into the community. He is a junior deacon in the Central Christian Church of Kansas City and a cochairman of the Teen Town Committee, a young people's organization devoted to teenage social activities.

Now that this promising young man has the resources to continue his education he is planning to attend the University of Kansas and major in engineering physics. While the parents of this student would have made any and every sacrifice to secure for their boy a good education, they are doubtful that this would have been possible without the substantial help provided by this generous scholarship. It is a fact that the great majority of those receiving this award would have been unable to continue their education without the financial help accompanying the award.

This is a fine example of labor's deep and abiding interest in the educational welfare of our children, but it is not at all unique. Similar scholarships are offered to high school students in almost every other district subdivision of the union. Moreover, hundreds of smaller but equally important scholarships are provided by local union affiliates of the United Steelworkers of America. Together, these contributions toward the education of our youth represent a very significant and noteworthy step toward the growth and development of our future citizens.

Byelorussian Independence Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. MULTER. Mr. Speaker, the Byelorussians are one of the lesser known Slavic peoples.

This is partly because they have been intermingled with more numerous and powerful other Slavic peoples, and partly because they have been subjected to the oppressive rule of others. For centuries Russians have done all in their power to assimilate them, and have tried to represent them to the world as Russians. But history shows that the Byelorussians—the White Russians, or Ruthenians, as they are sometimes called—formed a distinct national group in their homeland, east of Poland and west of Moscow, long before the formation of the modern Russian State. Since that event, early in modern times, Byelorussia became part of the Russian Empire.

Czarist Russian rule did not eliminate the Byelorussians as an ethnic group. The more they were oppressed by their Russian masters, the more Byelorussians clung to their ethnic and national ideals, and longed for the day of their independence. This came about in 1918, when the Czarist regime was overthrown. On March 25 of that year the Byelorussian National Republic was proclaimed, with its capital in the historic city of Minsk. Soon it was recognized by the governments of many countries, and it looked as if the new state was to attain sovereignty in historic Byelorussia. Unfortunately the independence thus proclaimed did not last long. Russian Communists attacked and overran it, and in March 1921, Byelorussian independence vanished. Since then some 10 million Byelorussians are living under the oppressive Soviet regime. But they have not abandoned their ultimate goal for freedom and independence. There in their homeland, while working hard under the unfree and almost inhuman Soviet system, they ardently look to the day of their liberation and freedom.

On this 41st anniversary of their independence day, let us all hope for the freedom of Byelorussia and its liberty-loving people.

Byelorussian Independence Day

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. RODINO. Mr. Speaker, Byelorussia's modern history is overshadowed by Russian history, because during most of that period the country had become part of Russia, and the Russians have tried to eradicate all Byelorussian traditions and national traits there. But the Byelorussian people, who have had a longer history as a nation than the Russians themselves, were never willing to forego and forget their distinct identity, and they have always wanted to regain their freedom and independence. They had that opportunity in 1918.

In that year, when the detested Czarist regime was no more, and the new Communist regime in Russia was still in its infancy, the Byelorussians regained their freedom and proclaimed the establishmentof the Byelorussian National Republic on March 25, 41 years ago. Then it was hoped that some 10 million Byelorussians, having become sovereign in their historic homeland, would enjoy the fruits of freedom in peace. Unfortunately that was not to be. Early in 1921, before Byelorussians had the chance to consolidate and strengthen their government, Soviet forces attacked and overran the country, and Byelorussia as an independent nation vanished. Since then, for more than four decades these liberty-loving and sturdy Byelorussians are living under the unrelenting rule of Communist Russians. But they have not given up their hope for freedom and independence. They still cherish that noble ideal, and on this 41st anniversary of their independence day, I wish them strength and fortitude in their moral and physical struggle.

A Permanent United Nations Police Force

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, March 25, 1959

Mr. JAVITS. Mr. President, on August 8, 1957, the Senate adopted Senate Resolution 15 expressing the sense of this body in favor of the creation of a permanent United Nations police force. Such a permanent U.N. police force has long been the dream of those who seek to firmly maintain the peace.

At the ninth annual conference of national organizations called by the American Associations for the United Nations, on March 10, my distinguished colleague [Mr. KEATING] delivered a significant address on the need for a permanent U.N. police force.

I ask unanimous consent that my colleague's address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A PERMANENT U.N. POLICE FORCE

The United Nations, now in its 13th year of existence, continues to be the most effective organization yet devised by man for the maintenance of peace.

The founders of the United Nations hoped that the harsh lesson of World War II would long discourage threats to the tranquility of the world. Sorrowfully, it must be recognized that these hopes were in vain. For while the United Nations has served us well, it has not yet succeeded in completely stamping out the lurking dangers and outbreaks of hostilities.

This organization for peace has accomplished much good, but it must be made to function even better.

One essential step in the process of making the United Nations stronger is the creation of a United Nations police force.

I need hardly remind this audience that the idea of an international police force is not new. It was incorporated into the covenant of the League of Nations. The United Nations charter specifically provides for U.N. armed forces operating under the Security Council and a military staff. Unfortunately, little has been done to implement these provisions.

The principal obstacle to constructive action on this subject, as on so many others, has been the intransigence of the Soviet Union. Last October its delegate to the United Nations announced that any move by the General Assembly to establish a peace force would be illegal and unacceptable. This attitude emphasizes the fundamental division within the United Nations between those nations which desire a stable international order and those which are determined to undermine the peace of the world community by their aggressive actions.

The United States has repeatedly demonstrated its willingness to participate in an international army for peace. The President in addressing the General Assembly last August urged action by the Assembly looking toward the creation of a standby United Nations peace force. And Secretary Dulles has since suggested positive steps for carrying out this plan.

Under the Secretary's proposal, a small planning staff would be created within the Secretariat to develop standby plans for calling into being, deploying and supporting

such a peace force. This planning staff would develop concrete arrangements to facilitate any United Nations decisions to employ its force. These arrangements would be designed to enable the United Nations effectively to meet any crisis with a minimum of delay.

The Congress of the United States also is on record as approving in principle the creation of a peace force. In the last session, a concurrent resolution was adopted expressing the sense of the Congress that consideration should immediately be given by the United Nations to the development, within its permanent structure, of such organizations and procedures as would enable it promptly to employ suitable U.N. forces for such purposes as observation and patrol in situations that threatened international peace and security. I strongly endorsed this resolution as a demonstration of this Nation's willingness to explore all means for preserving world peace, and I am happy to note that it won overwhelming support in both Houses.

The operations and experience of the United Nations Emergency Force in the Gaza Strip demonstrates the purpose a peace force can serve. It also demonstrates the many problems involved in any such undertaking. The Secretary General's excellent report to the General Assembly on the operations of UNEF gives us a significant case history of the use of such a force from which many guiding principles can be derived.

I find myself in disagreement, however, with the conclusion of the Secretary General that the nature of the actual organization required should not be anticipated in advance. In my opinion, the effectiveness of such a force would be enhanced by its establishment on an ever-ready, permanent basis. This is the only way to guarantee its immediate availability in the event of a crisis.

The force must be operated at all times under the strict and direct control of the United Nations. But we cannot afford the delay which would result from bringing it into being only after the outbreak of hostilities and the resolution of all political decisions.

The recent situation in the Near East demmonstrated the tremendous need for a permanent peace force ready to move into action instantly at the request of a member government threatened by outside aggression.

In a world contracted by speedy communications, in a world in which even the smallest nations possess the terribly destructive weapons of modern war, any international disturbance—however localized—can spread like a plague and present an immediate threat to world stability. The only feasible answer to this challenge to the peace of the world is to provide a U.N. force capable of so spreading a U.N. mantle over an embattled state as to inhibit—if not directly to prevent—a coup d'etat, infiltration by indirect aggression, or other untoward pressures from outside the nation, such as we witnessed in the Near East.

A United Nations police force need not be a huge, all-powerful army. It might not number more than 50,000 or 60,000. It might perhaps be found best to establish a firm nucleus at all times centered under one command, with other forces in the individual countries, available upon call.

It is my firm conviction that the smaller nations of the world must form the backbone of any international force. This will prevent the bigger powers running the risk of being dragged into a nuclear conflict which could doom all mankind.

Such an international policy army could not—and should not—fight wars. But a permanent U.N. police force can serve as an effective deterrent to hostilities, could be a focus for the moral opinion of the world, and could serve numerous practical uses in observation, patrol, and guard duty between potentially hostile states. As the Secretary of State pointed out in his address to the General Assembly, "its very presence (would) make visible the interest of the world community in the maintenance of tranquillity."

The possibility of establishing an international police force is a particularly pertinent and timely topic for the troubled times in which we live. Perhaps never before in the history of the world has there been greater need for calm, objective, and broad-minded thought on this possible avenue for helping to achieve a more just and secure international order. We must search with imagination and foresight for the answers to the enigmas of world peace. Today we show too little of either quality—at a time when we stand in desperate need of both.

The time is running short. Each new crisis brings us closer to the potential horrors of a World War III. The next international brush fire may set off that worldwide conflagration if the nations of the world do not rise to the occasion.

A permanent United Nations police force provides a new, decisive means by which the nations of the world which sincerely believe in peace can provide the machinery to quarantine regional conflicts and thus better insure their solution. I urge this great organization, which is dedicated to the strengthening of the United Nations, to work for this goal. It is one of the strong, sure ways of making the United Nations the instrument for peace which all men of good will hope and pray it will become.

The Challenge of the Soviet Economic Offensive

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, March 25, 1959

Mr. HUMPHREY. Mr. President, on February 12 it was my priviledge to address the Economic Club of Southwestern Michigan in St. Joseph, Mich. The theme of my address was "The Challenge of the Soviet Economic Offensive."

I ask unanimous consent that this address be printed in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CHALLENGE OF THE SOVIET ECONOMIC OFFENSIVE

Today the world is confronted by a profound crisis, a crisis in which the cherished values of western civilization are challenged as never before.

We hear the word "crisis" repeated again and again in the screaming headlines about Berlin, Iraq, or the Formosan Strait so that we become numb and forget its deeper meaning.

It is perfectly true that there are many crises, but underlying all these specific challenges is a fundemental crisis. Some historians and philosophers have said that our generation is confronted with the greatest crisis of modern times.

The profound and many-sided world crisis is the result of three dynamic and interrelated realities, each of which is pregnant with dangers and opportunities—the challenge of modern technology, the challenge of the revolution of rising expectations, and the challenge of communism itself.

1. The fantastic progress in technological development has put mankind within reach of one of his greatest goals, the elimination of poverty. But this same technology ironically may be mankind's undoing. I need not remind an audience like this of the potential destructiveness of modern terror weapons made possible by new energy and means of transporting energy discovered by science. We should not blame science, but recognize that science is neither a savior nor a demon, but a source of power which can be used for good or ill. The basic problem is political and moral, not technical.

2. We have heard a great deal of the revolution of rising expectations in the economically less developed and politically noncommitted countries of Asia and Africa. The destiny of these people who are striving for or celebrating their independence may determine the destiny of the world within the next generation or two. Not everyone in the free world has grasped the political and moral significance of the ferment in these vast areas, but we can be sure the leaders of the Soviet Union have.

3. The third massive reality is the Communist challenge itself. Modern technology and the upheaval in Asia and Africa would themselves be sufficient cause for a world crisis. But the crisis is compounded by the existence of an aggressive and expansive political religion whose ultimate goal is world conquest. The high priests of world communism prefer to attain their goals without nuclear war if possible. But they have not ruled out either limited or total war if that seems necessary or expedient.

We make a great mistake, perhaps a fatal mistake, if we think of the Communist challenge as exclusively a military challenge, or even primarily a military threat. The challenge of communism is military to be sure, but it is also economic, ideological, political, and, in its deepest sense, it is religious. I say it is religious because the distorted Communist view of man and the world challenges the fundamental precepts of our Judeo-Christian value system.

THE EXPANDING SOVIET ECONOMY

Today I want to confine my remarks to the Soviet economic offensive. But I want to do this within the framework of the many-faceted Communist challenge and the larger world crisis.

It is one of the great ironies of American history that today we are being given a run for our money by the expanding and dynamic economy of a country which only a few short years ago we thought of as backward. This is a spectacle as humorous as the fabled tortoise and hare. Before sputnik streaked across the heaven, we assumed that we were the biggest, the fastest growing, and strongest economy in the history of mankind. And we were. We became smug and complacent. We refused to believe in increasing signs of growth in Soviet technology and productive capacity. The hare would win the race, paws down. We could stop for a short siesta under a sycamore tree and the poor tortoise, weighted down by the hard shell of socialistic controls, would not have a chance.

But while we slept the turtle plodded on, unnoticed and unobserved. Then came Sputnik I and subsequent achievements which proved beyond a shadow of doubt that the U.S.S.R. had made giant technological and economic strides. We were shocked. We were momentarily stunned. But we still did not awaken to the full reality. It was since sputnik that we allowed ourselves the luxury of a recession, and today we are still not out of the woods.

Alas, the race is no longer a race between a tortoise and a hare, but between two hares. But because of our hurt pride, our lack of a sense of urgency, and our deficit in leadership, we are still not running scared.

I would like to put a few facts on the record which if understood and taken to

heart, will help us to run scared. By scared I mean properly afraid, and determined, not hysterical. Here are the facts:

1. We have consistently underrated Soviet economic and industrial achievements. We have underrated their progress in atomic energy, missiles, aircraft production, and even in some areas of consumer production. The sputniks and lunik should have shattered our rose-colored glasses, but even now there are people in Washington who calmly tell us that we are ahead in nuclear energy and the missile race. The Secretary of Defense has himself issued smooth and reassuring words to the American people, words which were characterized by one of our most respected columnists (Joseph Alsop) as "soothing sirup."

Now it's true that the laymen, and this includes most Members of Congress, do not know exactly where we stand in relation to the Soviet Union, in spite of congressional hearings to determine just that. Sometimes the experts disagree. But isn't it the better part of wisdom and valor to overestimate Soviet economic and military strength than to underestimate it? Wouldn't it have been better if the democratic nations would have slightly overestimated Hitler than vastly to underrate him?

2. The Soviet economy is growing at about three times the rate of the U.S. economy. Although accurate statistics are hard to come by most economists believe that the Soviet economy is expanding at a rate of between 6 and 8 percent a year. In contrast the American economy at present is growing at a rate of less than 2 percent. Since 1900 our economy, our gross national product (GNP) has grown at an average rate of 3 percent annually. From 1945 to 1952 it expanded at a rate of 5 percent. Since 1953 the rate has been about 2 percent.

Of course, the Soviet economy is not as big as ours. But the fable of the tortoise and hare is appropriate here too. While the hare takes it easy and permits himself the luxuries of needless recessions, the tortoise transforms himself into a hare. Economists tell me that for a short time last year the combined steel production of the U.S.S.R. and Red China exceeded the steel production of the mighty United States. This fact alone should make us run scared.

3. The Soviet Union manages its economy to serve national goals. The leaders in the Kremlin can slice the national income pie any way they wish, within the limits of endurance set by the long suffering Soviet people. This gives them a great advantage. They can plow back into the economy the capital necessary to guarantee the maximum economic development consistent with domestic and foreign policy objectives. They can channel scarce resources into high priority enterprises such as nuclear energy, missiles, steel, and certain industries producing items for export. They can curb consumer demand by promising better food and larger apartments in the near future. They can get their people to produce guns with the promise that by the end of the present 7-year plan they will be producing both guns and butter.

A good share of the Premier's 8-hour speech at the recent party congress in Moscow was devoted to explaining the goals of the 7-year plan. The overarching goal, he said, was to outproduce the United States of America in the 1970's.

"How," you may ask, "has a totally and centrally planned economy been able to do so much? How could they have gotten where they are without the natural incentives of profit and reward in a free enterprise system like ours in America."

The answer is that years ago the Soviet leaders departed from the orthodox doctrines of Marxism, and copied incentive and productivity ideas from the system they decried.

The Soviet Union does not really practice socialism or communism, but rather a system of state capitalism. The Red Chinese in their communes may not yet have learned this lesson.

THE SOVIET INTERNATIONAL ECONOMIC OFFENSIVE

We have referred to Soviet economic strength and the capacity of Soviet leaders to make the economy serve political purposes. Now let us turn specifically to the Communist international economic offensive in the areas of trade, aid, and investment.

1. The trade offensive: Today there are Soviet trade missions in many capitals of the world, including the capitals of some countries which have never had any trade with the Soviet Union. These missions are quietly negotiating commercial trade agreements. The Soviet Union has surpluses with which to bargain. Even though Russia is still poverty stricken as far as consumer goods are concerned, she is willing to compete in the world market.

Recently I heard a startling story about a Boston importer who purchased some sample microscopes for high school and college use from the Soviet Union. They cost roughly one-fourth of what similar instruments in the United States cost and they were of a superior quality. Perhaps the U.S.S.R. was dumping them; that is, selling them at less than cost. Whether she was dumping them or selling them at an honest price, the problem is serious. We are presented a tremendous challenge from a backward country. Only a few years ago one of America's top Russian experts said that the Soviet Union could not even mass produce bicycles. She has not only mass produced bicycles, and microscopes, but MIG jets, bombers, and perhaps she is now mass producing ICBM's.

We can expect the Soviet trade offensive to increase in tempo and volume in the months and years ahead.

2. The aid and investment offensive: The Soviet Union is an Ivan-come-lately to foreign economic aid. The United States blazed the trail with the mighty Marshall plan and subsequent programs of aid. And yet in this field in which we were pioneers we are being severely challenged. At the very time when many Americans are confused and unconvinced, when the very basis of economic aid is being challenged, the Soviet Union, according to all reports, is winning friends and influencing people through its aid offensive.

Apparently convinced that you "can't buy friends," the U.S.S.R. during the past 3 years has concentrated on capital investment as its major form of foreign aid. She has offered long-term, low-interest loans to the countries of the Middle East and Asia. There are extensive Soviet economic aid projects in the United Arab Republic and in seven south Asian countries—India, Burma, Afghanistan, Ceylon, Indonesia, Nepal, and Cambodia. The Soviets are helping to build a steel mill in India, bridges in Egypt, a cement plant in Afghanistan, a sugar factory in Ceylon, a tire factory in Indonesia and a hundred other projects designed to raise the living standards of these underdeveloped areas. In the past 3 years the Soviet Union has extended more than $1.5 billion in credits. Recently Mr. Khrushchev offered President Nasser aid to build the high dam across the Nile—the same type of aid which Mr. Dulles abruptly withdrew in 1955 and which many observers believe forced Nasser to seize the Suez canal.

The Soviet Union offers its development credits, and the necessary technicians, she claims, without political strings attached. The offer is attractive, and we cannot blame underdeveloped countries for accepting it. In their great desire for economic development, they are reluctant to see the possible political implications of such generously offered help. At the beginning of the Soviet program her interest rates were better than needy countries could get elsewhere. And there were no explicit political strings attached. Further, the Soviet Union seemed to demonstrate with her sputniks that she could make as much technical progress in 30 years as the United States did in 100 years. Some of the people in these areas seem to prefer ruble diplomacy to dollar diplomacy.

The argument that a centrally planned, designed and controlled economy is inevitably and inexorably more powerful and productive than a free economy appeals to peoples who desire economic development, and who have no experience with the political restrictions which go along with Soviet-style planning. Regrettably, the Communist model is appealing. The fear of ideological and political penetration is not real enough to offset the economic appeal. We must do more—and we can.

WE MUST STRENGTHEN THE AMERICAN ECONOMY

These sketchy facts about the strength and growth of the Soviet economy and the success the Soviets have had in using trade and aid as instruments of their international objectives should help us to run scared. But I am afraid that many of us know the facts without really understanding them. We need a new sense of urgency if we are to accept the economic challenge of the Soviet Union to our domestic economy, and to our international economic objectives.

First, let me suggest how we can and indeed must strengthen our domestic economy if we are to meet the challenge successfully.

Our problem is not primarily an economic problem, but a political problem and a moral problem. The economists may not always agree, but in general they know how to increase productivity. The problem is whether we really want our economy to expand, and whether we are willing to take the risks involved.

To oversimplify the issue, and to make comparisons, there are two competing philosophies about our national economy.

The one I would call George Humphreyism—this philosophy holds that the greatest danger to the United States is inflation, perhaps a greater danger than the threat of communism itself. We must at all cost, according to the former Secretary of the Treasury, prevent inflation, even if it means cutting back in our rate of growth, even if it means 4 or 5 million men unemployed and many others underemployed, even if it means that our industrial plants are working only to 75 or 80 percent capacity, even if it means a recession such as the one we recently went through. Unemployment and underproduction are preferable to full employment and high production, according to this theory, because this is the only way to prevent inflation.

Now, we are all opposed to inflation—either of the galloping or creeping variety. I think it is significant that in the past few years, while our economy has remained stagnant, prices have literally soared. The answer to price stability does not lie in economic lag. Growth in the economy is not only desirable and necessary, but consistent with a price stabilization program. Here are some of the things we must consider:

First, and most obvious, the U.S. population is growing by 3 million persons a year, and with our present lag in productivity we can hardly stay where we are.

Second, if we are really going to take the Soviet economic offensive seriously, we must have sufficient production to keep up with her—militarily, scientifically, and every other way.

The President's budget and budget message were obviously influenced by George Humphreyism. I hope that the Democratic Congress will be instructed by a more dynamic and imaginative philosophy—a philosophy which believes in the capacity of a

free economy to be productive without being inflationary.

TOWARD A DYNAMIC ECONOMIC OFFENSIVE

In the area of foreign economic policy the administration, partly in response to the Soviet challenge, is taking some steps in the right direction, but the escalator of history may be moving more rapidly in the other direction. We should build a stronger economy at home in order to do what necessity and prudence demand abroad. Our highly productive economy, even in its present less-than-dynamic state, makes it possible for us to do more than the administration wants us to do. Our position of leadership of the free world places upon us a moral responsibility commensurate with our power and wealth.

I would like to suggest a three-point program for strengthening our present economic offensive in the world, a program designed to do what we are best qualified to do.

1. Increase the flow of trade with other countries: Most economists agree that the free world would be strengthened by the lowering of trade barriers among nations. They also believe that the U.S. economy as a whole will benefit from freer trade, although they know that some industries will suffer. But as Adlai Stevenson once put it: "We shall have to make the choice between relatively minor adjustments caused by increased imports or major adjustments caused by decreased exports."

The United States is a wealthy Nation. With only 6 percent of the world's population, she produces over 40 percent of the world's goods and services. Yet our country is dependent on imports from all over the world. If these imports were to be completely cut off, our daily life would change drastically until adequate substitute for vital imports could be found. Our automobiles, telephones, radios, television sets, and a hundred other modern necessities would become useless when parts depending on imports would wear out. We would be threatened with mass unemployment. And our defense program would collapse.

Every automobile needs 38 essential materials which are largely imported. Forty-eight imported products go into every telephone. Not a single pound of steel can be made without manganese; nine-tenths of our supply of this vital ore is imported. We import all of our chromium and tin, ninety-nine percent of our nickel, 65 percent of our bauxite (essential to making aluminum) 42 percent of our copper, and so on.

On the average day about 418,000 tons of imports, worth $42 million, arrive at American ports. Only about one-eighth of these imports are finished manufactured products which can compete with American made goods. At the present time our annual imports total more than $11 billion.

Other countries need our products and we need theirs. We need to export in order to buy the necessary imports for our own economic health. A substantial loss of foreign markets could damage our entire economy. The United States cannot export unless other countries have dollars to buy our products. To get dollars they must sell to us. Trade is a two-way street. If the traffic slows down on one side of the street, it will have to slow down on the other. A balanced and high-level flow of world trade makes for worldwide economic health. The interdependence of nations is nowhere more clearly apparent than in the economic realm.

This is not the place to discuss the technical details and procedures for increasing trade. I merely want to make the point that we must seize every opportunity to move toward this desirable goal, and to take appropriate governmental action to help those industries which may suffer undue hardship, because of increased imports.

I might say in passing that I believe international trade should not be restricted to the nations of the free world. I favor certain types of trade with the Communist bloc. This will, of course, have to be undertaken with proper regard for legitimate security considerations.

2. Utilizing our agricultural abundance: One of the most vexing problems facing our country is the so-called agricultural surpluses resulting from over abundance. This is a serious domestic problem which has far-reaching international implications. It is clearly to the advantage of the United States to use stored-up food and fiber before it becomes worthless. If we simply give it away to needy countries without regard for normal marketings or opportunities to benefit the recipient country as well as ourselves, we run the risk of upsetting world market prices which may result in injury to the economies of other nations. Even if we sell our farm surpluses at the world market price, and advance credit to purchase them, we will be competing with other countries whose need for export may be greater than ours—unless we find and use economic tools for converting our food to useful purposes, that save, rather than detract from, our basic foreign policy objectives.

There is no easy solution to this complex problem. We always have to ask ourselves three questions: What is good for the American farmer? What is good for the U.S. economy? What will best serve our goals of helping to strengthen our free world allies and the uncommitted nations?

In answering these questions wise statesmenship must make difficult and discriminating decisions which honor the legitimate claims of each competing interest.

I believe a way out can be found. I believe the utilization program under Public Law 480 can and should be extended and enlarged so that our farm abundance can serve the needy overseas without hurting our closest allies. I will support efforts in this direction. I regret to say that the administration plans to spend $14 million less under Public Law 480 for fiscal 1960 than is being spent during the current year.

3. A 5-year development loan program: In the foreign-aid picture I have supported the Marshall plan, the point 4 program of technical assistance and direct grants for economic and military aid. I have supported U.S. participation in the technical-assistance programs of the United Nations. I think each form of assistance has a proper role to play. I would support an expanded program of technical aid under the point 4 program. But I am firmly convinced that the greatest opportunity for achieving substantial economic development in the politically uncommitted areas lies in a greatly expanded capital loan program.

In the 19th century the London capital market provided vast sums of money for the development of economically backward countries, including the United States. Today, the United States is the largest single source of capital, and yet the proportion of our gross national product going into development abroad is far smaller than that of Great Britain a hundred years ago.

In the spring of 1957, when congressional support for foreign aid was at its lowest ebb, up to that time, three distinguished research agencies recommended that the United States put foreign aid on a long-term basis of perhaps 20 or 30 years and that our Government appropriate the $2 billion a year for economic development. (The three research agencies were the Committee for Economic Development, a business-sponsored organization; the University of Chicago Research Center in Economic Development and Cultural Change; and the Center for International Studies at MIT.)

This recommendation for a greatly increased air program was not a harebrained scheme, but the product of some of the finest scholars in the country—men who know the capacity of the American economy and the requirements of leadership in a world threatened by communism. And, I might add, men who represent the finest humanitarian traditions of America.

With this type of backing, I do not hesitate to propose a $10 billion development loan program over a 5-year period. We spend $50 billion a year on defense and perhaps even this is not enough. Can we not invest 5 percent of this amount in the future of Asia and Africa? I believe we can. I believe we should.

I believe the program should consist largely in long-term, low-interest loans which can compete effectively with what the Soviets are doing. I believe that the projects for which loans are provided should be thoroughly appraised by competent specialists so that the capital will be well spent. We must take into account the absorptive capacity of the recipient country. We must avoid waste and corruption.

There will be risks, but the need is great. The challenge is inescapable. President Truman's point 4 idea was called "a bold new program." It was new, but the majority in the Congress never permitted it to become bold.

Since then the urgency has increased. The time for a bold new program is upon us. And I believe that there are more and more Members of both Houses of Congress who are willing to match the challenge of our times with courage and boldness.

Walter Lippmann recently said something which every lawmaker and every administrator would do well to ponder. He said if you want public support for a Government program, make it big, bold and imaginative—appeal to the public's sense of responsibility and willingness to sacrifice. In attempting to second-guess the public, I am convinced that political leaders too often sell them short.

Massive investment is essential, and most of the capital must come from private sources. It cannot and should not come only from governments. In fact, governments should invest only when private sources are unable or unwilling to meet the legitimate needs for development. Private investors cannot afford to take large risks. Recipient countries should, of course, do all within their power to make private investment attractive, promising a reasonable return for the investor. I am glad to say that India has recently taken several significant steps to make private investment attractive. Any potential investor should look into new opportunities in this, the pivotal nation in Asia.

But it is not possible for an underdeveloped country to remove all risk to private investors. The countries needing aid most desperately often are the very ones where the risk is greatest. It is in these cases of great need and risk, where both the economic and political stakes are high, that government loans are required.

And if the free world does not provide investment capital, we can be sure the Communist bloc will. It is unfortunate, but understandable, that the fear of communism may prompt us to do what we should have done all along and what Great Britain in fact did in the 19th century.

CONCLUSION

I want to conclude by applauding Mr. Douglas Dillon, the Under Secretary of State for Economic Affairs, for his leadership in the area of long-term investment loans. I support him. But I fear that he has not gone far enough. Perhaps he is afraid that the Congress will not support him. Or, more likely, he may be afraid that the President will veto a more dynamic program.

Our Nation and our people face a massive challenge today.

The economic, political, ideological, and military offensive of a dedicated and determined foe confronts us at every turn.

Can the American people respond to this challenge with courage and wisdom?

The answer is "No," if we continue to sweep unpleasant facts under the rug of a complacent optimism. The answer is "No," if we are content with smooth words and soothing sirup from a man whose main task should be to jolt us from our lethargy. The answer is "No," if we continue to prefer tail fins and mink-lined suburban nests to first-rate schools and a responsible, if costly, foreign policy.

But the answer need not be "No." I firmly believe that the American people have the moral resources and political wisdom to respond with courage and determination. I know we have the economic resources to do the job that needs to be done. We can do the job if we have leaders who lead, leaders who can impress us with the deeper meaning and urgency of the crisis.

There is no substitute for leadership, leadership hardheaded enough to face the facts of life and warmhearted enough to honor the cherished values of our Western religious heritage.

A Fair Trade Law Is Not Necessary

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. ALGER. Mr. Speaker, the Federal Trade Commission Act, section 5, states, "That unfair methods of competition are hereby declared unlawful."

More precisely the Robinson-Patman Act, section 3, states:

> It shall be unlawful for any person engaged in commerce * * * to sell, or contract to sell goods at unreasonably low prices for the purpose of destroying competition or eliminating a competitor.

State laws are also directed at so-called loss leader or unfair practices. So what the proponents of fair trade dislike, they already have protection against. Further, why have fair trade proponents shied away from loss leader bills in times past when they were introduced to meet the problem of predatory pricing?

The basic answers to fair trade are not being sought or found by a study of H.R. 1253. What is needed is an objective statistical study of these questions: First, are not small businesses flourishing in areas where there is no fair trade protection? Second, in States where fair trade laws have been invalidated, have small businesses disappeared? Third, prior to the passage of any of the fair trade laws were there no small businesses in the United States? Fourth, are there no small businesses that sell furniture and major appliances, items which the manufacturers have rarely fair traded?

Such a study should precede a fair trade bill. Meanwhile the consumers are way ahead of those Congressmen who think resale price maintenance is good for buyers.

Perhaps the more immediate problem concerns the Justice Department survey which shows a 27 percent lower price in non-fair-trade areas for 119 items compared to fair trade areas. How could a Member of Congress vote for fair trade and higher prices, leaving the posed questions unanswered, and then face constituent consumers?

Address by Hon. Hugh Scott, of Pennsylvania, at Annual Meeting, Fellows of American Bar Foundation

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, March 25, 1959

Mr. KEATING. Mr. President, the distinguished Senator from Pennsylvania [Mr. SCOTT], recently delivered a timely address in which he called on America to revive the great institution of patriotism. His remarks, delivered to the annual meeting of the Fellows of the American Bar Foundation on Washington's birthday, deserve the widest dissemination possible.

By thoughtful analogy to the experiences of some of our soldiers in the Korean conflict, the Senator from Pennsylvania points out that our schools and our Nation in general are failing to teach the great heritage that comes with being an American. He calls for an unremitting emphasis on the origins of our Nation, on what made it strong and great and kept it free, upon fundamentals of our national purpose.

I believe this clarion call to Americans to revive the teaching of the ideals which have made our Nation great should be read by every American. The Senator from Pennsylvania has performed a real service for our people by his able presentation of this problem.

So that a larger readership will be able to have the benefit of his wisdom, I ask unanimous consent that this splendid address be printed in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR HUGH SCOTT AT ANNUAL MEETING OF THE FELLOWS OF THE AMERICAN BAR FOUNDATION, EDGEWATER BEACH HOTEL, CHICAGO, ILL., FEBRUARY 22, 1959

My good and long time friend, Dave Maxwell, Mr. Luce, Mr. Malone, Mr. Williams, distinguished guests, ladies and gentlemen, congressional and public interest in the progress of the missile programs of the United States and the U.S.S.R., increases in intenstiy. What it will cost to close the missile gap, how long it will take, what procedures to follow, who's right, who's wrong—no current topic sparks more discussion, be the locale bar meetings, Bar Harbor, or barrooms.

That this gap exists, few will deny. Yet how many are aware of a far more menacing, infinitely more dangerous gap in our long range national security planning?

The closure of the missile gap is basically a matter of how much we are prepared to spend to maintain our security through fully adequate, deterrent, and retaliatory forces. This, of course, involves considerations not limited to, or by, numerical quantity of weapons.

What of this other gap? It is not one which can be bridged in a year, perhaps not in a dozen years.

Let us look at what befell us. Our country entered the fifth decade of our century rich, bounteously blessed, lolling at the wide end of the biggest cornucopia in the world. Then, seemingly all at once, and out of context with our proud national history, we developed a flaw. A flaw which could widen into a crevasse.

"In Every War But One," as a recent book of that title by Eugene Kinkead records, our Armed Forces presented no problem of loyalty, caused no concern in the country as a whole regarding the conduct of the individual American when a prisoner of war. That one war was the Korean war.

Oddly, and without precedent, not a single American prisoner of war managed to escape, for the first time in any of our wars. Twenty-one Americans elected to remain with the enemy.

This in no way derogates from the courage, devotion, and magnificent conduct of most American fighting men in Korea, but what of the fact that over one-third of American prisoners of war collaborated to at least a minor degree with the Communists, and about 13 percent became active collaborationists?

What went wrong?

Capt. L. S. Robinson, U.S. Navy, says: "It was lack of home training, loose standards, the idea of the fast buck, the quick deal." He lays the blame also to the almost total disregard of authority and to the unpopularity of the war.

I think it goes much deeper than that, especially when we consider the success of Red Chinese indoctrination tactics. I used the term "indoctrination" rather than "brainwashing" since the Army definition of brainwashing is a process producing obvious alteration of character whereby the subject ceases to be the same personality he was before. There is no real evidence of the use of the kind of severe measures required to effect a change of personality. What was accomplished here, was rather a change of viewpoint whereby Americans were persuaded to adopt the enemy's propaganda as their own. Incidentally, while there is plenty of evidence of disciplinary cruelty, there is not a single documented case of cruelty being applied in the indoctrination of prisoners. The method used was an alternation of leniency with pressure, the continued relentless repetition of plausible, seemingly factual statements.

The techniques used by the Chinese Communists were repetition, harassment and humiliation. Prisoners were required to cram on Chinese literature and were constantly examined on Communist ideology day in and day out, week in and week out. As the author of the book I have referred to states: "The technique of harassment was equally successful. * * * of the three tactics, the third, humiliation did the most psychological damage." Although prisoners were specifically promised leniency, any prisoner who questioned a point of Communist doctrine during a lecture period was required to remain seated and the entire class of his fellow prisoners ordered to stand and remain on its feet until the objector had abandoned his objection. This led the other prisoners after hours of standing to complain and mutter against the objector and ultimately led to his capitulation. The prisoner was then required to read a long self-criticism ending with an abject apology to the class and the instructor followed by a period wherein his classmates were ordered to criticize him which they did. He in turn was made to criticize his classmates. This

technique ultimately led to complete distrust of each prisoner by every other prisoner and the effect on morale was obvious.

Why were these arguments effective? They were effective because our soldiers had little or no grounding in American foreign policy, little interest in current events and wholly inadequate grounding in American history or the basic tenets of the individual's duty to his country.

Were these American soldiers incapable of learning? True, many had immature minds and some had not gone beyond the fifth grade. But they returned to the United States able to recite long passages from Karl Marx from memory, they had studied the theoretical writings of Lenin and Stalin until they could argue the merits of communism and its superiority to democracy with some of the best educated Army interrogators. It ought to be added here that many of the collaborators came from the ranks of those who were bright and who had had an average or better than average education. Indoctrination therefore was successful to some degree in all groups and the degree of education was evidently not the controlling factor.

There has been failure in depth here, on the part of teachers and public officials. Failure in home training played its part too. Too many young soldiers had been indoctrinated before they ever landed in Korea, in the belief that it's what you get, not what you give, that counts. "The fault, dear Brutus, that we are underlings, lies not in our stars but in ourselves."

The growth of governmental paternalism, the promise to vote benefits out of the pockets of some people into the pockets of others, the concept of America as the "Lady with the Ladle" rather than the "Lady with the Lamp," these ideas had found fertile ground in the minds of young men who had never been taught to honor sacrifice, to respect unselfishness, to feel devotion to a cause, to love one's country, to cherish the memory of those who died in all our wars for freedom's cause.

Those who faltered were the "beat" of this generation. There were so many more who met their duty and their destiny with gallantry and patriotism.

But those who failed are a charge upon our conscience, a warning of signs of decay among us, a peril to our future security. "He that cannot think is a slave; he that dare not think is a coward; he that will not think is a bigot."

Before patriotism goes out of style, should we not busy ourselves with some wise remedial planning?

I believe we must, through State and local programs, reexamine and drastically overhaul our present methods of instructing our youth, in grade school, high school and college. Here is a quote from an interesting letter written by a college girl which appears in the March issue of the Atlantic Monthly: "My academic preparation had included work on the school annual, student service in the school library, traffic laws and safety, courses in poise, and a culture course that somehow never went beyond young person's guide to the orchestra." One wonders whether the high school in question had any courses in American history, civics, government, and one may be permitted to wonder also what textbooks may have been used. The Federal Government should reexamine its Armed Forces indoctrination and orientation programs, even though there has been progress in this area in the past 5 years.

We need unremitting emphasis on the origins of our Nation, on what made it strong and great and kept it free, upon the fundamentals of our national purpose.

I would like our schools to stir our students to love of country, to prepare them to counter the washers of brains with undeviating faith founded upon knowledge of our country's principles and policies, with the sturdiness of their conviction in the justice of our country's cause. And if this be propaganda, I would also like our Armed Forces to employ much more of it.

Nor is it sentimentalism which leads me to suggest that I would like to hear again in the classrooms of America, the stirring stories of our clearing of the wilderness, the wintry tale of the agonies of the men of Washington at Valley Forge, the gallantry of Ticonderoga, Antietam, Chateau Thierry, and Iwo Jima.

I would like to hear again in the classrooms of our Republic, the rolling cadences of "Hail, Columbia", "The Battle Hymn of the Republic," "The Halls of Montezuma." I should like to be assured that from these, our halls of learning, our sons and daughters depart with the chambers of their minds filled with the beauteous and pleasant riches of wisdom, tolerance and patriotism. So armed, they will meet and conquer the menace of any Red schoolhouse.

These things I would like,
And so, I think, would you.

Benson Gaining Support

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. DIXON. Mr. Speaker, from the days of the early Greeks and Romans, and even before, the vitality and growth of a nation could be determined by the activity of that nation's markets. Free markets, bringing together free sellers and free buyers, served as the mainspring behind national progress.

Someplace along the line we in America sacrificed our free agricultural markets on an altar of expediency and fear. We became fearful that our agricultural economy could not prosper as a free facet of our economy. We started to shelter, to control, and to regulate it. Today we have all but smothered it.

A leading exponent of free markets, of course, has been our dedicated Secretary of Agriculture, Ezra Taft Benson. He has warned the American people of what is happening to our agricultural economy. He has pointed out that agriculture must be given room for breathing and expansion in free markets. For his trouble, the Secretary has been maligned and has suffered indignities not befitting a man of his character and demonstrated ability.

Daily, however, Secretary Benson has found new allies, both in the field of agriculture and without.

One of the most important allies, not only for Secretary Benson, but for the entire agricultural economy, has been the Board of Trade of the City of Chicago. The support of such a group is important, because the sole purpose of the board of trade is to bring buyer and seller together freely for the buying and selling of agricultural products. The activities of the commodity exchanges is a vital link in the chain from production to distribution. As a result of bringing the competitive forces of supply and demand together in this fashion, grain and grain products are distributed nationally and internationally. The operations of the Chicago Board of Trade are under rigid self-imposed rules of business conduct, as well as Government regulation. The board's primary objective is to provide the Nation with the most efficient grain marketing services at lowest possible costs.

I should like to conclude these remarks by including in the RECORD the agricultural policy statement of the Board of Trade of the City of Chicago, adopted recently. The policy statement follows:

AGRICULTURAL POLICY STATEMENT

Despite having, for over 6 years, a Secretary of Agriculture dedicated to free markets, the entrenched bureaucracy and self-interest of those who prosper under control have led the country further down the road to complete Government domination of the free agricultural marketing system. The President of the United States, in his state of the Union message, indicated that by July 1, 1959, Commodity Credit Corporation would have $9 billion tied up in loans and surplus commodities, and that the carrying charges on this mountain of production would run to $1 billion annually.

This continued expansion of CCC and its increasing inroads into the marketing of grain has brought a greater awareness to the majority of the membership of the association of the problems, and of the need for positive action. It is time to take up the challenge, since it is clear that the natural course of events cannot be depended upon to help free markets.

The board of directors of the Board of Trade of the City of Chicago has, therefore, adopted the following as basic policy to guide the association in its continuing struggle for restoration of free markets.

"We must go on record as being vigorously opposed to all programs and policies that result in agricultural food and fiber not clearing through the market. Therefore, basic policy of the Chicago Board of Trade is to:

"1. Take a more aggressive stand on the elimination of governmental competition and domination of free markets.

"2. Act as a more forceful spokesman in defense of the private marketing system as opposed to State trading.

"3. Give open support to those farm leaders and farm organizations when those leaders and organizations work for the programs that benefit the private marketing system.

"4. Support legislation which will keep the Government from acquiring surpluses of commodities."

Why Not Enforce Existing Law?

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. ALGER. Mr. Speaker, the fair trade bill, H.R. 1253, now before the Interstate and Foreign Commerce Committee endeavors to make legal—by setting aside antitrust protection—resale price maintenance. Resale price maintenance legislation is not needed to prevent predatory price cutting. The Sherman Act and the Robinson-Patman

Act—particularly section 3—have been passed by previous sessions of Congress to prohibit such predatory price cutting.

Now we are asked to set aside the law providing these protections and enact a law to shackle the free enterprise system.

Is it not about time that Congress, through its committee, stopped buying a "pig in a poke," accepting and dignifying the proponents claims as valid? Rather, we should investigate why so many proponents of this bill feel endangered by predatory price cutting which is already illegal. Let us first decide the shortcomings, if any, or lack of enforcement of existing law before we impose federally sanctioned price control.

Memorial Tribute to 2d Lt. Kenneth G. Fauteck

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. HALPERN. Mr. Speaker, Monday's newspapers announced the finding in Spokane, Wash., after a 16-day search, of the body of little 9-year-old Candice Elaine Rogers who had disappeared as she was selling Camp Fire Girl mints near her home.

The Nation has been deeply horrified by the wanton brutality of this crime. It is the hope of all of us that the vicious murderer may soon be apprehended and brought before a court for trial.

Today, I want to say a few words, in both pride and sorrow, about another very tragic phase of the case, the heroic death of a young man who grew up in my congressional district, the Fourth District of New York.

Kenneth G. Fauteck, a second lieutenant in the Air Force, who was killed in a helicopter accident near Spokane, on March 7, was the eldest of the two sons of George and Marie Fauteck, of 216–18 117th Road, Cambria Heights, N.Y. He was pilot of an Air Force helicopter, and was, with four other crew members, engaged in a volunteer search up the Spokane River for the missing little girl, when the helicopter struck some high-tension wires of the Washington Water Power Co., and fell in wreckage into the Nine Mile Reservoir. Two others were killed with Kenneth: S. Sgt. William A. McDonnell, and A2c Marlice D. Ray. Two survived, with minor injuries: S. Sgt. James L. Fisher and A2c. Michael R. Holloway.

Kenneth Fauteck leaves a young bride, the former Eleanor Dengler of Ozone Park, N.Y., to mourn his loss and to take pride in the memory of his brave sacrifice. Otto Gumaelius, to whom I am grateful for sending me word of this sad event, well asks:

> In a time of peace, what greater glory can a young man have than one who, while serving in the Armed Forces of the United States, unselfishly and heroically gives up his life so that a child might live?

Police Inspector Robert B. Piper, in whose search for the missing child Kenneth Fauteck and the others were assisting, said:

> How do you thank men for such a noble gift? Their deaths are a great tragedy. I know the boys who died felt it was as necessary as anything in the world for them to do what they did.

The mayor and the City Counsel of Spokane have similarly expressed their gratitude and grief, personally and in the name of the city of Spokane. But it seems fitting also that there be a recognition of the sacrifice of Kenneth Fauteck in particular, here on the floor of the House, at once local, in that I represent his home district, and national, in that I am speaking before the House of Representatives of the United States.

Kenneth was but 22 years old, and had been married only a year this month. He had, after his marriage on March 2, 1958, been transferred in rapid succession from Mitchel Field to Georgia, to Texas, to California, and finally to Fairchild Air Force Base, Spokane, Wash. His quick intelligence and eager interest in flying had enabled him, without having completed high school, to earn his officer's commission. It seems sure that he had a great career, in service and achievement, before him—but no length of life could have earned him more gratitude and glory than his death in the performance of this brave act. As a symbol of the recognition Kenneth Fauteck has deserved from his country, I am sending to his family, in tribute to his memory, an American flag that has flown over the U.S. Capitol.

Women Won't Need To Shop Any More

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. ALGER. Mr. Speaker, the consumers of this Nation shopping for sales, a cheaper price, a bargain, make millions of daily decisions which in total establish the prices of merchandise.

The right price is that price the buyer will pay by choice after comparing competitive items. Other matters, such as credit terms, delivery, warranty, and the like, are present, but change not the fact that the price is, by definition, the mutual choice made by buyer and seller. The buyer may haggle to get the price reduced. The merchant may hold the merchandise for a period, reduce it, have a sale, or throw in a bonus. The sales price is still the amount the buyer will pay.

Now by Federal law, known as fair trade, H.R. 1253, the Federal Government is to be asked to set aside antitrust law and let the manufacturer set the retailers' price. Is the give and take of the marketplace between buyer and seller now to go out the window? Might as well tell the women, as one fair trade exponent commented, "It won't be necessary to shop any more."

Greek Independence Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. MULTER. Mr. Speaker, 138 years ago the national flag of Greece was unfurled to ignite the great revolution against foreign rule. Today the Greek people take rightful pride in celebrating this historic day, March 25, 1821, which heralded the beginning of the end of the suppression of the Green Nation by the despotism of the Ottoman Empire.

Freedom-loving people throughout the world have drawn inspiration from the long, hard, valiant, and epic struggle of the Greek people for independence. Greek Independence Day has immortalized the bravery and devotion of this proud nation's warriors and martyrs. On this stirring occasion the free world is once again reminded that "eternal vigilance is the price of liberty."

The spirit of Greece's passion of independence was strikingly captured by Lord Byron when, on the eve of the War of Independence, he wrote:

> The isles of Greece. The isles of Greece.
> * * * * *
> The mountains look on Marathon,
> And Marathon looks on the sea;
> And musing there an hour alone,
> I dreamed that Greece might still be free;
> For standing on the Persians' grave,
> I could not deem myself a slave.

Ancient Greece was the cradle of liberty. Apostles of freedom still look to Greece, both ancient and modern. For it was there that the Western concepts of representative government and the rule of law were mothered, and it was in classical Greece that political theories antagonistic to tyranny first were born, later to mature and inspire the great democratic movements of modern civilization.

Today Greece, precariously situated on the border of the Soviet empire, is a compelling example of the perseverance and sacrifice necessary to defend democracy against the dynamic threat of Communist aggression. Greece is now economically poor. Nevertheless, it manages to spend 5 percent of its gross national product on its military establishment. Assistance from the outside is essential to assure Greece a stable economic system and a viable future amidst the distresses of the cold war. The United States and its allies are now providing this help, a token of the great debt which their civilization owes to Greece.

After World War II, when strong pressure was applied by the Soviet Union and subversion by the Communists had engulfed the country in civil war, the

United States came to the aid of Greece. As a result of assistance from this country, the wartorn economy of Greece was reconstructed and the Communist insurrection was suppressed.

The continuing freedom and security of Greece is of great importance to the free world. At the same time, the security of Greece as a free nation contiguous to the Soviet bloc is vitally dependent on the strength of the Western alliance. Since 1950, Greece has been associated with the North Atlantic Treaty Organization in planning for the defense of the Mediterranean. Greece's land, sea, and air forces are now linked with the combined NATO command for southeastern Europe and have participated in the joint exercises for developing a coordinated defense program for the eastern Mediterranean. The armed services of Greece are supplied with modern arms and equipment under the NATO programs.

In this way, Greece has undertaken to assume its responsibility for the defense of the Balkans and the eastern Mediterranean. Consequently, the area bridging Europe is more secure and the southern flank of NATO is more strongly fortified.

On this anniversary, the United States salutes the Greek people for their monumental contributions, past and present, to our country and to our civilization. Throughout the land, there are over one-half million Americans of Hellenic background. Our country is a much improved place because the patriotic and resourceful Greek people have contributed their magnificent heritage toward building a greater America.

Fair Trade Violates Both Political Parties and Congressional Oath

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. ALGER. Mr. Speaker, Republicans often praise the merits of the free enterprise system and stress principles of balanced budget, fiscal responsibility, price stability, sound money and freedom from price and wage controls. These are good and true principles, it seems to me.

Now comes the Fair Trade Act, H.R. 1253, to enforce by Federal law a retail stipulated price system permitting the manufacturer to set these prices. Well, it is price control, contrary to Republican principles. As to inflation and sound currency—well, fair trade items in a comprehensive Justice Department survey cost 27 percent more than in a nonfair trade area. This certainly cuts buying power. Price stability? That, too, is out the window. In short, fair trade fails the best of Republican principles.

Democrats constantly attempt to identify themselves with common people, the little man, the average consumer. Well, these price fixing laws are not in the interest of the consumer.

Democrats and Republicans share principles rooted in American tradition—that set us apart as a Nation from foreign ideologies—no matter the differences between parties. Members of Congress by oath subscribe to the balance of powers between the branches of Government and between Federal and State. This fair trade bill would be a Federal encroachment on State jurisdiction.

Fair trade is antithetical to the beliefs of both parties, and to both conservatives and liberals. When Members of Congress get the facts, the so-called fair trade bill will be discarded and discredited.

DAV Services in Massachusetts

EXTENSION OF REMARKS
OF
HON. JAMES A. BURKE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. BURKE of Massachusetts. Mr. Speaker, an exceptional record of vital rehabilitation services freely extended to thousands of Massachusetts citizens has recently come to my attention. These splendid humanitarian services are not sufficiently appreciated by those who have benefited thereby, directly and indirectly.

Among the several congressionally chartered veteran organizations, which have State departments and local chapters in Massachusetts, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war.

Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have benefited every compensated disabled veteran very substantially. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer M. Freudenberger; its national director of claims, Cicero F. Hogan; and its national director of employment relations, John W. Burris—all located at its National Service Headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation in 1920, the DAV National Headquarters, located in Cincinnati, Ohio, has maintained the largest staff of any veteran organization, of full-time trained national service officers, 138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration, and in its central office in Washington, D.C. They have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less well-informed claimants.

The DAV maintains five national service officers in Massachusetts, located in the VA Regional Office at 1 Beacon Street, Boston, Mass., as follows: Eugene F. Reilly, James J. Sayre, Louis Spencer, Paul J. Sullivan, and Thomas J. Tomao. The DAV department commander is Leo W. Lalley and the department adjutant is Joseph R. Harold, who also serves as executive service assistant to the national commander, Judge David B. Williams, of Concord, Mass., all of whom are my personal friends.

The DAV Department of Massachusetts has nationally appointed representatives to the Veterans' Administration Voluntary Services Advisory Committees at each of the Veterans' Administration hospitals servicing Massachusetts veterans. These DAV representatives and the hospitals are as follows: Bedford VA Hospital, E. Elmer Baldwin, representative; Boston VA Hospital, George J. Lynch, representative; Brockton VA Hospital, George K. Inglis, representative; Boston regional office, Framington VA Hospital, Robert F. Irino, representative; Northampton VA Hospital, Earl A. Gour, representative; Rutland Heights VA Hospital, Alonzo Scott, representative; and West Roxbury VA Hospital, Harry E. Guerriero, representative.

During the last fiscal year, the VA paid out $199,218,000 for its veterans' program in Massachusetts, including $71,227,789 disability compensation to its 93,730 service-disabled veterans. These Federal expenditures in Massachusetts furnish substantial purchasing power in all communities. Only about 13 percent—12,420—are members of the 91 DAV chapters in Massachusetts.

This 13-percent record is strange, in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officers in behalf of Massachusetts veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

Claimants contacted (estimate)	260,603
Claim folders reviewed	217,169
Appearances before rating boards	65,078
Compensation increases obtained	10,194
Service connections obtained	5,013
Nonservice pensions	1,349
Death benefits obtained	180
Total monetary benefits obtained	$4,899,389.07

These above figures do not include the accomplishments of other national service officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in

such district offices, resulting in monetary benefits of $20,850,335.32, and in the central office, they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for Massachusetts veterans, their dependents, and their survivors.

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel, and assistance extended to all of the claimants who have contacted DAV national service officers in person, by telephone, and by letter.

Pertinent advice was furnished to all disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guarantee loans for homes, farms and businesses, and so forth. Helpful advice was also given as to counseling and placement into suitable useful employment (to utilize their remaining abilities), civil service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans—not given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service connection of a disability becomes extremely difficult—too many times impossible. A claims and rating board *can obviously* not grant favorable action merely based on the opinions, impressions, or conclusions of persons who submit notarized affidavits. Specific, detailed pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations, and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses his skill, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed because most claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others at an aggregate loss to them of more than $28 million per year. About 4.5 percent of such discontinuances and reductions have probably occurred as to disabled veterans in Massachusetts, with a consequent loss of about $1,260,000 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in Massachusetts to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or, again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increase obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its Idento-Tag—miniature automobile license tags—project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project is thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1,400,000 owners of sets of lost keys have received them back from the DAV's Idento-Tag department, 28,272 of whom, during the last 8 years, were Massachusetts residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating $3,300,000, exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV service foundation is therefore very much in need of the generous support of all serviced claimants, DAV members, and other social-minded Americans—by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV Chapter in Butte, Mont., which established the first perpetual rehabilitation fund of $1,000 with the DAV Service Foundation. Recently it added another $100 thereto. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from $100 to $1,100, equivalent to about $4 per DAV member—an excellent precedent for Massachusetts.

Each claimant who has received any such rehabilitation service can help to make it possible for the DAV to continue such excellent rehabilitation services in Massachusetts by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington, D.C. Every such serviced claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is $100—$50 to those born before January 1, 1902, or World War I veterans—payable in installments within 2 full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, trade associations and various religious, fraternal, and civic associations. All of America's veterans ought to be members of one or more of the patriotic, service-giving veteran organizations. All of America's disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice—the DAV.

Battle Between Bigs Means Higher Prices

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 25, 1959

Mr. ALGER. Mr. Speaker, consumers pay lower prices for goods in a non-fair-

trade area. Justice's Antitrust Department survey clearly establishes this fact—Bick's statement 1959, appendix 1. In eight non-fair-trade cities, 132 fair trade items sold for 27 percent below fair trade values. Retailers were making money and the consumers did not know how lucky they were to be in a non-fair-trade area. Those paying more did not know how unlucky they were to be in a fair trade area.

The moral is that wide profit margins—now being asked by Federal law—in a fair trade bill—H.R. 1253—are the very reasons that discount houses enter the scene.

We are told that this is a battle between big and little retailers—not so. It is a battle between bigs, and the Federal adoption of this fair trade bill will kill the little independent retailer, not the big stores. As Mr. Bicks pointed out:

> It is more correct to say that the fair trade fracas is one between big retailers or price stores on the one hand, and big manufacturers or quality stores on the other, rather than one between big and little retailers * * * there are money and vested interest aplenty on both sides and the colorful drama somewhat overdrawn of the big foreign operator crushing the little local independent is a poetic legend more suitable for propaganda exploitation than the whole unvarnished reality.

Maybe the small retailers had better get wise to the dangers of fair trade while there is still time and beware of their own national leadership.

Benson Establishes Unbroken Record Opposing Farm Legislation

EXTENSION OF REMARKS
OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 25, 1959

Mr. COOLEY. Mr. Speaker, it is my painful duty to report to the House that, with the Nation's agriculture headed into a new and a deeper recession, Mr. Ezra Taft Benson, the Secretary of Agriculture, and this administration have opposed in this Congress every bill taken up by our committee intended to stabilize and strengthen the farm economy.

The Members of the House have introduced 238 bills in the 86th Congress relating to agriculture. To this date, the Department of Agriculture has objected to every one of these bills on which it has taken a position.

This administration has set a course of lower and lower prices and income for agriculture and it stands cold and inflexible against any action of the Congress which might alter this policy of penury for our farmers.

Here is the administration's record in this Congress:

Our Committee on Agriculture called up legislation proposed by the Nation's wheat producers, to attack the surplus problem of wheat, and at the same time to provide a reasonable price for wheat farmers. The administration had conceded that our most pressing problem in agriculture at this time is the accumulation of great surpluses of wheat. Yet, spokesmen for the Department of Agriculture came to our committee room and opposed this legislation.

We called up a bill to restore a reasonable price relationship between corn and the smaller feed grains—oats, rye, barley, and grain sorghum. We did this when Mr. Benson set the 1959 support levels on the smaller grains so low as to assure hardships for the producers of these crops and at the same time to encourage larger planting of corn, already in surplus. Mr. Benson and this administration opposed us.

Consideration was set for legislation to provide a special program of research to discover new industrial uses for the products of our farms. Similar legislation was approved unanimously last year by the Senate. Yet, the Department came in and opposed the bill.

We brought up a measure supported by tobacco growers and the tobacco industry generally, to lower the parity and support level on tobacco, so that American tobacco could compete more favorably in world markets. Mr. Benson's spokesmen told us the cut was not big enough.

The great cotton producing areas of the Old South have been severely hurt by the operation of the acreage reserve of the soil bank. This program encouraged many small farmers to abandon their cotton acres and this has caused injury to the economy of many counties which depend upon cotton. We took up legislation to permit those farmers who do not wish to return to cotton production—now that the acreage reserve is discontinued—to lease their allotments to other farmers, so that a near normal pattern of production might be maintained to support the economies of businesses, towns, and cities which have been built to service cotton production and marketing. Mr. Benson gave a flat "No" to this proposition.

We brought up a bill which would allow cotton and rice farmers in counties where both crops are produced to exchange allotments—acre for acre—so that one farmer might have all his allotment in cotton and the other in rice. Thus a farmer would not have the expense of maintaining machinery for the production of two crops and could more efficiently produce one or the other. The Department of Agriculture opposed this bill.

Finally, Mr. Speaker, I shall cite one other bill which I thought every citizen of this Nation would approve. This measure proposes to provide $3 million additional during the current school term to prevent a closing down of the special school milk program in many States. But spokesmen for Mr. Benson appeared in our committee room and opposed this legislation. That is the bill which our committee reported and which the House on Monday passed unanimously and sent to the Senate, the objections of Mr. Benson and the administration to the contrary notwithstanding.

I do not know why the Department of Agriculture opposed the school milk bill unless it wanted to preserve unbroken its record of hostility to every piece of legislation relating in any constructive way to agriculture.

Incidentally, we should note here that the Department has not bothered to draft a bill of its own price-depressing proposal for introduction either in the House or the Senate.

Mr. Speaker, I do not expect that the President will veto the school milk bill because its benefits are to our children in much greater proportion than to our farmers who provide the milk for this program. But I want to point out to my colleagues here in the House that in this 86th Congress, as in the two previous Congresses, we are working constantly in the shadow of the veto power of the President wherever the primary interests of farmers are concerned.

The President vetoed in 1957 the bill passed by Congress to return farm price supports to 90 percent of parity. He vetoed in 1958 the bill passed by Congress to "hold the line" against any further price cuts until we could enact general farm legislation. The threat of veto killed the omnibus farm bill when it was presented by our committee last year.

We are certain that, if we pass the wheat bill brought forward by the wheat farmers of America, the President will veto it.

We are sure he will veto the effort to bring the prices of small feed grains into a fair relationship with corn, on the basis of feed value.

We sent to Mr. Benson in the last Congress bills proposing revisions in the present loan and acreage allotment program. We forwarded to him bills proposing two-price or domestic parity systems for various commodities which would let these crops move competitively into world markets while maintaining a reasonable price in our domestic markets. We sent to him proposals for production payments, compensatory payments, or marketing equalization payments to farmers. He returned them all with the Department's stamp of disapproval.

We all know that if the Congress proceeds with legislation in any one of these directions, we can expect our efforts and our work to end in a veto.

This is the dilemma which confronts us. And this sorry condition is aggravated by the fact that Mr. Benson, with the propaganda power of the Department behind him, has so divided our farmers and so confused facts that there is not now in the agricultural community of the Nation the unity essential to the enactment of a new farm program to meet the needs of the time—to turn back the economic upheaval on our farms which looms ahead of us.

Mr. Speaker, we are about to recess briefly for Easter, and many Members will visit their home people in their districts. I hope that each Member who represents farmers in this House will preach a gospel of unity, on the farms and along Main Street.

Your farmer friends will want to know why the agricultural economy is deteriorating and why the Congress has not

acted. Tell them how we are working in the Congress. Tell them how our every effort is resisted by the Department of Agriculture. Tell them about the veto power which hangs over us. Tell them over and over again the necessity for unity among farmers if we are ever again to have public policies that promise for farmers a parity position with other great segments of this free enterprise economy.

Fair Trade Federal Dictation Over State

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. ALGER. Mr. Speaker, fair trade substitutes Federal mandate for State or local discretion. In so doing it replaces the individual retailer's discretion by a manufacturer's edict.

At present the imposing of fair trade law is permissive with the State. Twenty States have invalidated fair trade through State supreme court or State government action.

The pending fair trade bill, H.R. 1253, irregardless of State law, would impose Federal law, with violation and enforcement becoming a Federal matter.

Such further Federal centralization of power plus the harm done the free enterprise system surely merits the attention of every Member of Congress.

Byelorussian Independence Day

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. DADDARIO. Mr. Speaker, today, March 25, marks the 41st anniversary of the proclamation of the independence of the Byelorussian Democratic Republic. For this Russian state, as is true for many of her neighboring lands, this day will be a time of mixed emotions. There will be rejoicing that on this day in 1918, Byelorussia finally achieved independence after centuries of czarist oppression, but this joy will soon turn to sorrow because the Byelorussians realize that they have lost their freedom to a new form of Russian imperialism.

The world will witness two different forms of celebration on this day. The first will be a mocking farce directed by Russian Communists and staged in the streets of Minsk, the capital. The Communists will try to create the effect of an enthusiastic demonstration of patriotic loyalty to the Soviet Union, but they will not succeed for such sentiments do not prevail in Byelorussia. The second celebration, expressing the true Byelorussian spirit, will show the world that the Byelorussians are not content to exist as a Russian puppet state. It is paradoxical and tragically ironic that the Byelorussians are not free to celebrate their own independence day. They must muffle their true expressions and desires for national independence, and conform to the manner and theme of demonstration dictated by the Russian organizers who will lead their celebrations. Those Byelorussians who have sacrificed their homes in order to flee from oppression and live in free countries are urging us not to be fooled, but to let the world, especially Russia, know that free people everywhere share the hope that Byelorussia will again be a free and independent country.

Fair Trade Unmasked

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. ALGER. Mr. Speaker, "There will not be any price competition and there should not be" so spoke witness Edward Wimmer, testifying in behalf of the fair trade bill H.R. 1253.

What is happening to the thinking of our citizens when such statements are made showing such basic misunderstanding? Or is it intentionally the abandonment of the free enterprise which has made this Nation great? In retailing there must be competition; there must be flexibility of price; there must be economic freedom for the retailer to set prices.

Any abandonment of such a basic component part of free enterprise will ultimately destroy all parts of our economic structure, since all are interrelated—supply and demand, profit and loss, consumer buying habits and all levels of manufacturing, distribution and retailing. This is fundamental.

If there are faults, or unfair or deceptive acts, or antitrust violations, let us correct them but not abandon the system. Let us patch up the hole in the boat, not jump overboard.

Sometimes simplest things are most esaily overlooked. Perhaps new laws are not needed, only present law enforced. The Sherman Antitrust Act and Robinson-Patman Act, section 3, are specifically designed for this purpose, that is, unjustifiable price cutting.

Has it not occurred to fair trade proponents that there could even be patterns of change in goods merchandising and distribution that herald growth and improvement, requiring understanding, not another Federal law. This might well deserve the committee study that is now going to the fair trade bill, the wrong cure for a mistaken symptom.

DAV Services in Iowa

EXTENSION OF REMARKS
OF
HON. NEAL SMITH
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. SMITH of Iowa. Mr. Speaker, an exceptional record of vital rehabilitation services freely extended to thousands of Iowa citizens has recently come to my attention. These splendid humanitarian services may not be sufficiently appreciated by many of us or by those who have benefited thereby, directly and indirectly.

Among the several congressionally chartered veteran organizations, which have State departments and local chapters in Iowa, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war.

Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have benefited compensated disabled veterans very substantially. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer M. Freudenberger; its national director of claims, Cicero F. Hogan, and its national director of employment relations, John W. Burris—all located at its national service headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation in 1920, the DAV national headquarters, located in Cincinnati, Ohio, has maintained the largest staff, of any veteran organization, of full-time, trained national service officers, 138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration, and in its central office in Washington, D.C. There they have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less well-informed claimants.

The DAV maintains two national service officers in Iowa, Charles L. Huber and Buford L. Phillips, located in the VA Center, Valley Bank Building, Des Moines. Mr. Huber also serves as department adjutant and the department commander is Mr. Joe Terrones, Wendell Court No. 2, Waterloo.

The DAV Department of Iowa has nationally appointed representatives to the Veterans' Administration voluntary

services advisory committees at each of the Veterans' Administration hospitals servicing Iowa veterans. These DAV representatives and the hospitals are as follows: Mr. Henry J. Luckritz at the 560-bed DOM hospital at Clinton, Mr. Joseph Walsh at the 386-bed general medical hospital at Des Moines, Mr. Robert Hess at the 484-bed general medical hospital at Iowa City, and Mr. R. I. Woody at the 1,540-bed neuropsychiatric hospital at Knoxville.

During the last fiscal year the VA paid out $80,315,000 for its veterans program in Iowa, including $19,811,233 disability compensation to its 24,702 service-disabled veterans. These Federal expenditures in Iowa furnish substantial purchasing power in all communities. Only about 13 percent—3,188—are members of the 37 DAV chapters in Iowa.

This 13-percent record is strange, in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officers in behalf of Iowa veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

Claimants contacted (estimated)	55,336
Claim folders reviewed	46,113
Appearances before rating boards	21,800
Compensation increases obtained	4,456
Service connections obtained	1,713
Nonservice pensions	1,363
Death benefits obtained	83
Total monetary benefits obtained	$1,856,649.36

The above figures do not include the accomplishments of other national service officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of $20,850,335.32, and in the central office they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for Iowa veterans, their dependents, and their survivors.

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel, and assistance extended to all of the claimants who have contacted DAV national service officers in person, by telephone, and by letter.

Pertinent advice was furnished to disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guaranty loans for homes, farms, and businesses, and so forth. Helpful advice was also given as to counseling and placement into suitable useful employment—to utilize their remaining abilities—civil service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans—not given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service connection of a disability becomes extremely difficult—too many times impossible. A claims and rating board can obviously not grant favorable action merely based on the opinions, impressions, or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting the same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations, and schedule of disability ratings. No DAV national service officer, I feel certain, uses his skill, except in behalf of persons he is sure are worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed—because most claims are not properly prepared. It is very significant, as pointed out by the DAV actional national director of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others at an aggregate loss to them of more than $28 million per year. About 1.2 percent of such discontinuances and reductions have probably occurred as to disabled veterans in Iowa with a consequent loss to them of about $336,000 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in Iowa to give his power of attorney for this purpose to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent, expert national service officer.

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or, again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increase obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

Evidently, many claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income of its Idento-Tag—miniature automobile license tags—project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project in thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1,400,000 owners of sets of lost keys have received them back from the DAV's Idento-Tag department, 3,747 of whom, during the last 8 years, were Iowa residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled, financially to maintain an expert service officer in every one of the 173 VA hospitals.

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating $3,300,000, exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all serviced claimants, DAV members and other social-minded Americans—by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago which concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first Perpetual Rehabilitation Fund of $1,000 with the DAV Service Foundation. Recently it added another $100 thereto. Since then, every DAV unit in that State has established

such a special memorial trust fund, ranging from $100 to $1,100, equivalent to about $4 per DAV member—an excellent objective also for Iowa.

Claimants who have received any such rehabilitation service can help to make it possible for the DAV to continue such excellent rehabilitation services in Iowa by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington, D.C. Every such serviced claimant who is eligible can and should also become a DAV member, preferably a life member for which the total fee is $100—$50 to those born before January 1, 1902 or World War I veterans—payable in installments within two full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, business organizations, trade associations, and various religious, fraternal and civic associations. All of America's veterans ought to be members of one or more of the patriotic, service-giving veteran organizations. All of Americas' disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice—the DAV.

I am proud personally to be a member of the DAV.

The Manufacturer's Double Play

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. ALGER. Mr. Speaker—

I can, however, suggest a possibly profitable path for this subcommittee's inquiry * * *. Large department stores or mail order houses may well encourage manufacturers to fair trade nationally branded items, the only items which the small retailers can secure. At the same time, such mass sellers may market their own private brands—substantially identical to nationally branded goods—at prices lower than fair trade markups for the nationally branded counterparts. The result could be to enable large retailers, by hampering their smaller competitors' ability to cut prices, to hold an umbrella over the market for their own private branded items. In closing, I take the liberty of suggesting that this question might well be an area ripe for this subcommittee's inquiry.—Quote from Bicks, Justice Department antitrust attorney, testimony.

This quotation is self explanatory. Also, the manufacturer has an interesting part. He gains the right to set the retail price. Thus he binds the retailer and for this new right he contributes nothing himself. Indeed, he is free, after setting a price floor and guaranteeing a profit margin for himself to manufacture identical merchandise for some big store who can set any price it chooses after removing the trademark undercutting the independent retailer with the same merchandise, yet the independent cannot change his price. No wonder the manufacturer wants fair trade. No wonder the big chain or department stores will not be hurt. The wonder is that proponents of fair trade overlook the fact that the only one who can be hurt, even ruined by fair trade, is the smaller retailer and his national lobby representatives are pleading for this bill.

Present Legal Price Maintenance Practices

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. ALGER. Mr. Speaker, fair trade H.R. 1253 would permit a manufacturer to set prices at the retail level, and for this new right he makes no concession.

Fair trade proponents state that fair trade laws should be permissible since there are other forms of price maintenance which are legal.

Well, let us look at these other forms. They include, first, consignment selling; second, selling through manufacturer-owned retail stores; third, granting of franchises; fourth, selling direct from manufacturer to retailers who will abide by the manufacturer's suggested retail price; fifth, selling direct from manufacturer to consumer; sixth, having your own private brands made up.

Now, analyze each; the manufacturer in each has assured additional marketing responsibilities and risks in order to be able to maintain his price.

Not so in the fair trade bill, which for the manufacturer is "have your cake and eat it too"—that is, until the inevitable consequences of replacing free enterprise with price control by Federal mandate catch up with the industry—then manufacturers will wish for the good old days.

Americans Traditionally Oppose Fair Trade Price Fixing

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. ALGER. Mr. Speaker, in 1945 the FTC in an 872-page report concluded generally that resale price maintenance was unsound economically, tended to destroy competition, and at least in certain areas, favored the large concerns. So spoke Chairman Gwynne reminding us on the Fair Trade Subcommittee last year that fair trade was traditionally opposed by FTC and the people of this country, as a matter of principle to free people in a free country.

In 1952 the FTC described resale price maintenance as:

Contrary to the public policy expressed by Congress in the antitrust laws since 1890 and contrary to the public policy expressed by Congress in the Federal Trade Commission Act.

Since the concept of resale price maintenance contravenes the traditional ideas of the American system of free competitive enterprise, you would not expect Congress to try to support resale price maintenance. Are we? Yes, by name—the fair trade bill H.R. 1253, permitting the manufacturer to set the retail price on his merchandise by setting aside the antitrust law.

SENATE

THURSDAY, MARCH 26, 1959

The Senate met at 10 o'clock a.m.

Dr. Lawrence Daniel Folkemer, pastor, Lutheran Church of the Reformation, Washington, D.C., offered the following prayer:

We are not unmindful, O God, of this week in which we move, a week hallowed by the memories of one who in obedience to divine truth and righteousness, and in utter self-sacrifice, spent Himself for mankind. Grant, O God, that in the busyness of this week, our minds may not become so preoccupied with our duties that we spare ourselves no time for meditation upon the meaning of His passion. Help us to see the purpose which Thou hast set for us; then grant us the power to follow its course with steadfast courage and loyalty. If following Thy purpose should bring us, Lord, to some Calvary of criticism and rejection, still make us faithful to endure, knowing that Thy truth is vindicated in the joy of an open tomb. Through Jesus Christ, Our Lord, Amen.

THE JOURNAL

On request of Mr. MANSFIELD, and by unanimous consent, the reading of the Journal of the proceedings of Wednesday, March 25, 1959, was dispensed with.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Miller, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session,

The PRESIDENT pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the House had passed the bill (S. 1094) to amend the Bretton Woods Agreements Act, with an amendment, in which it requested the concurrence of the Senate.

The message also announced that the House had passed a joint resolution (H.J. Res. 301) providing for printing copies of "Cannon's Procedure in the House of Representatives," in which it requested the concurrence of the Senate.

ENROLLED BILLS SIGNED

The message further announced that the Speaker had affixed his signature to the following enrolled bills, and they were signed by the President pro tempore:

H.R. 5247. An act to increase the authorized maximum expenditure for the fiscal year 1959 under the special milk program; and

H.R. 5640. An act to extend the time during which certain individuals may continue to receive temporary unemployment compensation.

HOUSE JOINT RESOLUTION REFERRED

The joint resolution (H.J. Res. 301) providing for printing copies of "Cannon's Procedure in the House of Representatives" was read twice by its title and referred to the Committee on Rules and Administration.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. KUCHEL, and by unanimous consent, the Subcommittee on Health, Welfare, Education, and Safety, of the Committee on the District of Columbia; and the Subcommittee on Government Organization of the Committee on Aeronautical and Space Sciences, were authorized to meet during the session of the Senate today.

AUTHORIZATION FOR SECRETARY TO RECEIVE MESSAGES FROM THE HOUSE AND FOR VICE PRESIDENT OR PRESIDENT PRO TEMPORE TO SIGN BILLS AND JOINT RESOLUTIONS DURING ADJOURNMENT

On request of Mr. MANSFIELD, and by unanimous consent, it was

Ordered, That, notwithstanding the adjournment of the Senate until April 7, 1959, the Secretary be authorized to receive messages from the House of Representatives, and that the Vice President or the President pro tempore be authorized to sign enrolled bills and joint resolutions duly passed by the two Houses and found truly enrolled.

ANNOUNCEMENT CONCERNING PROCEDURE TODAY

Mr. MANSFIELD. Mr. President, for the information of the Senate, let me state that there are no nominations on the Executive Calendar, and no action will be taken today on any bills. So no votes of any kind or nature will be taken today.

Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDENT pro tempore. Without objection, it is so ordered.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. MANSFIELD. Mr. President, under the rule, there will be the usual morning hour for the introduction of bills and the transaction of other routine business. I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

REPORT ON COMMODITY CREDIT CORPORATION SALES POLICIES, ACTIVITIES, AND DISPOSITIONS

A letter from the Assistant Secretary of Agriculture, transmitting, pursuant to law, a report of the General Sales Manager, concerning the policies, activities, and developments, including all sales and disposals, with regard to each commodity which the Commodity Credit Corporation owns or which it is directed to support, dated January 1959 (with an accompanying report); to the Committee on Agriculture and Forestry.

REPORT OF AIR FORCE MILITARY CONSTRUCTION CONTRACTS AWARDED WITHOUT FORMAL ADVERTISING

A letter from the Director, Legislative Liaison, Department of the Air Force, transmitting, pursuant to law, a report of the Air Force military construction contracts awarded without formal advertising, for the period July 1, 1958, through December 31, 1958 (with an accompanying report); to the Committee on Armed Services.

AUDIT REPORT OF FOUNDATION OF THE FEDERAL BAR ASSOCIATION

A letter from the president, the Foundation of the Federal Bar Association, Washington, D.C., transmitting, pursuant to law, a report of the audit of the financial transactions of that corporation, for the fiscal year ended September 30, 1958 (with an accompanying report); to the Committee on the Judiciary.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated.

By the PRESIDENT pro tempore:

A joint resolution of the Legislature of the State of Idaho; to the Committee on Finance:

"SENATE JOINT MEMORIAL 3

"Joint Memorial to the Honorable Senate and House of Representatives of the United States in Congress assembled

"We, your memorialists, the Legislature of the State of Idaho, as assembled in its 35th session, do respectfully represent that—

"Whereas the national debt of the United States of America has reached such proportions that it creates an obligation not only to those citizens faced with the problems of government, but is of such proportions that the debt will have to be passed on to future generations; and

"Whereas no steps have been taken to reduce the national debt in an orderly and financially sound manner; and

"Whereas our present system of taxation for the purpose of carrying on all functions of government, from local to national, consists of a patchwork of many and varied forms of taxation, many of which are oppressive and discriminatory between classes and groups of people; and

"Whereas the future welfare and well-being and security of all citizens of the United States of America is dependent upon a sound fiscal policy and one which will without exception grant the privilege of making a contribution to the Government of the United States and to each of the several States and the subdivisions thereof; and

"Whereas a fair, equitable, honorable and universal method of paying the national debt and abolishing the patchwork of Federal, State and local methods of taxation can be realized by the adoption of a plan referred to as "Equal Gross Value Insurance", which plan would provide for the inventorying of all tangible property of the residents of the United States of America and evaluating such inventory at the current fair market value (the value for which each individual would be willing to sell said property) and the then annual payment of a 1 percent premium of the value of such inventory by each resident, the money to be realized to be distributed first to the local governing units, then to the State governing units, and then to the United States of America, in proportions which will pay the Government operating expenses and systematically reduce the national debt in a short period of time: Now, therefore, be it

"Resolved by the 35th session of the Legislature of the State of Idaho now in session, the Senate and House of Representatives concurring, That the Congress of the United States of America be, and the same hereby is, memorialized to fairly consider the adoption of the foregoing plan to the end that necessary constitutional and legislative enactments may be proposed, considered and adopted to the accomplishment of the payment of the national debt and the financing of the general obligations of Government; be it further

"Resolved, That the Secretary of State of the State of Idaho, be, and he is hereby, authorized and directed to forward certified copies of this joint memorial to the President and Vice President of the United States of America, the Speaker of the House of Representatives of the Congress and to the Senators and Representatives representing the State of Idaho in the Congress of the United States."

A joint resolution of the Legislature of the State of Montana; to the Committee on Public Works:

"HOUSE JOINT MEMORIAL 7

"Joint memorial of the Senate and House of Representatives of the State of Montana to the President of the United States, Dwight D. Eisenhower; the Congress of the United States; James E. Murray and Mike Mansfield, Senators from the State of Montana; Lee Metcalf and LeRoy Anderson, Representatives in the Congress from the State of Montana; the Committee on Public Works of the U.S. Senate; the Committee on Public Works of the U.S. House of Representatives; the Committee on Appropriations of the U.S. Senate; the Committee on Appropriations of the U.S. House of Representatives; Interior Committees; the Secretary of the Army, Wilber

M. Brucker; the Chief of the Corps of Engineers, Department of the Army, Maj. Gen. E. C. Itschner; the Secretary of the Interior, Fred Seaton; the Commissioner of the Bureau of Reclamation, W. A. Dexheimer; and the Director of the Budget, Maurice H. Stans; requesting the introduction and enactment into law of the necessary and proper legislation to authorize construction by the Federal Government of Glacier View Dam on the North Fork of the Flathead River in the State of Montana with appropriate provision for the reservation of a block of power generated therefrom to Montana; to authorize that sufficient appropriations be provided for the detailed planning and construction of Glacier View Dam

"Whereas Glacier View Dam and Reservoir is a proposed multiple-purpose project, to be located at Flathead River Mile 177 on the western boundary of Glacier National Park, 72 miles upstream from Flathead Lake and 41 miles below the international boundary; and

"Whereas Glacier View project would provide flood control, hydroelectric power and recreation benefits; and

"Whereas Glacier View Lake behind this dam will stabilize the economy of Glacier National Park by providing the recreational facilities so badly needed; and

"Whereas construction of Glacier View project would not disturb the economy of the vicinity in which it is located; it would flood no towns; private property affected would be a number of small ranches and dude ranches in the North Fork Valley; tax revenue loss would amount at most to $500 a year; and

"Whereas the U.S. Geological Survey-Water-Supply Paper 866–C 1947, recommended this dam site; and

"Whereas the Army Engineers in House Document No. 531–1950 also recommend this dam site; and

"Whereas these multiple-purpose benefits combine to give the project a favorable benefit-to-cost ratio of 1.84 to 1; and

"Whereas the pool level at 3,660 feet above sea level, would provide 3,025,100 acre-feet of vitally needed headwater flood control storage; and

"Whereas the release of flood waters as needed through the winter season of low streamflow would generate 225,000 kilowatts of hydroelectric power, and in addition, would make Coram Canyon Dam feasible and firm up power production of many down-stream dams on the Columbia River; and

"Whereas many industries are now looking for large blocks of low-cost firm hydro power in the Northwest; and

"Whereas development of the Glacier View Dam site would create jobs urgently needed to provide for our burgeoning population and the future defense and welfare of our region and the Nation; and

"Whereas the industrial development of Montana and the entire Pacific Northwest will be greatly enhanced by the large amounts of low-cost power made available by the full development of the potential of the Glacier View Dam site; and

"Whereas the people of the State of Montana have seen in the example of Hungry Horse Dam on the south fork of the Flathead River; the immense benefits which accrue as a direct result of the construction of these great projects; not only to the State in which they are constructed but also to the entire region and Nation; and

"Whereas revenues from the sale of power from Glacier View Dam represent the most feasible source of funds to aid in the rapid construction and the maintenance of major future irrigation projects in the State of Montana; and

"Whereas the Glacier View Reservoir will have great value for the conservation and development of fish and wildlife resources and will provide a superb recreational area for the sportsmen and many families of the Northwest and the Nation who enjoy Montana's great scenic beauty and outstanding outdoor attractions; and

"Whereas large amounts of storage are required in the Flathead River to provide adequate protection against the seasonal floods which periodically cause great loss of life and the destruction of millions of dollars worth of property, causing great hardship throughout the Pacific Northwest; and

"Whereas many of the large storage projects planned by the Army Engineers for the control of floods in the Columbia River Basin have been and are being lost due to conflicting uses and inadequate development, so that it is seriously doubtful that even the minimum flood control storage requirements of the region can be met; and

"Whereas the Glacier View project was dropped from the Corps of Engineers 308 Report, primarily because of opposition from the National Park Service and conservation organizations, whose objections are summarized as follows:

"1. The reservoir would inundate about 19,000 acres of land within the western boundary of Glacier National Park; destroy some 8,000 acres of virgin timber; require destruction of 56 percent of the white-tailed deer, 30 percent of the mule deer and elk, over 50 percent of the moose, due to flooding of their winter-feeding area; flood out over 70 percent of the beaver; impair the natural beauty of the valley, with an attendant loss of interest of park visitors who come for stream fishing.

"2. The project would violate policy established under the act of August 22, 1914 (38 Stat. 699), accepting Federal jurisdiction over Glacier National Park, which specifically requires the Park Service to afford protection against any attempted action adversely affecting the natural wildlife, growth or beauty of the park; and

"Whereas the answers to these two major objections are as follows:

"1. The reservoir would inundate 10,000 acres, only 1 percent of the total area of Glacier National Park; nearly all the reservoir area is covered with second growth brushy fir and lodgepole pine; there are vast areas just as good as the reservoir area into which the game would move; the reservoir would be filled from the spring flood flow, retained as a stable lake throughout the summer recreational period; use of part of the stored water would begin in the fall and continue through the winter until capacity was again available for retention of spring flood waters and a repetition of the cycle; this operation would enhance, not harm, recreational use of what is now a little-used valley, largely an unsightly burn with no scenic attraction; construction of a road around the reservoir would make for easier access into an area now almost inaccessible.

"2. The act of August 22, 1914, acknowledges the fact that provision for beneficial uses of water resources has a higher priority than 'reservation of all timber—natural curiosities—and the protection of the animals'; and

"Whereas the public interest would so clearly be served best by construction of Glacier View Dam and Reservoir: Now, therefore, be it

"Resolved by the Senate and House of Representatives of the State of Montana, That the Representatives of the State of Montana in the Congress of the United States be requested to enact into law necessary and proper legislation to authorize construction by the Federal Government of Glacier View Dam on the North Fork of the Flathead River in the State of Montana; be it further

"Resolved, That said legislation authorizing the construction of Glacier View Dam contain a provision reserving to Montana a block of the power generated by Glacier View Dam; be it further

"Resolved, That the Bureau of Reclamation be authorized and sufficient appropriations be provided for the detailed planning and construction of Glacier View Dam; be it further

"Resolved, That this assembly request the Congress, in making appropriations for the construction of the Glacier View project, to define the compensations that shall be received from the Government of the United States by the County of Flathead and by affected cities and school districts in said county for extraordinary expenses resulting from expanded services required in the fields of school and hospital facilities, health, and sanitation, and police protection incidental to the construction of said projects; and to provide all necessary funds and take all needed action to insure the construction of all transportation and other facilities needed to provide opportunity equal to that now existing of access to mines, to forests in Federal, State, and private ownership, and to manufacturing and refining plants, to the end that the present steady and continuous employment of Montana people depending upon forests and mines for their livelihood will not be adversely affected; and be it further

"Resolved, That copies of this memorial be submitted by the secretary of the State of Montana to each of the individuals and to the chairman of each of the committees named in the title of this memorial and also to the presiding officers of both Houses of the Congress of the United States, RICHARD M. NIXON and SAM E. RAYBURN.

"JOHN J. MACDONALD,
"Speaker of the House.
"PAUL CANNON,
"President of the Senate."

The petition of Apolonto M. Ontimare, of Burauen, Leyte, the Philippines, relating to the settlement of this claim under the provisions of the Rehabilitation Act of 1946; to the Committee on the Judiciary.

A resolution adopted by the Board of Supervisors of the County of Hawaii, T.H., expressing appreciation for the enactment of legislation granting statehood to Hawaii; ordered to lie on the table.

RESOLUTION OF HOUSE OF REPRESENTATIVES OF ILLINOIS

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the RECORD, and appropriately referred, House Resolution 23, adopted by the 71st General Assembly of the State of Illinois recommending that Public Law 85–316 be amended to confer nonquota immigrant status on those aliens classified as fourth preference applicants and whose petitions had been approved by the Attorney General prior to July 1, 1957. This resolution deserves the attention of every Member of the House and Senate because it points up the need to revise at least one aspect of our rigid immigration policy. Legislation is now before the Judiciary Committee designed to reunite fourth preference applicants with their families in the United States. It is hoped that early action will be forthcoming.

There being no objection, the resolution was referred to the Committee on the Judiciary, and, under the rule, ordered to be printed in the RECORD, as follows:

HOUSE RESOLUTION 23

Whereas there are many Americans who have filed petitions with the immigration authorities of the United States for the entry of

their sons, daughters, brothers, and sisters, which petitions are classified in the fourth preference quota of the Immigration and Nationality Act; and

Whereas of the four preference quotas established by the Federal Immigration and Nationality Act, the first, second, and third quotas are allotted 100 percent of the total annual entry quota; and

Whereas as a result those persons who fall within the fourth preference section must depend for entry into this country upon deficiencies in the first three quotas; and

Whereas there is frustration and despair resulting from the law that gives hope to Americans by permitting them to file petitions, getting them approved, and then compelling them to wait for their kin who may never come; and

Whereas thousands of discontented people abroad, whose hopes are first raised and then dashed, certainly cannot believe in the good will we try to engender through our foreign policy, and thus become easy prey to the propaganda of unfriendly nations; and

Whereas Congress has recognized and alleviated a similar problem through Public Law 85–316, which includes a provision for reuniting spouses and minor children of aliens legally residing in this country whose petitions were approved prior to July 1, 1957: Therefore, be it

Resolved by the House of Representatives of the 71st General Assembly of the State of Illinois, That this house respectfully request the Senate and House of Representatives of the United States to amend the provisions of Public Law 85–316 to include cases which fall within the fourth preference quota, in order to provide for entry of the many thousands, petitions for whom have piled up in a backlog in prior years; that in order not to create another problem of separated families, those applicants who are married and have families be permitted to bring them; and that a suitable copy of this preamble and resolution be sent by the secretary of state to each Congressman and U.S. Senator from the State of Illinois.

Adopted by the house, February 3, 1959.

PAUL POWELL,
Speaker, House of Representatives.

CLARENCE BOYLE,
Clerk, House of Representatives.

RESOLUTIONS BY THE EQUITY CO-OPERATIVE LIVESTOCK SALES ASSOCIATION

Mr. WILEY. Mr. President, this morning I received a copy of resolutions adopted by the delegates attending the Equity Cooperative Livestock Sales Association at Green Bay.

The association, indeed, represents the crystallization of the thinking of a great number of folks in Wisconsin, since it serves about 50,000 livestock producers.

The resolutions adopted at the annual meeting reflect upon both State and Federal problems, a number of them relating especially to our national agriculture policy.

Today, we recognize that we face particularly difficult problems in agriculture in trying to find a farm policy that will serve the interests of both consumer and producers and, at the same time, promote health in the agriculture economy.

To give my colleagues the benefit of the thinking of this fine association, I request unanimous consent to have the resolutions printed in the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTIONS OF THE EQUITY CO-OP LIVESTOCK SALES ASSOCIATION FOR THE 37TH EQUITY ANNUAL MEETING HELD ON THURSDAY, FEBRUARY 12, 1959, GREEN BAY

RESOLUTION 1. DISCREPANCIES IN LIVESTOCK MOVEMENT AND MARKETING OF LIVESTOCK

Existing law controlling the movement of livestock in Wisconsin grants special privileges to stockyards, dealers, terminal markets, and other assembly points that are denied to operators of livestock auction markets.

We, therefore, strongly urge that section 95.49 of the Wisconsin statutes be amended to eliminate inequities in the present law. We urge that uniform regulations and the same standards of sanitation be established to apply alike to all market facilities.

RESOLUTION 2. LIVESTOCK DISEASE CONTROL PROGRESS

Equity wishes to commend the Wisconsin State Department of Agriculture, and the Wisconsin Veterinarian's Association for the splendid job that has been done in reducing the incidence of bovine brucellosis in Wisconsin to less than two-tenths of 1 percent, a remarkable record. Equity cooperated with the State department of agriculture this past year by allowing them to take blood samples of more than 2,000 wornout dairy cows that were consigned to our slaughter auctions at Altoona and Richland Center. All of this large number proved negative to the Bangs test with the exception of one subject animal. This shows the efficiency of the program in eliminating Bangs disease in Wisconsin cattle.

Such results lead us to believe that we are reaching a time in Wisconsin when some of the expensive restrictions imposed on dairymen can be eliminated. The cost of the testing program was more than a half million dollars this past year.

We specifically urge the continuation of the ring test and the quarantine of infected herds, to be covered by proper test to eliminate reactors. We recommend that expense of additional testing be eliminated for farmers whose herds are in modified, brucellosis-free counties and have been determined negative to brucellosis under its brucellosis program.

RESOLUTION 3. MEAT AND MILK MARKET EXPANSION

The equity commends all of the agencies that together have worked to bring about expanded markets for milk and meat. We feel this to be in the public interest since meat and milk provide our most nutritious food constituents. Good health leans heavily on good food.

We urge the continued expansion of our school lunch program toward the goal of reaching all school students as soon as possible.

RESOLUTION 4. TAXATION OF PATRONAGE SAVINGS

We reaffirm our position which has been held for years that the net proceeds of a cooperative returned to patrons on a patronage basis—in cash, certificate of equity, or allocated book credits—is income to the patrons and therefore not taxable income as far as the cooperative is concerned. This is consistent with the basic concept of a cooperative as a nonprofit organization in which any income over and above the costs of operation belongs to the member patrons. The law should be changed and clarified to make it clear that patronage refunds are taxable in the hands of the patrons in the year allocated and not taxable income to the cooperative.

We are basically opposed to any legislation which would discriminate against cooperatives requiring them to pay a fixed rate of interest upon their capitalization, to retire their capitalization within 3 years, and force them to pay income tax on capital not retired after that period, none of which are required of any other type of business in the Nation.

RESOLUTION 5. AGRICULTURE PRICE SUPPORTS

We recognize the need for programs of Government assistance to agriculture. Such programs have to change from time to time to meet changing conditions and new challenges in an ever-changing and progressive world. However, ample research and thorough study should be made before new programs are adopted.

Therefore, it is considered advisable that present price supports be continued on at least 1957 levels until such time as a new workable program is developed which will (1) provide an adequate level of living for farm families and continue the operation of a family-type agriculture; (2) promote and provide incentive for technical progress and improved efficiency within agriculture; (3) promote and encourage the consumption of agricultural products; (4) conserve our agricultural resources; (5) ever strive to improve the current program; and (6) encourage the use of agriculture products in our foreign aid programs in lieu of financial credit.

RESOLUTION 6. ADEQUATE PROTECTION OF LANDOWNER RIGHTS UNDER CONDEMNATION

Acquisition of farmlands for public use such as schools, State and Federal highway programs, and national defense programs is becoming more extensive. We believe that the Federal and State laws of eminent domain should be amended to assure adequate compensation for severance damage, inconvenience, reduction or destruction of appearance, interference with operational efficiency of the remainder of the property, effects upon drainage, and any other internal changes or disruption.

We also believe that the time for receipt of payment should be extended so as to be more comparable with normal land sale arrangements, and that a longer time should be provided for taking possession so as to give landowners more opportunity to rearrange his farm operations and make alternate arrangements.

RESOLUTION 7. WATER USE POLICY AND LEGISLATION

We commend the 1957 legislative session for providing full scale hearings and investigations into the need for improving Wisconsin's water use policy and legislation. We believe that legislation should be enacted that will clarify the legal rights of property owners to the use of water resources, keeping in mind the interests of the public as well. Present day conditions make changes highly necessary in the present water use law. We sincerely hope and will work for such changes in the law as will clarify legal rights of farmers in surface and underground waters and provide for equitable determination on the basis of need and available supply. We request positive legislation to protect underground and surface water supplies for agricultural uses.

RESOLUTION 8. PROPOSED WISCONSIN EGG GRADING LEGISLATION

In view of the increasing importance of uniform quality control in production and marketing of eggs, there has developed a definite need for improvement of Wisconsin egg grading regulations. We believe that regulations should be developed to eliminate ungraded eggs at retail level, provide producer protection against misgrading, and so regulate the sale of eggs to improve consumer acceptance.

RESOLUTION 9. DAYLIGHT SAVING TIME

Due to the difficulty in meeting school bus schedules in the fall, we urge the Wisconsin Legislature to amend daylight saving time to be terminated on September 1 rather than October 1.

RESOLUTION 10. APPRECIATION AND COMMENDATION

Equity extends to Russell Gasch its sincere appreciation and gratitude for the leadership and service he has contributed during his years as a member of the board of directors.

We extend our heartfelt thanks for a job well done.

RESOLUTION 11. APPRECIATION

To the management and staff of station WBAY and WBAY–TV, we extend sincere thanks for the many courtesies extended to us and for contributing to the success of our meeting by making these excellent facilities available for our convenience.

To the Green Bay Chamber of Commerce, we express deep appreciation for the support, splendid cooperation, and assistance given to make this meeting a success.

BILLS AND JOINT RESOLUTIONS INTRODUCED

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SCOTT:

S. 1563. A bill for the relief of Sang Ho Lee, his wife, Hi Sook Lee, and minor child, Byung Yun (Louise) Lee; to the Committee on the Judiciary.

By Mr. MURRAY:

S. 1564. A bill to amend title II of the National Defense Education Act of 1958 to provide a new method of distributing Federal capital contributions to institutions of higher education in a State, if a State's allotment is insufficient to permit each such institution to receive the total amount requested by it; to the Committee on Labor and Public Welfare.

By Mr. MURRAY (for himself, Mr. NEUBERGER, and Mr. MANSFIELD):

S. 1565. A bill to amend the act entitled "An act relative to employment for certain adult Indians on or near Indian reservations," approved August 3, 1956, so as to enable certain Indians who do not reside on trust property to participate in the program authorized by such act; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. MURRAY when he introduced the above bill, which appear under a separate heading.)

By Mr. MURRAY (for himself, Mr. ALLOTT, Mr. ANDERSON, Mr. BARTLETT, Mr. BENNETT, Mr. BIBLE, Mr. CHAVEZ, Mr. DWORSHAK, Mr. GOLDWATER, Mr. MAGNUSON, Mr. MOSS, and Mr. MANSFIELD):

S. 1566. A bill to stabilize the domestic market prices of lead and zinc; to the Committee on Finance.

(See the remarks of Mr. MURRAY when he introduced the above bill, which appear under a separate heading.)

By Mr. KEATING:

S. 1567. A bill to provide that each member of the bar of the highest court of a State or of a Federal court shall be eligible to practice before administrative agencies of the United States; to the Committee on the Judiciary.

(See the remarks of Mr. KEATING when he introduced the above bill, which appear under a separate heading.)

By Mr. SCHOEPPEL:

S. 1568. A bill to provide for the establishment of the Fort Scott National Historic Site, in the State of Kansas, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. YARBOROUGH:

S. 1569. A bill for the relief of Charles H. Denny; to the Committee on the Judiciary.

By Mr. MANSFIELD (for himself, Mr. HART, Mr. HUMPHREY, Mr. MCNAMARA, Mr. MAGNUSON, Mr. MORSE, Mr. MOSS, Mr. MURRAY, Mr. NEUBERGER, Mr. PROXMIRE, Mr. YOUNG of Ohio, and Mr. JACKSON) (by request):

S. 1570. A bill to establish fair labor standards for employees engaged in wool and mohair shearing operations, and for other purposes; to the Committees on Agriculture and Forestry, and Labor and Public Welfare, jointly.

(See the remarks of Mr. MANSFIELD when he introduced the above bill, which appear under a separate heading.)

By Mr. KEFAUVER (for himself, Mr. CHAVEZ, Mr. DOUGLAS, Mr. BARTLETT, Mr. ENGLE, Mr. GRUENING, Mr. HENNINGS, Mr. HUMPHREY, Mr. LANGER, Mr. LAUSCHE, Mr. MANSFIELD, Mr. MCCARTHY, Mr. MORSE, Mr. MCGEE, Mr. NEUBERGER, Mr. YARBOROUGH, Mr. YOUNG of Ohio, Mr. WILEY, Mr. CARROLL, Mr. MCNAMARA, Mr. HART, and Mr. KEATING):

S. 1571. A bill to establish a Department of Consumers in order to secure within the Federal Government effective representation of the economic interests of consumers; to coordinate the administration of consumer services by transferring to such department certain functions of the Department of Health, Education, and Welfare, the Department of Labor, and other agencies; and for other purposes; to the Committee on Government Operations.

(See the remarks of Mr. KEFAUVER when he introduced the above bill, which appear under a separate heading.)

By Mr. JOHNSTON of South Carolina:

S. 1572. A bill to amend the Federal Executive Pay Act of 1956; and

S. 1573. A bill to amend section 202(8) of the Classification Act of 1949 so as to exclude pilots from such act; to the Committee on Post Office and Civil Service.

By Mr. JOHNSTON of South Carolina (by request):

S. 1574. A bill to require information concerning the average of the number of copies of each issue sold or distributed to paid subscribers to be included in sworn statements relating to all publications, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. MAGNUSON:

S. 1575. A bill to amend the act of August 1, 1958, to authorize and direct the Secretary of the Interior to undertake continuing studies of the effects of insecticides, herbicides, fungicides, and other pesticides, upon fish and wildlife for the purpose of preventing losses of those invaluable natural resources, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. MAGNUSON (for himself and Mr. JACKSON):

S. 1576. A bill to provide for the construction of a salt-water research laboratory at Seattle, Wash.; to the Committee on Interstate and Foreign Commerce.

By Mr. DOUGLAS:

S. 1577. A bill for the relief of H. M. Cooper;

S. 1578. A bill for the relief of Ralph E. Swift and his wife, Sally Swift; and

S. 1579. A bill for the relief of Arthur B. Moore; to the Committee on the Judiciary.

By Mr. SCHOEPPEL:

S. 1580. A bill to amend section 334 of the Agricultural Adjustment Act of 1938, as amended, to provide that for certain purposes of this section, farms on which the farm marketing excess of wheat is adjusted to zero because of underproduction shall be regarded as farms on which the entire amount of the farm marketing excess of wheat has been delivered to the Secretary or stored to avoid or postpone the payment of the penalty; to the Committee on Agriculture and Forestry.

By Mr. ALLOTT:

S. 1581. A bill to establish an expenditure account for the operation and maintenance activities of the Bureau of Reclamation; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. ALLOTT when he introduced the above bill, which appear under a separate heading.)

By Mr. KEATING:

S.J. Res. 85. Joint resolution to amend the Constitution to enable the Congress to function effectively in time of emergency or disaster; to the Committee on the Judiciary.

(See the remarks of Mr. KEATING when he introduced the above joint resolution, which appear under a separate heading.)

By Mr. SPARKMAN (for himself and Mr. HILL):

S.J. Res. 86. Joint resolution proposing an amendment to the Constitution of the United States providing for the election of President and Vice President; to the Committee on the Judiciary.

(See the remarks of Mr. SPARKMAN when he introduced the above joint resolution, which appear under a separate heading.)

RESOLUTION

Mr. HUMPHREY submitted a resolution (S. Res. 96) favoring an international agreement for a suspension of nuclear weapons tests, which was referred to the Committee on Foreign Relations.

(See above resolution printed in full when submitted by Mr. HUMPHREY, which appears under a separate heading.)

ADULT VOCATIONAL TRAINING SERVICES FOR INDIANS

Mr. MURRAY. Mr. President, on behalf of the junior Senator from Oregon [Mr. NEUBERGER], my colleague the junior Senator from Montana [Mr. MANSFIELD], and myself, I introduce, for appropriate reference, a bill to amend Public Law 84–959, which provided adult vocational training services for Indians.

Our bill would accomplish two things. It would remove the present authorized ceiling of $3.5 million annually for this program, and authorize instead appropriation of such sums as may be necessary to carry out the provisions of the act. Secondly, the bill would remove the present requirement that participation be limited to Indians who reside on trust property.

As of December 31, 1958, 961 heads of families and single individuals had entered vocational training under the act. There were 490 applications for training pending. The appropriation for the current fiscal year—$2,830,000—will permit only 150 of the 490 to obtain training this fiscal year.

Mr. President, I regard the adult vocational training program as one of the most important programs for our Indian population. So do the Indians. So do the Secretary of Interior and the Commissioner of Indian Affairs, both of whom I shall quote in a moment. Therefore, it is amazing to me that with this backlog of applicants the administration refused to recommend appropriation of the very modest full authorization, $3.5 million, and refused to ask for a supplemental appropriation. The budget request for the program for this

year is $2,830,000, the same amount as recommended and approved last year.

Mr. President, I should like to put in the RECORD quotes from administration officials on the value of this vocational training program.

Commissioner of Indian Affairs Glenn L. Emmons, on July 3, 1958, stated:

> Personally I am deeply encouraged that we now have this vocational training program underway and I feel confident that it will produce large and growing benefits for the Indian people in the years ahead. There are, of course, many reasons for the widespread poverty we find so frequently on Indian reservations. But certainly one of the most important and tangible reasons has been the lack of specific job skills—the sheer fact that large numbers of adult Indian people have not been qualified by training for anything but common labor and consequently have had no personal bargaining power whatever in seeking for employment.
>
> The new program is explicitly designed to help correct this situation. Under its auspices hundreds of Indians in the younger age brackets will get the type of training they need to make the difference between bare subsistence wages and a reasonably adequate income, between almost total job insecurity and some measure of protection, between a flat and unpromising future and one that holds some promise of steady advancement and improvement. All of these things are implied in the vocational training program and the long-range results should be tremendously beneficial.

A Department of Interior press release on January 20, 1959, stated that "one of the most important developments" concerning educational opportunities for Indians was the launching of a new vocational training program designed to improve the job skills and earning capacity of adult Indians.

Secretary of the Interior Seaton, on September 18, 1958, made the following statement:

> Under no circumstances could I bring myself to recommend the termination of the Federal relationship with any Indian tribe in this country until the members of that tribe have been given the opportunity of a sound and effective education. To me it would be incredible, even criminal, to send any Indian tribe out into the stream of American life until and unless the educational level of that tribe was one which was equal to the responsibilities it was shouldering.

Mr. President, the administration's position on Indian education reminds me of the administration's position on national park improvement. The administration put out reams of publicity and fancy brochures about the Mission 66 program, then refused to recommend appropriation of enough money to carry out its own recommendations. Members of Congress had to increase the money, and of course we were labeled as spendthrifts for doing so. Now the administration says Indian vocational education is a wonderful thing, but refuses to recommend appropriation of a very small amount of money which would help extend this worthwhile program to more Indians who wish to participate.

I believe the Senate should increase the appropriation for this year for Public Law 959 to the fully authorized $3.5 million, and that we should pass the bill I am introducing today so that the program can be geared to meet the need, and so that Indians who do not live on trust property may be able to participate in this program.

The PRESIDING OFFICER (Mr. LONG in the chair). The bill will be received and appropriately referred.

The bill (S. 1565) to amend the act entitled "An act relative to employment for certain adult Indians on or near Indian Reservations," approved August 3, 1956, so as to enable certain Indians who do not reside on trust property to participate in the program authorized by such act, introduced by Mr. MURRAY (for himself, and Mr. NEUBERGER, and Mr. MANSFIELD), was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

STABILIZATION OF DOMESTIC MARKET PRICES OF LEAD AND ZINC

Mr. MURRAY. Mr. President, I introduce, for appropriate reference, a bill designed to breathe economic life into this Nation's sick lead and zinc industry. Senators ALLOTT, ANDERSON, BARTLETT, BENNETT, BIBLE, CHAVEZ, DWORSHAK, GOLDWATER, MAGNUSON, MOSS, and MANSFIELD have joined me in the sponsorship of the bill.

Unemployment and the human distress that always go with this economic disease are widespread in the great lead and zinc producing areas of our country.

I call the attention of the Senate to the fact that the price structures called for in this bill are identical with the price structure supported by the administration when the Congress last year considered the problem of lead and zinc.

I further call the attention of the Senate to the fact that no appropriation will be necessary to implement this piece of legislation, and it, therefore, will not affect the budget.

The bill is designed to bring about price stability for lead and zinc; restore employment in the lead and zinc mines, mills, and smelters; and provide adequate supplies of lead and zinc for the consuming public at reasonable prices.

My colleague, Representative LEE METCALF, is today introducing an identical bill in the House of Representatives.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1566) to stabilize the domestic market prices of lead and zinc, introduced by Mr. MURRAY (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Finance.

Mr. DWORSHAK. Mr. President, I am happy to join the chairman of the Senate Committee on Interior and Insular Affairs in sponsoring a bill to stabilize the lead and zinc minerals industry. For several years efforts have been made by representatives of those States having vital mining activities to provide a proper background to enable the industries to operate at a profit and provide full employment. Unfortunately, there has been a deluge of imports, particularly of lead and zinc, in competition with our own mines, and as a result it has been difficult to maintain price levels which will make it possible for the domestic minerals industry to maintain itself as an integral part of our national preparedness program.

I certainly hope, Mr. President, that the committee will take early favorable action on this bill, and that the Senate will give its approval to it, so that some action may be taken during the present session of Congress.

ELIGIBILITY OF CERTAIN ATTORNEYS TO PRACTICE BEFORE FEDERAL ADMINISTRATIVE AGENCIES

Mr. KEATING. Mr. President, I introduce, for appropriate reference, a bill to provide that each member of the bar of the highest court of a State or of a Federal court shall be eligible to practice before administrative agencies of the United States.

Many of the important administrative tribunals operating under the authority of the Federal Government have set up special qualifications for attorneys who wish to practice before them. These requirements vary widely, and make it difficult for lawyers coming from outside of the District of Columbia to appear and present matters.

The Department of Justice has made a study of this situation, and has recommended that the agencies drop their formal admission requirements, and adopt a uniform rule making eligible anyone who is a member of the bar of the Supreme Court of the United States or of the highest court of any State. My bill is essentially the same as the recommendation of the Department of Justice. I think these special requirements are unnecessary. I do not see any reason why an attorney who has qualified to practice before his own highest court should be barred from any of these tribunals.

There is one exception I would make, however, and that is in the case of the Patent Office. Because of the very technical nature of the work involved, it is understandable that this agency requires special qualifications, and I would therefore except the Patent Office from the bill.

Mr. President, I ask unanimous consent that the text of the bill be included in the RECORD, and that the bill lie on the desk through Wednesday, April 15, in case other Senators desire to join in sponsoring it.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD, and lie on the desk, as requested by the Senator from New York.

The bill (S. 1567) to provide that each member of the bar of the highest court of a State or of a Federal court shall be eligible to practice before administrative agencies of the United States, introduced by Mr. KEATING, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That notwithstanding any other provision of law, any person who is a member in good standing of the bar of the highest court of a State or

possession of the United States, or of the District of Columbia, shall be eligible to practice before any department, board, bureau, or administrative agency of the United States, other than the Patent Office, without the necessity of making application therefor or of showing any other qualifications.

WOOL SHEARING LABOR STANDARDS ACT OF 1959

Mr. MANSFIELD. Mr. President, by request, on behalf of myself, and Senators HART, HUMPHREY, MCNAMARA, MAGNUSON, MORSE, MOSS, MURRAY, NEUBERGER, PROXMIRE, YOUNG of Ohio, and JACKSON, I introduce, for appropriate reference, a bill to establish fair labor standards for employees engaged in wool and mohair shearing operations, and for other purposes. The bill seeks to amend the National Wool Act. However, inasmuch as the bill has something to do with fair labor standards, I ask unanimous consent that it be referred to both the Committee on Agriculture and Forestry and the Committee on Labor and Public Welfare.

The PRESIDING OFFICER. The bill will be received, and, without objection, will be referred as requested by the Senator from Montana.

The bill (S. 1570) to establish fair labor standards for employees engaged in wool and mohair shearing operations, and for other purposes, introduced by Mr. MANSFIELD, by request, for himself and other Senators, was received, read twice by its title, and referred to the Committees on Agriculture and Forestry and Labor and Public Welfare, jointly.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the bill, together with an analysis, be printed in the RECORD at this point.

There being no objection, the bill and analysis were ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Wool Shearing Labor Standards Act of 1959".

SEC. 2. Section 702 of the National Wool Act of 1954, as amended (Act of August 28, 1954, 68 Stat. 912, as amended by Act of August 28, 1958, 72 Stat. 995; 7 U.S.C. 1785), is amended by inserting at the beginning thereof the figure "(a)" and by adding at the end thereof the following:

"(b) It is further recognized that the objectives of this Act depend upon the maintenance of a skilled labor force for wool or mohair shearing operations and that the desired domestic production of wool and mohair and the general economic welfare are impaired not only by the depressing effect of wide fluctuations in the price of wool or mohair in the world markets, but also by the depressing effect of substandard wages among workers in wool or mohair shearing operations. It is hereby further declared to be the policy of Congress that in promotion of the general economic welfare and as an encouragement of domestic production of wool or mohair, fair labor standards be established for employees engaged in wool and mohair shearing operations."

SEC. 3. Section 706 of such Act is amended by inserting at the beginning thereof the figure "(a)" and by adding at the end thereof the following:

"(b) No loan, purchase, payment, or other price support operation shall be made to any wool or mohair producer, directly or through any marketing agent, under the provisions of this Act unless such producers files a certificate or certificates with the Secretary (at such times prior to such payment as the Secretary may prescribe) certifying that the employees employed in shearing operations resulting in wool or mohair production on which such loan, purchase, payment or other price support operation is claimed, have been paid not less than the wage (including any overtime or other employee benefits) prevailing in the locality in which the work was performed for such employees as determined, after notice and an appropriate hearing, by the Secretary of Labor. Determinations by the Secretary of Labor under this subsection shall be final and conclusive and shall not be reviewable by any other officer or agency of the Government."

The analysis presented by Mr. MANSFIELD is as follows:

ANALYSIS OF THE WOOL SHEARING LABOR STANDARDS BILL

The bill is an amendment to the National Wool Act. It seeks to establish fair labor standards for employees who shear price-supported wool or mohair. The bill is cited as the "Wool Shearing Labor Standards Act of 1959."

Section 2 amends the statement of policy of the National Wool Act. The section declares that a skilled labor force is required to achieve the objectives of the National Wool Act, i.e., the production of wool as a strategic commodity needed for national security. It also says that substandard wages paid to sheep shearing workers impair the domestic production of wool and the general economic welfare, just as wide fluctuation in wool prices do. The establishment of fair labor standards for employees in wool and mohair shearing operations is declared to be the policy of Congress.

Section 3 provides that after holding appropriate hearings, the Secretary of Labor will determine the prevailing wage paid in a particular area for work performed in sheep shearing operations. Wool producers must certify that the area prevailing wage was paid to workers engaged in the shearing of their price-supported wool. This certification must be made before growers or their marketing agents can receive price-support benefits.

The prevailing wage provision of this legislation has a number of precedents, especially in the Davis-Bacon and Walsh-Healey Acts. The certification provision is used in many pieces of legislation involving Federal financial assistance or guarantees for construction of housing, highways, airports, etc.

EXPENDITURE ACCOUNT FOR OPERATIONS AND MAINTENANCE ACTIVITIES OF BUREAU OF RECLAMATION

Mr. ALLOTT. Mr. President, before explaining a bill I shall introduce, I wish to state for the RECORD that I am a cosponsor of Senate Concurrent Resolution 16, submitted by the Senator from Virginia [Mr. BYRD], and that I believe in the principle of full and complete control by the Appropriations Committees and the Congress of all Federal expenditures. The bill I am about to propose is, I believe, consistent with that principle. To the extent that it is not, I shall welcome amendments to make it so. The bill provides for the establishment of a revolving fund for the operation and maintenance moneys paid to the Bureau of Reclamation.

Under the present procedure, operation and maintenance funds paid to the Bureau of Reclamation by water and power users are channeled into the general fund of the Treasury with subsequent appropriations made out of the general fund to the Bureau. Under the bill, the operation and maintenance funds would go into a revolving fund for expenditures, subject to full accountability to Congress, thus eliminating the present unrealistic appearance that the reclamation program is costing the taxpayers a great sum of money annually, when it is actually paid by the reclamation project users.

The purpose of the proposed bill is to provide a more realistic procedure for review and action on the financing of the operation and maintenance of the Federal reclamation projects. The funds required would be available under the authority of a permanent appropriation subject to complete accountability to Congress and any annual limits thereby imposed. This financing is substantially from revenues, and the processing through the regular budgetary process is largely a formality, in that Congress appropriates the amount included in the budget. Benefits will accrue to the Bureau's operation and maintenance activity from the practice of having funds available on a continuing basis. This practice would reduce the hiatus created in the irrigation operation whereby charges to water users are assessed, levied, and collected on a calendar or operating year basis that is not coextensive with the fiscal year basis for which funds are appropriated.

Approximately $3,800,000 in advances made by water users' organizations for operation and maintenance would be credited to this appropriation for fiscal year 1959. Unused balances of this amount and subsequent advances will remain continually available in the appropriation account, if this language is enacted, without the document processing that is currently required through the Treasury Department at the beginning of a fiscal year to transfer unused funds to the appropriation of the commencing year.

Based on the reguest in the budget of the United States, a specific appropriation of $27,500,000 for operation and maintenance for fiscal year 1959 would not have been required if this permanent authorization were in effect. Of this amount, $22,365,100 would be derived from the reclamation fund, $2,015,000 from the Colorado River Dam fund, and $3,119,900 from the general fund. The portion of the total required appropriated funds related to non-revenue-producing and nonreimbursable activities, such as soil and moisture conservation, flood control, and so forth, is about 10 percent, or $2,843,500.

Collections available for the financing requested in this proposed legislation arise chiefly from operation and maintenance charges, water service charges, and power revenues. The amounts deposited to the credit of the reclamation fund and Colorado River Dam fund in fiscal year 1958, and from which our requirements could be financed in accordance with this proposal, were approxi-

mately $65 million and $9 million, respectively.

The legal basis for depositing collections from Bureau operations to the credit of special or other funds would not be disturbed by the proposed legislation. Deposit of operating revenues according to law to the reclamation fund, Colorado River Dam fund, general fund, and so forth, would continue. Required moneys to defray expenses of the operation and maintenance activities would be transferred from these depositories to the special expenditure account created by the recommended bill. In effect, the procedure would be the same in principle as practiced today under the annual authority of the appropriation acts, except that by the adoption of the proposed legislation the Bureau would have permanent authority. Budgetary statements showing requirements will continue to be included in the Annual Budget of the United States transmitted to Congress.

This bill would have no impact or effect on repayment obligations of the beneficiaries of Bureau facilities. Present reclamation laws controlling contractual repayment requirements with beneficiaries will not be affected by this bill.

As construction of projects or features of projects is completed the level of fund requirements for operation and maintenance will rise. A factor offsetting this increase will be the transfer of the operation and maintenance of certain irrigation facilities to water users organizations.

Precedent exists for this proposed language. On April 11, 1956, legislation was approved by the President authorizing construction of the Colorado River storage project and participating projects and providing for the continued availability of operation and maintenance funds from the revenues of the associated projects without further specific congressional appropriation. In the attached exhibit are listed noteworthy revenue producing organizations of the Federal Government having the authority to use revenues for operation and maintenance without further congressional appropriation. Also listed in the exhibit are activities using proceeds from operations as a source of funding expenses under authority of permanent appropriations or revolving funds:

USE OF REVENUES BY FEDERAL AGENCIES

1. Tennessee Valley Authority: Revenues used for operation and maintenance provided for in section 26 of TVA Act of 1933.

2. St. Lawrence Seaway Corporation: Use of toll revenues (not yet started) for operation and maintenance and bonds for construction. No appropriations made. See pages 209–210 of U.S. budget for fiscal year 1958.

3. Panama Canal: Uses revenue for nearly all operations except acquisition of capital assets. Under Government Corporations Control Act.

4. Virgin Islands Corporation: Virgin Islands (48 U.S.C. 1407).

5. Alaska Railroad: Revenue used for operation and maintenance of railroad and vessels (48 U.S.C. 301).

6. Some activities covered by permanent appropriations or revolving funds:

(a) Bonneville Power Administration, $500,000 from power revenues for emergency expenses (16 U.S.C. 832).

(b) Southeastern Power Administration: For emergency expenses, $50,000 (16 U.S.C. 825a–2).

(c) Fort Peck power project (U.S.S.R.): Operation and maintenance provided by a permanent appropriation. A fund established from power revenue to equal $500,000.

(d) Bureau of Land Management: Use of revenue from sale of timber to cover expenses (41 Stat. 202; 53 Stat. 1196).

(e) Bureau of Indian Affairs: Some revenues used for operation and maintenance of irrigation and power works (60 Stat. 895).

(f) Upper Colorado River Basin fund (U.S.B.R.): Revenue to be used for operation and maintenance (a special fund).

(g) Bureau of Mines: Production of helium (50 U.S.C. 164).

(h) Department of Defense: Operation of Naval Academy laundry (34 U.S.C. 1106–1107).

(i) Department of Commerce—Maritime Activities: Vessel operations fund.

(j) General Services Administration: Operation and maintenance of certain buildings from rental receipts (40 U.S.C. 345).

I introduce at this time a bill to establish an expenditure account for the operation and maintenance activities of the Bureau of Reclamation and ask that it be appropriately referred.

I ask unanimous consent that it may be printed at this point in my remarks and that it may lie on the desk until April 1 for such Senators as may desire to join me in sponsoring it.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD, and lie on the desk, as requested by the Senator from Colorado.

The bill (S. 1581) to establish an expenditure account for the operation and maintenance activities of the Bureau of Reclamation, introduced by Mr. ALLOTT, was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That funds advanced by water users and others for the operation and maintenance of projects and facilities under the jurisdiction of the Bureau of Reclamation shall be deposited to the credit of the operation and maintenance expenditure account and shall be available without further appropriation for the purposes for which advanced. In addition to the funds advanced as aforesaid, subject to such separate limitations as may be included in annual appropriation acts, there are hereby made similarly available such amounts as are required after June 30, 1959, to defray the costs of operation and maintenance and replacements of projects and facilities under the jurisdiction of the Bureau of Reclamation and for the conduct of its soil and moisture conservation program, as authorized by law, said amounts to be derived from the special or other funds in the Treasury into which revenues collected in connection with operation of such projects and facilities are deposited or, in the case of operation and maintenance expenses properly allocable to flood control, navigation, the preservation and propagation of fish and wildlife, soil and moisture conservation and, as authorized by law, other nonreimbursable functions, such amounts as may be specified for these purposes in annual appropriation acts from moneys in the Treasury not otherwise appropriated. Nothing herein shall affect the operation of the Fort Peck Continuing Fund established by the Act of May 18, 1938 (52 Stat. 403) or the Coloroda River Basin Fund established by the Act of April 11, 1956 (70 Stat. 105) but moneys from such funds may be transferred to and expended from the expenditure account herein established.

PROPOSED AMENDMENT TO CONSTITUTION RELATING TO EFFECTIVE FUNCTIONING OF CONGRESS IN EVENT OF EMERGENCY OR DISASTER

Mr. KEATING. Mr. President, I introduce for appropriate reference a joint resolution to amend the Constitution to enable the Congress to function effectively in time of emergency or disaster.

The Federal Government is now ill prepared for continued operations in the event of some national disaster. We should not delay the adoption of measures for meeting such contingencies. For a number of years I have proposed constitutional amendments which would provide machinery for determining succession in the event of Presidential inability, and which would provide for temporary appointments to the House of Representatives in an emergency.

I am very much pleased that the Subcommittee on Constitutional Amendments of the Committee on the Judiciary has reached bipartisan agreement on a joint resolution with respect to Presidential inability. While I have some reservations about the procedure contemplated in this joint resolution and might seek amendment in the committee, I would not want to propose any alternatives which would delay prompt resolution of this problem. The need for some such procedures is so vital that I am willing to withhold my own proposals if this will expedite action by the Congress. I hope the Senate will act promptly on this measure, and that its approval by both Houses will not be delayed by bickering over details.

There is an equally vital need to provide procedures for any situation in which a substantial part of the House of Representatives is disabled as the result of some national catastrophe. As it stands today, the Constitution confers no authority on State Governors to appoint Members of the House of Representatives. Vacancies in the Senate may be filled by appointments by the Governors of the respective States. Vacancies in the judiciary may be filled by the President. There is also legislation regulating Presidential succession in the event of the death of the Chief Executive. But in the House of Representatives, vacancies can only be filled by special elections which may require a substantial lapse of time.

The joint resolution I am introducing would enable the Governors of each State to immediately appoint Representatives, if ever some great disaster should reduce the membership of the House by one-third or more. Any persons appointed to fill such vacancies, of course, would serve only until the people filled the vacancies by election, as now provided in article 1, section 2, of the Constitution.

We all hope and pray, of course, that the authority proposed in this joint resolution will never need to be exercised. In these perilous times, however, we cannot delay revision of our fundamental law to enable us to cope with emergencies. We could not have expected the Founding Fathers to recognize the possibility that hydrogen bombs and similar devices could destroy a large part of our National Legislature in an instant. It is of critical importance that we correct the defects in our Constitution which modern weapons of war have made evident.

Approval of Presidential inability and congressional succession amendments in this session of the Congress would constitute a notable achievement. The major value of such amendments would be to guarantee the continuation of constitutional representative government no matter what catastrophe confronts us. I hope that these proposed amendments will have the approval of all Members.

Mr. President, I ask unanimous consent that the text of the joint resolution be printed following my remarks in the RECORD.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred; and, without objection, the joint resolution will be printed in the RECORD.

The joint resolution (S.J. Res. 85) to amend the Constitution to enable the Congress to function effectively in time of emergency or disaster, introduced by Mr. KEATING, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, and shall be valid to all intents and purposes as part of the Constitution if ratified by the legislatures of three-fourths of the several States within seven years from the date of its submission by the Congress:

"Article ——

"Whenever, during any national emergency or national disaster, the total number of vacancies in the House of Representatives shall exceed one hundred and forty-five, the Speaker of the House of Representatives shall so certify to the President. In case there is no Speaker, or in the event of the inability of the Speaker to discharge the powers and duties of his office, such certification shall be made by the Clerk of the House of Representatives, or, if there is no Clerk or he is unable to discharge the powers and duties of his office, by such person as may be chosen by majority vote of the remaining Members of the House present and voting. Upon receipt of such certificate, the President shall issue a proclamation declaring the facts recited in such certificate. The executive authority of each State shall then have power to make temporary appointments to fill any vacancies in the representation from his State in the House of Representatives which may exist at any time within sixty days after the issuance of such proclamation. Any person temporarily appointed to fill any such vacancy shall serve until the people fill the vacancy by election as provided for by article I, section 2, of the Constitution."

Mr. KEATING. Mr. President, I ask unanimous consent that this joint resolution lie on the desk through Wednesday, April 15, in case other Senators desire to join in sponsoring it.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROPOSED AMENDMENT TO CONSTITUTION RELATING TO ELECTION OF PRESIDENT AND VICE PRESIDENT

Mr. SPARKMAN. Mr. President, on behalf of myself, and my colleague, the senior Senator from Alabama [Mr. HILL], I introduce a joint resolution for appropriate reference.

This joint resolution would propose an amendment to the Constitution with respect to the election of the President and Vice President. Briefly, it would abolish the electoral college system and would provide for direct vote within each State for the presidential and vice presidential nominees of the different parties.

While the electoral college would be abolished, the electoral vote would be retained and would be cast for the President and Vice President as under the existing method. The vote would be divided percentagewise in accordance with the popular vote. For example, Alabama now has 11 electoral votes, based on one for each United States Senator and each Congressman. Alabama would continue to have 11 votes for President and Vice President under my proposal, but if the Democratic nominee received only 65 percent of the popular vote he would receive only 65 percent of the electoral vote.

The retention of the electoral vote is a compromise which largely avoids the objections to the direct election of Presidents. It wisely holds on to the spirit of compromise so important in the Constitution which gave the small States equal representation in the Senate.

Thus a State like Nevada would have 1 electoral vote for each 37,000 people while New York would have 1 electoral vote for each 300,000 people. These States represent the two extremes, but the comparison illustrates the importance to the small States of retaining the electoral vote.

The amendment would follow the present provision of the Constitution in leaving the qualification of voters to the States. It would require no uniformity of qualifications as among the different States.

I believe that the proposed reform carefully guards the rights of the States in election matters.

Mr. President, I am convinced that this would be a fairer way of electing our President and Vice President than exists under the present system. It would encourage both major parties to make the maximum effort in all the States of the Union. It would encourage voters to be more active and to go to the polls in larger numbers because their votes would carry greater weight than is presently the case in many States. It would also encourage more serious consideration of men of outstanding ability from the less populated States of the Union.

The joint resolution I am introducing has long been before us from Congress to Congress. It was originally known as the Lodge-Gossett joint resolution. I have supported it and spoken for it, and testified in behalf of it before different committees since it was first proposed. It is a good joint resolution.

With the thought that others may want to join as cosponsors, I am asking that the joint resolution lie on the table until April 13.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred; and, without objection, the joint resolution will lie on the table, as requested by the Senator from Alabama.

The joint resolution (S.J. Res. 86) proposing an amendment to the Constitution of the United States providing for the election of President and Vice President, introduced by Mr. SPARKMAN (for himself and Mr. HILL), was received, read twice by its title, and referred to the Committee on the Judiciary.

IMPROVED OPPORTUNITY FOR PROMOTION OF CERTAIN OFFICERS IN NAVAL SERVICE—AMENDMENT

Mr. YARBOROUGH submitted an amendment, in the nature of a substitute, intended to be proposed by him, to the bill (H.R. 4413) to provide improved opportunity for promotion for certain officers in the naval service, and for other purposes, which was referred to the Committee on Armed Services and ordered to be printed.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD as follows:

By Mr. ENGLE:

Excerpts from address delivered by him to joint meeting of the American Municipal Association's Committee on International Municipal Cooperation and the Civic Committee of the People-to-People Program, March 17, 1959.

By Mr. MANSFIELD:

Address delivered by Secretary of the Interior Fred A. Seaton, at 33d anniversary of signing of charter of Long Island University, at Brooklyn, N.Y., on March 24, 1959.

By Mr. CASE of South Dakota:

Statement on DAV services in South Dakota and elsewhere.

PRICES AND WAGES IN THE STEEL INDUSTRY

Mr. WILEY. Mr. President, I commend President Eisenhower for his firm advice to the steel industry's management and labor leaders not to raise prices and wages in the steel industry, so as not to pass on the increased costs to other industries using steel.

The President of the United States, speaking for all the people of the United States, recognized the consumer's interest in the prices charged and the wages paid in the steel industry.

I have been following these matters closely in the Antitrust and Monopoly Subcommittee, and I am glad the President has spoken out in ample time to warn the steel industry of its public responsibility.

Similarly, I said on the floor of the Senate a week or so ago that collective bargaining negotiations in the industries which have high concentration of companies should have consumer representation.

Some persons say, "Well, that is none of the consumer's business." But if the consumer pays the tariff, or pays the increase, in my humble opinion it is a part of his business. In other words, we are living in a world a little bit changed from the free enterprise world of yesteryear. We are living in a world in which the people who have the power and can exercise it to the detriment of the consuming public must be checked.

In his statement the President was, in effect, representing the consumer in connection with the forthcoming wage negotiations in the steel industry.

I ask unanimous consent that an article from the Wall Street Journal referring to my statement be incorporated in the RECORD at this point in my remarks, as well as two articles in today's Washington Post and Times Herald on the subject.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Wall Street Journal, Mar. 12, 1959]

INFLATIONARY STEEL PACTS COULD LEAD TO FEDERAL CONTROLS, KEFAUVER SAYS—SENATOR WILEY SUGGESTS PUTTING REPRESENTATIVE OF CONSUMER INTERESTS IN WAGE TALKS

WASHINGTON.—Chairman KEFAUVER, Democrat of Tennessee, of the Senate Antitrust Subcommittee warned negotiators in coming steel labor talks that Government controls might follow if management and labor in steel and other key industries set off a new round of inflation.

His comment does not suggest any serious move in Congress for wage and price controls, a device still extremely unpopular with most lawmakers. Nor does it indicate any change in attitude by the Tennessee Senator, who always has regarded vigorous antitrust action as the best remedy for high prices in highly concentrated industries and has considered controls as a last resort.

However, it does square with Mr. KEFAUVER's campaign warnings directed at the steelmakers and the steelworkers. President David MacDonald of the United Steel Workers Union recently told Mr. KEFAUVER to mind his own business and keep out of the forthcoming steel wage negotiations. Steel labor pacts expire June 30.

Another approach was taken yesterday by the subcommittee's senior Republican, Senator WILEY, of Wisconsin. He suggested to the Senate that the Government might place a representative of consumer's interests at major collective bargaining sessions. He declined to take sides in the debate over whether wages or prices do more to cause inflation, but declared: "As things have gone, it appears that collective bargaining sessions have a big part to play in the inflationary spiral."

Senator KEFAUVER sounded his warning as the subcommittee heard John Kenneth Galbraith, a leading economic brain truster of the Democratic Party, assert that the Senator's proposed inflation cure, breaking up big corporations, would not work as a block against price inflation and that some kind of price control is needed.

Mr. Galbraith, Harvard University economics professor and head of the Democratic National Committee's economic council, told the panel there is no hope for an inflation remedy in the antitrust laws. Greatly expanded antitrust activity, he argued, would mean a wholesale revision in industrial structure, a wholesale disintegration of existing business units.

The Senator and professor were in substantial agreement, however, in their diagnosis of the cause of the postwar rise in the cost of living. Both attacked prices which they claim are allegedly administered in the highly concentrated industries with little regard for consumer demand, and wages demanded by giant unions in those same industries.

Mr. Galbraith indicated he favors legislation that would require hearings by a Government board or a board with at least one public representative before a price increase could be put into effect. Bills along this line have been introduced by Senators O'MAHONEY, Democrat of Wyoming, and CLARK, Democrat of Pennsylvania, and Representative REUSS, Democrat of Wisconsin. But these measures would not compel a business to follow the recommendations of a board that found a proposed price increase to be unjustified. Mr. Galbraith said he would favor making such decisions binding in some way. This would amount to price control, which neither Congress nor the administration favors. At any rate, the bills are considered to have almost no chance to be passed.

The Democratic economist also attacked the Federal Reserve Board's use of monetary policy to decrease credit demand and fight inflation, contending monetary policy has little effect on prices. In addition, he restated the Democratic argument that budget balancing should not be major goal of Government while unemployment continues at a high level.

* * * * *

Chairman KEFAUVER, Democrat of Tennessee, of the Senate Antitrust Subcommittee renewed his warning to negotiators in coming labor contract talks that Federal wage and price controls might follow if management and union officials in steel and other key industries set off a new round of inflation. Senator WILEY, of Wisconsin, the subcommittee's senior Republican, suggested the Government send consumers' representatives to the bargaining sessions.

[From the Washington Post and Times Herald, Mar. 26, 1959]

PRESIDENT WARNS STEEL TO HOLD LINE ON PRICES

(By Edward T. Folliard)

President Eisenhower told labor and management in the steel industry yesterday that he was not going to let them add to the cost of living.

He said that when they begin to bargain soon over a new contract, they must do it in a way that will not cause a rise in the price of steel.

In an allusion to the gospel of St. Matthew, the Chief Executive threatened to intervene if necessary to head off a boost in steel prices that would send an inflationary wave through the whole economy.

"While this is a matter between the steelworkers and the steel companies," he said at a news conference, "the whole public is affected by everything they do.

"It would be completely * * * out of character for me to pretend to ignore it and wash my hands, like Pontius Pilate. I don't mean to do that."

(General Eisenhower had in mind a passage in the New Testament that is widely read in this Holy Week, the account of how Pontius Pilate, the Roman governor, yielded to the multitude demanding the crucifixion of Jesus although convinced of His innocence.

(It is in Matthew 27:24: "When Pilate saw that he could prevail nothing, but that rather a tumult was made, he took water, and washed his hands before the multitude, saying, I am innocent of the blood of this just person: see ye to it.")

The President's vehemence was startling against the background of his mild, hands-off policy of the past with respect to labor-management disputes. As he told the reporters, his administration has tried to keep outside the business of collective bargaining, and not to inject itself into that process.

APPEALS UNHEEDED

Heretofore he has contented himself with generalized appeals to management and labor to show restraint in the matter of wages and prices, appeals that have gone unheeded.

The price of steel has been raised 12 times since the end of World War II. In explanation, the steel companies have argued that they have had to go up on the price to offset wage increases for their workers and to set aside money for new plants and equipment.

Economists regard steel as the key factor in the American economy. They say that the price of steel can influence the price of everything from hairpins to warships. Between 1945 and 1958, according to the Joint Economic Committee, the average price of finished steel per ton rose from $101.36 to $242.44.

News of President Eisenhower's statement yesterday reached Wall Street on a day when the market was experiencing a slight decline. Steel issues fell off moderately, losing fractions to more than a point.

[From the Washington Post and Times Herald, Mar. 26, 1959]

FOUR SCHOOLS OF THOUGHT ON PRICES

(By Bernard D. Nossiter)

The great debate on rising prices, jobs and output echoed all over Washington yesterday.

President Eisenhower made a startling contribution. He deliberately and consciously focused public opinion on the forthcoming steel industry-union bargaining. And, like Senator ESTES KEFAUVER (Democrat, Tennessee), the President warned both interests by name that they had better not come up with a package that is used again as an excuse for a price boost—a boost that travels like a shock wave throughout the economy.

On the House side of the Capitol, economists John Kenneth Galbraith and Gardiner Means were backing a measure to do something about it. This is the Reuss-Clark bill. It would require the President's Council of Economic Advisers to hold hearings whenever concentrated industries, like steel, planned price increases.

The sponsors, Representative HENRY REUSS (Democrat, Wisconsin) and Senator JOSEPH CLARK (Democrat, Pennsylvania), along with the two economists, were arguing that such hearings would provide a rational basis for the kind of specific appeal that Mr. Eisenhower was making.

However, this logic did not impress the Council Chairman, Raymond J. Saulnier. He was sending a letter to the Government Operations Committee, contending that the Reuss-Clark motion would so burden the Council that it would interfere with its other jobs.

On the Senate side, the Joint Economic Comimttee is in the argument, too. Senator PAUL F. DOUGLAS (Democrat of Illinois) and his group were hearing yesterday from a former Federal Reserve Board chairman, Marriner S. Eccles. He was the last of four witnesses in the committee's opening round of a broad economic study.

Still to be heard from is the newly organized Cabinet Committee under Vice President RICHARD M. NIXON. And KEFAUVER'S antitrust and monopoly subcommittee is soon to resume its investigation of concentrated economic power.

All this adds up to the liveliest set of arguments over the economy since the New Deal. At the moment, there is a surprising amount of agreement in the identity of three problems; a price level that keeps on going up (although it has been level for consumers for 10 months); unemployed men and plants; and a slow rate of economic growth compared to many other nations.

There also is wide disagreement over causes and cures and the relative importance of the problems.

Four main schools of thought now dominate the debate. The thumbnail descriptions that follow hardly do justice to any of them, but pick up the major ideas in each.

CLASSICAL

Neil Jacoby, former member of Mr. Eisenhower's Council and a business school dean, is a representative specimen. He believes stable prices are the key to high employment and growth. He blames price rises chiefly on concentrated union power and would apply antitrust laws to unions to remove this structural rigidity. He would give tax cuts to business and the wealthy to spur private investment.

CONSERVATIVE

In the literal sense of saving what exists, Sumner Slichter is a typical example. He approves of creeping inflation and links price increases to wages. He wants rising wages to boost demand and thus employment and would run a budget deficit now to prop demand.

REFLATIONIST

Leon Keyserling is a leading spokesman. He believes creeping inflation is the result of underemployment, but prefers it to giving up increased Government spending. He links price increases to management decisions. He wants big increases in Federal spending for defense and welfare purposes for their own sake and to speed up growth.

INTERVENTIONIST

Galbraith and Means are exponents. They believe rising prices flow from concentrated industrial power in key industries with unions a contributing factor. They blame underemployment and slow growth on big industry which maximizes profits by cutting output (and jobs) to support higher prices. They would at least focus opinion on key wage-price decisions through public hearings.

In political terms, the schools are not easily classified. Jacoby comforts conservative businessmen, conservative Republicans, and conservative Democrats—except when he attacks subsidies, tariffs, quotas, and other built-in privileges for business.

Slichter comforts many Republicans, the steel and auto industry, and conservative union leaders. Keyserling, chairman of former President Truman's council, is the favorite of some Democrats and most union leaders. Galbraith is endorsed by a widening array of Democrats, especially new ones, a microscopic number of businessmen, and Walter Reuther of the United Auto Workers.

Only one prediction is safe. The debate will mount in intensity.

PROGRESS TOWARD AN EAST-WEST FOREIGN MINISTERS' CONFERENCE

Mr. WILEY. Mr. President, as we know, the recent discussions between President Eisenhower and Prime Minister Macmillan have resulted in some progress toward negotiations aimed at resolving the problems of German unification, and we hope it will bring about a final peace treaty with Germany in which Germany will be reunified.

As of now, the Soviets appear to have agreed to a May 11 meeting of Foreign Ministers of France, the U.S.S.R., the United Kingdom, and the United States.

The President has insisted—and, I believe, rightly so—that, prior to a summit meeting, work at the Foreign Minister's level should provide a foundation upon which there would be a possibility for real accomplishments by a summit meeting.

I see by the newspapers of today that Mr. de Gaulle, of France, agrees with the President in that connection.

From past experience, however, we are well aware that the tortuous, twisting policy line of the Soviets, either prior to or following the May 11 meeting, may well raise new questions and possible obstructions to fruitful negotiations. Unfortunately, positive results from either a Foreign Ministers' Conference or a summit meeting depends to a substantial degree upon the extent of the willingness and readiness and good faith of the Soviet Union to try to find a peaceful and reasonable solution to the German problem.

This morning, the State Department released the text of a note delivered today to the Soviet Ministry of Foreign Affairs in Moscow relating to the proposed May 11 meeting of Foreign Ministers.

I request unanimous consent that the release be printed at this point in the RECORD.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

TEXT OF NOTE DELIVERED TO THE SOVIET MINISTRY OF FOREIGN AFFAIRS BY THE AMERICAN EMBASSY IN MOSCOW, IN REPLY TO THE SOVIET NOTE OF MARCH 2, 1959

The Government of the United States refers to the note of the Government of the U.S.S.R. of March 2, 1959, in response to the U.S. note of February 16 proposing a conference of the Ministers of Foreign Affairs of France, the U.S.S.R., the United Kingdom and the United States.

The U.S. Government has consistently favored meetings of interested powers that could provide opportunities for conducting serious discussions of major problems and could be an effective means of reaching agreement on significant subjects. It was for this reason that the U.S. Government in its note of February 16 proposed a meeting of the Foreign Ministers of France, the U.S.S.R., the United Kingdom, and the United States. The U.S. Government notes with satisfaction the Soviet Government's agreement to such a meeting.

Specifically, the U.S. Government proposes that a meeting of France, the U.S.S.R., the United Kingdom, and the United States at the Foreign Minister level be convened in Geneva on May 11, 1959, to consider questions relating to Germany, including a peace treaty with Germany and the question of Berlin. Naturally, any of the four participating governments should have the opportunity to present its views on any question which it may consider relevant to the problems under consideration. The purpose of the Foreign Ministers meeting should be to reach positive agreements over as wide a field as possible, and in any case to narrow the differences between the respective points of view and to prepare constructive proposals for consideration by a conference of heads of government later in the summer. On this understanding and as soon as developments in the Foreign Ministers meeting justify holding a summit conference, the U.S. Government would be ready to participate in such a conference. The date, place, and agenda for such a conference would be proposed by the meeting of Foreign Ministers. The conference of heads of government could consider and if possible resolve some wider problems such as those referred to in the Soviet Government's note of March 2 and in previous communications from the U.S. Government and where necessary establish machinery for further negotiation on these problems.

The U.S. Government fully recognizes that Poland and Czechoslovakia, like a number of other countries, have a legitimate and direct interest in certain matters which will be discussed in the conference. The possibility of the participation of other countries at a certain stage in negotiations could therefore be contemplated. However, the U.S. Government believes that the proposed meeting should at least at the outset involve only the four powers responsible for Germany. The U.S. Government also notes that the Soviet Government agrees with the proposal made in its note of February 16 that German advisers should be invited to the meeting on May 11 and be consulted.

The Government of the United States in proposing a Foreign Ministers meeting on May 11 understands that the Soviet Government would find Geneva a suitable location. The Government of the United States will, therefore, inquire of the Government of Switzerland to determine if this place and time would be convenient and also of the Secretary General of the United Nations to ascertain if the facilities of the United Nations in Geneva can be made available.

CELEBRATION OF TENTH ANNIVERSARY OF NATO

Mr. WILEY. Mr. President, in recognition of the 10th anniversary of the North Atlantic Treaty Organization, to be celebrated on April 4, the President has issued a proclamation calling upon the people of the United States, as well as the agencies and officials of the State and Federal Governments, to encourage suitable observances of this occasion.

The birth of NATO in 1949 heralded one of the major alliances in history aimed at promoting freedom.

During the intervening 10 years, NATO has served the cause of freedom well, particularly in defending the independence and interests of member nations.

Although often thought of only as a military alliance, NATO is indeed far more than that.

In addition to acting as a bulwark against Communist aggression, the organization has promoted cooperation among the North Atlantic Nations, laid a real foundation for resolving mutual problems, established new lines of communications and understanding, and generally promoted progress toward the development of a real community of nations.

The recognition on April 4 of the outstanding contribution of NATO to world peace by the Government and citizens of the United States—as a leader of the free world—is, indeed, most fitting.

Recently, the Secretary General of the the North Atlantic Treaty Organization, Mr. Paul Henri Spaak, in an article in

the American Federationist entitled "NATO and the Communist Challenge," outlined highlights of the splendid work accomplished by the North Atlantic Treaty Organization.

I request unanimous consent to have a copy of the President's proclamation, followed by the address by Mr. Paul Henri Spaak, printed at this point in the RECORD.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

TENTH ANNIVERSARY OF NATO—1949–59

(A proclamation by the President of the United States of America)

Whereas 10 years ago, on April 4, 1949, the North Atlantic Treaty was signed at Washington by Belgium Canada, Denmark, France, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, the United Kingdom, and the United States; and

Whereas Greece and Turkey each became a party to the treaty on February 18, 1952, and the Federal Republic of Germany did likewise on May 6, 1955; and

Whereas this treaty has resulted in collaboration for the common defense and in political cooperation among the 15 members of the North Atlantic Treaty Organization to a degree unprecedented in history, and has thereby significantly contributed to economic, social, and cultural progress among the peoples of the North Atlantic area; and

Whereas this association of free nations is a mainstay of peace and a shield of freedom; and

Whereas the North Atlantic Treaty Organization has requested its member governments to arrange and encourage, in their respective countries appropriate observances and celebrations on the occasion of this anniversary: Now, therefore, I, Dwight D. Eisenhower, President of the United States of America, do hereby direct the attention of the Nation to Saturday, April 4, 1959, as the 10th anniversary of the signing of the North Atlantic Treaty; and I call upon all agencies and officials of the Federal Government, upon the Governors of the States, and upon the officers of local governments to encourage and facilitate the suitable observance of this occasion.

I also urge all citizens to participate in appropriate activities and ceremonies, in cooperation with the American Council on NATO in recognition of the objectives and achievements of the North Atlantic Treaty Organization.

In witness whereof, I have hereunto set my hand and caused the seal of the United States of America to be affixed.

Done at the city of Washington this 25th day of February in the year of our Lord 1959, and of the independence of the United States of America the 183d.

[SEAL] DWIGHT D. EISENHOWER.

By the President:

CHRISTIAN A. HERTER,
Acting Secretary of State.

[From the American Federationist, March 1959]

NATO AND THE COMMUNIST CHALLENGE

(By Paul Henri Spaak, Secretary-General, North Atlantic Treaty Organization)

In 1949, the year which saw the birth of the North Atlantic Treaty Organization, the situation of the free world, and especially of Europe, was far from brilliant.

We had by no means recovered from the effects of the war. True, the Marshall plan, which saved Western Europe from poverty and communism, had become a reality and, since the spring of 1948, had begun to operate. But by the spring of 1949 the results of the Marshall plan were necessarily patchy, and many of the ruins still had to be rebuilt.

The political event of the moment was the Communist coup in Czechoslovakia, the consummation of Soviet policy.

This policy, a combination of internal subversion and external pressures, had enabled the Soviet Union to add several thousand square miles to its territory in the space of a few years, to bring under its jurisdiction—against the will of those concerned—several million human beings and to set up, in the Balkans and Eastern Europe, minority governments completely subservient to its wishes.

The Communist coup in Czechoslovakia marked a turning point in the postwar foreign policy of the Western World. Until then many well-meaning people had hoped for a reasonable compromise between the Communist world and the free world which would preserve the alliance that had made the victory over the Nazis and Fascists possible.

So as to be able to follow this course, the West had made many concessions and proved its evident good will. The historian of the future will perhaps add "and displayed too much weakness."

Be that as it may, the Western World reacted at last and did so in time to prevent the worst. One year after the Prague coup the Washington Treaty was signed. Its main purpose was to put a stop to the expansion of Soviet imperialism and to achieve this purpose without having to resort to war.

Whatever its defects and shortcomings—and they exist—all free men should be deeply grateful to the North Atlantic Treaty Organization for having served the cause of freedom so well and for having so successfully defended the independence of the democratic countries of Europe.

This is the moment to ask a vital question: Is NATO, with its present composition, spirit, and machinery, still the right answer to the threat which communism represents for the free world?

Ten years ago the Communist threat was essentially European and military. Today I see it as more particularly Asian and African and as more economic and social than military.

Is it sufficient at the present time to construct a solid military barrier along the Elbe if the free world is to be outflanked politically, militarily, and economically in the Middle East and Africa? Has the time not come for a reappraisal of NATO to adapt it to what is obviously the new plan of campaign of the Communist offensive?

When certain dates are lined up, their special significance becomes apparent:

April 4, 1949: Signing of the Washington Treaty establishing the Atlantic Alliance.

May 12, 1949: End of the Berlin blockade.

October 1949: End of the civil war in Greece, marking the end of the Communist offensive in Europe.

June 25, 1950: Invasion of South Korea. This major event marks the preliminary stage of the period in which we are living today.

There is a displacement of the center of international difficulties. Can we still afford to maintain attitudes, however excellent, which are beginning to be outdated? We adopted them 10 years ago—and this is a fast-moving world.

Very fortunately, the Washington Treaty and the organization which issued from it have one outstanding quality—a degree of flexibility that provides for the possibility of almost endless adaptations.

NATO is not only the most powerful military alliance known to history but also an international political council, the like of which has never before been seen; a secretary-general, a commander in chief, two routine ministerial meetings every year, a council of 15 ambassadors in permament session in Paris, a military standing group in Washington, a military command for Europe with its numerous subdivisions, a naval command for the Atlantic, another for the Channel. This entire formidable organization has come into being as the result of the following rather loosely worded lines of article 9 of the Washington Treaty:

"The parties hereby establish a council, on which each of them shall be represented, to consider matters concerning the implementation of this treaty. The council shall be so organized as to be able to meet promptly at any time. The council shall set up such subsidiary bodies as may be necessary; in particular it shall establish immediately a defense committee."

This, I think, justifies my claim that the North Atlantic Treaty is sufficiently flexible to adapt itself to all conceivable contingencies and shows that those who have to interpret or implement it have sufficient imagination to find in its text all they need in order to cope with even the most recent eventualities.

I believe it to be essential, before we define our new positions, to make sure that we thoroughly understand the problem we have to solve. I mean that we must correctly assess the nature and magnitude of the Communist challenge to the free world and to its civilization.

Communism aspires to be a new form of civilization. What it wants to do is to impose on the world a new conception of man, of his rights and duties, of his relationship to other men, to society and to the state. This conception marks a very evident backward movement away from what it has taken such long and patient efforts to build up over centuries of struggle and sacrifice.

While we, for our part, are doing our best—though possibly not always with complete success—to infuse a moral character into our private lives and into our institutions as well as to follow principles calculated to make a reality of "respect of the individual," the core of Western civilization—while we, for our part, are doing our best to safeguard human freedom and to shape society with that end in view, communism proposes a formula of which the outstanding features are the most extreme form of intolerance, blind obedience, political dictatorship.

There lies the true cause of the opposition between the free world and communism. This is the measure of the magnitude of the struggle and of its vital significance for the future of mankind.

Recent history has shown only too clearly that the systematic appeasement of dictators leads to the most harrowing experiences. Such a lesson must not be lost.

We must therefore pursue our military effort, for, although it imposes a heavy, costly burden on us, it is essential—not as a means of intimidation but as a guarantee against threats and blackmail.

But, above all, before we decide what action to take, we must assess the magnitude of the challenge thrown out to us. It must be clearly understood that the challenge is not that of the U.S.S.R. to the United States; it is the challenge of the whole Communist world to the whole free world.

The countries of the free world must accept the challenge collectively, in all fields and everywhere. That is their only chance of winning.

I fully sympathize with those who, while recognizing the importance of NATO, see it as a strictly military one and take a greater interest in the efforts made elsewhere.

NATO must remain a powerful military machine and it is our duty to explain why the effort needed for this must be made. But even today NATO is a great deal more than this.

It is the very center of the most significant diplomatic innovation ever attempted. It is not only creating new methods but even a

new spirit where the relations of nations to each other are concerned.

If the experiment in progress is crowned with success, the West will present a very different appearance, for the individualism, the national selfishness, perhaps wholly admirable in the past but which are out of harmony with our own times, will make way for new concepts—agreement, mutual aid, cooperation, the common good.

If we can successfully accomplish this revolution by and for ourselves, we can without fear or hesitation accept the great challenge which, under the name of "peaceful coexistence," is, in fact, a struggle between two civilizations.

THE LABOR BILL

Mr. GOLDWATER. Mr. President, yesterday the Senate Labor and Public Welfare Committee reported to the Senate a bill which purportedly is a labor reform measure. The public has rightly demanded of the Congress laws to protect them from the abuses of power disclosed by the McClellan committee during the past 2 years.

Mr. President, people deserve far more than this so-called attempt provides. If the Senator from Massachusetts would call his bill a reporting bill, I could agree with him that the name would be appropriate; but to say that this bill will effectively put a halt to the operations of James Hoffa is as far from the point as the Rocky Mountains are from Washington. But if he called it a reporting bill, then I would have to point out to him the many loopholes his bill contains even in that area. It reminds me of the labor leader who said "I do not mind a strong labor reform bill as long as it has plenty of loopholes." The bill now before this body has more loopholes than substance, more gimmicks than a carnival gambler has, and will do nothing more to James Hoffa and the likes of him than to give them cause for mirth.

Mr. President, the public is becoming aware that the Kennedy bill is a weak approach to a serious problem. Daily the press of the Nation is expressing concern over its softness. As examples, I ask that several editorials from newspapers across the Nation be inserted in the body of the RECORD, at this point in my remarks.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Los Angeles Times, Feb. 19, 1959]

COHERENT PROGRAM

Mr. NIXON was no doubt encouraged to say what he did about the party by watching republicanism take form in the House of Representatives. There are 281 Democrats to 153 Republicans in the House, but the minority is far from overawed. Adversity has if anything sharpened the edge of republicanism there. The leadership is reinforced and the following is coherent. There aren't many modern Republicans in the Taft-Hartley law.

* * * * *

We said the Vice President speaks for himself. Anyone who listened to him at the Press Club Tuesday evening and compared his performance with the one before the same club a year ago would detect a difference. Last year he was the cautious spokesman of his Chief and an anxious and sensitive moderator of the intraparty storm blowing up in his home State. This year he was having a little time of his own.

And as he retorted to one questioner, "Next year I shall not be a candidate for Vice President."

[From the Los Angeles Times, Feb. 19, 1959]

THE AFL–CIO WANTS IT SUGAR COATED

Just as a small boy demands candy if he is forbidden to break windows, the AFL–CIO is again insisting that it be rewarded if laws against union corruption are passed.

The top leaders of organized labor, in fact, gave an ultimatum to Congress Tuesday in which they warned that they would no longer support even the weak Kennedy-Ervin bill controls if they were not coupled with union concessions.

What the AFL–CIO wants sugar coated cannot by any stretch of the imagination be considered onerous union regulations. As set forth in the bill they merely prohibit union officials from misusing funds and rigging elections.

They are essentially the same minimum safeguards of the Kennedy-Ives bill, which was rejected by the House last year because of the inadequacy of the controls and the overloading of the measure with prounion amendments to the Taft-Hartley law.

Senator KENNEDY announced that this year he would rewrite the defeated measure to include only anticorruption provisions, leaving controversial proposals to change the Taft-Hartley Act for later consideration and in a separate bill. Somewhere along the line, however, the Senator apparently could not resist the temptation to drop in some sops to union chiefs.

The cosponsor of the new bill, Senator ERVIN, Democrat, North Carolina, subsequently came out in favor of stripping the bill of all union-proposed amendments and the howl from the AFL–CIO executive council was heard all the way from their meeting place in San Juan, P.R.

Apparently the most that the public can hope for in the 86th Congress is the administration's labor-reform program, which would go beyond the Kennedy-Ives bill by amending the Taft-Hartley law to prevent secondary boycotts and "blackmail" picketing. The White House indicated yesterday it will not back down on the additional corrective measures even though Labor Secretary Mitchell previously said he would be willing to accept a two-bill approach.

Neither measure, however, makes any effort toward curbing the dangerous monopolistic strength unions have gained. "They seem to be," as Henry Hazlitt comments in Newsweek magazine, "drafted mainly on the assumption that labor bosses can do no wrong except to union members."

But organized labor officials who will cheat union members are surely capable of misusing their economic power in the worst interests of the public.

[From the Los Angeles Times, Feb. 5, 1959]

CONGRESS AND UNION REFORM

The Senate Rackets Committee today is to begin investigating charges of election threats and irregularities among two Los Angeles locals of the Teamsters' Union which have literally brought the problem of union corruption close to home.

Serious as they are, these charges are relatively minor when compared to many instances of racketeering and abuse of power in organized labor as uncovered by the Rackets Committee's 2-year probe. Yet even this accumulation of shocking evidence has not resulted in the enactment of corrective legislation by Congress.

CORRECTION STYMIED

Last year the Senate strained mightily, but could only come forth with the weak Kennedy-Ives bill. Supporters of the measure rationalized its deficiencies by insisting that "half a loaf was better than none," but the half loaf was really little more than the crust and crumbs of proper safeguards.

Union members and the general public deserved much more. And although the AFL–CIO grudgingly endorsed the final draft of the bill, the House rejected the meager fare in hopes of something better.

Now, early in the 86th Congress, Senator KENNEDY has offered a warmed-over version of his previous bill. In essence the new measure requires full and open disclosure of union finances and democratic procedures in union elections, but little more. It does nothing about the vicious practices of secondary boycotts and blackmail picketing but the Senater from Massachusetts has adopted the new stratagem of promising the rest of the labor legislation loaf at a later time.

President Eisenhower replied with recommendations for "complete and effective labor-management legislation" aimed at curbing both blackmail picketing and secondary boycotts as well as providing the minimum reforms of the Kennedy bill.

IKE WANTS FULL CURB

A full rather than a piecemeal program is vital, the President said, "to assure the American public that true, responsible collective bargaining can be carried on with full protection to the rights and freedoms of workers and with adequate guarantees of the public interest."

A third bill will soon be offered by Senator MCCLELLAN, the rackets committee chairman, who feels that both the White House and Kennedy programs fall short of the legislation necessary to help unions rid themselves of the unwholesome conditions and evil practices of their small but dangerous minority of corrupt leaders.

Furthermore, said Senator MCCLELLAN, the union movement's "colossal and growing economic power must be regulated; it should never be permitted to fall under a management or control that would make it a dynamic force for evil."

No fairminded person desires that such regulations be enacted in the form of union-busting laws, but all citizens, as well as union members, are entitled to protection from potential abuse of the vast power of union monopolies.

Senator KENNEDY optimistically contends that his modest proposals would put Teamster boss Jimmy Hoffa and his henchmen virtually "out of business." Hoffa, however, is probably not overconcerned because the KENNEDY measure seems not only too little but too late to topple the Teamster empire.

MONOPOLY GROWING

By the time Congress stops arguing over union reform legislation, "Hoffacracy" will have become even more of a transport union monopoly. Unfortunately, KENNEDY rightly assessed the labor-dominated 86th Congress when he said that "enactment of labor reform legislation is difficult enough without attempting to tie to it legislation which would affect industrial relations in this country * * *."

Sooner or later, however, regulation of labor monopolies in the public interest must come about just as business trusts of an earlier day were subjected to proper control. Reasonable restrictions have not halted the growth of business and industry and would not hamper the realization of organized labor's legitimate aims.

But if the leaders of the union movement continue to insist on mere crumbs of reform, they may eventually taste the full bitterness of public demand for harsh restrictions.

[From Business Week, Feb. 7, 1959]

REFORMING THE LABOR LAWS

The important fact about Eisenhower's proposals for labor legislation is that he

would combine a program of labor reform with sweeping changes in the Taft-Hartley Act.

Senator JOHN F. KENNEDY has proposed a two-package approach to labor legislation. The first installment would include relatively noncontroversial provisions for internal union reform and require reporting on certain union practices. The second would come later and would seek a modernization of the Taft-Hartley Act.

Internal reforms and reporting are necessary steps toward elimination of abuses that exist in some unions, but they won't do the job by themselves. They would help in disclosing the symptoms of corruption; they would not act directly against the basic causes of existing evils.

Congressional hearings have shown how labor power can be abused through coercive boycotts and blackmail picketing. Such practices, which go far beyond the legitimate scope of union activities, would scarcely be touched by the Kennedy bill, which has the support of organized labor.

The President's proposals for union internal reform would reach further and would be backed up by stiffer penalties than KENNEDY'S. But the real strength of the Eisenhower program is that it would couple internal reform with a curb on the unfair and coercive practices which harm the public and injure innocent third parties. This means amending the Taft-Hartley Act to tighten restrictions on secondary boycotts and blackmail picketing.

Undoubtedly it will take longer for Congress to amend Taft-Hartley than to hustle through a noncontroversial bill for internal reform. But we think that the President is absolutely right to insist that the two must be part of the same package.

The trouble with Senator KENNEDY'S installment approach is that it invites Congress to adopt the easy part and postpone the hard part indefinitely. If Congress is allowed to deal with the bill for internal reform as a separate measure, the odds are that modernization of Taft-Hartley will then be swept quietly under the rug. The result would be that instead of real labor reform we would get a weak, halfway measure that would soothe the fears of labor abuses without really ending them. And in the long run that would be worse than no reform at all.

[From the New York Herald Tribune, Jan. 22, 1959]

SENATOR KENNEDY IS OVERLY OPTIMISTIC

Senator JOHN F. KENNEDY is off to a fast start with a labor reform bill that would virtually put Mr. Hoffa and his associates out of business.

That, of course, is only what the Massachusetts Democrat says. For it is hard to see just how KENNEDY reasons that this bill would stop the boss of the Teamsters Union. What the Senator offers is pretty much a rerun of last year's legislation, which failed in the closing days of Congress chiefly because some Members of the House thought the bill wasn't strong enough and others didn't want to annoy the unions in an election year with even a pale variety of regulation.

Now the problem is still not so much what is in the Kennedy bill. Nobody can seriously argue with its content, which could almost be described as noncontroversial. But the real rub is about what KENNEDY has left out.

For instance, among the most potent weapons of Hoffa and his kind are:

(1) The phony picketing where, for instance, a storekeeper can't get goods delivered unless he signs up with the union;

(2) The secondary boycott where an innocent third party is made to suffer in a labor hassle.

KENNEDY'S bill does nothing to strike down these two evils. There is more of this kind of omission, but that's enough to show that Hoffa & Co. needn't fear yet about losing the franchise.

Of course KENNEDY hardly approves of the aforementioned malpractices. He just says these ought to be handled sometime later when Congress gets around to amending the Taft-Hartley Act. This, however, is extremely tenuous assurance.

Meanwhile the Senator says the hearings on his bill, beginning next week, should be completed in 9 days at most. Not long thereafter, one assumes from KENNEDY'S prediction, Jimmy Hoffa will be hastening to abdicate.

Want to bet, Senator?

[From the Baltimore Sun, Feb. 14, 1959]

EYES ON THE PICKETS

Current testimony before the McClellan committee indicates that the picket and the whole institution of picketing is the next big quasi-labor phenomenon due for a thorough rethinking by the general public. We say quasi-labor, because the picket lines now being examined by the rackets investigators have only a vestigial contact with legitimate unionism. They are employed by racketeers posing as trade-union men to force jukebox or pinball machines on people who don't want them.

The way the thing works is simple. If the proprietor of a "location" for a music or gaming machine refuses to do business with the racketeers seeking to supply him, they call on their phony union friends. These people call out some professional pickets—in one instance reported to the committee a single professional picket was enough. The picket or pickets are stood up in front and around the uncooperative proprietor. This aims to bring him to terms because suppliers, customers, etc., refuse to cross picket lines.

Their refusal roots in a curious mystique that has grown up in the United States, mostly since 1933. The idea is that no right-minded American will cross a picket line. The picket line is supposed to be its own philosophical justification. To question the merits of those who organize it or to sympathize with those whom it penalizes is thought to be bad form. Gangsters now exploit this dogmatic mindlessness in their own interest.

Nor is the picket abuse limited to the crooks and racketeers. Legitimate unions also exploit the picketing mystique. A typical usage is to coerce unorganized employers and workers into a union by flaunting a picket line in the face of a powerful second union, not otherwise involved in the dispute, and usually one of Mr. Hoffa's teamster locals. Seeing the picket line, the teamster people ask no further questions. They just starve the picketed concern to death by shutting off deliveries in and out.

Use of the picket line to advertise the union's side of a labor dispute has been upheld by the Supreme Court. Violence on the picket line is illegal, even if the law is not always enforced by police in local jurisdictions. Between these extremes there are abuses so far uncorrected. To these the public will have to devote more attention. A first step would be for thinking people to remind themselves that the picketer is not necessarily always right.

[From the Kansas City Times, Feb. 4, 1959]

THE PUBLIC STAKE IN LABOR LEGISLATION

Congress now has before it two labor programs—the broad proposals of the administration, and the antiracketeering plan of Senator KENNEDY. The McClellan committee has apparently resisted the undercover move to upset its bipartisanship and is continuing its hearings. There are reports that Senator MCCLELLAN will introduce a bill that will go much further than the administration's. Offstage you can hear the political orators tuning up for the great debate. And where, in all this, does the public stand?

We strongly suspect the public view will be the issue least frequently considered when Congress gets around to the labor discussions. The people who seem to have paid the least attention to the reports of the McClellan committee have been those who occupy the seats in the House and Senate.

The point that may be missed by the people is that, while the Kennedy bill may very well provide a weapon against the racketeers in labor, it will not serve the public interest beyond that point. It is perfectly true that the biggest headlines have been made by the revealed theft of millions from union treasuries. A law that would strike hard at union racketeers would serve the public interest. There is a danger that a labor-slanted Congress will stop there. And the Nation might be lulled into the false assumption that the legislators had discharged their obligations in the labor field.

In addition to the sordid racketeering picture, the McClellan committee has also shown how the Nation's labor code fails to protect the public in general industrial relations. Secretary Mitchell regards a tightening of the restraints on secondary boycotts and a restriction on blackmail picketing as essential. It seems unlikely, however, that a majority of the Members of the present Congress will concur.

The responsibility for good labor legislation has now been placed on the shoulders of Congress. The administration has stated its case. Senator MCCLELLAN may offer an even stronger one. Both, we believe, have correctly assessed a growing public awareness not only of union racketeering but of the unregulated abuses of power by some union leaders. Unfortunately, the Democratic majority, blinded by the political weight that labor threw around last November, seems to have missed the point.

[From the Baltimore Sun]

IN LABOR'S INTEREST

In the jockeying for position which now marks the labor-legislation debate in Washington, one thing ought to be kept in mind. It is not management abuses, this time, which have impressed public opinion. It is not the racketeering practices of the boss, not his coercion of innocent people, not his slugging of employees, not his blocking up of public highways, not his abuse of monopoly positions which troubles the public conscience. After all, there's quite a lot of law already on employer abuses.

Senator MCCLELLAN'S committee has exhibited manifestations of some employer depravity, true enough. There have been front-office men willing to bribe their way out of honest labor contracts. There were management representatives all too friendly with the least savory type of labor leader. But these demonstrations were mostly incidental to the main theme the McClellan committee has been developing. The main theme was labor abuses.

This has a distinct bearing on the present debate over what ought to go into the one and only labor bill that is likely to get through the present session. If disagreement on this point results in the failure of Congress to pass any legislation at all, it will be labor abuses which continue mainly to affront the public, not management abuses. It will continue to be labor abuses which the McClellan committee exposes, and management abuses only incidental to labor abuses.

The net of such considerations might well be a conclusion in the wisest labor and pro-labor quarters that it is more to labor's advantage to have corrective legislation now than it is to management's advantage. The wisest labor people may begin to suspect that

their true friends are those who urge effective labor legislation in this session, not those whose quarreling over details threatens to prevent any labor legislation at all.

The wise labor people who begin to think this way may prove more responsive to proposals of conciliation with the administration reform proposals. They will look askance at suggestions that you can cure labor racketeering without considering the various boycott and picket-line tricks by which employers and workers nonunion by preference are not so much bargained with as put to economic strangulation. The short of it is that labor tactics which cancel legislation now may lead to tougher legislation a year or two years from now.

[From the Washington Post, Jan. 24, 1959]

QUESTION OF PACKAGING

Senator KENNEDY has shown good judgment in introducing his revised labor reform bill early in the session and in moving promptly for committee action. In general it is a good bill. Whether or not it would "virtually put Mr. Hoffa and his associates out of business," as Senator KENNEDY claims, it would certainly put more squeeze on the racketeers in the ranks of organized labor than they feel today. The chief question about Mr. KENNEDY's bill is not whether it looks in the right direction but whether it goes far enough—or, to look at the matter from a different angle, too far.

In general, the bill would strike at corruption within unions by requiring detailed disclosure of their financial operations and of any transactions by their officers which might involve a conflict of interest. It seeks to give workers control over their unions by requiring secret-ballot election of officers or of delegates to the conventions at which officers are chosen. Numerous specific safeguards to prevent undemocratic procedures would be written into the law, and the Secretary of Labor would be authorized to institute court action to upset improper elections and to substitute therefor honest elections supervised by his Department. Various safeguards would also be set up to prevent the use of trusteeships for exploitation of local unions and concentrations of power.

Mr. KENNEDY has tried to draw a distinction between his "reform" bill and the larger task of overhauling the Taft-Hartley Act—a task which he promises to undertake later in the session, with the aid of a committee of experts. There is much to be said for this two-package approach. All the efforts of the last decade to achieve a comprehensive overhaul of Taft-Hartley have gone down to failure, carrying urgent reforms with them, although it must be remembered that the relatively mild KENNEDY-IVES bill died in the House last year, but this was partly because it was regarded as not strong enough.

In any event, Mr. KENNEDY has blurred the logic of his argument by including in his bill several Taft-Hartley changes that would normally go into the second bill. These are provisions to eliminate the "no man's land" in the jurisdiction of the National Labor Relations Board; to ease the bargaining problems in the construction industry; and to give replaced strikers the right to vote in representation elections. If these amendments are to remain in the bill, Secretary Mitchell will have a strong case for including also his proposed reforms dealing with blackmail picketing and abuse of the secondary boycott. The indications are that Senator MCCLELLAN will also introduce a bill including some of the stiffer reforms that Senator KENNEDY wishes to avoid.

Undoubtedly the two-package approach is more likely to result in prompt action. But when all the sweetening is added to the first package the incentive to load it also with the stiffer reforms becomes irresistible. We think Senator CASE of New Jersey is right in suggesting that the Taft-Hartley amendment be shifted to a second bill.

[From the Washington Post, Mar. 8, 1959]

ABUSES OF PICKETING

All the sponsors of reform legislation in the labor-management field agree that some additional curbs on picketing are essential. The mildest of the measures before Congress, the KENNEDY-ERVIN bill, would prohibit what Senator KENNEDY has described as "shakedown picketing"—the use of picket lines to force an employer to "buy off" a union boss. The need for such a provision is self-evident. Controversy has arisen because this very limited curb would not touch various other abuses that are no less despicable than a shakedown.

The MCCLELLAN committee has brought to light numerous cases in which picketing has been used as an instrument of blackmail. In Flint, Mich., a Teamster Union local began picketing an employer to force him to sign a collective bargaining contract even though none of his employees belonged to the union. When he refused, a fire bomb was tossed into his store, sugar was poured into truck gasoline tanks and employees were assaulted.

It is a common practice for the Teamsters to tell small employers to deliver their employees into the union—or else. The "or else" may be either blackmail picketing or a secondary boycott against the victim, or both. A small employer has the alternative of yielding or of watching his business destroyed. If he yields, of course, the rights of his employees to join a union of their own choice or not to join any union are grossly violated.

Under the present law employees have a right to vote in a NLRB election on whether they wish to be represented by a union. If they reject the union, however, it may nevertheless picket the plant and perhaps destroy the business and wipe out their jobs. Even in cases where the employer has recognized a union composed of his employees under the terms of the National Labor Relations Act, a stranger union is free to picket the business if the union already established there does not happen to have been certified by the NLRB.

Protection of these collective bargaining rights of employees is no less important than the protection of employers against shakedown picketing. Secretary of Labor Mitchell has proposed amendments to the KENNEDY-ERVIN bill that would strike at these additional abuses of the picket line. His suggestions are moderate and reasonable, but of course not sacrosanct. If any legislator, labor leader or employer can produce better or more effective methods of curtailing blackmail picketing, it is certainly his duty to do so. But these abuses ought to be dealt with (without impairing any of the legitimate rights of organized labor), and in our opinion an overwhelming majority of the American people want Congress to do its duty in this particular.

NEED FOR A PREVAILING WAGE AMENDMENT TO THE NATIONAL WOOL ACT

Mr. MURRAY. Mr. President, I congratulate my colleague, the junior Senator from Montana [Mr. MANSFIELD] on his excellent presentation of the need for a prevailing wage amendment to the National Wool Act. I am happy to be a cosponsor of his bill.

This measure will correct an intolerable situation which is now causing a loss of jobs and wages among sheepshearers. It will provide some protection for them, just as the National Wool Act now provides some protection to wool growers.

This bill will deal with the unfair competition which sheepshearers must face in the form of migrant crews, who are forced to work in almost peonage conditions. The prevailing wage amendments to the National Wool Act will provide much-needed fair labor standards in the sheepshearing industry.

Mr. President, this bill is strongly supported by the organization of the sheep shearers. They are a part of the Amalgamated Meat Cutters and Butcher Workmen—AFL–CIO. The need for and justice of this legislation is well described in a letter which Thomas J. Lloyd and Patrick E. Gorman, president and secretary-treasurer, respectively, of the Amalgamated Meat Cutters and Butcher Workmen—AFL–CIO, wrote in January to Mr. Don Clyde, then president of National Wool Growers Association.

I ask unanimous consent to include this letter in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AMALGAMATED MEAT CUTTERS AND BUTCHER WORKMEN OF NORTH AMERICA (AFL–CIO),
Chicago, Ill., January 14, 1959.

Mr. DON CLYDE,
President, National Wool Growers Association Convention, Portland, Oreg.

DEAR MR. CLYDE: We are taking the liberty of transmitting this letter to you through Mr. Harry Evans, president of our sheepshearers division, whom some of your officers have very kindly invited to attend the convention of the National Wool Growers Association.

As Mr. Evans will discuss with you and other members of your organization, we are greatly concerned about the depressing effect on wages and the unemployment caused by the influx of sheep shearing crews from Texas into the wool growing areas. These crews serve under a semipeonage system. Their working conditions and living conditions are terrible. Because of these substandard conditions, their contractors are able to undercut the rates of long-established contractors in the wool growing areas. The living standards and employment of the members of our union who shear sheep are, therefore, critically endangered. These members have lived in the area all of their lives and now find their usual work being taken away by migrant crews from Texas.

We are not concerned about the influx of these crews, as such. There are enough sheep to be shorn and competition should hold sway. But this competition must be a fair competition. We are sure you will understand our position, since it was the desire of the members of the Wool Growers Association for fair competition with foreign wool growers, which led your organization to seek enactment of the Wool Act. In other words, our insistence on protecting the livelihood of sheep shearers and other workers in the sheep industry corresponds exactly to your organization's excellent efforts to protect the livelihood of wool growers.

We intend in this session of Congress to seek legislation which would establish prevailing wages for sheep shearing workers in the various areas where this work is done. This legislation would be an amendment to the Wool Act. It would set a floor under the wages of workers, just as other sections

of the Wool Act set a floor under the earnings of wool growers.

We are certain that this course of action will appear eminently just and logical to you. We are taking the opportunity of Mr. Evans' visit with you to inform you of our plans, because we want you and the other members of your organization to understand that we seek to cooperate with the wool growers. We seek to work closely with you.

As proof, we want to point out that we did not seek this legislation last year when renewal of the Wool Act was under consideration. We felt that the act faced such serious opposition that this additional issue could very well have killed the act's renewal chances. We did not want to do this. We, therefore, delayed any activity on the amendment until 1959.

Our action was in keeping with organized labor's policy over the years toward the Wool Act. Labor has never opposed the act. In fact, it has given support to this legislation. It is our intention to seek the prevailing wage amendment to the Wool Act, and then to work with you, actively and strongly, for future renewals of the Wool Act. We pledge to you that if the livelihood of workers in the sheep industry in the various States is protected, as the Wool Act protects the livelihood of wool growers, we will make renewal of the Wool Act a major part of our union's legislative program. Further, we will get the active support of the AFL–CIO and its other affiliates.

Our union has cooperated with industry and consumers on many pieces of legislation in the past. For example, in 1957, we spearheaded a successful campaign for a poultry inspection law. Last year we were a major part of a successful cooperative effort to get a $2 million increase in appropriations for meat inspection. This money provided, for the first time in many years, adequate funds for the important inspection work.

Let us repeat again, we want to work together with your organization for the benefit of the industry's workers and growers and the consuming public which uses the industry's products. We believe such cooperation will be to the great benefit of all parts of the industry and the public.

We wish you a very successful convention.

Best regards.

Very truly yours,

THOMAS J. LLOYD,
President.
PATRICK E. GORMAN,
Secretary-Treasurer.

NATIONAL HEALTH INSURANCE LEGISLATION

Mr. MURRAY. Mr. President, the April issue of Catering Industry Employee, published by the Hotel and Restaurant Employees and Bartenders International Union, AFL–CIO, carries a lead editorial endorsing S. 1056, my national health insurance bill, which was cosponsored in the House of Representatives by Representative JOHN D. DINGELL, of Michigan.

I commend the editor and the union for this editorial, and ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANOTHER TRY

Some time back we suggested, in the light of the liberal sweep in November, that somebody ought to dust off the old Murray-Dingell bill to set up a national health insurance plan.

Now it's happened. Senator JAMES E. MURRAY, Democrat, of Montana, and Congressman JOHN D. DINGELL, Democrat, of Michigan, son of the man who first joined in the proposal, have introduced companion measures for a national contributory health insurance scheme to cover major costs of medical care.

Recent years have seen collective bargaining bring, for many workers in many places, for the first time in their lives, good medical care. But, despite the progress for some, most health-and-welfare coverage is woefully short on medical care. And millions have no such protection of any kind.

It can be taken for granted that existing prepayment plans, in most cases, can be integrated into any new system for the Nation. We learned a lot about how to handle such arrangements. Doctors themselves have had enough experience to know that prepayment and group practice don't mean socialized medicine.

The new bill, say its authors, is "the one thing needed to furnish everybody with adequate health care * * * and * * *. It won't change the practice of medicine."

But it can change our lives.

THE DEPRESSED AREAS BILL

Mr. BUSH. Mr. President, the Washington Post and Times-Herald of this morning, March 26, 1959, published a very interesting editorial entitled "A Uniform United States?" The editorial deals particularly with the so-called depressed areas bill which was passed by the Senate on Tuesday by a vote of 49 to 46.

The editorial shows, I think, that the Washington Post has a very excellent understanding of what is needed and what is not needed with respect to the whole matter of depressed areas. I call the attention of the Senate to this language:

Obviously its proponents are inviting another veto, presumably in the hope of reaping a second crop of the political dividends which last year's go-round appeared to yield in some economically distressed States. A vetoed bill would be of slight help to the distressed areas, of course, but beyond this it may be questioned whether the rather ambitious program favored in the narrow Senate vote is really a sound prescription.

This is a very serious issue, as the present Presiding Officer, the distinguished junior Senator from West Virginia [Mr. BYRD] knows as well as I do. Both of us are very deeply sympathetic toward this matter and toward the very urgent situation which exists in his State, in view of its very large unemployment factor.

Mr. President, I ask unanimous consent that the editorial be printed at this point in the RECORD, in the hope that it may be read by the Members of the House of Representatives. I think it would be too bad if they did not heed the warning which is inherent in the very close Senate vote, and realize the importance of the issue. I hope they will favorably consider the administration bill.

The PRESIDING OFFICER (Mr. GOLDWATER in the chair). Is there objection?

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A UNIFORM UNITED STATES?

The Senate has gone too far, we believe, in the program of aid to depressed areas which it approved the other day. The $389 million loan and grant authorization which it has sent to the House is more than a third larger than the bill vetoed by the President last year and seven times the size of the Eisenhower proposal in this field. Obviously its proponents are inviting another veto, presumably in the hope of reaping a second crop of the political dividends which last year's go-round appeared to yield in some economically distressed States. A vetoed bill would be of slight help to the depressed areas, of course, but beyond this it may be questioned whether the rather ambitious program favored in the narrow Senate vote is really a sound prescription.

No Federal program could hope, of course, to provide even a tiny portion of the capital investment that a real industrial development or conversion effort would require. Such funds must come from private sources. What is mainly required in areas suffering from the effects of technological changes, resource depletion or other such factors is a survey and promotion of new opportunities. Here local and State governments can help—even to the extent of temporary tax concessions and the like in some cases. A modest Federal supplementation of such efforts might be useful. But in general, with the economy's high rate of capital accumulation and the general flexibility and initiative of American business, real opportunities will not be long neglected.

Extensive subsidization of an area that may be depressed today would be hard to end, and even in the short run would tend to work against the interests of more prosperous regions with certain natural advantages. How could such a program possibly be administered with fairness to all sections of the country and without running into disputes concerning every effort to help that would, in the end, probably be settled on a political rather than an economically realistic basis?

For industrial and agricultural workers disadvantaged by sudden changes beyond their control there ought, of course, to be more adequate programs of unemployment compensation and job placement than now exist in most States. A retraining program in which industry would participate (in order to insure its real utility) would be helpful. But if the Government were to go much beyond such measures and endeavor to maintain some kind of uniformity of economic progress and prosperity in so large and heterogeneous a Nation as this, it would be embarking upon a program that would require far more money than anything yet proposed—and far more wisdom in its administration than seems likely to develop. In any case, the Senate bill faces an almost certain veto if enacted, and the House ought to refashion it along more reasonable lines.

VISIT TO THE SENATE BY MR. ABAS-QOLI ARAB-SHEIBANI, MEMBER OF PARLIAMENT OF IRAN

Mr. MANSFIELD. Mr. President, the Senate is honored today by a visit from a distinguished representative of the Iranian Parliament. It is my privilege as acting majority leader to present to the Senate the chairman of the Investigating Committee and a member of the Educational Committee of the Iranian Parliament, Mr. Abas-Qoli Arab-Sheibani. [Applause, Senators rising.]

Mr. President, I ask unanimous consent that a brief biographical background of our distinguished visitor be inserted at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

BIOGRAPHICAL INFORMATION ON MR. ABAS-QOLI ABAB-SHEIBANI OF IRAN, A PARTICIPANT IN THE FOREIGN LEADER PROGRAM OF THE INTERNATIONAL EDUCATIONAL EXCHANGE SERVICE OF THE U.S. DEPARTMENT OF STATE

Mr. Abas-Qoli Arab-Sheibani, Deputy of the 19th Majlis (House of Representatives) from Fassa and Majlis member of the board of Bank Melli.

Born: 1905, Shiraz, Iran; married, four children.

Home address: Behind Sepahsalar Mosque, Nasim-ol-doleh Street, Teheran, Iran.

Academic training: Military College, Teheran.

Previous positions: Various positions in the Iranian Army, 1933–41 (resigned from army while a major); high-ranking official of Bank Melli, 1941–47; member of the 15th and 16th Majlis from Fassa, 1947–52; Deputy of the 18th Majlis from Fassa, 1954–55. Also Majlis representative at Bank Melli and Bank Note Reserve.

REDUCTION OF ELIMINATION OF SUPPORT PROGRAMS

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent to have printed in the body of the RECORD an article appearing in the April 1959 issue of Farm Journal.

This article gives the results of a poll which shows that an overwhelming majority of American farmers voted for a reduction in the present high support programs and the majority of these farmers voted for the complete elimination of all support prices and controls.

Their being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FARM PLAN YOU VOTED FOR—HOW THE UNITED STATES VOTED ON THE FIVE CHOICES

No supports: No controls, no floors; free market prices; get the Government clear out: 55 percent.

Emergency supports: To prevent disaster from a huge crop or sudden loss of markets; floors set at, say, 50 percent of parity, or 75 percent of the average 3-year market price. No controls: 15 percent.

Adjustment supports: Such as 90 percent of the average 3-year market price. Permits gradual adjustment to normal markets. Moderate production control when necessary to ease adjustments: 8 percent.

High price supports: 90 percent to 100 percent of parity. Cross-compliance and tight production controls to restrict output to available markets—bushel-and-pound allotments to limit what you could sell: 14 percent.

Production payments: Let markets fall, then pay farmers in cash to make up the difference between the market price and the support level. Extend supports to perishables, such as beef, pork, eggs and fruit. Strict bushel-and-pound controls to hold down costs of the program: 8 percent.

Eight out of ten Farm Journal readers want lower price supports and fewer controls in the future—instead of higher price supports and strict controls.

And more than half (55 percent) want the Government to get clear out.

That's the way farmers voted who mailed in ballots printed on page 41 in the February issue. The article accompanying the ballot sized up the situation this way:

Farm productive capacity is racing ahead faster than the growth in population and demand. This tightens the squeeze on farm prices. At the same time, support programs are piling up Government surpluses at an alarming rate. So, the article asked, which of five general directions do you think future Government price support policy should take?

Results from the first 10,000 ballots mailed by farmers show that 78 percent favor the first three choices—each of which calls for less support and more freedom than past or present support programs. By all odds the most popular choice is to chuck all supports and get the Government clear out—let farmers' own decisions and management ability determine who'd produce what.

This poll reveals that the South's Farm Journal readers are no longer the "high price support and strict control" advocates they were once assumed to be. Midwestern States gave high price supports a larger vote than the other three regions—but still only one midwestern farmer out of five favors 90 percent to 100 percent of parity. It may surprise you that Iowans, who are often held up as typical of all farmers, are less inclined to "kick the Government out" than farmers in any other State.

Among the different commodities, farmers specializing in either poultry, beef, or fruit and vegetables are the most inclined to chuck supports. Wheat growers and feed grain producers are least disposed to do this—although nearly half of them think it's the thing to do.

How dependable are these figures? Statisticians say, "they're sound." The ballot tabulations were checked in these ways:

Tentative percentages were figured after the first 2,000 ballots were counted. These percentages proved highly accurate when 10,000 had been tabulated.

Farm Journal statisticians say that counting several thousand more ballots wouldn't change the regional and national percentage figures except possibly by one or two points here and there. Percentage figures from the small States with fewer farms have the best possibility of being nonrepresentative.

The results are a pretty good barometer of farm thinking across the Nation for these reasons:

Farm Journal's circulation—a whopping 3.1 million—covers all parts of the country.

The number of ballots mailed is amazingly close to the proportion of circulation in each State—there was no run on the ballot box from one State or region to upset the final percentages.

When the vote of readers is adjusted for the actual number of farms in each region (1954 census figures), the final percentages are almost identical to the ones from our sample. The difference: 2 percent more in favor of the no-support choice, and 1 percent fewer in favor of high supports.

As a further check, a 14-State survey was made among fathers of vocational agriculture students—some Farm Journal readers, and some not. Eight out of ten (82 percent) favored the first three choices (compared with 78 percent by mail).

This poll also checks closely with a survey made in the December 1957 Farm Journal when 50 percent of the readers responding voted that the Government should get clear out of farming.

Age makes little difference in the attitude of the readers voting. The slight difference is that young farmers in the 20- to 30-year-old bracket and farmers 60 and over are slightly more in favor of lower supports and fewer controls.

Two ballots were returned from Alaska, one by a haygrower and one by a potato grower—both voted for no supports. One Illinois corngrower mailed his ballot from Canada. The oldest voter was an Idaho wheatgrower at an even 100 years. Five said their most important farm product is children.

EASTER SUNDAY BROADCAST OF THE STORY OF EXPLOSIVES

Mr. CHURCH. Mr. President, it has been called to my attention that on this Easter Sunday the National Broadcasting Co. will present through its well-known program, Omnibus, the story of explosives—from matches to nuclear bombs.

I have been informed this is the first such film ever made under the auspices of the United Nations.

With the penetrating interest of this body in the problems attendant upon control of nuclear testing, both in its civilian and military aspects, I suggest this may well be worth our attention.

It is my understanding the documentary will be shown over the NBC network between 5 and 6 p.m. Sunday, eastern standard time. While I have not previewed the film, the previous high quality of Omnibus programs would cause me to recommend it for its very subject matter. I hope that many of us will have the opportunity to be members of the audience.

MANDATORY CONTROL OF OIL IMPORTS

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed, and the Chair recognizes the Senator from Louisiana [Mr. LONG].

Mr. LONG. Mr. President, today I should like to expand upon my remarks of March 20 concerning the program which has recently been put into effect which provides for a mandatory system for the control of imports of petroleum and petroleum products into the United States. I ask unanimous consent that, in the event there are any interruptions in the course of my remarks, they be printed immediately following my address in the RECORD, and, furthermore, that insertions I have prepared may appear in the RECORD at the appropriate place.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LONG. Mr. President, on March 10 the President of the United States issued a proclamation to regulate the imports of oil and its principal products into the United States. The basis for the President's action was legislation passed last year by the Congress, the so-called defense amendment, section 8 of the Trade Agreements Extension Act, which amends the Reciprocal Trade Act to read as follows:

SEC. 2. * * *

(b) Upon request of the head of any Department or Agency, upon application of an interested party, or upon his own motion, the Director of the Office of Defense and Civilian Mobilization * * * shall immediately make an appropriate investigation, * * * to determine the effects on the national security of imports of the article which is the subject of such request, application, or motion. If, as a result of such investigation, the Director is of the opinion that the said article is being imported into the United States in such quantities or under such circumstances as to threaten to impair the national security, he shall promptly so advise the President, and, unless the President determines that the article is not being imported into the United States in such quantities or under such circumstances as to threaten to impair the national security as set forth in this section, he shall take such action, and for such time, as he deems necessary to adjust the imports of such article and its derivatives so that such imports will not so threaten to impair the national security.

(c) For the purpose of this section, the Director and the President shall, in the light of the requirements of national security and without excluding other relevant factors, give consideration to domestic production needed for projected national defense requirements, the capacity of domestic industries to meet such requirements, existing and anticipated availabilities of the human resources, products, raw materials, and other supplies and services essential to the national defense, the requirements of growth of such industries and such supplies and services including the investment, exploration, and development necessary to assure such growth, and the importation of goods in terms of their quantities, availabilities, character, and use as those affect such industries and the capacity of the United States to meet national security requirements. In the administration of this section, the Director and the President shall further recognize the close relation of the economic welfare of the Nation to our national security, and shall take into consideration the impact of foreign competition on the economic welfare of individual domestic industries; and any substantial unemployment, decrease in revenues of Government, loss of skills or investment, or other serious effects resulting from the displacements of any domestic products by excessive imports shall be considered, without excluding other factors, in determining whether such weakening of our internal economy may impair the national security.

At the time when the amendments of 1958 were being considered, the defense amendment of 1955 was already in effect. The 1955 amendment gave the President far more discretion than the 1958 amendment. Even under the 1955 amendment, however, the President's Cabinet Committee had already determined that an adequate domestic petroleum industry was essential to national defense and that the ratio of exports to imports prevailing in 1954 was the desirable level.

A voluntary control program was in effect in 1958 with the understanding that a mandatory program would be necessary if the voluntary program failed to achieve its objective.

It was understood in the House of Representatives that the defense amendment which they wrote into the act before the bill came to the Senate was designed for just such a situation as existed in the petroleum industry.

I should like to call the attention of the Senate to a colloquy between the chairman of the Ways and Means Committee of the House of Representatives, the Honorable WILBUR MILLS, and the Member of Congress from the 13th District in Texas, the Honorable FRANK IKARD, on June 10, 1958, on the defense amendment.

Let me quote from this colloquy:

Mr. IKARD. Mr. Chairman, I would like to ask the distinguished chairman of the committee two or three questions.

Is it a fact that the so-called national security section of the committee bill has as its purpose providing the executive department with a means of taking whatever action is necessary to avoid a threat to our national security through imports and to make such that injury to a particular industry essential to the national security wil be avoided?

Mr. MILLS. The answer is "Yes."

Mr. IKARD. Is it a fact that the national security amendment of the present law was amended by the committee as reflected in the committee bill for the purpose of improving and facilitating the operation of this provision by providing specific criteria and guidelines for use in its administration?

Mr. MILLS. The answer to that question is "Yes."

Mr. IKARD. The national security section of the committee bill specifies certain factors which would govern the Director of the Office of Defense Mobilization and the President in determining whether imports are a threat to national security. These are stated in the committee bill substantially as follows:

"The Director and the President shall * * * give consideration to domestic production needed for projected national defense requirements, the capacity of domestic industries to meet such requirements, existing and anticipated availability * * * products, raw materials, and other supplies and services essential to the national defense, the requirements of growth of such industries and such supplies and services including the investment, exploration, and development necessary to assure such growth, and the importation of goods in terms of their quantities, availabilities, character, and use as those affect such industries and the capacity of the United States to meet national security requirements."

Mr. IKARD. I am interested in knowing how these criteria would relate to the problem of excessive imports of petroleum and petroleum products. It is intended that under this provision imports of petroleum and petroleum products be held at levels which would permit the domestic industry to engage in a vigorous program of exploration at a rate consistent with the demands of our economy?

Mr. MILLS. This provision is intended to hold imports at a level which will permit the United States to have sufficient oil, known, discovered, and developed as is required to meet our national security needs.

Mr. IKARD. Does the committee amendment that will be offered to the national security section of the committee bill dealing with investment, exploration, and development necessary to assure the proper growth of an industry have any significance to the petroleum industry and other extractive industries?

Mr. MILLS. Yes. This amendment will be offered to the bill for the purpose of further clarifying the committee's intentions with respect to encouraging free enterprise, exploration for, and the development of our natural resources at a rate sufficient to meet the demands of our national security. If drilling and exploration activities do not reach a satisfactory level, then under this provision the President or his designate would have the responsibility of re-evaluating existing programs for the regulation and control of imports to see that they meet the requirements of the new standards in the committee bill.

Mr. IKARD. In the case of petroleum, is it intended that if the pending committee bill becomes law that a new study and certification would be necessary?

Mr. MILLS. The answer is "No." I refer the gentleman specifically to the language on page 17, lines 15 to 17, which he offered in the committee to guarantee that the answer would be "No."

Mr. IKARD. Is it intended that when the imports of a natural resource are controlled under the provisions of the national security section of the committee bill, and with particular reference to petroleum, that such control should take into consideration the importation of products, derivatives, or residues of petroleum so that these products and derivatives could not be imported in a way that would circumvent the control of the imports of the basic natural resources?

Mr. MILLS. Yes. Clearly, when a decision is taken to restrict imports in the interest of national security it is our intention that the decision be effective and not rendered ineffective by circumvention.

Under these circumstances, it is difficult for anyone who supported the defense amendment of 1958 to conceive how anyone could possibly argue he did not understand that the defense amendment of 1958 would require greater protection of the domestic petroleum industry. Certainly, those of us who served on the Finance Committee explored this matter very carefully when the Secretary of Commerce testified before the committee.

Much of the language which went beyond the 1955 amendment was drafted with the petroleum industry specifically in mind. While there is no transcript of the executive session before the Committee on Finance, I am certain that every member of the committee recalls distinctly that the relationship of the

amendment to the petroleum industry was thoroughly discussed when the committee considered this matter.

The Senate Finance Committee broadened the language of the House bill to strengthen the defense amendment. I should like to quote from the committee report on this measure:

The Finance Committee accepted the section of the House bill relating to the national security, but amended it for the express purpose of strengthening and increasing its effectiveness. As was the purpose when the national security section was added in the 1955 extension of the act, the amendments are designed to give the President unquestioned authority to limit imports which threaten to impair defense-essential industries. Section 8 of the bill as reported grants to the President a potentially fast-moving vehicle for guarding our national security in this respect.

The bill as reported provides that imports of an article, or its derivatives, must be adjusted unless the President finds that they are not entering in such volume as to threaten the national security, after the Director of the Office of Defense Mobilization has indicated such a threat exists. Language was further added directing attention and providing possible action whenever danger to our national security results from a weakening of segments of the economy through injury to any industry, whether vital to the direct defense or a part of the economy providing employment and sustenance to individuals or localities. The authority of the President is thereby broadened considerably, but the dangers inherent in an economy suffering from unemployment, declining Government revenue, or loss of skills, and investment because of excessive imports of one or more commodities, must be recognized and avenues provided whereby they may be lessened.

No one can read the legislative history of this amendment and have any doubt that such a mandatory program is exactly what was intended by the bill.

Mr. President, the problem of excessive imports of our fuel supplies has not been of concern only to the oil industry. Our coal producers supply much of our domestic fuel needs and have been having an extremely difficult time as well. The order placing residual fuel oil on the quota list should help revive that industry so vital to our national well-being and to the economies of certain sections of our country.

The President has not been hasty in responding to the duty that Congress has imposed upon him to limit oil imports. Many distinguished Members of this body have been urging the administration to take this action for some time as it has become increasingly apparent to us that the domestic industry, so vital to our whole economy, has been driven into a dangerously low level of production and exploratory activity.

Last year I felt it necessary to introduce an amendment which would require the President to limit the amount of foreign oil that could be brought into this country. I did not bring this amendment to a vote because I was assured that the defense amendment was designed to meet the problem.

In issuing the proclamation establishing the mandatory control program, the President said:

The new program is designed to insure a stable, healthy industry in the United States capable of exploring for and developing new hemisphere reserves to replace those being depleted. The basis of the new program, like that for the voluntary program, is the certified requirements of our national security which make it necessary that we preserve to the greatest extent possible a vigorous, healthy petroleum industry in the United States.

It has been contended by some that the national security argument is specious. I do not see how anyone who is aware of the facts of the case can make such a statement, especially in view of the position of the Commander in Chief of our Armed Forces and the Special Committee To Investigate Crude Oil Imports, composed of the following Cabinet members: John Foster Dulles, Secretary of State; Neil H. McElroy, Secretary of Defense; Robert B. Anderson, Secretary of the Treasury—former Assistant Secretary of Defense, former Secretary of the Navy; Fred A. Seaton, Secretary of the Interior; James P. Mitchell, Secretary of Labor; Lewis L. Strauss, Secretary of Commerce—also rear admiral, retired, former Chairman of the Atomic Energy Commission.

On March 6, this special committee recommended the voluntary import program be replaced by a mandatory program. In their report to the President, they said:

On February 27, 1959, the Director, Office of Civil and Defense Mobilization, reported to you that crude oil and its principal derivatives were being imported into the United States in amounts which threaten to impair the national security. In the light of that finding, the special committee recommends that the voluntary oil import program be replaced by a mandatory program which will limit the imports of crude oil and certain derivatives to such levels as the national security requires and will allocate such imports as are authorized among companies in a fair and equitable manner.

Mr. President, those who argue that it is not necessary to the security of the United States that we have a healthy domestic oil industry capable of rapidly expanding its production in time of emergency must be of the school who believe that any future wars will be of the pushbutton nuclear type.

Apparently they rely upon statements of some of our military leaders that a thermonuclear war would cause such devastation that the outcome would be decided within 72 hours. From this statement they reason that the ability to fight a long, protracted war is no longer necessary. Hence, they suggest that there is no real need to maintain a domestic oil industry of any real magnitude.

If the gentlemen are correct, what we say and do here will make little difference one way or another. If there is such a nuclear conflict, utilizing all of the weapons that have recently been developed whose destructive power is almost beyond comprehension, the best that we could hope for is that possibly 60 million of the enemy would be destroyed while only 15 million or 20 million of our own would be lost. We might be able to completely destroy the enemy's war-making potential, with our losses limited to perhaps 10 percent of our population. On the other hand, it is conceivable, and some say that it is highly probable, that civilized man would be completely eradicated from the face of the planet in such a holocaust.

Now, let us analyze that logic for a minute. Have any of the military leaders ever said that we do not need to have a domestic fuel industry adequate for our needs? Not at all. Have any of our military leaders suggested that we should not be able to fight a limited war with conventional weapons? Not that I know of.

Quite the contrary, Gen. Maxwell Taylor, the Chief of Staff of the U.S. Army, and Adm. Arleigh Burke, our Chief of Naval Operations, both state clearly that while we must stay prepared for a nuclear war, it is much more likely that the hostilities in which we will be engaged will continue to be wars of a limited nature.

Since World War II, there have been 18 wars of various sizes. Atomic weapons have not been used in any of them. Some of those wars were large and extremely significant. So was the result of the military decision.

Among them were the civil war leading to Communist victory in China, the war in Korea, the war in Indochina, the revolutions in Indonesia, the fighting in Greece, the warfare in the Near East, and the revolution in Hungary.

During the Suez crisis we had a good indication of the importance of a dependable supply of oil. England and France were frantic. They were fighting to protect their lifeline to the oil in the Near East. In England gasoline was rated to approximately 7 gallons per month. Gasoline reserves were rapidly depleted in France.

It was the United States with its surplus productive capacity which was able to maintain a position of strength and confidence. We were able to go to the aid of our friends with large quantities of surplus oil and forgo imports from abroad at the same time.

It is not because we wish it that way that we are constantly called upon to shoulder the heavy end of the load. Yet the truth is that aside from the oil in the United States, the free world is in a very vulnerable position insofar as its fuel requirements are concerned.

This is especially true of all of our allies in Europe, Australia, New Zealand, and even Japan. In the event of an emergency that disrupted the oil supply from Venezuela, the Middle East, and Indonesia, over 368 million people who are our allies would be dependent upon us for oil.

It would be extremely dangerous and unwise to permit our domestic oil industry to wither away as a result of foreign oil imports until we were no longer able to provide even our own requirements in an emergency.

We know that the Government of Venezuela is friendly as of today but the reception given our Vice President and his wife by Communist sympathizers is enough to put us on notice that the situation there could change overnight.

I do not think our friends from New England would like to be completely dependent upon the Middle East for fuel oil to keep them warm on cold winter

nights. We all are familiar with the conflicts and the basic instability of that part of the world at present. With Nasser, Kassem, and Khrushchev all vying for supremacy, that source could be denied us at any time.

It is difficult to see how anyone fully aware of the facts could deny that a healthy oil industry is vital to our national security.

Recently a shipment of Rumanian oil reached the United States. Russia is now exporting large quantities of oil to certain areas in Europe and Iceland. I certainly hope that those opposed to a strong oil-producing industry in America are not so foolish as to believe that we might be able to import Rumanian and Russian oil in time of crisis.

PROBLEM OF MAINTAINING ADEQUATE CAPACITY

Those of us who understand the petroleum business are frequently confronted with opponents whose arguments have so little foundation in fact that we have a hard time even understanding what they are trying to say. For example, I have found people who would presume to express an opinion about the subject who are under the impression that an industry with proved reserves adequate to last 15 years should be able to produce all those reserves in 4 or 5 years to meet an emergency. This fails to take into account the actual facts of the situation.

If a well is pulled too hard, the ability of the well to drain oil from the sand where it is usually located is destroyed. Most oil is found in a strata of sand or shale on top of an almost inexhaustible supply of salt water. If pulled too rapidly for good conservation purposes, the salt water will be drawn into the pipe, and it may be a long time before oil can be produced from the well again. In some cases the well will be permanently killed.

In other cases the pressure of gas above the oil is required to force the oil to the surface. The principle of this operation is like a seltzer-water bottle, in which the gas is above the water and a tube extends from the mouth of the bottle into the water. The gas pressure pushes down on the water, forcing it up the tube and out of the bottle. In the case of an oil well, if the oil is extracted too rapidly, the gas will be exhausted too quickly, thereby forcing the use of a pump to lift the oil.

Another method of getting oil to the surface is called water flooding. In a field where there is no gas pressure, water is pumped into a well. The oil floats above the water, making it possible to lift the oil by pumping or flowing it slowly.

No matter what method is used, only a certain amount of oil can be taken from the ground each day without reducing the capacity to produce that which could otherwise be recovered.

The present capacity of the industry is somewhat greater than 10 million barrels per day, compared to about 7 million domestic production and 9 million domestic consumption.

In addition to the heavy losses suffered by trying to produce oil too quickly from a well, there must be sufficient transportation facilities to carry the oil to the refineries where it is turned into the petroleum products that are needed. Oil must be carried by pipeline, by water, or by the railroads. A tremendous increase in domestic production would dislocate existing transportation facilities, and if the domestic industry were to be further curtailed, transportation facilities would not be adequate to meet an emergency increase in domestic production. Transportation difficulties became a very serious problem when the industry was called upon to expand its production during the Suez crisis.

On March 6, 1959, the above ground crude oil stocks of the United States were estimated at 256 million barrels and petroleum product stocks were estimated at 488 million barrels. The National Petroleum Council estimates that only 30.1 percent of the crude oil stocks are readily available and only 65 percent of the product stocks, the rest being the fill in pipelines necessary to insure a smooth flow, and in the bottom of storage tanks. Available crude oil is estimated at 77 million barrels, and available products are estimated at 314,894,000 barrels. Thus, we have approximately a 10-day supply of available crude above ground and a 30-day supply of products. This is not enough to carry us very far in case of an emergency.

It might be asked, Why not store more above ground where it is readily available? This suggestion runs afoul two objections. First, because it is wasteful due to evaporation; and, second, because of the excessive cost of tank storage. It costs approximately $2 per barrel to store oil above ground. To store a 10-day supply of 70 million barrels costs about $140 million, not including the cost of the loss due to evaporation, which would be considerable if the oil has to be stored for a long period. It is far more efficient and economical to keep the oil in the ground, and to maintain at all times a sufficient number of wells capable of stepping up production without undue loss.

WE ARE NOT RUNNING OUT OF OIL

Several Senators have recently taken the floor to argue that it would be far better to save our own oil and import all the oil we can get, husbanding our own supplies for an emergency.

This is the fallacious idea that the domestic petroleum industry has had to contend with since shortly after it was founded just 100 years ago this year. The fact that the domestic industry is 100 years old and today is stronger in terms of reserves in the ground than at any time in its history, is proof of that.

I would like to cite a few examples of oil prophecies of the past which claimed the hour of extinction was at hand and show the progress of the domestic oil-producing industry despite these forecasts of doom.

First. In 1891, just 32 years after the first well was drilled successfully, the U.S. Geological Survey stated there was little or no chance for oil to be found in Kansas or Texas. In reality, more than 25 billion barrels of oil have been produced in these two States since that date.

Second. In 1914, an official of the U.S. Bureau of Mines stated that a total production of only 5.7 billion barrels of oil was possible in the United States. In reality, 56 billion barrels have been produced from 1914 to 1959.

Third. In 1947, the Chief of the Petroleum Division of the Department of State said sufficient oil cannot be found in the United States. From 1947 through 1958, 26 billion barrels of crude oil were produced and, in addition, 9 billion barrels were added to our known reserves.

Fourth. As late as 1949, the then Secretary of the Interior stated that the end of the U.S. oil supply was almost in sight. Since that date the domestic oil-producing industry has found more than 29 billion barrels of oil.

Today, total U.S. production is 7,100,000 barrels daily and the Nation's petroleum reserves are at an all-time high of 16 billion barrels.

In contrast to these earlier forecasts of the United States running out of oil, however, the U.S. Bureau of Mines, in a statement before the House Appropriations Subcommittee, recently set total U.S. recoverable crude oil reserves at 300 billion barrels under known recovery methods. This 300-billion-barrels figure refers to the so-called potential reserves which estimates the amount of oil that experience causes us to predict we can find and produce. This does not take into consideration increased efficiency in production or the development of better technology in the search for and development of domestic reserves.

Neither do these figures take into consideration the U.S. Geological Survey estimates of available oil from western shale deposits of more than 1 trillion barrels.

Thus, it should be apparent to all, that as long as we have oil producers in this country, we will have oil. The only essential for the next 1,000 years is the oil producer. He is the indispensible element.

This brings me to the final answer to the "running out of oil" song which those who would profit most by loosening a flood of foreign oil into this country sing so loudly.

Most of us here in the Senate are fairly well versed in the rudiments of economics. Thus, I think we can all understand that if a producer cannot sell his product, he soon goes out of business. The domestic oil producers do not have an inexhaustible supply of funds, despite what we may hear to the contrary. In order to go out and look for new oil fields, in order to drill the wells once he thinks he has found a possible producing area, he first must sell some of the oil he has found in the past. He must pay the debts he incurred while finding and producing his previous wells and still have enough money left over to look for more oil. He cannot do this if he cannot sell the oil he has already found.

That oil does him, the economy, or the national security very little good until it is produced, sold, and processed. And, believe me, Mr. President, the oil he has not found yet cannot do anyone any good. If you do not believe me, just ask the Indians.

It takes from 3 to 10 years to develop a large oil field into shape so that it would be available in time of need. Oil potentials are simply not reserves until they are found and developed. They simply cannot be found nor developed overnight, as some would have you believe.

Some of my friends who complain about the necessity of insuring a healthy domestic petroleum industry remind me of the little pig who built his house of straw to keep the wolf away. They will share the benefits of our internal strength if, like the pig who built his house of brick, we insure our security by maintaining an adequate domestic fuel supply.

The more one explores the facets and problems of maintaining an adequate supply of fuel to meet whatever war or emergency this Nation might face, the more one is forced to the inescapable conclusion of the Special Cabinet Committee which follows:

In summary, unless a reasonable limitation of petroleum imports is brought about, your Committee believes that: In the event of a serious emergency, this Nation will find itself years away from attaining the level of petroleum production necessary to meet our national security needs. (Taken from the report of the Special Committee To Investigate Crude Oil Imports, July 29, 1957.)

The Secretary of the Interior has correctly stressed the crucial necessity of finding and developing additional reserves as our existing reserves are depleted. He has pointed out that since 1956 the number of wells drilled has declined by approximately 16 percent. Senators will note that the defense amendment, for which they voted, placed particular stress upon just such factors. Once again I invite attention to the last paragraph of section 8 of the Trade Agreements Extension Act which I have previously quoted.

FOREIGN TRADE: THE DOLLAR GAP IS GONE

Apart from the needs of national defense, it would be well to consider our imports and exports in oil as compared to other aspects of our foreign trade. Let us separate some of the facts of the situation from the fiction and the myth that exist today.

In the first place, there is no longer any dollar shortage throughout the world. Perhaps there may be a shortage of dollars in a few countries, but in the world as a whole foreign dollar holdings now amount to more than $16 billion. I first came to Washington in 1948. We were told that it was necessary to pass the Marshall plan to give away $17 billion as a contribution to the economic reconstruction of Europe. It was contended at that time that Europe was not in a position, and could not be in the foreseeable future, to repay the dollars which she needed from us. We were told that it was necessary to close the dollar gap, which theoretically represents the difference between our exports and our imports from Europe.

Ten years later we find that every year since 1948 foreign nations have received more dollars from the United States than they have paid out. While it is true that an American is not entitled to demand payment in gold for his dollars, foreign nations and foreign businesses are in a position to demand gold payments.

Much of the dominant position of the United States in international commerce has been related to our ability to redeem our currency abroad by payment in gold. When the great hue and cry to close the dollar gap was raised in 1948, we then had at Fort Knox $24,400 million, in round figures, worth of gold. Foreign nations held $7,700 million, leaving us $16,700 million in gold that we could call our own. By the end of 1958, our gold balance had declined to $20,600 million, with foreign nations holding $17,600 million, leaving us only $3 billion in gold not subject to foreign claims. We were told that this is less than the bare minimum which it is necessary to keep on hand for the protection of our own currency within the United States. Therefore, the fact of the matter is that, when we look to the world as a whole, far from having a situation that requires that we place more of our dollar holdings in the hands of foreign nations, we have, in fact, just the opposite situation.

I am not saying that there are not a number of ways by means of which we can adjust our present situation in order to reverse the flow of our dollars to foreign nations. There are a number of expedients which we can use to protect our position; but, so long as we stick to present policies, we have depleted our gold reserves as far as we can afford.

One may ask how we came to be in such an unfavorable position on trade balances, when our exports have been exceeding our imports by more than $6 billion a year. Much of the misunderstanding in this field has resulted from a failure of administration propagandists to tell the whole story. When they compute an export figure of $17,900 million for 1958, compared to an import figure of $12,800 million for the same period, they stop at that point, without telling the rest of the story.

The spokesmen for unlimited imports leave out of their calculations over $3 billion of military expenditures overseas in payments for base rights and in payrolls of servicemen.

They overlook almost $3 billion of direct aid to foreign governments.

They overlook $3 billion annually of American investment in foreign countries.

They overlook the tourist expenditures of about $1¾ billion annually going to citizens of foreign countries.

When all of these factors are taken into account, it is easy enough to see why our dollar balance is declining at the very time when we had been led to believe that we would be in better shape than ever.

Therefore, let us get this matter straight, once and for all. There is no dollar shortage in any general sense. We are on the short end of payment balances. In a general sense, it is this Nation which owes the money, not the foreign countries.

MOST INDUSTRIES EXPORT MORE THAN THEY IMPORT

Now let us further analyze the nature of foreign imports into this country. Of $12,800 million of foreign products imported into the United States last year, almost half of these products came in without any charge whatever for duty. These products were on the free list. For the most part they are not produced in the United States. I have in mind such products as coffee, cocoa, bananas, industrial diamonds, various metals, ores, and newsprint.

When we add to the list of imports which come in duty-free the imports which are subject to duty, although they are not competitive with American products, such as chrome, nickel, manganese, and cut diamonds, we find that more than half of the products imported into the United States are not competitive with those produced here. With regard to that half of our imports, we are trading in the old and traditional sense, whereby a Nation imports the things it does not produce and cannot produce, and exports the things it produces in surplus. This much of our foreign-trade picture should be simple and relatively uncomplicated.

There is a second type of trade, which is generally accepted and favored by all nations. This is the kind of trade in which a nation imports a product which is not essential to the security of the importing nation, and which has always been produced more cheaply by foreign nations.

The third category of imports are those which most nations prohibit. Those imports would have the effect of curtailing or destroying an established domestic industry. I have not been able to find a single instance, with the exception of the United States of America, in which a country has permitted one of its major industries to lose its domestic market, or even a significant portion of its domestic market. I am sure there must be instances in which this has resulted; yet I have challenged some of those who pose as experts in this field to cite me even one. Thus far they have not done so. It is certainly true in a general sense that every nation imposes tariffs and quotas or provides subsidies for its domestic industries before it permits them to be driven out by low-cost foreign competition. In the United States only 1½ percent of our gross national product, or 3 percent of our movable production, is represented by imported products which are competitive with American production.

In almost every major industry, our exports exceed our imports.

For example: Our Nation exports nearly five times as much in the field of chemicals and related products as it imports.

We export about 14 times as much industrial office and printing machine equipment as we import.

We export nearly four times as much in the scientific and professional instruments field as we import.

The automobile industry is an interesting example of foreign trade. At present, we import almost four times as many cars as we export. Yet, when we compare the total dollar volume of exports of automobiles, parts, and accessories, to

the total volume of imports, we find that our exports are well over twice our imports.

The answer to these seemingly contradictory statistics in connection with the automobile industry is that almost three-fourths of the value of automobile exports is composed of component parts and trucks, which are produced in this country, but are assembled in other countries. Thus, we import more finished products, more complete automobiles; but we export far more in the way of semifinished automobiles.

In other words, except for sugar and wool, which industries are protected by special arrangements under law, every other American major industry, except the minerals and the paper industries, exports far more than it imports. This statement is even true of the textile industry as a whole, although certain segments of that industry do face stiff foreign competition.

Petroleum and petroleum products, therefore, constitute the principal industry unprotected by a firm arrangement in Federal law in which imports greatly exceed exports. In the petroleum industry, as I have said, the imports exceed exports by over five to one.

Mr. President, I would like to have printed at this point in the RECORD a table comparing imports to exports in certain industries.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Imports compared to exports

	Exports (millions of dollars)		Imports (millions of dollars)		Export-import ratio (approximate)
	January 1957	September 1958	January 1957	September 1958	
Petroleum and petroleum products	725.0	351.0	1,365.7	1,826.0	5 to 1.
Chemicals and related products	1,038.0	995.4	205.8	207.1	1 to 5.
Industrial, office, and printing machinery industry	1,950.8	1,813.7	151.9	131.6	1 to 14.
Automobiles, parts and accessories	989.4	803.3	227.8	387.5	1 to 2.
Textile fibers and manufactures	1,322.0	1,013.2	753.7	668.5	2 to 3.
Photographic and projection goods	75.6	77.9	29.8	29.1	2 to 5.
Scientific and professional instruments	77.0	75.3	21.2	20.5	1 to 4.

PETROLEUM INDUSTRY ABSORBS FAR MORE THAN ITS SHARE OF IMPORTS

Mr. LONG. Mr. President, petroleum and petroleum products have accounted for a steadily declining percentage of total U.S. exports. At the same time oil has accounted for a steadily increasing share of total U.S. imports.

I would like to insert in the RECORD at this point, a table showing these contrasting trends.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

	Exports of petroleum and products as percent of value of total exports of U.S. merchandise	Imports of petroleum and products as percent of total value of U.S. imports for consumption
Average, 1936–40	10.9	2.0
Average, 1941–45	5.8	2.7
Average, 1946–50	4.8	5.8
Average, 1951–55	4.7	7.3
Average, 1956 [1]	4.0	10.2
Average, 1957 [1]	4.8	12.0
Average, 1958	3.3	12.9

[1] Affected by Suez crisis.

Mr. LONG. In 1958, as is apparent from this table, oil accounted for 12.9 percent of the total dollar volume of U.S. imports. When it is realized that approximately half of these imports are not competitive with American goods, it is apparent that oil accounted for well over 25 percent of the dollar volume of all competitive imports.

The petroleum industry recognizes the important role of international trade. However, let us take a look at the relative position of oil in total U.S. foreign trade for 1957 and compare this with 1934, the year the trade agreement program was authorized. In 1934 oil imports were valued at about $36 million, or 2 percent of the total value of all imports of all commodities. In 1957 these figures were $1.5 billion, or 12 percent of this Nation's import trade. Obviously, oil has already contributed a substantial and increasing share of the total U.S. import trade. This one industry, so vital to national security, should not be expected to contribute to increasing international trade beyond the point that endangers the maintenance of adequate domestic supplies.

Most industries which face stiff foreign competition have the protection of tariffs. On goods which are protected, excluding oil, the average tariff is almost 15 percent ad valorem, compared to a tariff of approximately 3 percent in the case of oil.

In almost every case where imports of a product exceed the exports of that product there is a program to protect our domestic industry. Two examples of this are sugar and wool. The level of American production of these products is sustained by acts of Congress.

In 1958, our exports totaled $17.9 billion, and our imports totaled $12.8 billion. In 1957 our exports were valued at $20.8 billion, while imports were valued at $12.8 billion. Our imports have been roughly equal to two-thirds of our exports. Only half of the goods we import compete directly with American goods. Only about $6.5 billion of our annual imports are competitive.

Thus we see that the average ratio of exports to all competitive imports for the last 2 years is approximately 3 to 1. Our exports are three times as large as our imports for American industry as a whole.

Compare this favorable ratio to the situation which exists in the oil industry, where we import over five times as much as we export. Is it not then apparent that the oil industry is already absorbing at least several times more than its fair share of the burden of foreign trade?

What other American industry and its workers would be willing to give 20 percent of their market to foreign imports, and lower their tariff to 3 percent,

This history shows that oil has more than done its part in encouraging world trade. To further the extent of contribution petroleum has made since 1939, the date of the original Venezuela agreement, total annual dollar value of petroleum imports has increased more than 35 times, from approximately $40 million to about $1.5 billion in 1957.

Comparing the first half of 1956 to the first half of 1958, we see that the production of crude oil in the United States dropped by 698,000 barrels daily, while production in the Middle East increased by 502,000 barrels daily and Venezuelan production increased 155,000 barrels daily. U.S. production was down 9.7 percent in this period, while Middle East production was up 13.9 percent, Venezuelan production up 6.6 percent, Far East production up 19.2 percent, and Canadian production up 4.6 percent.

The following chart shows changes in crude oil production from the first half of 1956 to the first half of 1958:

Changes in crude oil production—First half 1958 versus first half 1956

		Barrels daily
Middle East	up	502,000
Venezuela	up	155,000
Far East	up	75,000
Canada	up	20,000
United States	down	698,000

		Percent
Middle East	up	13.9
Venezuela	up	6.6
Far East	up	19.2
Canada	up	4.6
United States	down	9.7

Mr. President, the importation of oil into the Unted States has increased tremendously in the last 5 years, as demonstrated by the next exhibit showing the source and amount of U.S. crude oil imports from 1954 through 1958:

Source of U.S. crude-oil imports

[Thousands of barrels per day]

Year	Canada	Venezuela	Other Western Hemisphere countries	Total Western Hemisphere imports	Eastern Hemisphere countries	Total
1954	7	352	47	406	251	656
1955	46	386	43	475	307	782
1956	117	456	42	615	319	934
1957	151	531	35	717	304	1,022
1958	84	433	29	546	407	953

without the prospect of some sort of protection?

I should like to put my friends on notice that if their attitude concerning protection for an industry, which is so vital to our national security, is one of unrestricted free trade, we may require that they live by the same standards they set for us.

It should be emphasized that under the provisions of the defense amendment, the President has the power to raise as well as lower the import quotas. It is not a one way street. If any of the fears expressed by opponents of the program materialize, the President has the authority to increase the quota.

DOMESTIC PRODUCTION WILL PROTECT THE CONSUMER

Many fallacious arguments have been used in attacking the President's long-overdue action to regulate oil imports. It has been stated that the President's order is a major contribution to inflation.

The record of the oil producing industry refutes this statement. The domestic petroleum producing industry has been one of the least inflationary industries in the United States. Since December of 1947, crude oil prices have been adjusted upward in only two instances, once in June 1953 and again in January 1957. Both increases were nominal and insufficent to offset increasing costs. Since the last increase, prices have been eroded away until today in many of the oil producing areas of the United States the price is below what it was before January 1957.

In the latest 16 months, studies made by the Oil and Gas Journal indicate that oil producers have lost $807,718 a day in income through crude price cuts, involving 5,487,200 barrels a day. During this time some crudes have sustained two price cuts.

Mr. President, the following table shows cuts in the price of crude oil, the amount of crude affected, and the total daily dollar loss to producers:

	Barrels per day	Amount of cut (cents)	Total loss
October 1957 to April 1958	1,945,000	13.1	$250,000
May to October 1958	2,260,470	20.51	463,000
November 1958 to mid-January 1959	1,282,050	8.75	112,188

Mr. President, a few upward adjustments were made in this period which added $17,470 to producers' income.

Since 1947, this industry has absorbed more than 11 general increases in the price of steel, which it uses by the millions of tons every year. Industry wage rates have increased on 10 occasions, and there have been increases in the price of all of its equipment from drill pipe to oilfield machinery.

We often hear complaints about the high price of gasoline at the service station. Yet today we pay only 2 percent more for gasoline—less taxes—than we did in 1926. It is true that since 1926 the tax on gasoline has increased 270 percent. The 2-percent increase in the price of gasoline is in contrast to a 63-percent increase in the consumer price index for all commodities during the same period. Nor does it take into account the tremendous improvement in the quality of the gasoline.

This history of the petroleum industry is persuasive argument that the consumers of this Nation will not be the victims of unreasonable price increases because of a very modest restriction placed upon the importation of foreign oil.

It would be well to keep in mind that imports had been steadily increasing until the President's order went into effect and inflation had increased tremendously during this period.

It has been mentioned in the Senate that New England has experienced an increase of about 2 cents per gallon in the price of fuel oil within the last few months. It was said that this was the result of the voluntary controls over the importation of oil.

In view of the fact that imports continued to increase until March 10, it is difficult to see how this raised the price of fuel oil. It is probable that the increase in fuel oil prices was due to the increase in transportation costs.

The increase in tank-wagon prices in four Midwestern States has been criticized. Let me say that a one-half cent per gallon increase is hardly worth commenting on in this regard. There are frequent price fluctuations in tank-wagon prices throughout the United States at all times. If there were not this price difference, it is likely that someone would contend that there was an industry monopoly and that the industry was not subject to competitive conditions.

Oddly enough, the price increase of the Standard Oil Co. of Indiana was that which was referred to. I should like to point out that this is one of the major oil importing companies which was not in favor of the mandatory program. When it was pointed out in the Senate that "these oil interests could not wait for the ink to get dry on the President's proclamation before they started raising prices," it might be said that, inasmuch as Standard Oil of Indiana was opposed to the mandatory program, they could have raised prices in order to discredit the program and make it appear as if it were responsible for what was actually a long-contemplated price increase.

The independents and other domestic producers would want this program to be popular, while the large importers might well want the program to be unpopular.

When critics of this program referred to the problem of increased unemployment, they could not be referring to the tens of thousands of oil field workers who will be put back to work, as a result of the President's program. As a matter of fact, a tabulation and estimate the junior Senator from Louisiana had made as to the effect of increased imports in Louisiana indicates that in Louisiana alone, which is not the largest producing State by any means, unemployment increased about 25,000 because of increased oil imports.

The increased production from domestic wells, which has long been producing at uneconomically low daily allowables, should help to hold down the price of oil.

Foreign imports do not tend to lower the price of oil—they merely lower American production. This is true because the importers own most of the refinery capacity. The more they import the less domestic oil they buy. The less they buy, the less oil the independents can produce, once the above-ground storage has been fully utilized. At this point, State programs prorate production to prevent waste and to permit to each producer his share of daily allowables.

It is unsound from the consumer's economic standpoint to become dependent upon foreign oil. Even if foreign sources were not susceptible to the whims of dictators and unstable governments, it should be remembered that foreign oil production is controlled by a handful of international oil combines. In contrast, the domestic petroleum industry consists of thousands of individuals, partnerships, and companies engaged in the production of petroleum. In view of these facts, is it better for the consumers of this Nation to be at the mercy of a few international oil companies? Or is it better that they rely upon thousands of producers in this country? The answer is obvious. The President's order, by preserving competition, will better protect the consumer.

The capacity of American producers is over 10 million barrels per day. They have been permitted to produce only 7,100,000 barrels per day.

DANGER OF UNDESIRABLE CONTROL OF INDUSTRY

The objection has been raised that the order of March 10 leads straight down the road to greater bureaucratic control over U.S. industry.

This supposition is completely fallacious. Since the first days of our Constitution, the Federal Government has regulated foreign commerce. This exercise of constitutional authority need not, and, in fact, it cannot legally lead to controls of prices and wages of domestic industries.

As I have mentioned previously, the action of the President to limit oil imports is under specific provisions of law wherein the Congress has delegated responsibility to the President. The law, commonly referred to as the national security amendment, was first enacted as section 7 of the Trade Agreements Extension Act of 1957. It was further amended and clarified last year in section 8 of the Trade Agreements Extension Act of 1958. This law gives the President authority to limit imports in the interest of national security. The law gives the President absolutely no authority to control prices, wages or any aspect of a domestic industry. To attempt to do so would be outside the law. It is fantasy to speculate that this law authorizes broadside Government controls of industry operations. Any attempt to so extend it certainly would fail for lack of legal basis.

Some Members of this body seem to abhor the thought of the Federal Government exercising its constitutional right and responsibility to control foreign commerce. The fact is that until recently the few international oil companies which control most of the foreign oil production have been controlling oil imports to their own liking.

For almost 4 years, the executive branch has been endeavoring to persuade these importing companies to limit their imports. These pleas and efforts for voluntary restriction have been flagrantly disregarded by importing companies with the result that imports have jumped to unprecedented levels.

CHARGE OF DISCRIMINATION UNFOUNDED

It has been charged that the President's program is discriminatory against regions of the United States without indigenous fuel supplies. This charge is likewise without foundation.

The President's order will not result in a drastic cutback in imports. It, in fact, will permit petroleum imports at a very substantial rate. Prior to World War II, total petroleum imported into the United States amounted to about 5 percent of domestic production. Following World War II, during the period 1946 to 1950, imports increased rapidly, averaging about 10 percent of domestic production. During the period 1951 to 1955, imports increased further, averaging about 16 percent of domestic production. The new oil import order will permit imports to continue at a rate equivalent to a rate of approximately 20 percent of domestic production. Certainly this cannot be criticized as a drastic cutback. It is, in fact, a most reasonable limitation.

It is true that the order constitutes a cutback from the rate of imports during the past 3 years. For example, during 1958 total imports amounted to 25 percent of domestic production. But it became obvious that such high rates of imports were crippling the domestic industry and causing a serious decline in the exploratory and development efforts of the domestic industry. No one has sought to eliminate all petroleum imports.

The President's Special Cabinet Committee To Investigate Crude Oil Imports carefully considered this aspect of the problem. In its 1957 report, it had this to say:

> Domestic consumers are utilizing an increasing amount of petroleum products for transportation, fuel, heating, and many other aspects of consumer life. In the event of a national emergency, it is essential to these consumers that there be adequate supplies at reasonable cost, both now and in the future. The low cost of imported oil is attractive, but excessive reliance upon it in the short run may put the Nation in a long-term vulnerable position. Imported supplies could be cut off in an emergency and might well be diminished by events beyond our control. This vulnerability could easily result in a much higher cost, or even in the unavailability, of oil to consumers. It is therefore believed that the best interests of domestic consumers, as well as of national security, will be served if a reasonable balance is maintained between domestic and foreign supplies.

During recent months the Government of Venezuela has taken action to increase the taxes imposed upon American companies operating there. This action further illustrates the instability of foreign oil from a consumer standpoint.

As consumers, the more we become dependent on any foreign source, the more we are at their mercy with respect to the price we are forced to pay. Once we become dependent upon foreign sources, we will have no choice but to pay whatever price is asked. The slight savings we might temporarily enjoy could prove very expensive a few years from now.

CANADA IS TREATED FAIRLY

The mandatory oil import program has been criticized on the grounds that it would complicate our relations with Canada. Let us weigh the impact of the program upon our northern neighbor before we jump to that totally unwarranted conclusion. It is important to realize several facts:

First, oil as such is a minute particle of our overall trade with Canada.

Second, the mandatory program makes generous allowances for Canadian oil imports.

Third, the importing companies in the Pacific Northwest have not been filling their allocations under the voluntary program with Canadian oil, not because of any U.S. Government restrictions, but because these importers found a cheaper source of supply, namely the Eastern Hemisphere.

As to oil in the overall Canadian trade picture, it should be noted that in 1958 petroleum accounted for only 2.4 percent of the total U.S. exports to Canada and only 3 percent of the total U.S. imports from Canada.

In 1958 the United States exported $3,400 million worth of goods to Canada. Petroleum accounted for $82 million of that total. We imported $2,600 million in goods from Canada, of which $78 million was in petroleum. The following table presents these figures:

Canadian-American trade, 1958

	Total exports	Petroleum exports	Percent of total
	Millions	*Millions*	
Canada to United States	$2,600	$78	3.0
United States to Canada	3,400	82	2.4

This chart illustrates the obvious fact that Canada finds it economical to ship oil to us in the west and we find it economical to ship oil to Canada in the east.

The mandatory program makes allowances for refineries in the north central portion of the United States, which have easiest access to Canadian oil. It provides that imports of these refiners will not be within the program. Thus, they will be allowed to import without restrictions whatever they need in the way of imports from Canada.

During the past year when the voluntary program was in effect, importers in the U.S. Pacific Northwest, who historically have purchased Canadian crude oil, began to turn more and more to the cheaper crudes of the Eastern Hemisphere.

The voluntary program did not establish the source of imports, nor does the present mandatory program. If importers wish to purchase all their imports from Canada, there is nothing in the program to rule otherwise.

But let us face the facts. By and large, American importers do not want oil from Canada. In 1957, imports into the west coast from Canada totaled 95,000 barrels daily. In 1958, this total dropped to 25,000 barrels daily despite the fact the Government's crude oil allocation was more than 75,000 barrels daily for companies in that area who normally imported from Canada.

In the last quarter of 1958, imports from Canada into the west coast totaled only 11,000 barrels daily, some 65,000 barrels below the daily allocation. This decline took place despite the fact that two of the importing companies in the area have pipelines from Canada to their refinery gates.

This record shows that the President's program does not discriminate against Canada. If there is, or has been, discrimination, it has been at the hands of the importing companies, not the U.S. Government.

In addition, let us examine Canada's own record. In 1954, Canada imported 95,000 barrels daily from the United States. In 1957, this declined to 80,000 barrels daily. In contrast, during this same period, imports into Canada from the Middle East and Venezuela increased from 218,000 barrels daily in 1954 to 320,000 barrels daily in 1957. As a result, about 45 percent of Canadian consumption is being supplied by Middle East and Venezuelan oil. Canada imports large quantities of low-cost Middle East and Venezuelan oil, rather than U.S. oil, to meet her large eastern markets, and, at the same time, takes the position that she has an established right to export her own production into the United States.

It might be well to take a look at our trade experience with Canada during the Korean conflict. In 1950, we imported 108,000 tons of lead pigs and bars from Canada. On January 26, 1951, our Government felt it necessary to impose price controls upon lead and other nonferrous metals. This immediately caused Canadian producers to divert their lead to other markets where they could obtain a higher price. Our lead imports from Canada were cut almost in half. In 1951, they dropped to 57,000 tons. In spite of our great need for lead during the Korean conflict, the incentive to sell to other markets was too great for our Canadian neighbors to refuse.

This is not to condemn our good neighbors but merely to point out that a fair minded Canadian has no basis to criticize an order which protects American interests in a moderate way without discriminating against Canada.

VENEZUELA UNDERSTANDS

The fear has been expressed that this program would damage our relations

with Venezuela. It would appear that Americans are more worried about this than the Venezuelans. Their Minister of Mines and Hydrocarbons, Sr. Juan Pable Perez Alfonzo, has stated that he does not regard the new U.S. mandatory imports control plan as a substantial change in the situation. Sr. Alfonzo said:

> Obligatory restrictions in the United States do not modify substantially the existing situation of the oil industry in this nation.
>
> For some time now, voluntary restrictions have shown the way toward stability of markets and prices. It is this stability that we are interested in.
>
> Venezuela, like the United States, wants to avoid upsetting the oil industry either here or there through undue market competition.

It must be remembered that there has been a fantastic increase in the importation of oil from Venezuela in the last 10 years. No other nation than the United States, capable of producing all the oil it needs, would consider allowing as much oil to come into the country. No other nation would have been so self-effacing.

The Venezuelans are certainly intelligent enough to recognize their good fortune in obtaining a large share of the American market.

Our prime purpose in economic assistance to friends and allies should be to help other nations to provide their own requirements rather than to displace American workers.

Our good-neighbor policy of allowing excessively large imports has benefited more than anyone else, the large oil companies. A country such as Argentina, which has its own nationalized oil industry will find little opportunity to sell oil in the United States. The large integrated companies who own the tankers and the refineries are not interested in buying oil from other sources. They will not ship it and they will not be anxious to refine it. They can make more money producing their own oil overseas.

Mr. President, I have felt compelled to go into considerable detail to produce the facts and figures to put to rest a great number of uninformed charges and statements which have been cast about this Chamber and that of the House of Representatives in rather willy-nilly fashion. Their statements do credit to the extremities of their imagination. Practically none of these statements had any documentation whatever. I regret to say that a number of them exposed an abysmal lack of information concerning even the most elementary aspects of the petroleum industry. A great number of them would appear to rely upon the popular misconception that the domestic petroleum producer is a powerful, vested, special interest, gaining special advantages to which he is not entitled.

Herblock, the great cartoonist for the Washington Post, usually pictures the typical oil man as fat and prosperous and a cigar smoker. This picture, while extremely exaggerated, should be confined strictly to the importer. The typical domestic producer who is not in a position to operate overseas, could more accurately be pictured in khaki work clothes. Most of our small independent producers work hard for no more than the equivalent of a decent wage, and many go broke. A few lucky and skillful ones strike it rich, but that percentage is extremely small.

At a later date, I expect to present more information to clear up the false public impression about the financial status of the independent oil producers. It will be shown that earnings for the domestic industry as a whole are about the same as for manufacturing generally.

THE FOREIGN TAX CREDIT

It is the billion-dollar American oil companies which are reaping the benefits from foreign oil imports. These large corporations are benefited by a tax advantage which makes the percentage depletion allowance appear very small by comparison.

The operation of the foreign tax credit has caused the large oil companies to pay practically no tax whatever on their fantastic profits from foreign oil. As I have attempted to explain to a number of my friends, any reduction in percentage depletion for oil would not bring additional revenue to the U.S. Government from the enormous income from foreign oil, because it would only result in Venezuela, Saudi Arabia, Iraq, Kuwait, and Indonesia increasing their tax on American oil companies to claim for their treasuries that which would otherwise escape their taxation to the benefit of Uncle Sam.

Anyone who cared to enlighten himself on the manner in which this foreign tax credit has been used to deny revenue to our Government could satisfy himself in short order by reading the report drafted by the Joint Committee on Internal Revenue Taxation and made available to the Senate Committee on Finance. The report explains how this type of tax avoidance was used by Arabian American Oil Co. in pursuance of policies of the Government of Saudi Arabia.

INFERENCES OF CORRUPTION

I notice that the junior Senator from Wisconsin [Mr. PROXMIRE] told the Senate yesterday:

> The oil industry has won a position of corrupting power and influence in our Federal Government.

Mr. President, that statement sounds extremely like some of those which I have heard made by a previous junior Senator from Wisconsin. I hope very much he will produce his evidence that the smaller and independent domestic producers have corrupted the Congress which passed a law compelling the President to take action or that they corrupted the President who acted, well knowing that it was his duty. If the junior Senator from Wisconsin knows of unexposed corruption in Government, it is certainly his duty to bring forth his evidence.

During my 10 years of service in the Senate, it has been my duty to vote upon a number of trade bills and a number of amendments affecting the petroleum industry when such amendments were offered to trade bills. In some years when oil imports were at a lower level, I have voted on the side of the major companies. In recent years, when oil imports began to threaten the domestic industry, I have felt it my duty to vote and fight to control foreign imports.

It has always been my feeling that both the large corporations and the small producers were entitled to be heard by the junior Senator from Louisiana. Both sides have very large investments in the State which sent me to the Senate. I am prepared to testify under oath that there hasn't ever been a single instance in 10 years during which the representatives of oil producers, either large or small, be they foreign producers or domestic companies, have made any offer to reward or threat of reprisal with regard to any position that I have taken or proposed to take concerning their interest. The junior Senator from Louisiana is certainly not one who owes his election to the influence of the oil companies. They were almost unanimous in their opposition to me—I mean both the independent and the major oil producers—when I was elected to the Senate in 1948, in large measure because I had strongly favored a very heavy increase in severance tax on oil at the State level. If I had known them to be less than honorable, I would not state to the contrary.

I believe I have shown that the President's order will help to preserve a domestic petroleum industry. In preserving the thousands of small independent producers, the President's order will assure vigorous competition by many thousands of competitors. Such competition is necessary if the consumer is to be protected from monopolistic pricing.

I believe I have demonstrated that the President's order has not and will not disturb our friendly relations with our neighbors or our friends throughout the world.

Quite the contrary, it will assure our ability to go to the aid of at least a dozen of our important friends and allies throughout the world in the event that everyone else fails them.

I believe I have demonstrated that the petroleum industry has accepted a rate of competitive imports compared to exports many times beyond the contribution of other American industries.

Above all, I believe I have demonstrated that the logic of the report of the President's Special Committee to study this matter is inescapable, and that the security of this Nation requires that we maintain a domestic petroleum industry adequate to serve this Nation in times of crisis.

Those who have experienced the cold winter months of World War II when fuel was strictly rationed and those who stand ever ready to make great sacrifices if need be in time of peace as well as in time of war, would never want this Nation to be at the mercy of uncertain and

undependable sources of fuel during wartime or during national emergencies.

It is for this final reason that I am satisfied that all thoughtful Americans who take the trouble to acquaint themselves with the problem will hail the President's order as a desirable one, required by act of Congress and required by his duty to preserve this Nation.

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. LONG. I yield.

Mr. CARLSON. I would feel remiss as a Member of the Senate if I did not express my appreciation of the excellent and timely statement which has been made by the distinguished junior Senator from Louisiana concerning the domestic oil problems.

Not only was it an excellent statement; it was a statement which should have been made at a time closely following upon the President's Executive order with respect to the mandatory control of oil imports.

I appreciate, too, the distinguished Senator's support of the President's position on setting mandatory quotas for the importation of oil. I think it is in the interest of the national economy and certainly in the interest of national defense.

It is a pleasure to serve with the distinguished junior Senator from Louisiana on the Committee on Finance. I have worked with him on many occasions on the subject of oil. It will be a pleasure to continue to do so.

Mr. LONG. I thank the Senator from Kansas.

During the delivery of Mr. LONG's remarks, at point where he referred to the defense amendment of the Trade Agreements Act,

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. LONG. I yield to the Senator from Kansas.

Mr. CARLSON. I hesitate to interrupt, because the distinguished Senator from Louisiana is making an excellent statement on the legislative history of the amendment he has been discussing, which was adopted not only by the House Ways and Means Committee but rewritten somewhat by the Senate Finance Committee in a manner which, as members of the committee, we thought, strengthened it. I am positive the statement the Senator from Louisiana has just made is a statement of the legislative intent, at least, of the Senate Committee on Finance when it approved the amendment.

Mr. LONG. There is not the slightest doubt about it. The discussions on the floor of the House of Representatives made this clear. I know the Senate Finance Committee held executive sessions during which this subject was very thoroughly explored. The Senator from Kansas, who is a member of that committee, well recalls the situation. It was discussed and explained in the committee report.

As I shall explain, the junior Senator from Louisiana had an amendment designed to make it a firm mandatory legislative requirement that the President do what he has done. The amendment was not offered because the defense amendment in the bill was intended to take care of that situation. I believe the distinguished Senator from Kansas was one of those who encouraged the junior Senator from Louisiana not to offer his amendment on the floor of the Senate because the defense amendment had exactly the same purpose which the junior Senator from Louisiana had in mind when he offered his proposal to make it absolutely mandatory on the President, without discretion, that such a program be put into effect.

Mr. CARLSON. Mr. President, will the Senator further yield?

Mr. LONG. I yield.

Mr. CARLSON. In order that the RECORD may be clear—and I think it is important that we do make it clear—the Senator from Louisiana has stated what I believe to be the exact situation as it developed in the discussions in the Senate Finance Committee on the amendment dealing with the oil industry.

As a member of the committee, I urged the Senator from Louisiana not to press his amendment for the reason that I thought the amendment approved by the committee would take care of the situation.

I have been one Member of the Senate and of the Finance Committee who hoped that we could have a voluntary program, and that it would work. Not being able to have the situation taken care of by voluntary action on the part of the oil companies, I felt that the President should have the authority to act. I favor that program for the reason that, once we enact legislation which makes it mandatory to limit quotas, or write them into law, it is difficult to adopt changes. There might be times when changes are needed.

Under executive direction the President can follow through with the program. He has established mandatory quotas. If it is found that they need to be changed, he is in a position to change them.

I hope this program will work satisfactorily, and that the oil industry will give the President's order regulating oil imports at least a fair trial.

Mr. LONG. I thank the Senator. There is no doubt, however, in line with the Senator's remarks, that this amendment, and the action the President has taken under it, represent that for which Senators voted who have been known to criticize the order. They voted for exactly this; and those of us on the committee made every effort to explain that this sort of situation was what we were voting for when we voted for the amendment to the Trade Agreement Act last year.

During the delivery of Mr. LONG's speech, when he referred to the conclusion reached by the Special Cabinet Committee,

Mr. CARLSON. Mr. President, will the Senator from Louisiana yield?

Mr. LONG. I yield.

Mr. CARLSON. The Senator from Louisiana has stressed the importance of a program of continuous exploration and development in order to keep current the reserves we much have in order to make oil available for domestic use. I have some figures which I think should be made a part of the RECORD, and which show what happened with respect to the development of and exploration for oil in the year 1958.

The number of rotary rigs which were active in the drilling industry were down 20.7 percent, or about one-fifth. They were idle because of the importation of oil.

Second, there was 18.2 percent less wildcat well drilling. The Senator from Louisiana, I know, will agree with me that it is the wildcats who find the oil.

Mr. LONG. Most of the wildcat wells are drilled by the small independent operators. Certainly 80 percent of the discoveries of oil have been made by the small independent operators who take risks which, in many cases, the large companies have felt to be unwarranted. Thus it has been the small independent operators who have found more domestic oil than the large operators.

Mr. CARLSON. The older major oil producers reap the benefits of the wildcat operations of the small companies having limited capital.

The number of active exploratory crews, which are, after all, the oil field workers, were down 12 percent.

The total footage drilled was down 9.9 percent.

The total number of wells drilled was down 8.5 percent in 1958.

The number of development wells drilled was down 5.8 percent.

I think those figures prove that the oil industry, as a result of the excessive importation of oil, which has reached as high as 2 million barrels a day, is being seriously impaired. As a result, the economic effect on the communities and States where oil is found certainly is not conducive to the strengthening of our national defense.

Mr. LONG. I thank the Senator from Kansas.

During the delivery of Mr. LONG's speech,

Mr. O'MAHONEY. Mr. President, will the Senator yield?

Mr. LONG. I yield.

Mr. O'MAHONEY. I have listened with rapt attention to the remarks of the Senator today. I thank him for the diligence which he has applied to the accumulation of the facts he has set forth.

The truth is, as he says, that the position of the domestic petroleum industry is not at all recognized by the people of the United States.

Nor is there any recognition given to the extent to which our Government has actually subsidized the American companies which are producing oil in foreign nations to compete with the production of domestic oil in the United States.

I believe the Senator will agree that I do not go too far when I say that the huge imports of petroleum and petroleum products to which the Senator has

referred have to a large extent been stimulated by tax exemptions which our Government has given to the investment of private capital in foreign countries in the production of oil.

Mr. LONG. The Senator is entirely correct in his statement. He is familiar with what happened when the Arabian-American Oil Company was called before his committee recently to explain why it had paid no taxes to the U.S. Government on an annual profit which I would estimate to be around $500 million a year in Saudi Arabia alone.

Mr. O'MAHONEY. As I recall the figure, Aramco was paying nothing in taxes to the United States on its huge profit and was paying $189 million to Saudi Arabia.

Mr. LONG. As the Senator so well knows, those who talk about reducing the depletion allowance in this country would get no revenue from foreign oil production for our Government if that were done. It would result in Saudi Arabia using the tax to increase the amount of foreign tax credit.

Mr. O'MAHONEY. Is it not a fact that it is a subsidy for the Government to allow a 27½ percent depletion allowance on the production of oils in Saudi Arabia, Venezuela, and other countries?

Mr. LONG. Yes. Those companies get the same benefits that the companies in America get, but they get the additional advantage that the royalties which they pay to the foreign government has been classified as a tax.

All the royalties paid to the foreign government, as well as the taxes paid to it, are given a tax credit status against what the companies would otherwise pay to the United States Treasury. The State of Louisiana has a severance tax of about 24 cents a barrel. In addition, the companies must pay income taxes to the State and royalties to the private owner of the land, or to the State if the land is State owned. These taxes, plus royalties, amount to about 80 cents a barrel. That is considered a deduction. It is considered as any other expense for tax purposes. In Saudi Arabia that amount is considered a credit worth 100 cents on the dollar, as compared with a deduction in this country which is worth 52 cents on the dollar against corporate income tax liability.

Mr. O'MAHONEY. I should like to ask another question of the Senator, in order to get the matter on the record in the simplest possible terms. Is there any possible excuse for the Government of the United States to pursue a tax protecting policy on the production of oil products in foreign countries by American corporations in order to help them compete against American production in the United States?

Mr. LONG. I can see no reason why this country should subsidize low-cost production of oil in foreign countries, which can only help to drive out the domestic producer. If the cost of the foreign producer were greater than the cost of the American producer, I could perhaps see some logic for the subsidy.

Mr. O'MAHONEY. Is it not a fact that in addition to the 27½ percent depletion allowance for the production of oil in foreign countries, our giant petroleum companies are allowed to operate under a Western Hemisphere tax forgiveness policy which does not apply to companies producing only in the United States? For example, the exploration subsidy applies to American capital working in Venezuela to produce petroleum there, but it does not work to the benefit of the American company drilling for oil in Louisiana or Wyoming or Texas, or in any of the oil bearing States of the Nation. Is that not a fact?

Mr. LONG. The fact is, as the Senator so well knows, the companies producing foreign oil—and these are the giant corporations—have the same tax advantage which the independent producer in this country has, plus the enormous advantage of the foreign tax credit, which is worth more than the deduction in this country is worth. Thus the foreign companies get a credit which is worth twice as much as the deduction in this country.

Mr. O'MAHONEY. The Senator is a member of the Committee on Finance. I should like to ask him whether there is any possibility of the Committee on Finance going into the records of the Internal Revenue Service so as to set forth the plain facts of what the foreign tax credit amounts to.

Mr. LONG. There is a report before the committee, which has not yet been released, on the situation in Saudi Arabia. I know that a number of the members of the committee have been very much troubled about the situation. It seems to me that there is a possibility of the matter being looked into. The Treasury is concerned about the fact that here are companies making more than a billion dollars in profit a year on which they are paying virtually no taxes.

Mr. O'MAHONEY. During the hearings of the Antitrust and Monopoly Subcommittee, dealing with the international oil situation, when the Suez Canal was closed for a time, at a hearing at which I presided, I was so impressed by the testimony dealing with the exemptions given to Aramco that I wrote a letter to the chairman of the Committee on Finance asking him to have the Joint Committee on Internal Revenue Taxation go into the facts, because the concessions which have been granted by Saudi Arabia exempt the company from obligations which otherwise are levied upon the American companies.

I happen to have a copy of the letter in my hand, and I should like to read this paragraph:

The concession—

That is the concession to Aramco from Saudi Arabia—

states that Aramco shall be exempt from all direct and indirect taxes, imposts, charges, fees, and duties. Thus the Treasury might have decided that the 50 percent income tax law in Saudi Arabi was not the result of action by a sovereign power, but a move decided by Aramco to shift increased royalty to the U.S. Treasury.

This is something which the country does not at all understand.

Mr. LONG. I am not sure whether the report makes it clear exactly how that result occurred, although it has always been my suspicion that what occurred was that the ruler of Saudi Arabia was demanding more money from the oil companies and that some of them simply pointed out that if he ceased to call these large royalties by their name and instead, called them taxes, they would have tremendous tax savings from the United States Government which they would be happy to remit to the Government of Saudi Arabia. That is probably what actually happened, although the report does not quite say so.

I believe there is a great deal of precedent for this being done. It is not unprecedented and it is not illegal, and I do not accuse the company of taking any advantage. I criticize Congress for not having done something about it.

Mr. O'MAHONEY. Years ago—I forget in which year the decision was rendered—a great Supreme Court Justice from the State of Louisiana, Chief Justice White, pronounced the decision against the Standard Oil Co. of New Jersey by which that company was obliged to split into its original units, or some of those units. In other words, Standard Oil Co. of New Jersey was found to be a concentrated group of producers in the petroleum industry working in violation of the Sherman Act. So it was compelled to split up. The owners of Aramco include three of the original units——

Mr. LONG. Plus two other major companies.

Mr. O'MAHONEY. Aramco was established by Standard Oil Co. of California and Texas Co., as I recall. It became such a profitable enterprise that Standard Oil Co. of New Jersey and Socony-Vacuum insisted upon buying into it and were able to do so.

Under the concession, Aramco may produce its oil in Saudi Arabia, but it may not refine the oil. It sells its crude oil to the owning companies. So Standard of New Jersey, Standard of California, and Socony-Vacuum buy a substantial portion—the majority—of all the oil produced in Saudi Arabia.

Now the Government of Saudi Arabia, I am informed, wants to make Aramco an integrated corporation, so that Saudi Arabia will gain more tax revenue from the production, refining, transportation, and sale of its natural resource.

While all this is going on to the advantage of foreign governments and to the advantage of the American companies operating in Saudi Arabia, those same companies are operating in a competitive way against the independent producers of the United States, upon whom the oil workers of the United States and many of the States such as Louisiana, Wyoming, and Texas, depend for their earnings and tax revenue.

The United States is pursuing a tax policy which reduces the receipts of its own National Treasury while it injures the domestic petroleum industry.

I am happy, indeed, that the junior Senator from Louisiana, who is an effec-

tive member of the Committee on Finance, has given so much of his time and attention to this matter and has made it a part of the Senate RECORD in the admirable address which he is delivering this morning. I thank him very much for what he is doing.

Mr. LONG. I am extremely grateful to the senior Senator from Wyoming, who is a master of the particular subject which I am attempting to discuss today. He has been in the Senate a great many years. Much of my understanding of the petroleum industry relates to my service under his leadership on the Committee on Interior and Insular Affairs when I first came to the Senate. He arranged a considerable number of hearings, during which were explored the availability of fuel in the United States to meet present and future needs. I believe the documents prepared for his committee at that time, by his staff and by the Senator himself, comprise some of the best and most thorough information available anywhere on the subject.

Mr. O'MAHONEY. The Senator from Louisiana is very kind.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. LONG. I yield.

Mr. MONRONEY. I compliment the distinguished junior Senator from Louisiana for a very thorough, thought-provoking discussion of the effect of oil imports on domestic production and the necessity in the future of having a sufficient domestic oil supply for emergencies. He has discussed the situation with great ability and understanding.

I think few persons realize the magnitude of the tax exemptions, which permit huge writeoffs and practically complete tax exemption, on a barrel of oil which is imported from the Middle East. This is due, as he said, and as the distinguished senior Senator from Wyoming [Mr. O'MAHONEY] has said, to the tax device which grew out of the original 50–50 working interest. It amounts actually not only to a tax credit for the 50 percent now charged as taxes rather than as working interest, but also takes the 27½-percent depletion which would normally have been computed on half the production which belonged to a developing country. Instead, the total production is now included which magnifies the depletion to 54 percent, which is far too much.

In the case of some of the giants this results in a complete and total exemption from Federal income tax, as the distinguished senior Senator from Wyoming has proved in the hearings conducted by him, and as has been demonstrated by the Committee on Finance studies. This is indeed a contrast with the taxes a barrel of oil produced in this country must pay.

I think we must be realistic enough in the study of imports, duties, tariffs, and quotas to recognize that, because of American ingenuity in producing an automobile, producing packaged food, and producing many articles in which artistry and design and our machine tools play a part, we are given an opportunity to compete against lower prices in the world market. Those are industries, I believe, which are capable of being competitive, and in which import quotas or other special treatment are not necessary.

But there can be no difference in the quality or the standards of a barrel of oil. It is a certain grade whether it is produced in Venezuela, Saudi Arabia, Canada, Alaska, Texas, or any other part of the United States. If it meets a certain grade, it is an identical product. Therefore, there is no qualitative superiority of the American product. There is no advantage whatever in saying "this is a well known brand," because all oil of a given grade is the same.

But when a barrel of foreign oil reaches the Delaware River huge refineries which are being built today, it comes in without any tax, local, State, or Federal, except the present 5-cent a barrel import duty.

As the Senator was speaking I was evaluating the tax escapism on a barrel of foreign oil as compared with some of the taxes which must be paid by oil producers in my State. Most of them—perhaps 99 percent of them—are small or marginal producers, who live from day to day off the marketing of their oil. In my State, on every barrel of oil produced at the wellhead, the producer must pay a gross production tax, or a severance tax, as it is called in some States, of 5 percent. The producer must pay a social security tax, and that is as it should be. But it is an effective tax on the barrel of oil. He must pay an unemployment compensation tax. He must pay an ad valorem tax on his derricks and drilling machinery and on the tools, the tankage, and on everything else above ground. His tax on an ad valorem basis would amount to almost 20 percent of the value of the producing equipment.

He would pay the highway user's tax on the fuel which is used to operate his trucks. He must pay a 2-percent sales tax, on top of that, on everything he buys for use in necessary production. He must then pay a State income tax, which will amount to about 20 percent of the average gross.

All this adds up to the fact that there is a tax load which more than equals the total cost of the production of the barrel of oil in Saudi Arabia.

While American operators produce from sands which are from 5 to 10 feet thick, foreign operators produce from deposits thousands of feet thick. While domestic production can only be drilled every 40 to 60 acres, in order to protect the rights of the individual landholder, foreign wells are drilled on 10 square mile tracts.

On top of the local taxes, which support schools, highways, and the other necessary facilities, there is an extra tax, the 51 percent Federal corporation tax. Is not that correct?

Mr. LONG. Yes.

Mr. MONRONEY. So we reach a staggering disproportion in production costs. I believe this will be borne out by any cost study. At least $2.50, if not $2.65, of every $3 for which a barrel of oil is marketed in this country, represents the cost of production.

Yet the Middle Eastern oil, from the thick sands, with freedom from local taxes and everything else which would be a proper charge, arrives in the Delaware River at about 85 cents a barrel total production and delivery cost.

Yet when it flows in through the huge integrated companies, it is marketed at the rate of approximately $3 a barrel, for the crude oil. If they do not sell the crude oil directly, its production into refined products still gives them an asset value of approximately $3 on every 85-cent barrel of crude oil. I do not know how American oil, with a $2.50 or $2.65 production cost, could hope to compete against foreign oil with its tax-free benefits.

LEVYING AND COLLECTION OF TAXES AND ASSESSMENTS

The PRESIDING OFFICER (Mr. SPARKMAN in the chair). The hour of 12 o'clock has arrived; and the morning hour has expired.

The Chair lays before the Senate the unfinished business, which will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 643) to amend the act entitled "An act relating to the levying and collecting of taxes and assessments, and for other purposes," approved June 25, 1938.

MANDATORY CONTROL OF OIL IMPORTS

Mr. MONRONEY. Mr. President, will the Senator from Louisiana yield further to me?

Mr. LONG. I yield.

Mr. MONRONEY. Furthermore, people do not realize the effect of the import duty as it existed in the days prior to the Reciprocal Trade Act. I happened at that time to be a Member of the House of Representatives. There was a tax of 20 cents a barrel on oil. It was not an ad valorem tax. At that time oil was selling for $1 a barrel. So actually the ad valorem tax rate on the imported barrel of oil at that time was 20 percent.

I have supported reciprocal trade, and I intend to continue to do so. But first we authorized a reduction in the tariff rates of one-half—that was the first cut; and subsequent reductions have taken away another half of the residual amount, which on paper would appear to be 20 percent of the original ad valorem duty. But since it was based on barrels, that reduction has brought the tax down to 5 cents a barrel. In the meantime, oil has risen in price from $1 a barrel to $3 a barrel. So, instead of cutting the tax by 25 percent, in connection with the negotiation of reciprocal trade agreements we have reduced the 20 percent tax to 2 percent, because of the increase in the ad valorem tax per barrel and the increased cost per barrel.

So it seems to me that when anyone protests against certain activities which are necessary on the part of the Federal

Government in order to keep our domestic production alive and going and to free us from the dependence upon the wiles or the temperamental decisions of Mr. Nasser in connection with the Suez Canal, or from the effects of Russian absorption, by infiltration, of the Middle East oil producers; when arguments are advanced against necessary government action to protect to a minor degree—and, Mr. President, this import quota certainly is far less than what the Senator from Louisiana or the Senator from Wyoming had in mind when, in 1954 or 1955, we gave the President the right to protect the defense base by imposing quotas, and when some say this is a terrible blow to the users of petroleum, they are not looking at the facts, as the Senator from Louisiana has so well stated.

We cannot risk being charged $5 or $10 a barrel for oil—which would be the risk we would run if our producers were to fail to supply themselves with the funds necessary to have in order to be able to discover new fields, so as to have a healthy, going oil production industry in this country. It is insanity to think that America, which moves on wheels, should be negligent or unconcerned about the future of its petroleum industry.

I approve of imports; I think they are necessary, as a supplemental measure. But I think imports to the extent of 10 percent of our domestic market are sufficient.

However, I think that the Government now intends to allow imports to the extent of 15 percent of our domestic consumption, which constantly is rising. As our base increases, the allotments to foreign oil increase.

We are merely asking for the right of self-preservation of what I consider to be the most vital fuel for national defense; and I believe it can be assured only by having a petroleum industry which continues to make discoveries, continues to search for new sources of oil, and continues to develop new means of refining oil, because if oil discoveries and the production of oil in the United States end, then our sciences which are based on oil and have meant so much to us will die at the same time. Then the technicians in the oil industry—from the tool pushers to the roughnecks at the wells—will be out of work; and those occupations will soon become forgotten.

I thank the Senator from Louisiana for yielding to me; and I appreciate the depth of the debate here on the floor.

Mr. LONG. I thank the Senator from Oklahoma.

Of course, Mr. President, I have not stressed the point that many State governments are very much dependent, for the purposes of State government, upon the taxes they receive from the oil industry. I know that the great bulk of the funds for the education of the children in Louisiana—probably about 80 percent of the total—comes from the tax on the petroleum industry; and, as I have said, this tax, when paid to the State, as well as all the royalties which are paid to the State, is simply allowed as a deduction against income, when the producers pay their Federal taxes.

By way of contrast, as the Senator from Oklahoma well knows, and as he has so well pointed out, similar payments made to foreign governments receive just about twice the favor in respect to tax treatment. But when we try to explain all the complications in connection with how the foreign producers arrive at the conclusion that they do not owe the U.S. Government any tax on the foreign oil that is imported, the simplest way to explain the matter is to conclude that they do not owe the U.S. Government any taxes, and do not pay any.

Mr. McGEE. Mr. President, will the Senator from Louisiana yield to me?

Mr. LONG. I yield.

Mr. McGEE. I should like to join in the compliments which have been paid to the Senator from Louisiana for having contributed the information which has been made available to us today, and for the colloquy between my three colleagues, who know more about oil and the oil industry and its ramifications on the American scene, as well as on the international scene, than perhaps any other Members of this body who contribute to an understanding of the difficulties of this question.

I think the need for what my colleagues have done here today is exemplified by a simple suggestion: If one word, "oil," were to be removed from all the orders the President has issued in imposing mandatory quotas on oil and in connection with some of the charges which have been made, and if we were simply to discuss the question in terms of the other issues at stake, we would find a far greater reception for the significant national issues which must be resolved. In other words, because of ignorance or because of lack of information, there is almost a built-in reflex action on the part of many in America against oil.

In part, this attitude has been earned by the oil industry itself, or at least by a segment of the oil industry, because of misdeeds or extreme action. I suppose I shall be permitted to say this, because in the last campaign I received very little support from the oil industry. But I think it is necessary for us to keep the record straight. Whether the subject under consideration is foreign oil, uranium, or some other vital resource, we are concerned with this vital question because of the national interest; and the people must view it from the point of view of the national interest, instead of from the point of view of another excuse to whip some "favored boys" over the head at every opportunity. It would seem that that attitude is the reason for the difference between the public treatment and consideration of independent oil producers overseas and of those within our own borders. Certainly the latter must be fostered for the benefit of the people.

Mr. LONG. Mr. President, the Senator from Wyoming is entirely correct when he makes that statement. As a matter of fact, if the identical control had been imposed in order to preserve a domestic supply of milk or of bread, we would not have heard a word of criticism from those who have taken the floor to scream out against the preservation of our ability to provide our Nation with its own essential requirements of fuel.

As a matter of fact, just last year the Senate had before it a Sugar Act which was for the purpose of preserving our domestic sugar industry, which can produce about 50 percent of our domestic requirements of sugar. We estimate that in the event of war, our Nation would be in a position in which it would have to ration sugar, but that, somehow or other, it could get by with what was available, by using a certain amount of saccharin for sweetening, and so forth. We heard only two Senators complain about preserving our domestic sugar industry against low-cost foreign competitors.

But when the Congress and the President wish to preserve the independent oil producers, some persons wish to make a whipping boy out of the small, independent businessman, simply because he happens to be in the oil business; and, for some reason, such persons attempt to make the oil producer appear to be an unsavory character.

As a matter of fact, the larger producers, who in the past have had monopolistic tendencies, certainly must, because of their sins of the past, and perhaps because of sins of the present, take their share of the blame. In fact the misdeeds they have committed have certainly amounted to more than half of the mistakes which in the past or in the present have been committed by the industry. Yet they are the ones who are being favored by those who speak against the domestic oil industry. So far as the major companies are concerned, they would be happy if there were no program at all to control the importation of oil. Oddly enough, we see cartoons, such as those by Mr. Herb Block, picturing the little fellow being driven out of business as being the wealthy man, when actually it is the person driving him out who should be so pictured.

During the delivery of Mr. LONG'S speech in reference to protection of the domestic oil industry,

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. LONG. I yield.

Mr. MANSFIELD. I desire to take this opportunity to commend and compliment the distinguished junior Senator from Louisiana, who speaks seldom on the floor of the Senate, but who, when he does speak, has something worthwhile to say and worthwhile to listen to. I am delighted he is taking this occasion to deliver a major address on a problem which affects all the oil-producing States of the Union. I want him to know I think he is performing a service. I am very much impressed with the well-thought out, carefully reasoned argument he is making today.

Mr. LONG. I am extremely grateful for the compliment from the acting majority leader, who is one of the great experts in this body on foreign relations and other subjects. Particularly because of the source of that compliment, I appreciate it. I believe he has sufficient knowledge of our problems in foreign relations to know what I am saying on the floor is consistent with our foreign policy.

Mr. MANSFIELD. The Senator from Louisiana is absolutely correct.

Mr. YARBOROUGH. Mr. President, will the Senator yield?

Mr. LONG. I yield.

Mr. YARBOROUGH. I should like to join the others of my colleagues who have commended the distinguished junior Senator from Louisiana for the great amount of care with which he has presented this statement to the Senate and to the Nation during the course of which he has analyzed so many facets of our domestic economy, particularly as they pertain to this energy resource, because, after all oil is energy for production.

In line with the comments made by the distinguished junior Senator from Montana, who has stated this problem is of vital interest to every oil-producing State, I wish to say it is of vital interest to every American State, and to the consumers, as well as the producers.

I wish to ask the Senator from Louisiana whether, in his research, he has found in European countries on the Mediterranean, such as Greece or Italy, which are very close to the rich oil sources in Saudi Arabia, any instance of the price of gasoline being as low to the consumer as it is in the United States.

Mr. LONG. I know of no such instance. As the Senator from Texas well knows, those who would like to place the argument of inflation before the consumers, insofar as the price of gasoline is concerned, have to rely upon the tax increases, because, so far as the producer is concerned, gasoline today reaches the consumer at a price of about 18 cents a gallon. It is the State, city, and Federal taxes which run the cost of gasoline up so high.

I do not mean to excuse the Congress. Congress has voted tax increases on gasoline while I have been a Member of this body. I have seen State legislatures, including the State of Louisiana, do so. When someone talks about gasoline prices, he ought to keep in mind two things: (a) that consumers in this country buy gasoline at a price cheaper than it is sold elsewhere, and (b) so far as the producer is concerned, he has raised the price only about 2 percent since 1926, as compared with a 63 percent increase in other prices.

Mr. YARBOROUGH. The price of gasoline in many countries is as high as 70, 80, and 90 cents a gallon, in spite of the fact that shipping charges are very low for the delivery of oil from Saudi Arabia, due to the fact that cartels control the prices. Is it not true that the main reason for the low price of gasoline in America, in comparison with the price charged in other nations, is the fact that there are independent oil producers in this country who constantly give competition to the big companies which import oil?

Mr. LONG. There can be no question about that. The big companies are in a position to have an international cartel. Many of the companies that ship oil would like to get every nickel they are able to obtain; but if it were not for the domestic petroleum producers with whom they compete, there is absolutely no way to judge what the price of gasoline would be. There would ge in effect such a situation that those who produce would completely control the quantity and the market, and charge almost any price they wanted to, and possibly they might be able to do it and remain outside the reach of our antitrust laws.

Mr. YARBOROUGH. In the colloquy which took place a moment ago between the distinguished junior Senator from Louisiana and the distinguished junior Senator from Oklahoma, it was developed that a great proportion of the cost per barrel of oil produced in this country goes to the cost of production, plus multiple taxes to local school districts and the States, and finally the Federal Government. Even with those taxes and with the high wages paid in America, it is the competitive position of the American producer that has made the price of gasoline as low as it is. Is that correct?

Mr. LONG. That is correct. If the Senate wants to protect the public and prevent prices to the consumer from rising, it ought to vote against increasing taxes. Years ago I voted against the conference report on a highway bill because someone insisted on tying a tax increase to the highway bill. I think it comes with poor grace to have one complain of the price increase in gasoline when it has resulted entirely from tax increases which Congress has voted, and in which State legislatures have joined.

Mr. YARBOROUGH. Mention was made of the foreign oil brought into Delaware Bay at a cost of about 65 cents a barrel. Does the Senator from Louisiana know of any reduced prices of gasoline in the State of Wisconsin that the companies have granted to consumers there because of the 65-cent a barrel oil which was imported?

Mr. LONG. None whatever; and they are not going to. The Senator very well knows that to be so. They are going to get every cent they can charge for the foreign oil when they bring it in. The fact that it is produced cheaper does not mean it is sold cheaper.

Mr. YARBOROUGH. That is why I stated this is a matter of vital concern to every consuming State, as well as to those States producing oil. The competition of the independent producer in America is what holds the price down.

Mr. LONG. Mr. President, the Senator knows very well that the whole American structure with respect to commerce is based upon the theory that competition will protect the public from undue pricing of any product, and the theory that the free flow of capital in an area where people can compete effectively will cause prices to come down to a reasonable level in any industry which is getting unreasonably high profits on the product being produced. That process has operated in the oil and gas industry to the benefit of consumers and it will continue to do so unless we permit a handful of major companies who are in a position to be a part of an international oil cartel to completely control the entire world market, including our own. If we want that result we can very well get it and imperil the national security, victimizing the consumer at the same time.

If the consumer is wise he is going to want the benefit of having more than 10,000 independent producers who today, as in the past, are trying to compete with these large major companies.

Mr. YARBOROUGH. The Senator has commented regarding some statements of the distinguished junior Senator from Wisconsin [Mr. PROXMIRE] about the President's mandatory order. I think the order of the President was proper. I regret that the junior Senator from Wisconsin is not now present in the Chamber. If he were present I should like to ask him a question regarding the fast refrigerator tankers developed to bring in the Dutch and Danish milk, using the St. Lawrence Seaway, to deliver milk at lake ports. I wonder whether the Senator will be for free trade in milk as he is for free trade in oil now.

Mr. LONG. Mr. President, I have heard a number of speeches made on the floor on behalf of the dairy farmers of Wisconsin. I am not sure how many of the speeches were made by the junior Senator from Wisconsin [Mr. PROXMIRE], but the senior Senator from Wisconsin [Mr. WILEY] has educated me upon that subject year in and year out during the 10 years I have had the honor and pleasure of serving in the Senate. The senior Senator from Wisconsin has been extremely diligent in protecting the producers of blue cheese and of other cheeses produced in Wisconsin. I do not know precisely the connection with national defense, but I imagine the Senator could prove some connection if it were necessary to preserve that industry.

Mr. YARBOROUGH. I wish them well, because the prosperity of one State helps all the American people. I do not join in attacks upon one region or its products.

After all, if those who work on the drilling rigs in the Southwest are unemployed and walking the streets they will not be able to add to the demand for Wisconsin products.

Mr. LONG. The Senator is entirely correct.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield?

Mr. LONG. I yield.

Mr. BYRD of West Virginia. I join with my colleagues in complimenting the Senator from Louisiana for a very scholarly statement defending the Presidential order imposing mandatory controls on imports of crude oil, residual oil, and other derivatives of crude.

The Senator from Louisiana has spoken about the impact of unregulated, uncontrolled imports of oil upon the domestic oil industry, and he has related the problem to our national defense.

The Senator has also referred to the attacks which have been made upon the President's Executive order, and to statements which have been made that the imposition of controls will be inflationary.

The Senator has also very eloquently and ably spoken of the effect of the order upon our relations with other countries.

It is important that we devote a little thought to the effect of unregulated imports of residual oil upon the coal industry and the rail industry. I therefore ask unanimous consent to have printed in the RECORD a table which I have taken from a report of the Committee on Interior and Insular Affairs of the House of Representatives, 85th Congress. The committee report is entitled "Findings and Recommendations of the Special Subcommittee on Coal Research."

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Growth of the bituminous-coal and lignite-mining industry in the United States, 1890–1955

Year	Production (net tons)	Value of production		Number of mines	Capacity at 280 days (million tons)	Men employed	Average number of days worked	Net tons per man—		Foreign trade [1]	
		Total	Average per ton					Per day	Per year	Exports (net tons)	Imports (net tons)
1890	111,302,322	$110,420,801	$0.99	[2]	137	192,204	226	2.56	579	1,272,396	1,047,416

[2] Data not available.
[3] Average number of men working daily.

Source: U.S. Bureau of Mines, Bituminous Coal and Lignite in 1955, Mineral Market Summary No. 2628, tables 5 and 14.

Mr. BYRD of West Virginia. Mr. President, the table shows the production and employment in the bituminous coal and lignite mining industry of the United States from 1890 to 1955. I invite attention to the fact that employment in the industry has been continually dropping from an all-time high, in 1923, of 704,793 men. Production reached an all-time high in 1947 when 630,623,722 tons were mined. Production has declined, as the table will show. Last year, 1958, production of bituminous coal dropped to about 390 million tons, and employment in the bituminous coal industry dropped to about 190,000 men.

Mr. President, What has been the effect of unregulated imports of oil on the revenues of the coal industry, an industry which is basic to our national defense?

I ask unanimous consent to have printed in the RECORD a table from the same committee report, which provides financial data on leading coal and other companies, 1941 to 1955, inclusive. The table shows the very low percent of return on net worth accruing to the coal industry as compared with profits accruing to petroleum, chemical, lumber, stone, and clay products companies.

There being no objection, the information was ordered to be printed in the RECORD, as follows:

Financial data on leading coal, petroleum and refining, chemical, lumber, and stone and clay products companies, 1941 to 1955, inclusive

[Money figures in thousands]

[1] Coal companies include producers of both bituminous and anthracite.
[2] Data not collected.

Source: National Coal Association, which obtained data from reports of the National City Bank, New York City.

Mr. BYRD of West Virginia. Mr. President, the special subcommittee on coal research also noted that from 1925 to 1953, inclusive, the bituminous coal-mining industry experienced a net loss in 13 of the 27 years for which data are available and in only 2 of the 27 years were fairly good profits obtained. It also was noted that the 1,572 corporations engaged in bituminous coal mining in 1953 earned an average profit after Federal taxes of a little less than 3¾ cents per ton on the 350 million tons of coal which they produced. Viewing industry's earnings from another angle, it was found that the value, f.o.b. mines, of the total production of bituminous coal in 1953 was on the order of $2,247 million, from which the incorporated producers, who accounted for 80 percent of the production, realized a profit after Federal taxes of less than $13 million—or a calculated net profit of less than three-quarters of 1 percent on the gross value of the coal produced. It is doubtful that any other major industry vital to the economy of the Nation has experienced anything approaching the depressed financial condition of the coal-mining industry over the past 20 years.

Mr. President, I ask unanimous consent to insert, at this point in the RECORD, a table from the same committee report setting forth the net income and Federal income taxes of bituminous coal-mining corporations, 1917 to 1953, inclusive.

There being no objection the information was ordered to be printed in the RECORD, as follows:

Net income and Federal income taxes of corporations engaged in bituminous coal mining as shown by income tax returns

Source: National Coal Association, which assembled data from statistics of Income, pt. 2, U.S. Bureau of Internal Revenue.

Mr. BYRD of West Virginia. Mr. President, confronted with declining production and declining revenues the coal industry is certainly not in any position to respond to the expanding needs of a national emergency. The Presidential order imposing mandatory controls was certainly necessary from this standpoint.

Unregulated imports of residual oil have also been injurious to the rail industry. Many railroads owe their existence to the coal industry. Depressed economic conditions in the coal industry make themselves felt on the railroads' economy.

An article published in the Wall Street Journal of Monday, March 16, 1959, captioned "Freight Car Pinch," says that there is a probability of the worst railroad freight car shortage in years. I quote from the article:

The U.S. rail freight car fleet currently is in the worst shape in years. The number of usable cars today stands near 1,570,000, down some 85,000 cars, or 5 percent, from just a year ago.

The article goes on to say:

Part of the decline in the car fleet has occurred because railroads are not buying new cars as fast as old ones are heading for the scrap heap. In 1958, the carriers ordered only 17,546 new cars—just a fraction of the record 162,352 ordered in 1955—while at the same time some 41,000 cars were being retired.

Mr. President, on January 1, 1959, there were stored in class 1 railroad yards 54,494 hoppers which required major and extensive repair work. This is compared with a total of 19,150 bad order hoppers in existence on January 1, 1957.

In 1955 the average open top hopper car had an age of 20 years; and 29 percent of the open top hoppers were more than 30 years old.

I point out these facts in order that the RECORD may show the condition of the rail industry. I think it cannot be argued that this condition has not been at least partially brought about by the effects of unregulated current imports of residual oil, on the coal industry.

Mr. President, I wish to insert in the RECORD a table which gives the total United States supply of residual oil for the years 1946 to 1958. I call attention to the fact that in 1958 170,883 barrels of residual oil were imported and 69,549 barrels of residual oil were produced from imported crude. These 240,000 barrels of residual displaced an equivalent of approximately 58 million tons of bituminous coal. About 74 percent of the oil which is imported is competitive with coal. Therefore, considering residual oil imports alone, approximately 30 million tons of coal equivalent were lost to the American coal markets. Coal equivalent displaced by residual imports, to say nothing of that which was displaced by residual produced from crude imports, resulted in the loss of 13,700 coal miners' jobs and 8,100 railroad workers' jobs. Therefore, Mr. President, it is not difficult to understand the depressing effect of unregulated residual oil upon coal production, rail revenues, and mine and railway employment.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Total U.S. supply of residual oil, 1946–58

Year	Residual oil imports	Residual oil produced from imported crude	Residual oil produced from domestic crude	Total residual oil from all sources	Residual oil exports	Residual oil stocks	Total U.S. residual oil demand

[1] Preliminary.

Source: U.S. Bureau of Mines and American Petroleum Institute.

Mr. BYRD of West Virginia. I also wish to make the point that from time to time committees of the Congress have recognized the fact that something must be done about the unregulated imports of oil. I think that was recognized by the Special Subcommittee on Coal Research in its report to the Congress in 1957.

I should like to include in the RECORD appropriate paragraphs showing that that subcommittee recognized the danger of unregulated imports of oil. It also recognized the fact that some action must be taken, in the final analysis, if our national security was to be served and protected.

The Special Subcommittee on Coal Research had this to say in its 1957 report:

It appears to the subcommittee that since the oil importing companies, as a group, have continued to ignore the earlier requests of ODM for the voluntary limitation of oil imports, the time has arrived for positive action to protect the interests of the Nation and our national defense. The volume of oil imports should be curbed either through appropriate action under section 7 of the Trade Agreements Extension Act of 1955 or, if necessary, through the enactment of legislation designed for the specific purpose.

Until oil imports are effectively curbed, mounting surpluses of residual oil will continue to contribute to the ill health of the coal industry, to the depressed condition of coal mining communities, and to the impairment of the national security.

Mr. President, the Committee on Ways and Means of the House of Representatives, in its report on the Trade Agreements Extension Act of 1958, took cognizance of the injuries resulting from increased imports of oil as follows:

1. Increased volume of crude oil imports and the proposed imports for the latter half of 1957 threatened to impair the national security. This threat, under existing conditions, requires a limitation on imports. The committee recommends, therefore, that unless the importing companies comply voluntarily with the import limitation plan hereinafter set forth, you find that there is a threat to the national security within the meaning of section 7 of the Trade Agreements Extension Act of 1955.

Mr. President, an impoverished coal industry and a depressed rail industry cannot remain operative and maintain up-to-date plant and equipment necessary to cope with the expanded needs of a national emergency. I think the President recognized this when he issued the Executive order limiting oil imports. He, therefore, acted in the interest of national defense and national security.

Mr. President, I congratulate the junior Senator from Louisiana on his excellent presentation. I join with him in taking the position that the Presidential order was eminently correct, that it was required, that it was demanded in the interest of national security, and that it was timely.

The people in my area looked upon the order with gratitude. I represent the largest coal-producing State in the United States. It is a State in which there is much unemployment. Our coal industry is down. Our railroad workers are hunting work. When these two great industries are adversely affected, the results are also felt in other industries, in other vocations and walks of life.

For a long time representatives in the Congress from West Virginia have tried to obtain some action in the direction of controls on residual oil imports. The senior Senator from West Virginia [Mr. RANDOLPH] and I, together with the West Virginia delegation in the House of Representatives, went to the Director of the Office of Civil and Defense Mobilization, and to the Secretaries of the Departments of the Interior, Commerce, State, and Defense, and sought to bring this problem to their attention. We finally went to the President of the United States, a few days before he issued the order. We, from West Virginia, are certainly very grateful for his action and consequent recognition of this growing problem. We believe that controls had to come, and we believe that, in the interest of national security, they should certainly be maintained.

I thank the Senator from Louisiana for his kindness in yielding to me.

Mr. LONG. I thank the Senator.

One of the really pressing problems of the Nation has been increasing unemployment. I have made no particular point of it in the course of my speech, because I wanted to answer so many of the arguments which have been made on the floor of the Senate, with virtually no support whatever, in opposition to the mandatory import control program.

There is no doubt, however, that the displacement of American workers is an extremely serious problem. The oil import situation has created a great amount of unemployment. There has been a great increase in unemployment in the State of Louisiana. We are not affected nearly as much, in terms of current unemployment, as is the State of West Virginia.

One of the reasons why I voted for the substitute offered to provide greater assistance for the unemployed was the plea

made by the two Senators from West Virginia, who pointed out so eloquently effectively that the unemployment existing in that State alone has reached the point where it has become a national problem, and not merely a State problem. The entire Nation should begin to take note of it.

What the Senator from West Virginia says is entirely true. It applies to a lesser degree to other areas which produce coal, or in areas which are producing oil. Louisiana and Texas are affected to a lesser degree by unemployment, but we, too, have felt the impact of excessive imports upon employment. That is one additional reason why this program should have been put into effect. I agree with the Senator.

I believe that the Senator's colleague [Mr. RANDOLPH] made an additional excellent statement on the same subject, showing how the whole problem has affected the State of West Virginia. He could not be present today. Yesterday he made a very excellent speech explaining the impact of this problem on the State of West Virginia. He also supported the position taken by the junior Senator from West Virginia today.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield further?

Mr. LONG. I yield.

Mr. BYRD of West Virginia. I ask unanimous consent that there be included in the RECORD a table which appeared in a bulletin issued by the West Virginia University, entitled "Significant Trends in the West Virginia Coal Industry From 1900 to 1957." The table shows the decline in coal mining employment in West Virginia by counties over those years.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Total coal-mining employment in West Virginia, by counties, 1900–1956

County	1900 [1 2]	1910 [1 2]	1920 [1 2]	1930 [2]	1940	1950 [3]	1955 [3]	1956 [3]

[1] Totals are for the fiscal year.
[2] Totals for 1900 through 1930 do not include mines with fewer than 5 employees.
[3] Totals include supervisory employees.

Source: West Virginia Department of Mines, Annual Report, 1900–1956.

Mr. BYRD of West Virginia. I also wish to read into the RECORD an excerpt from a recent issue of the Wall Street Journal. I think it bears upon the Senator's statement concerning mandatory controls and inflation. There are some Senators who have stated that the mandatory controls on oil will contribute to the inflationary spiral. I quote the excerpt:

[From the Wall Street Journal, Mar. 24, 1959]

COAL COMPANIES JUMP THE GUN ON APRIL PRICE CUTS

Major northern soft coal mines plan price reductions of 25 cents a ton on April 1. But power companies and cement firms, waiting for cheaper coal, hold back on taking shipments. This leads some small mines to shade prices in advance. Result: Sharp buyers get some coal now at the lower prices that will prevail next month.

The buying slowdown makes its mark on bituminous output, which so far this year trails 1958 by almost 4 percent despite heftier use by steel mills. Mines would like higher prices to cover 1959 union wage boosts, but say they're blocked by competition from nonunion coal, cheap foreign oil.

I believe this action by coal companies indicates that the coal people certainly are not going to try to take advantage of mandatory controls imposed by the President, and that they do not intend to increase the price of coal and thereby contribute to growing inflation.

On the other hand, they are cutting their prices. I am informed that the coal hauling railroads intend to cut their freight rates by the first of next month. I should think that these steps certainly would refute the argument which has been made by those who are trying to attack the President's order on the basis that it contributes to inflation. I thank the Senator for again yielding.

Mr. O'MAHONEY. If the Senator from Louisiana would be good enough to yield to me further I should like to make this brief remark. While those of us who take the position that he takes, and the Senator from Kansas takes, and the Senator from West Virginia has taken this morning, as well as the Senator from Oklahoma, and other Senators, it remains to be seen whether the mandatory control program put into effect under the amendment of the Trade Agreements Extension Act will be effective. We know that some of the big import companies have already, through spokesmen, stated that they feel that the power to impose mandatory restraints is not covered by the Trade Agreements Act amendment, and that it may be unconstitutional. Whether or not there will be a court test, I do not know.

I do feel it is incumbent upon us in Congress to realize that this country must not allow itself to become dependent upon foreign sources of supply. With a number of other Senators, on February 23, I introduced S. 1157, to stimulate the development of petroleum and coal reserves within the United States. We must go to the very bottom of this important problem. We can serve the best interests of the people of the United States by finding the best way to stimulate the development of our own reserves.

Exploration for oil in the United States is falling off because of importations. The utilization of coal is being seriously retarded because of these importations. The United States, not only in West Virginia but in other States also, has great deposits of coal. It has the largest deposits in the known world. Coal is the source of many materials. The search for the means of stimulating the development of our domestic supply of these two great products is very important.

I point out that the senior Senator from West Virginia [Mr. RANDOLPH] and I, when the distinguished Senator was a Member of the House, were the authors of a bill, the O'Mahoney-Randolph bill, to authorize the Bureau of Mines to construct and conduct demonstration plants for the manufacture of synthetic fuel from coal and oil shale.

It is vital to point out that in the States of Colorado, Utah, and Wyoming, there are deposits of oil and shale which geologists tell us at the present moment contain more oil than all the known resources of the Arabian peninsula. This is a natural resource of which we cannot afford to lose sight. Activities of the Bureau of Mines have been called to a halt. Some of the large importing companies are seeking to obtain control of the oil shale deposits. Of course, the interests of the people of the United States come first.

I ask unanimous consent that at the conclusion of the remarks of the Senator from Louisiana, there be printed in

the RECORD a copy of the bill, S. 1157, which was introduced for the purpose of bringing about the stimulation of which I spoke. The bill is before the Committee on Interior and Insular Affairs, and I am preparing hearings, which will be held after the Easter holidays, at which time we will call upon the experts of the country to show what our potential may be.

There being no objection, the text of the bill was ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Domestic Petroleum and Coal Development Act of 1959".

DECLARATION OF POLICY

SEC. 2. The continued exploration for and development of domestic petroleum reserves within the United States is essential to meet the domestic demand for crude petroleum and petroleum products so that the people of the United States may not become completely dependent upon the importation of such crude petroleum and petroleum products. To attain this objective it is necessary to maintain a reasonable balance between domestic production and the importation of such crude petroleum and petroleum products. The desirable ratio of such imports to total domestic demand is that which assures a vigorous level of domestic petroleum exploration and development. The importation of crude petroleum and petroleum products, including residual fuel in any form, should be restricted to the level at which that ratio is maintained. In administering such restrictions, quotas should be granted, with certain exceptions provided for in section 7 of this Act, only to refining companies in proportion to plant capacity.

OIL IMPORTS ADMINISTRATION

SEC. 3. The Secretary of the Interior (hereinafter referred to as the "Secretary") shall administer the provisions of this Act through an Oil Imports Administration (hereinafter referred to as the "Administration") which the Secretary shall establish as a separate agency within the Department of the Interior. The Secretary may appoint, without regard to the civil service laws, an administrator of such Administration, who shall report directly to the Secretary and shall be compensated at the rate provided by law for assistant secretaries of the executive departments. The Secretary may also appoint a deputy administrator of the Administration and directors of the principal organizational divisions of the Administration, without regard to the civil service laws and the Classification Act of 1949. To the maximum extent possible the Secretary shall, in carrying out the provisions of this Act, obtain and utilize the data and cooperation of existing Government agencies within and outside the Department of the Interior.

QUOTA PERIODS

SEC. 4. The Secretary shall establish quota periods of six months' duration, during which quotas established under this Act shall be effective, based upon the seasonal demands of the petroleum industry. The first quota period established after the effective date of this section may be a period of less than six months.

DETERMINATION OF NATIONAL IMPORT LEVELS

SEC. 5. Not less than sixty days prior to each quota period, the Secretary shall estimate and publish in the Federal Register the total domestic demand for crude petroleum and petroleum products and the portion thereof which may be imported consistently with the maintenance of a vigorous level of domestic petroleum exploration and development. The Secretary shall at the same time publish in the Federal Register the amount of imports so determined, in terms of barrels per day of crude petroleum and the crude petroleum equivalent of petroleum products, which shall be the national imports level for the ensuing quota period.

ALLOCATION OF QUOTAS

SEC. 6. Except as provided in section 7, quotas shall be allocated only to domestic refiners who shall make application not less than ninety days before each quota period. Not less than sixty days prior to each quota period the Secretary shall determine, announce and publish in the Federal Register the import quotas for all applicant refiners. Such quotas shall be divided among refiners in such manner as to maintain competitive conditions between integrated and independent companies and the allocation to coastal refiners shall not be in excess of 40 per centum of the total import quota: *Provided,* That in the case of any refining plant served by pipeline from foreign sources or where conditions otherwise limit the procurement of domestic crude petroleum by ordinary practical means, a quota sufficient for that plant's crude petroleum requirements to maintain refining capacity shall be issued. The uniform quota percentage determined by the Secretary shall be that percentage which, applied to the aggregate capacity of all refining plants in the United States owners of which shall have applied for quotas, together with any additional amounts authorized as a result of the proviso in the last preceding sentence and any special quotas authorized in section 7, will not exceed the national import level set for the following quota period. The Secretary shall issue quota certificates evidencing all quotas (including special quotas) issued under the provisions of this Act.

ALLOCATION OF SPECIAL QUOTAS

SEC. 7. Upon application and after hearing, special quotas may be awarded, in accordance with standards which shall be established by the Secretary and published in the Federal Register, in the following cases:

(1) Where a domestic producer operating abroad demonstrates that, despite all reasonable efforts by him, he is suffering as a result of import quotas in such foreign operations unreasonable drainage by others who have joint or offsetting interests in the same petroleum pool.

(2) Where an applicant desires to import special crude petroleums for special purposes and accordingly the importation thereof will not substantially replace domestic crude petroleum and will not therefore affect the national security.

(3) Where the applicant exports petroleum products refined by him and seeks a special quota to cover the crude equivalent of such products which will not compete in the domestic market.

(4) In cases where the applicant is an inland refinery and is suffering hardship by reason of inadequate access to the points of importation.

NONTRANSFERABILITY OF QUOTAS

SEC. 8. A quota may be used only for the importation of crude petroleum or petroleum products by the person to whom such quota was granted, and in the case of a quota for crude petroleum, the crude petroleum must be used in the plant for which the quota is granted unless, after application to the Secretary by the holder of the quota and after public hearing, the Secretary finds that the public interest and the purposes of this Act will be served by a transfer.

PETROLEUM PRODUCTS

SEC. 9. Quotas awarded under this Act shall cover both crude petroleum and petroleum products, including residual fuel. Such quotas shall be in terms of barrels per day of crude petroleum. Product importations shall be charged against such quotas according to their crude petroleum equivalent as determined and announced from time to time by the Secretary, and in the case of residual fuel the total imports in any calendar quarter of any year shall not exceed 10 per centum of the total domestic petroleum demand as determined by the Secretary when he determines the levels of national imports as provided in section 5 hereof.

FINALITY OF DETERMINATIONS

SEC. 10. The facts constituting the basis for any national import level or quota or denial thereof under the provisions of this Act, determined in conformity with rules and regulations prescribed by the Secretary, shall be reviewable only by the Secretary, and his determinations with respect thereto shall be final and conclusive.

APPEALS

SEC. 11. (a) An appeal may be taken, in the manner hereinafter provided, to the United States Court of Appeals for the District of Columbia in any of the following cases:

(1) By any applicant for a quota whose application is denied.

(2) By any person aggrieved by reason of any decision of the Secretary granting or revising any quota.

(b) Such appeal shall be taken by filing with said court, within twenty days after the decision complained of is effective, notice in writing of said appeal and a statement of the reasons therefor, together with proof of service of a true copy of said notice and statement upon the Secretary. Unless a later date is specified by the Secretary as part of his decision, the decision complained of shall be considered to be effective as of the date on which public announcement of the decision is made at the office of the Secretary in the city of Washington. The Secretary shall thereupon, and in any event not later than ten days from the date of such service upon him, mail or otherwise deliver a copy of said notice of appeal to each person shown by the records of the Secretary to be interested in such appeal and to have a right to intervene therein under the provisions of this section, and shall at all times thereafter permit any such person to inspect and make copies of appellants' reasons for said appeal at the office of the Secretary in the city of Washington. Within thirty days after the filing of appeal the Secretary shall file with the court the record upon which the decision complained of was entered, as provided in section 2112 of title 28, United States Code, and a list of all interested persons to whom he has delivered a copy of said notice of appeal.

(c) Within thirty days after the filing of such appeal any interested person may intervene and participate in the proceedings had upon such appeal by filing with the court a notice of intention to intervene and a verified statement showing the nature of the interest of such party together with proof of service of true copies of said notice and statement, both upon the appellant and upon the Secretary. Any person who would be aggrieved or whose interests would be adversely affected by reversal or modification of the decision of the Secretary complained of shall be considered an interested party.

(d) At the earliest convenient time the court shall hear and determine the appeal upon the record before it, and shall have power, upon such record, to enter a judgment affirming or reversing the decision, and if it enters an order reversing the decision of the Secretary it shall remand the case to the Secretary to carry out the judgment of the court. Review by the court under

the provisions of this section shall be limited to questions of law, and the findings of fact by the Secretary, if supported by substantial evidence, shall be conclusive unless it shall clearly appear that the findings of the Secretary are arbitrary or capricious. The court's judgment shall be final, subject, however, to review by the Supreme Court of the United States, upon writ of certiorari on petition therefor, under section 1254 of title 28 of the United States Code, by appellant, by the Secretary, or by any interested party intervening in the appeal.

(e) The court may, in its discretion, enter judgment for costs in favor of or against an appellant, and other interested parties intervening in said appeal, but not against the Secretary, depending upon the nature of the issues involved in such appeal and the outcome thereof.

REGULATIONS AND PUBLICATION OF DETERMINATIONS

SEC. 12. (a) The Secretary may establish such rules and regulations, which shall have the force and effect of law, as may be necessary to carry out the purposes and provisions of this Act. Any person knowingly violating any rule or regulation of the Secretary issued pursuant to this Act, shall, upon conviction, be punished by a fine of not more than $100 for each such violation.

(b) All quotas established under the provisions of this Act shall be promptly published in the Federal Register and shall be accompanied by a statement of the basis and considerations upon which each such determination was made.

ACTION IN EMERGENCIES

SEC. 13. Whenever the President finds that a national economic or other emergency exists with respect to petroleum, he shall, by message of Congress, recommend such legislation to suspend the operation of or to amend this Act as he deems necessary in the public interest.

IMPORTATION IN EXCESS OF QUOTA PROHIBITED

SEC. 14. The importation of crude petroleum or petroleum products in excess of the quotas provided under the authority of this Act is hereby prohibited. No importation of crude petroleum or petroleum products as defined herein unless exempted under section 10 hereof shall be cleared through customs unless a currently valid quota certificate issued under the provisions of this Act is filed with and as a supplement to the customs declaration.

ADMINISTRATIVE MATTERS

SEC. 15. In the administration of this Act the Secretary shall have the authority vested in the President under the provisions of subsections (b), (c), and (d) of section 710 of the Defense Production Act of 1950 (50 U.S.C. App. 2160 (b), (c), and (d)).

DEFINITIONS

SEC. 16. As used in this Act—

(1) The term "United States" includes the several States, the District of Columbia, the Territory of Hawaii, and Puerto Rico.

(2) The term "petroleum" includes all forms of petroleum except those forms which are gaseous at normal temperature and atmospheric pressure.

(3) The term "crude petroleum" means petroleum at the wellhead.

(4) The term "petroleum products" includes all conversions and derivatives of petroleum.

(5) The term "refining capacity" means the demonstrable maximum efficient daily average crude throughput of a plant in complete operation, using the crude stream proposed for the quota period involved, with allowance for necessary shutdown time for routine maintenance, repairs, and other such matters.

EFFECTIVE DATE

SEC. 17. Sections 3 and 16 of this Act shall become effective on the date of enactment of this Act. The remainder of this Act shall become effective after ninety days following the date of enactment of this Act.

Mr. LONG. I wish success to the Senator in his endeavors.

LEADERSHIP IN THE DEPARTMENT OF AGRICULTURE

Mr. SYMINGTON. Mr. President, on February 16 and 17, over a month ago, the Secretary of Agriculture testified before the Senate Agriculture Committee.

Despite the increasingly serious conditions which are clear to everyone and which result from the present farm program, when the Secretary of Agriculture came before our committee he had no positive legislative drafts for a program looking toward a solution of this problem.

During those hearings, therefore, I asked the Secretary to prepare an omnibus farm bill for the committee, embodying everything he believed necessary. This request was concurred in by the chairman, the distinguished senior Senator from Louisiana, and other members of the committee.

I am sure my distinguished friend the junior Senator from Louisiana [Mr. LONG] would like to have concurred if he had been present, as well as other Members of the Senate.

More than 5 weeks have elapsed since that request. Farm prices and farm income are on the way down. Inventories are increasing and it is obvious that production is going to greatly exceed the Department of Agriculture's estimates.

But to date the committee has not received the Secretary's omnibus bill.

Each day the Secretary of Agriculture postpones presenting to the Congress what he thinks should be done is time lost toward a solution to this steadily worsening picture of falling farm prices, increasing farm surpluses, and growing cost to the taxpayer.

It is hoped the Secretary will soon carry out his agreement to present his recommendations to the Congress in the form of an omnibus bill.

Mr. President——

The PRESIDING OFFICER. The Senator from Missouri.

KEN HECHLER

Mr. SYMINGTON. Mr. President, I wish to associate myself with the recent remarks of many distinguished Senators concerning Congressman KEN HECHLER.

We in Missouri are proud of KEN HECHLER, not only because he is a good Democrat, but because his roots go deep into Missouri soil.

His father, Charles Hechler, was born in Chariton County, and his mother, Catherine, was born in St. Louis County.

We hear a good deal about people who go from small towns to big cities to become successful. We overlook the fact that this trend deprives the small towns of the leadership they need.

KEN HECHLER is an admirable example of a man who left a successful career in a large city in order to move to an area of smaller communities and live among rural people.

KEN's race for Congress was based on the most fundamental principle of campaigning—getting out and meeting the voters. He had no organization and very little money. He went all over his district, listening to the problems of his fellow citizens, and convinced them he could help them.

I was in Clarksburg, W. Va., 2 weeks ago and saw with my own eyes the respect and affection which KEN HECHLER has already won in the hearts of his fellow West Virginians.

He is a worthy addition to the team led by the two very able Senators JENNINGS RANDOLPH and ROBERT BYRD, who are working so hard to help West Virginia realize the full potential that lies in its mountains and in the skill of its people.

Mr. President——

The PRESIDING OFFICER. The Senator from Missouri.

A MISSOURI PLAYGROUND FOR THE NATION

Mr. SYMINGTON. Mr. President, the State of Missouri is blessed with much natural beauty. No area is more scenic than that along the Current and Eleven Point Rivers in the south-central part of the State.

At the present time, efforts are moving ahead to make this beautiful section of our State a national recreation area, and it is hoped that the final study will be completed by the end of this year.

With reference to these plans, I ask unanimous consent that a recent editorial from the Kansas City Times entitled "A Missouri Playground for the Nation," be printed at this point in the RECORD.

There being no objection the editorial was ordered to be printed in the RECORD, as follows:

A MISSOURI PLAYGROUND FOR THE NATION

In the years ahead, the proposed national recreation area for southern Missouri could be built into the finest wilderness playground between the Smoky and Rocky Mountains. All of the potentials exist in abundance in the watersheds and along the banks of the Current, Jacks Ford, and Eleven Point Rivers.

This part of Missouri is rich in natural beauty, with its meandering, tranquil streams, the big springs, millions of acres of forests and wildflowers. Here is a major concentration of deer and thousands of beavers, foxes, squirrels, and raccoons. Fishing is good.

If more is needed, the Current River is billed as the last great float river in the world. It's a tall statement, but experts in the field stoutly make the claim.

If this ambitious plan for a national recreation area is finally adopted, this is how it would work:

The U.S. Park Service would be the coordinating agency between groups which already have important stakes in the area—the Missouri Park Board, the Missouri Conservation Commission, and the U.S. Forest Service.

Already there are three State parks along the Current River and, in addition, the Deer Run State Forest of 50,000 acres. The U.S.

Forest Service owns watershed lands in the hundreds of thousands of acres.

The U.S. Park Service would work out a single, unified recreation program for that region. It would purchase river frontage to provide badly needed access to floating and camping areas.

Men who have studied the potentialities of the plan believe that 1 million tourists a year would eventually be attracted to the valleys of these three picturesque streams. The travelers would come to enjoy first-rate camping, floating, hunting, and fishing—the outdoor life. This excellent proposal would give another boost to Missouri's growing prominence as a Middle West vacationland.

EXCESSIVE OIL IMPORTS

Mr. MORTON. Mr. President, first I desire to commend the distinguished junior Senator from Louisiana [Mr. LONG] on his excellent exposition. I wish to add a few comments of my own on the subject, particularly with respect to coal.

Mr. President, few laws are enacted and few executive orders issued without at least a modicum of protest along the way. Regardless of its overall, its national importance, almost any action by Congress or the White House will become an object of criticism by isolated provincial interests. It was therefore to be expected that the President's decision to place mandatory restrictions on imports of residual oil would be received with less than enthusiasm in some localities.

The problem of excessive oil imports was studied with the utmost care by a Cabinet Committee, aided by task forces from all relevent industries, 5 years ago. The finding at that time disclosed that the Nation's defense structure would be threatened unless a holddown on imports was effected. There followed the voluntary oil imports program and the national defense amendment to the Reciprocal Trade Agreements Act. The records offer ample evidence that the international oil shippers have flagrantly disregarded the White House recommendations and the implied will of Congress. Senators know the rest of the story. Last year a clause to protect defense industries was again included in legislation extending the Trade Agreements Act, and the administration attempted to strengthen the voluntary oil imports program.

The President's order of March 10 was issued only because the voluntary program failed. The White House order followed months of deliberation by the Cabinet Committee. Although a record high in shipments of foreign residual oil to America's fuel markets was established in 1958, the influx rose rapidly with the dawn of the new year. In the first 65 days of 1959 a total of 52,856,100 barrels of alien residual oil entered this country. This amount exceeded that of the corresponding period of the preceding year, when the all-time high was set, by more than 27 percent.

In the coal industry, production in the first 65 days of 1959 is running about 4 percent behind the 1958 production, which was only 400 million tons, one of the lowest annual production rates, with the exception of 1954, since 1939.

Under the circumstances, I believe that most of the vocal critics of the mandatory control program must concede the inadequacies of the voluntary plan and the need for a new approach to the oil import problem. Whatever the case, it is hoped that the new control plan will at least be allowed to take effect before objectors undertake to translate the results. I call attention to the fact that many complaints have been made about the results of the restrictions on residual oil imports. Yet that order does not become effective until April 1.

In am particularly disappointed that so many inaccuracies were included in the premature analyses which have already been presented to the Senate. One of the obvious misconceptions that emerged during recent discussions about the oil import program related to the use of residual oil. Some Senators have bewailed the prospect of having home heating costs rise because of the restriction on residual oil imports. I assure them that their fears have no foundation in reality. Residual oil is not used, and never has been, for heating homes. It is a heavy, viscous material which flows only in high temperatures. Anyone requiring manufactured heat to supplement the warmth provided by nature would have to install special equipment in his home to raise the temperature and provide for the flow of the fuel between storage tank and furnace. To assert that a rise in the price of residual oil imports would increase the cost of heating individual homes actually contains no more logic than to charge that milk prices will reduce the cost of the automobile.

Recently the charge was made in connection with comments on the residual oil program that already the oil companies had increased their prices by 2 cents a gallon. This is not true so far as residual oil is concerned. The 2-cent-a-gallon increase referred to applied to No. 2, or domestic heating oils. This, I understand, is a seasonal increase and is not peculiar to the New England area. At this time of year, when the heating load is heavy, it is traditional for the price of home-heating oils to be increased because of the law of supply and demand. It has nothing to do with imports or import restrictions.

As a matter of fact, residual oil prices on the east coast today are at their lowest levels in several years. A comparison of posted prices for oil in the New England area shows that the price in March 1957, was $3.30 a barrel, whereas in March 1959 the quotation is $2.37 a barrel, a difference of 93 cents a barrel.

Further with reference to the price facet of this problem, I refer to the statement made by Secretary of Commerce Strauss before the Senate Committee on Interstate and Foreign Commerce. He told the committee that under the new oil import control program "there is to be a continuous month-to-month survey of prices." He further assured the committee that "import quotas are to be administered in such a way that there cannot be any serious fluctuations in price."

On the part of the coal industry a conscientious and serious effort has been made both by the coal-producing companies and the railroads themselves to assure a reasonable and stable fuel price for the eastern seaboard. The railroads have petitioned for special freight rates on the movement of coal to certain customers on the eastern seaboard. Those rates will amount to approximately 50 cents a ton. At the same time, certain major coal producers have announced that, effective April 1, there will be a reduction of approximately 25 cents a ton in coal prices. These reductions are made in the face of increased costs on the part of both the railroads and the coal producers.

In referring to the effectiveness of coal as a stabilizing influence on fuel prices in the marketplace, I am reminded of the situation which developed in Florida. I happen to be personally acquainted with the Florida situation, since, as many of my colleagues know, I was one of the principal proponents of special freight rates to permit the movement of coal to Florida utility plants.

Two years ago, I became interested in the possibility of developing a sound market for coal among the Florida utilities people. Florida utilities depend, in the main, on oil for power-generating purposes. The sharp rise in residual oil prices following the Suez crisis spurred utilities executives to request President Eisenhower to interpose Federal price regulation as a block to further price increases.

Immediately, I appealed to the Florida utilities. I asked them flatly whether they would rather have more Government intervention in the operation of their business or whether they would prefer to explore the possibility of converting from oil to coal. Such a shift to coal would benefit the Florida electrical consumer, the coal industry of Kentucky, Tennessee, Virginia, and West Virginia, and the railroads serving the Southeast. Freight rates formed one of the keystones to the success of the venture.

Through a series of meetings and conferences with those interested in the coal industry, as well as with the railroads and utilities, we were able to effect an attractive rate on coal which made possible the movement of coal from the fields in districts 7 and 8 to Tampa, Jacksonville, and other Florida points, and made coal competitive with, and in many cases cheaper than, oil. In the Miami area, it was only after the special rates on coal movement were established that the oil distributors reduced their prices, in order to underbid the coal prices and to keep the business which they had acquired. That was a direct indication of the fact that a coal price quotation resulted in reduced oil prices to the consumers.

In Florida, in 1958, more than one-half a million tons of coal were burned by the electric utility plants. A sizable portion of this consumption was in the Tampa area. There, special freight rates and competitive barge rates made

coal a better buy than any other fuel for that plant.

Mr. W. C. MacInnes, president of the Tampa Electric Co., is quoted as follows in the January 17, 1959, issue of the Saturday Evening Post:

We don't buy fuel by the ton, gallon or cubic foot any more, but by the B.t.u. (British thermal unit). Coal gives us a million B.t.u.'s for 32 cents, compared to 38 cents for the competing fuels we have been using. When we start getting coal by barge, instead of by rail, on a 20-year contract, we expect to get the cost below 30 cents per million B.t.u.'s.

Currently, the coal men and the railroads are still working in an effort to make coal more attractive to Florida consumers. There is now being worked on a proposal which would move coal to the Florida utilities and, in return, would move phosphate north to the fertilizer plants, at special rates.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD, as a part of my remarks, a news article written by Nat Caldwell, of the Nashville Tennessean, and published in the Lexington Herald-Leader of February 22, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TWO RAILROADS SOON MAY CUT COAL FREIGHT RATES TO AID RECOVERY OF SOUTHEAST KENTUCKY MINES

(By Nat Caldwell)

NASHVILLE, TENN., February 21.—Two of the South's largest railroads soon may slash their coal freight rates to spark a major economic recovery in long distressed southeast Kentucky coal fields.

The rate cut on the 850-mile haul to booming Florida may lead Florida's private power companies to switch from bunker oil to coal as their major generating fuel.

The switch could create new markets for millions of tons of east Kentucky coal and bring about reopening of coal mines long shut for lack of markets, a power company spokesman said.

HINGES ON EXPERIMENT

The rate cut hinges on results of a coal shipping experiment by the Atlantic Coast Line and Louisville and Nashville railroads. The coal is being shipped from Manchester, Ky., near Corbin, to Tampa, Fla.

The two railroads said in a statement to the Nashville Tennessean today that "results thus far point to the complete success of the operation."

The coal freight rate cut would range from 15 to 20 percent. It would be made possible by savings to the railroads resulting from the use of 3,500 covered phosphate cars owned by the Atlantic Coast Line for hauling coal. These cars now return empty after hauling cargoes of Florida phosphate to fertilizer and chemical makers of the Midwest and the East.

PERSUADES RAILROADS

W. C. MacInnes, president of the Tampa Electric Co., said today he persuaded the two railroads to conduct the experiment to determine if the empty phosphate cars could be loaded with coal for the return trip to Florida.

"The question was whether the cars could be cleaned of coal dust," MacInnes said. "Before the cars could be reloaded with phosphate in Florida they had to be cleaned so the phosphate cargo would meet high purity requirements of chemical makers.

"To the railroads, success meant a two-way pay haul," he said. "To the only power company in south Florida that already has converted from high-priced oil to coal, it could mean much cheaper coal."

MINE LOCATED IN CLAY COUNTY

MacInnes said he now pays $4.15 per ton for coal for his Tampa steamplant plus $4.66 a ton freight rate. He buys from a Nashville coal operator, John Amos, whose Osborn Mining Co., is located at Manchester, Ky.

Tampa Electric was paying 48 cents per million British thermal units for bunker oil in December, 1957, when he began converting his steamplants to coal. The lower price of coal and the $4.66 freight rate brought Tampa electric costs down to 35 cents per million B.t.u. A freight rate cut to $3.80 per ton, or roughly 20 percent, would reduce these costs again to 30 cents per million B.t.u.

"This rate development easily could mean that all Florida power companies would switch from oil to coal, even though the oil people have cut some, since I pioneered the switch to coal," the Tampa power executive said.

MARKET FOR MILLIONS OF TONS

"That could mean a Florida market for millions of tons of east Kentucky coal each year."

A joint statement by Atlantic Coast Line and L. & N. railroads disclosing success of their coal-hauling, car-cleaning experiment did not mention the subject of rates. Rail spokesmen refused to comment on rate concessions, which they are expected to announce within the next 90 days.

But one of the South's outstanding freight rate experts said Friday, "this is the first venture by major American railroads to cut their rates well ahead of possible competition from water transport."

He predicted water transport opposition before the rate change is finally approved by the Interstate Commerce Commission.

Last week the experiment was stepped up to 20 cars per day. The first of these cars has reached Tampa, been unloaded, cleaned, and accepted by phosphate shippers.

On the strength of these results, Amos, who already supplies Tampa Electric, said he will go to Florida this week for "sales calls" on other Florida power companies.

"I think we can sell them on burning coal," Amos said. "It can be a great big thing for southeast Kentucky mines, closed down for years for lack of markets."

Two other major railroads, the Seaboard Airline and the Southern, which share a competing Florida to Midwest phosphate haul are watching the Atlantic Coast Line-L. & N. experiment. They are expected to follow suit in the event of coal rate cuts. The Southern serves east Kentucky coal fields adjacent to those served by the L. & N.

Mr. MORTON. Mr. President, I am convinced that there is nothing to be feared by the consumers in either New England or Florida as to the deleterious effects of this program. I urge that they give it a chance to be approved, before condemning it as something insidious.

I am sure it is not the intention of any proponents of the mandatory control program or anything similar to force a fuel shortage on any area or any individual. I am sure that all sections of our country will have adequate supplies of fuel at reasonable costs.

Some suggestions have been made as to the effects of this program on our relations with foreign oil producing nations. On the basis of my information, I think those suggestions are premature. In the case of Venezuela, which is the principal producer of imported residual oil burned in this country, their reaction was "they see nothing insidious in the mandatory controls by the United States." On the question of Canada, Secretary of the Interior Seaton, under whose direction the mandatory oil program will be administered, said:

There is nothing inherent in the program which will keep a quart or a barrel of Canadian oil out of this country.

He further said that—

Canada and other oil-producing countries in this hemisphere have a mutuality of interest as far as oil is concerned.

Again I assure my colleagues that this program was devised after the most careful thought and consideration and with the best judgment possible on the part of the executive branch. I am sure that it will be administered with the same carefulness. I hope that all parties concerned, whether they are for or are against the program of mandatory controls, will reserve judgment until such time as the program has been in operation and the actual results can be appraised impartially.

Mr. CARLSON. Mr. President, will the Senator from Kentucky yield to me?

Mr. MORTON. I am happy to yield to my colleague, the Senator from Kansas.

Mr. CARLSON. I wish to commend the distinguished Senator from Kentucky for his statement in regard to the effect of the importation of residual fuel oil on areas in which fuel must be imported for domestic use and for utility use. In my opinion, this statement should allay the fears of many persons that the President's order for mandatory quotas on imported oil would be detrimental to any section of the country. I think it fortunate that the President acted by order, instead of having the action taken legislatively, because once legislation is placed on the statute books, it is difficult to remove or to change it.

If it can be shown that the order causes real hardship in some communities, it can be changed.

The Senator from Kentucky is entitled to much credit for calling attention to this matter.

Mr. MORTON. I thank the Senator from Kansas.

Mr. MANSFIELD. Mr. President, will the Senator from Kentucky yield to me?

Mr. MORTON. I yield.

Mr. MANSFIELD. I wish to commend the Senator from Kentucky for the speech he has made; and I desire to attest to the fact that during his tenure in both the House of Representatives and the Senate, the Senator from Kentucky has always been consistent in his desire and his efforts to look after the interests of his State. The present instance is only another indication—one of many—of the attitude he has assumed at all times since he has been here, in looking after Kentucky's industries—in this instance, the coal industry—and in helping spread the use of this natural resource to other areas.

Mr. MORTON. Mr. President, I thank the Senator from Montana for his generous comment.

I yield the floor.

ADMISSION OF SPAIN INTO NORTH ATLANTIC TREATY ORGANIZATION

Mr. MANSFIELD. Mr. President, on March 25 the distinguished senior Senator from New Hampshire [Mr. BRIDGES] again called attention to the fact that Spain was not a member of NATO. He pointed out that both Houses of Congress had passed innumerable resolutions—one by unanimous vote of both Houses—urging that Spain be included in this organization of Western cooperation. Finally, he noted that inclusion of Spain would add in a very material way to the forces available for the defense of Europe at this critical time.

The distinguished Senator from New Hampshire has advanced strategic arguments for the admission of Spain which, I believe, would be endorsed by virtually every military leader of NATO. They deserve the most careful consideration, and the Senator from New Hampshire has performed a service by calling them to the attention of the Senate and the President.

Mr. President, in connection with the factual and pointed statement of the Senator from New Hampshire, I desire to insert at this point in the RECORD an article of mine upholding the admission of Spain to NATO in a debate which appeared in the November 1957 issue of the magazine Western World, and I ask unanimous consent to do so.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEBATE OF THE MONTH: A STRATEGIC NECESSITY—A TRIBUTE TO WESTERN CIVILIZATION

(By Senator MICHAEL J. MANSFIELD)

The question of whether or not to invite Spain to join the North Atlantic Treaty Organization has been discussed from one end of the Atlantic Community to the other. Leading statesmen have debated it for years. So too have schoolchildren in the United States engaged in the study of contemporary affairs. The arguments which the statesmen may have overlooked have surely been covered by the schoolchildren and vice versa. In short, the facts and opinions which surround the issue are widely known.

Admission of Spain to NATO remains, nevertheless, an open issue. The extensive discussion has failed so far to resolve the matter in a satisfactory fashion. While an invitation has not been extended to Spain to join NATO, and this might be regarded as resolution of a sort, it can hardly be considered as the final word in the matter. There is still a substantial and probably growing body of opinion in some of the member states in favor of admitting Spain and the policies of these states are not all in accord with the unspoken decision not to invite. The United States, for example, supports the inclusion of Spain while certain of the European powers have indicated that they do not.

The question is not being pressed in NATO circles, there being some tendency apparently to let well enough alone. Spain is, after all, cooperating with the United States in the matter of bases and the United States is in turn an active member of NATO. This arrangement provides a kind of indirect membership to Spain and, at the same time, serves to some extent the military needs of the organization. Is there any point, therefore, in reopening the matter at this time? Why not let sleeping dogs lie?

In truth, there is little point if the issue of whether or not to invite Spain to join NATO cannot be considered on its contemporary merit. There is little point unless the smoldering passions which have invariably threatened to flame whenever this issue has been raised in the past have cooled sufficiently to permit a rational appraisal of the relationship of Spain to NATO.

Not that these passions are to be disparaged. They arise out of human bitternesses that are deep and understandable. The violence of the Spanish Civil War is still a recallable experience to many in Spain and other Western countries and its remembrance is not infrequently scarred with personal tragedy. In a similar fashion, the activities of the Spanish Government during the Second World War, however valid from its point of view, were not such as to endear it to other Western nations engaged in a desperate struggle for their freedom and their very survival.

Having said that, however, it is also necessary to say that human society cannot draw sustenance from an unending bitterness. Nations, in their relations with one another, cannot remain forever chained to the real or imagined wrongs of the past and expect at the same time to do what is right for the present and future.

The Spanish Civil War is now two decades in history. A new generation has reached maturity in Spain, a generation for whom that bloody conflict is but a story told by old men. Indeed, many of those who fought and lived through the conflict are no more.

SPAIN LESS GUILTY THAN THE AXIS

As for the role which Spain played during the Second World War, that, too, is fast receding into history. Many of those associated with it are no longer officials of the Spanish Government. We have long since welcomed, moreover, the active participation of the former Axis powers, Germany and Italy, in the work of the Western community. In contrast with Spain, these countries dealt far more damaging blows to that community during the war.

These factors suggest that the time may be ripe for a reconsideration of the question of whether or not to invite Spain to participate in NATO. It may now be possible to make a fresh approach to this issue, reasonably free from the need to vindicate the past, free from past vindictiveness. It may be possible, in short, to come to grips with the reality of the question of whether Spain fits, if at all, not in a nonexistent NATO of yesterday, but in NATO today and tomorrow.

Before the question can be answered, it is necessary to reexamine the purposes of the organization. These purposes have never been quite as clearcut as they may have seemed in the early days of NATO's founding. At that time the need for defense against a possible Soviet aggression directed at Western Europe dominated the concept of the organization. That was true, not only in the United States, but probably in other member states.

This need for common defense against Soviet totalitarianism is still the predominant consideration which sustains the organization. It finds expression in the vast and busy headquarters of the Supreme Command at Rocquencourt, and in the continuous military planning and the joint military exercises that take place in various parts of the Atlantic and Mediterranean worlds. Notwithstanding the current peace of mutual terror NATO is still based largely on the assumption that the Soviet bloc may unleash a military aggression against one or more of the NATO nations and that these nations can defend themselves best by acting together. Perhaps even more important, by revealing their determination to defend themselves in common, they may discourage the Soviet Union from ever committing an act of aggression.

If NATO is seen exclusively or almost exclusively as a mechanism of deterrence or defense against Communist aggression, then it seems to me that the arguments for admitting Spain are unassailable. The tendency to view the organization as such in the United States accounts in major part for such diplomatic initiative as this country may have taken to obtain inclusion of Spain. Similarly, it is not surprising to find that the military leaders not only of the United States but of other NATO countries have also been especially partial to this point of view. They may differ among themselves as to the precise contribution which Spain could make but few if any would argue against admission on grounds that Spain would be a military liability.

One does not have to be an expert in these matters in order to understand why this is so. Spain borders on both the Mediterranean and the Atlantic. It is across these waters that the military positions of NATO must be supplied. Spanish membership in the organization would help to guarantee these sea lanes and to neutralize Soviet penetration of Egypt and other parts of the southern Mediterranean.

We may note, too, that Spain dominates the southwest approach to Europe. As such its inclusion in the integrated defense of Western Europe is practical and logical. Its military facilities and bases would be more useful if they were under control of the Supreme Command, instantly available for any military action in which NATO might become involved. As it is now, these facilities cannot be counted on, except as they might be provided through Spanish-United States arrangements. It is not at all certain that these arrangements would come into operation at least until and unless NATO were thrown back to a line of defense based on the Pyrenees.

Finally, Spain is in a position to supply troops at a time when NATO appears to be sorely in need of increased manpower. There is no point in reviewing the reasons for this need. Suffice it to say that the military authorities of NATO view it sometimes with an anxiety verging on desperation. Five divisions of anti-Communist troops from Spain would go a long way toward relieving this anxiety. These divisions could be equipped and trained at relatively low cost and would provide a significant increment in NATO's strength.

As noted, one may question the precise degree of military contribution which Spain could make to NATO, but certainly it has at least as much to offer as some of the smaller European powers. If the NATO nations were to become engaged in a conflict with the Soviet bloc it would obviously be better to have immediately available more rather than less military strength. If NATO is trying to deter aggression by a show of military force, then it would be better to reveal more rather than less potential strength. However great or small the Spanish contribution might be, it should nevertheless be welcome. That is, it should be welcome if NATO is seen exclusively or almost exclusively as a military bulwark against Communist aggression.

In spite of the importance of admitting Spain to NATO on military ground, these grounds are not decisive. The military case for admission of Spain is no more, perhaps not even as compelling as the arguments for equipping NATO forces with nuclear weapons. Given a choice between the two, it is not at all certain that NATO's military planners would select Spain's admission as the more urgent need. However much the inclusion of Spanish forces and facilities in

the NATO command may appear desirable it is doubtful that any responsible military leader would contend that the outcome of a conflict with the Soviet bloc hinges on Spain. Further, if the Soviet Union is not going to be deterred by a NATO without Spain, it is highly unlikely to be deterred by a NATO with Spain.

If military factors are not decisive, if what has heretofore been the principal argument for inclusion of Spain is discounted, how is it possible to contend that Spain belongs in NATO? Again, we must go back to the basic purposes of the organization. Is there any other purpose of the organization which would be served by Spanish membership? Is there any raison d'être for NATO except military defense against aggressive Soviet communism? These questions are best answered by posing others. If the military threat of Soviet communism were suddenly to be removed would there be logic in the continuance of the organization? If so, would inclusion of Spain sustain or weaken this logic?

It is not without significance in this connection that even the appearance of a relaxation of the Soviet threat at the time of the Geneva Conference of 1955 resulted in a prompt reduction of the zeal of member states in meeting their military obligations to the organization. It is of equal significance, however, that this apparent erosion of NATO was the occasion of widespread alarm in the member countries. It prompted a serious search for ways of preserving the essential intimacy of the NATO relationship by means other than military. This search, in turn, lost some of its steam when events in Hungary demonstrated a continuing danger of aggression from Soviet totalitarianism and, hence, the continuing need of NATO as a deterrent or defense with respect to that danger.

What this sequence suggests is that while concern with Soviet aggression has been the major impulse of NATO, that concern has not been the solitary impulse. Without the common fear of a Soviet military onslaught, NATO tends to falter at this time. The very faltering, however, sends shivers down the spines of the member states and impels them to undertake an introspective examination of the meaning of the organization. Why is that the case? Can it be that there are other vital common needs of the NATO nations which the organization is designed to serve or may be made to serve?

That there are others, is indicated by the North Atlantic Treaty itself. If there were not others, how are we to explain the failure of the text of the treaty to identify either Soviet or Communist aggression as the threat which the treaty is designed to deter or resist? How are we to explain the inclusion of article II which extends the potential area of cooperation among the NATO members beyond military affairs into political and economic realms?

The basic design of the treaty clearly indicates a groping on the part of the adherents for something more than a means of meeting the immediate need for common defense against the threat of Communist aggression. It suggests that the parties seek a method of safeguarding something that is precious to all of them, regardless of the quarter in which the danger to it may arise. This something, this thing of common value, it seems to me, is the heritage of the civilization which, with its core in Western Europe, has radiated outward in greater or lesser degree to all of the NATO members. Indeed, there is scarcely any part of the globe which has not been at least touched by this heritage, that does not have some small stake in it.

The need to safeguard this heritage which is composed of ideals of freedom and human decency arises in major part of course out of the immediate threat of Soviet totalitarianism but that is by no means the only potential source of jeopardy. The ideals have been menaced in the past in many ways and in many places. Most significantly, in recent decades, they have almost been destroyed by the actions of the very nations which have held them most closely. The two World Wars of this century were, in effect, if not in motive, an attempt to obliterate this heritage.

In the aftermath of the second of these disasters, it was obvious that the older techniques for safeguarding the ideals of European-Western civilization—the techniques for example, of the nation-empire with its multiple social institutions, of diplomacy and of the balance of power—were no longer adequate. Nor was the United Nations competent to assume this responsibility. Other mechanisms—intermediate mechanisms—had to be devised and were devised, and NATO is one of them.

In this context, the rationale of NATO is not limited to defense against the immediate but perhaps transitory danger of Communist aggression. Rather it is one of several international devices for the preservation of the living heritage of European-Western civilization against either aggression from without or aggression and erosion from within.

At the risk of over-simplification NATO may be regarded as the second ring of security for this purpose. The inner core is made up of the nations of Western Europe held together not only by common national interests and outlook but by the cement of the Western European Union, and other intra-European organizations. Surrounding this core is NATO, composed not only of the core, but of the United States, Portugal, Turkey, Greece, and other nations which share the European-Western heritage in varying degree and whose own futures are intimately linked with its preservation.

If the concept of the place of NATO delineated above is an accurate one, then it may be possible to consider the question of whether or not to invite Spain to join in a somewhat different light than has heretofore been the case. The question is not merely what has Spain to contribute in a military conflict with Soviet communism, rather, it is this: How much of the European-Western heritage does Spain share and will its membership in NATO act to safeguard or erode that heritage? Indeed, may it not act to expand it?

Heritage as it is used here is, of course, an abstraction. There are few objective measures which can be used to determine how little or how much of it is held by any nation. But certainly, the test is not whether at a particular time particular personalities happen to hold sway over a nation. Personalities are transitory.

The question is not shall Spain be invited to join NATO. What we must ask is whether the Spanish people are associated in a comparable degree of intimacy with the European-Western heritage as are the other members of the Organization. One may perhaps debate whether Spain is of the inner core of this heritage, the core which is embraced by the Western European Union. Can there be any doubt, however, that Spain's relationship to the heritage is at least as close as that of Greece, Turkey, or Portugal? Can there be any doubt that Spain, the Spain of Ferdinand and Isabella, the Spain of the Napoleonic wars, the Spain of Goya and Cervantes falls in the second ring?

That is why the exclusion of Spain from NATO seems to me to be clearly a serious schism in what is otherwise a logical design for the preservation of the heritage. It is an invitation to inner erosion, and it may be an invitation to external aggression in the future. Furthermore, it inhibits the extension of the values of that heritage, particularly in north Africa, and perhaps in Latin America as well.

It seems to me essential to draw Spain closer to full participation in the heritage, not to thrust it away or to exclude it on the basis of events which occurred 20 or even 10 years ago. It is essential, not for the sake of a regime, not even for the sake of Spain alone. It is essential in order to preserve and to advance these ideals of freedom and human decency to which the peoples of the NATO countries aspire.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. BYRD of West Virginia in the chair). The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MORTON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

CONSUMERS ACT OF 1959

Mr. KEFAUVER. Mr. President, I introduce, for appropriate reference, a bill to establish a Department of Consumers in order to secure within the Federal Government effective representation of the economic interests of consumers; to coordinate the administration of consumer services by transferring to such department certain functions of the Department of Health, Education and Welfare, the Department of Labor and other agencies; and for other purposes.

Joining me in sponsoring this bill are the following Senators: The Senator from New Mexico [Mr. CHAVEZ], the Senator from Illinois [Mr. DOUGLAS], the Senator from Alaska [Mr. GRUENING], the Senator from Missouri [Mr. HENNINGS], the Senator from Minnesota [Mr. HUMPHREY], the Senator from North Dakota [Mr. LANGER], the Senator from Ohio [Mr. LAUSCHE], the Senator from Montana [Mr. MANSFIELD], the Senator from Minnesota [Mr. MCCARTHY], the Senator from Wyoming [Mr. MCGEE], the junior Senator from Oregon [Mr. NEUBERGER], the Senator from Texas [Mr. YARBOROUGH], the Senator from Ohio [Mr. YOUNG], the Senator from Wisconsin [Mr. WILEY], the Senator from Colorado [Mr. CARROLL], the Senator from Michigan [Mr. HART], the Senator from New York [Mr. KEATING], the Senator from Alaska [Mr. BARTLETT], the Senator from California [Mr. ENGLE], the senior Senator from Oregon [Mr. MORSE], and the Senator from Michigan [Mr. MCNAMARA].

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1571) to establish a Department of Consumers in order to secure within the Federal Government effective representation of the economic interests of consumers; to coordinate the administration of consumer services by transferring to such department certain functions of the Department of Health, Education, and Welfare, the Department of Labor, and other agencies; and for other purposes, introduced by Mr. KEFAUVER (for himself and other Senators), was received, read twice by

its title, and referred to the Committee on Government Operations.

Mr. KEFAUVER. Mr. President, the forgotten man in our governmental structure is the American consumer. Technically, it would probably be more correct to say that the individual is the "forgotten woman," since it is the American housewife who makes most of the consumer purchases.

The American consumer is losing the battle to inflation. No matter how careful the purchasing and how expert the marketing, the American consumer cannot possibly protect himself, or more properly, herself, against the steady and continuing rise in prices. As has been demonstrated before our Subcommittee on Antitrust and Monopoly, most of the inflation of the last 5 years has stemmed from price increases in the administered-price industries, which have become largely immune to the normal forces of supply and demand. Thus the American consumer is being denied that protection which it is assumed, in our economic order and form of government, will adequately protect him. The protection of which I speak is, of course, the unseen hand of competition. Where price competition has disappeared or atrophied, those who are presumed to be protected by it could logically be expected to find themselves in the role of innocent injured parties. And that is precisely what has happened to the American consumer, particularly since the end of World War II.

Unless one studies the statistics carefully, it is hard to realize just how much inflation has taken place in our economic system. Between 1947 and 1958 the consumer price index has risen 29.3 percent, while the wholesale price index has advanced 23.7 percent. Actually, the overall increase would have been substantially greater had it not been for a decline of 5 percent in the price of farm products. Aside from farm products and foods, the level of wholesale prices has risen nearly one-third during this period. Pacing the rise has been a sharp increase in the price of steel, the bellwether of our economy, which between 1947 and 1958 more than doubled. The greatest increases have all been in the administered-price areas. Increases of more than 60 percent have been registered by the metals and metal products group and by machinery and motive products, while rubber and rubber products and nonmetallic minerals have shown advances of more than 40 percent. In contrast, such market-price areas as textile products and apparel, leather and leather products, and miscellaneous products have, along with farm products, registered actual decreases in price.

The cost of this inflation is almost beyond comprehension. Between 1947 and 1958 gross national product in current dollars increased by $203 billion; however, in real terms (that is, 1958 dollars) the increase was only $125 billion. The difference, or $78 billion, is pure inflation. As a specific example, take the case of steel. Had the amount of steel that actually was shipped between the second half of 1955 and the end of 1958 been sold at the price prevailing in the second quarter of 1955, instead of at the steadily higher prices which have prevailed since that time, the savings to the direct buyers of steel would have been $5,165 million. And this is before the higher prices are pyramided as each successive producer and fabricator in the flow of production makes a greater dollar increase in price in order to maintain his percentage markup.

To make the matter even worse, there seems to be no end in sight. We must not delude ourselves with the easy assumption that "a little inflation" will not do any harm. An average price increase of 3 or 4 percent a year may not sound particularly dangerous. Yet, if prices were to rise at an average rate of 3 percent a year, the price level would be doubled within 24 years; a 4 percent annual increase would double the price level in only 18 years. If our price level is to double in just two decades, how sound an economy will we have? How much growth will we have enjoyed? How much investment in new plants and equipment will have been made? How much will real consumption of goods and services have increased? How many of our foreign markets will we have lost? How strong will we be in protecting our interests against the ever-present threat of Communist world domination?

When 2 years ago the Subcommittee on Antitrust and Monopoly initiated its inquiry into inflation in the administered-price industries, interest in the problem of inflation was something less than it is today. Now we find a veritable abundance of committees inquiring into the problem, which, in view of its enormous importance, is all to the good. The Congress earlier this week voted a $200,000 supplemental appropriation to the Joint Economic Committee to embark upon an extensive study of inflation and economic growth. The Congress and the country are indeed fortunate that this study will be conducted under the chairmanship of the Senator from Illinois [Mr. DOUGLAS] who is universally recognized as one of the country's foremost economists. Last week the Cabinet Committee on Price Stability for Economic Growth, headed by the Vice President, began to operate by hiring as its executive director Mr. W. Allen Wallis, professor of economics of the University of Chicago. There has also been formed under the chairmanship of Dr. Saulnier a Committee on Government Activities Affecting Prices and Costs, whose function it is to eliminate or reduce activities contributing to inflation carried on by the Government itself. In the Subcommittee on Antitrust and Monopoly we, of course, intend to continue our somewhat tedious and laborious task of developing the facts on the actual nature of the inflationary movement in specific industries, and to try to ascertain whether in such industries the public interest is adequately protected by the antitrust laws. From time to time we intend to continue supplementing these industry-by-industry studies with general hearings at which economic and legal authorities will be invited to present their views as to the public policies best suited to meet the problem. Out of all these inquiries there may be found some solution, consistent with American traditions and institutions, to the problems of securing economic growth, preventing inflation, and minimizing short-term unemployment. It is well to consider the possibility, however, that the day of its discovery may not be just around the corner.

In the meantime, we should not be idle; we should be about our business doing those things which ought to be done and whose objectives, while less ambitious than the solution of all of our major economic problems, represent in their own limited way definite contributions to the public interest. The objectives of the bill which my colleagues and I have introduced today are of this limited but worthwhile character.

The primary purpose of the bill is to provide effective representation within the Federal Government of the American people in their capacity as consumers. The existing Government agencies, with few exceptions, represent the American people in their capacity as producers. Thus, the Department of Commerce represents businessmen; the Department of Agriculture represents farmers as producers; the Department of Labor represents workers as producers; and so on. Indeed, the Government abounds with departments, agencies, and bureaus set up by the Congress to represent producer interests of virtually every conceivable type. There is no such representation of the consumer interest. Such consumer representation as does exist is limited, fragmented and relatively ineffectual.

What groups of persons are particularly in need of the protection to be provided by this measure? In approaching this question, it must be recognized that simply because most consumers are also producers their interests, by that fact alone, cannot be assumed to be adequately protected. We have in this country a large number of citizens who are no longer producers, but who are living on income earned in earlier years when prices were lower. I am speaking, of course, of the older persons living on pensions and annuities, who are caught in a cruel squeeze between fixed—and often very limited—incomes and steadily rising prices. There are the salaried and white collar workers whose income traditionally does not keep pace with rising prices and to whom what is brought in as producers does not equate nicely with what must be spent as consumers. The unorganized workers, who are the poorest paid and thus most in need of adequate representation, form another bloc of American citizens who have suffered a worsening relationship between what they earn and what they consume. The position of even the organized workers as a group has deteriorated in recent years. This is indicated by the fact that, according to data prepared by the Joint Economic Committee, unit labor costs in manufacturing as a whole actually declined by nearly 2 percent between 1953 and 1958 while the Wholesale Price Index rose by 9 percent. For all of these groups, which together represent a clear majority of our population, there is to be found in the Government no adequate voice to

represent them in their activities as consumers.

What specific functions would the new department carry out in its task of protecting the consumer interest? As set forth in section 5 of the bill, its first function would be "to present the viewpoint of consumers of goods and services within the United States in the formulation of policies of the Government." The number and variety of different governmental policies which have a real and direct impact upon consumers is virtually infinite. A recent example should serve to illustrate the need for presenting the consumer point of view at the highest level of the executive branch.

On March 25 the President urged the steel industry not to raise prices. This is an action which was long overdue. Had a Department of Consumers been in existence and headed by a responsible Secretary of Consumers who could have brought home to the President the injurious effects of the upward movement of steel prices, I feel sure that the President would have made his direct and pointed appeal long before this, with a consequent savings to buyers of hundreds of millions of dollars. Beneath the Presidency there are, of course, many lower echelons of Government which formulate and put into effect policies of one kind or another which cost the American consumers dearly. To say that such policies are usually conceived with little or no regard to the consumer interest is not to criticize, but merely to state an obvious fact. It is right and proper that the effect of their policies on consumers be forcibly called to the attention of those who formulate them. And this should be done before the policies are put into effect. The Government departments might, in fact, benefit more from the work of this new agency than they might imagine. The Government is, in fact, the Nation's largest consumer of goods, and anything which the Department of Consumers does to restrain inflation will inevitably work to the advantage of the Government as a consumer.

The second function of the Department is to represent the economic interests of consumers of the United States in proceedings before courts and regulatory agencies of the United States. The Constitution reserves to the Congress the power to regulate commerce. Because of the complexity of the issues involved, Congress has established certain independent regulatory agencies to carry out this function. In establishing these agencies, it was never intended that they should merely duplicate the type of activity carried on by the third branch of the Government, the judiciary. They were intended to be and should remain arms of the Congress. Unfortunately, over the years these agencies have tended to assume the role more as umpires between contesting groups of producers than as protectors of the consumer interest. The Interstate Commerce Commission is caught in disputes between railroads and trucks; the Civil Aeronautics Board between large airlines and small airlines; the Federal Communications Commission between rival applicants for television and radio licenses; the Federal Power Commission between gas producers and public utility companies; the Tariff Commission between companies; wanting tariff protection and firms selling to countries which would be adversely affected thereby and so on. In their efforts to settle these disputes among rival producers, it is almost inevitable that the effect of their actions upon consumers has not always been given sufficient attention by these regulatory bodies. Under this bill the Department of Consumers would be given the right by law to intervene in such matters before these regulatory bodies as rate increases, tariff increases and the like. In the words of the bill, it would be authorized to present to such regulatory agency, in conformity with the rules of practice and procedure thereof, such evidence, briefs, and argument as it shall determine to be necessary for the effective protection of the economic interests of such consumers. Before taking action the regulatory body would have had presented to it information showing the consequences of its action on consumers. In no way is their power reduced or abridged. The purpose is merely to see to it that insofar as the consumer interest is concerned their action shall not be taken in a vacuum.

Moreover, in matters involving the judicial branch of Government, the Department would have the right to certify information to the proper official for presentation before the district courts, and to ask leave to present the consumer point of view before appellate courts. In the event that Congress were to enact some type of price notification legislation, such as the O'Mahoney bill or the Clark-Reuss bill, under which large corporations in concentrated industries would have to file prior notice with some governmental agency of their price increases the Department of Consumers could appear and present information bearing on the appropriateness of the price increase and its probable effect upon consumers.

The next function of the Department is to conduct annually a National Consumers Conference. There are a number of organizations interested in promoting and protecting consumer interests whose advice and assistance should be sought by the Department. The State of New York has had an organization within the State government established to promote consumer interests, and it is my understanding that similar organizations are being contemplated by the States of Massachusetts and California. They, too, are in a position to contribute to the effective operation of the new Department and it in turn should be in a position to furnish them with helpful advice and assistance. To be sure that this type of mutual interchange does take place, the bill provides that an annual National Consumers Conference will be called by the Department.

The Department would also have operating responsibilities. Specifically, the following agencies or parts of agencies would be transferred to it: The Food and Drug Administration of the Department of Health, Education, and Welfare; the Division of Prices and Cost of Living of the Bureau of Labor Statistics of the Department of Labor; the Home Economics Research Branch and the Human Nutrition Research Branch of the Agricultural Research Service of the Department of Agriculture; and those elements of the National Bureau of Standards which the Director of the Bureau of the Budget shall determine to be engaged primarily in research with respect to, or the testing of, articles intended for use by consumers.

In proposing these agency transfers I am not being critical of the work which they have performed in the past. Indeed their contributions to the public welfare have been legion. However, I believe that the gains by reason of their reorganization under one roof would far outweigh any possible loss. It should be obvious that the work of each of the different agencies would contribute far more to the work of the others than is now the case. Then too, instead of being situated within indifferent, and sometimes unfriendly, departments, these agencies would be working within an overall department whose aim and mission would be the same as theirs. Morale, unity of purpose, cohesiveness—all should be vastly improved and with this improvement efficiency should rise. With the type of reorganization I have proposed, the taxpayers should thus get much more for their tax dollar out of the consumer-protection agencies than is now the case. The additional cost to the taxpayer would be negligible, if any. The additional benefits to the taxpayer in his capacity as a consumer should be numerous and important.

Another function of the Department would be to receive and evaluate consumer complaints. The Department would constitute a single unified place to which consumers could send their complaints of all kinds. In those cases where the matter falls within its jurisdiction, the Department would itself take corrective action and in others it would transmit the complaint promptly to the appropriate government agency. Today, even where he has a complaint of the most legitimate type, the most informed consumer can be excused for not knowing to which of the numerous government agencies he should address himself.

The Department would have the function of making economic studies and investigations relating to productive capacity, methods of distribution, price levels, quality and suitability of goods affecting consumers, and similar matters. Essential to carrying out this and its other functions are powers to gather and compile necessary information. To this end the Department would be granted general fact-gathering powers similar to those vested by the Congress in the Federal Trade Commission. However, in order to prevent the disclosure of that type of information about which business firms are most sensitive, the bill specifically provides that "information received by the Department concerning the cost of production or distribution of any product by any such corporation, or any division or subsidiary thereof, may be made public only in a form which does not disclose such information with

respect to any particular corporation, or any division or subsidiary thereof."

A similar safeguard is incorporated in the bill to assure that the Department does not attempt to set itself up as an arbiter of the respective merits of goods produced by rival companies. To this end the bill specifically provides that "nothing contained in this act shall be construed to authorize the Department to engage in any program of testing for the purpose of determining, as among the products of different producers, the relative merits or suitability of products of any class or type."

Congress itself would be among the beneficiaries of the new Department. It is often difficult for Congress, in considering legislation, to evaluate its effect upon consumers. This is a type of information which is frequently most difficult to obtain. To have available an agency which can present information and testify on the ways in which consumers may be affected by particular bills will, I am sure, prove to be of tremendous assistance to Congress.

Mr. President, I wish to emphasize that the measure would not give to the Department, or to any part of Government, any power to control prices, rates, wages, or anything else. It would not involve the creation of a new Government agency which would merely duplicate functions now being carried out elsewhere. Rather, it would perform a few new functions not now being carried on by anyone; and in addition would take over the administration of certain existing consumer-oriented agencies. The bill, in fact, is modest in its scope and objectives. In itself, it is not a solution to the overall problems of assuring growth and preventing inflation. But it is a step in the right direction, and it does a few things which ought to be done.

Mr. President, this bill is a product of our times. It would not be necessary if competition were sufficiently effective throughout the economy to protect the consumer interest, or if there were no large blocs of citizens whose earning power did not keep pace with the upward trend of prices, or if the existing departments were not so exclusively oriented toward producer points of view, or if the regulatory agencies had not become more and more the arbiters of disputes among rival groups of producers rather than the guardians of the consumer interest, or if consumers actually did know which way to turn in bringing their grievances to the attention of the Government, or if the few existing consumer agencies within the Government had carried out their responsibilities in a more vigorous and coordinated manner.

These are conditions which are not likely to be changed in the foreseeable future. So long as they exist, there will be a need, and probably an increasing need, for a bill of this type.

I request that at this point there be printed in the RECORD a copy of an article of mine entitled, "A Voice for Consumers," appearing in the Progressive magazine for January 1959, in which I first set forth this proposal. I also request that there be printed a speech which I delivered on June 23, 1958, at the George Peabody College for Teachers at Nashville, Tenn., entitled "Administered Prices and the Consumer."

There being no objection, the article and speech were ordered to be printed in the RECORD, as follows:

[From the Progressive magazine, January 1959]

A VOICE FOR CONSUMERS

(By Senator ESTES KEFAUVER)

For nearly 2 years the Senate Subcommittee on Antitrust and Monopoly has been inquiring into the subject of administered prices. We have heard testimony from the Nation's foremost economists specializing on the subject. We have heard from representatives of business, labor, and consumer groups. We have pored through papers and reports and independent analyses of our own. We have held lengthy hearings and issued comprehensive reports on administered prices in the steel industry and in the automobile industry. We are now conducting research into the bread industry and into the manufacture of drugs.

In a way the problem with which we are now concerned is the inevitable legacy of our failure as a Nation to implement effectively one of the cardinal goals of the progressive tradition, namely the prevention of monopoly. What is happening in concentrated American industries today is exactly what men like the La Follettes feared would take place if the trend toward monopoly was not halted. For a variety of reasons, including some unfortunate judicial decisions, inadequate appropriations for the antitrust agency, and, in my opinion, the misguided belief of many liberals that monopolists, for some unknown reason, would be beneficent in their despotism, the fight to prevent the rise in concentration has been largely lost. As we look at the American economy today and see industry after industry firmly controlled by the Big Two, Big Three, or Big Four, it is apparent that excessive concentration is something which is no longer merely a threat of the future; it is a present reality.

The fundamental reason the La Follettes and men of similar vision and courage were vigorously opposed to the concentration of economic power was their conviction that monopoly would mean an economy of scarcity, characterized by exorbitant prices and unduly restricted production. Prices that are excessively high result in a curtailment of consumption and deny the people the benefits of scientific and technological progress. Production that is unduly restricted means curtailed employment and a failure to develop and utilize our resources. Today we find that these two evils are manifesting themselves simultaneously. On the one hand, we find prices in concentrated industries, such as oil, steel, and automobiles, have been rising; on the other hand, we find that their production and employment have fallen. We have witnessed the anomaly of price inflation during a recession. According to all the economic textbooks, this is a combination of trends which simply could not take place, since, as everyone knows, when demand falls, prices are expected to decline. The explanation for this singular phenemenon is the simple fact that the managers of our great corporations, when confronted with a decline in sales, apparently feel that the simplest and surest way to maintain profits is to raise prices. Since, as a result of either the dominance of a price leader or some form of collusive arrangement, the normal restraining influence of competition has been all but eliminated, they are able to make their decisions stick.

The Subcommittee on Antitrust and Monopoly has already discovered this very pattern of behavior in three of our most important industries—oil, steel, and automobiles. There is reason to believe that it exists in other industries as well.

Our steel hearings disclosed a history of steel prices rising at more or less regular intervals in stairstep fashion since 1947. United States Steel's announcements of price increases invariably have been followed within a few days by every other steel producer. The record contains numerous instances of sealed bids for Government contracts in which prices quoted by supposedly competitive producers were identical down to the thousandth of a cent. A noteworthy aspect is that the industry's prices have risen as frequently and as far during periods of recession and idle capacity as they have during periods characterized by huge backlogs of unfilled demand. They have also risen when unit labor costs have been falling as well as when they have been rising.

Another interesting aspect is that United States Steel, the dominant producer in overall steel production, does not appear to be either the most efficient company in the industry or the company with the largest capacity in certain particular types of steel products. Both Bethlehem and National Steel, for example, appear over the years to have been generally more efficient than United States Steel. In several product lines Bethlehem has greater capacity than United States Steel, while National has the largest cold-rolled sheet capacity in the industry. The subcommittee was understandably puzzled by the explanations offered by Bethlehem and National executives as to why they have had to meet each of United States Steel's price increases on those products in order to stay competitive.

The automobile industry also provides an instructive example of price administration by a dominant producer, General Motors. The pricing objectives of both Ford and Chrysler clearly appear to be either to match General Motors' prices or, if they choose to announce first, to anticipate price increases which will be satisfactory to General Motors. Occasionally, someone slips up. Ford took the lead in announcing prices on 1957 models, for example, with increases averaging about 3 percent. Soon thereafter General Motors introduced its new models at prices which were slightly more than 6 percent higher than in the previous year. Ford immediately revised its prices upward to the General Motors level. As in steel, the automobile manufacturers are just as willing to raise prices when sales are low as they are when people are standing in line at the dealers' doors. The most recent round of automobile price increases occurred in a year during which the companies will produce only slightly more than half the number of cars they made in 1955.

After nearly 2 years of inquiring into the matter, it is not surprising that people are beginning to ask us what we are planning to do about the problem. This is a question which is much easier to ask than to answer. But certainly the upward movement of prices in the midst of substantially unused capacity cannot be permitted to continue indefinitely. The results of a constantly increasing price level would be appalling. The value of savings, life insurance policies, pensions, wages of unorganized workers and salaries of white-collar workers would be progressively reduced, causing particular hardship to our older citizens and, indeed, to all persons living on fixed incomes. The incentive for saving would atrophy, thus impairing our ability to raise the capital necessary for future economic expansion. The limitations imposed on production in order to support the higher prices would, in a period of large-scale expansion of our labor force, tend to

swell the ranks of the unemployed. The exact point in time when we will have to face up to this problem cannot be predicted, but barring some unforeseen development on the international scene which would require a rapid buildup in our Military Establishment, it cannot be far off.

While I am not advancing it as the complete solution to the problem, one step which can and should be taken is to provide in some way for effective representation in government of the consumer's interest. To this end. I intend to introduce legislation in the forthcoming Congress to create a new agency, a Department of Consumers, whose head would become a new member of the President's Cabinet as Secretary of Consumers. The fundamental logic behind this proposal is that most of the other departments, including particularly the Department of Commerce, the Department of the Interior, the Department of Agriculture, and the Department of Labor, represent the American people in their capacity as producers. There is no department to represent them in their capacity as consumers. Even those agencies whose principal function is to protect the public interest, such as the independent regulatory agencies, have all too frequently come to regard their role not as the protector of consumers, but as an umpire between contesting groups of producers. Thus, the Civil Aeronautics Board concerns itself with disputes between large airlines and small airlines; the Interstate Commerce Commission tries to adjudicate the long-standing dispute between the railroads and the trucks; the Federal Power Commission is caught in a conflict between gas producing firms and public utility companies; the Federal Communications Commission spends much of its time trying to decide which of a number of rival applicants should be awarded licenses to operate TV stations; the Tariff Commission is constantly caught between one group of producers urging a tariff increase and another group opposing it on the grounds that such action would impair the ability of foreign countries to buy their goods; the Federal Trade Commission becomes embroiled in disputes between big business and small business. This is not to imply that these are not appropriate subjects for these agencies, but it does appear that in their day-to-day work the larger issue of the consumer interest has gradually come to be overlooked.

What would be the specific functions of this new agency? Although my views on this matter are preliminary and certainly subject to change, there are at least two major functions a Department of Consumers could properly undertake: (1) it could serve as an advocate of the consumers' interest at all levels and stages of government, and (2) it could provide a centralized and probably more sympathetic home for a variety of activities directly affecting the consumer which are now performed elsewhere in Government. In carrying out its function of "advocate" for the consumer, the agency could, for example, appear before the Civil Aeronautics Board or the Interstate Commerce Commission whenever either agency was considering a rate increase and present evidence on its effect on consumers. It could urge that greater consideration be given to the quality of service rendered the consumer by private firms which have been granted the privilege of operating as a monopoly. When it felt that consumers were being deceived by false and misleading advertising or were being exploited by price-fixing conspiracies, it could make complaint to the Federal Trade Commission. During hearings conducted by that agency on these and related matters, it could present evidence on the need for altering the nature of the advertising or eliminating the collusive arrangement.

Similarly when it felt that the consumer was being exploited by monopoly, it could make complaint to the Anti-Trust Division of the Department of Justice, and in the trial of antitrust cases could present evidence of the effect on consumers of the restraint of trade or attempt to monopolize. Wherever it deemed such action appropriate, the agency could follow up its actions at the lower levels of government with arguments to the Circuit Courts of Appeals and to the Supreme Court. When Congress was considering legislation, it could present evidence before the appropriate congressional committees on the effect of the proposed measure on consumers. In all of these undertakings, its primary objective would be the same—to make the regulatory agencies and the courts forcefully aware of the effect of their actions upon the interests of 175 million consumers.

In order to make any worthwhile contribution the agency would have to have a staff of expert lawyers, accountants, economists, and other professional personnel. Only by demonstrating a high degree of professional competence could the agency hope to secure the respect for its position which is a prerequisite for success. But no great bureaucracy need be established in order to secure this professional personnel. Much of it already exists within other parts of Government concerned with consumer problems. There has been a long-felt need to bring under one roof these consumer-oriented bureaus and divisions which are now scattered throughout a variety of different departments. Thus, the very act of carrying out the second function of the agency would in itself provide much of the professional personnel needed to carry out the agency's first function.

What are some of these functions now being conducted in the executive branch of the Government that need to be centralized in a Department of Consumers? Perhaps the first step would be to transfer the Food and Drug Administration to the new agency. The FDA is charged by Congress with safeguarding American consumers in the purchase of $50 billion of foods, drugs, cosmetics, and health devices a year. It is charged with protecting the consumer against economic cheats, as well as health hazards. It has the authority to conduct badly needed research on the many aspects of new consumer products. Because of inadequate appropriations most of its activities have been necessarily confined to the task of preventing serious health hazards. With only a moderate increase in funds and personnel, it could tackle such problems as short-weighting, the substitution of cheaper ingredients, and misleading labeling and packaging.

The work of the Bureau of Labor Statistics in compiling the Consumer Price Index, as well as its other price series, belongs more logically in a Department of Consumers than in the Department of Labor. In trying to appraise the effect of conflicting price movements on consumers' living standards, Congress, as well as other parts of Government, relies heavily on these indexes. Yet, in certain respects such, as their failure to reflect the increasing cost and importance of consumer credit, they do not adequately reflect the true increase in the cost of living.

Certain parts of the Bureau of Standards, which are or properly should be engaged in testing consumer products, could appropriately be transferred to the new Department. The same is true of the Bureau of Home Economics of the Department of Agriculture, which is probably the oldest consumer protection agency in the Federal Government. Although the present administration has curtailed its activities, the Bureau of Home Economics should be able to continue its historical function of conducting research and tests on the basis of which its how-to pamphlets can continue to be issued. These booklets, issued on a great variety of home activities, have become the basic consumer information sources for not only the Department of Agriculture but the whole of the Federal Government. Editors of women's magazines, household hints newspaper columnists, and home service radio commentators have leaned heavily on this material for years. Like the present location of the Consumers Price Index in the Department of Labor, the present location of the Bureau of Home Economics must be regarded as largly an historical accident.

In making this proposal for rearrangement of functions, I wish to make it clear that I do not believe in governmental reorganization simply for the sake of reorganization. The shifting around of Government agencies like pieces on a chessboard is one of the more popular and enduring indoor sports in Washington, and it frequently results in the needless disruption of personnel with a resulting loss in efficiency. In this particular instance, however, I believe the gains would far outweight any possible loss. For one thing the work of each of the different agencies would contribute far more to the work of the others than is now the case. For example, the price collecting agents of the Bureau of Labor Statistics could gather valuable information for the Food and Drug Administration, and Bureau of Standards personnel could do important testing work for the Bureau of Home Economics. Second, instead of being situated within indifferent, if not inhospitable, departments, these agencies would be working within an overall department whose aim and mission would be the same as theirs. The improvement in morale, and thus in efficiency, should be marked. Today when a favorite football team loses, it is often said that it was down for the game. The same is true of Government agencies. A small agency that is "up," one that is united behind its general purposes and objectives, can do many times the work of a much larger agency that is down. Hence, with the type of reorganization I have proposed, the taxpayers should get much more for their tax dollar out of the consumer-protection agencies than is now the case.

I want to emphasize that the establishment of a Department of Consumers along the lines I have outlined would not in itself eliminate the danger to our economy posed by the constant upward movement of prices. It should be, however, a helpful step. The managers of large corporations would, in my opinion, think twice before making a price or rate increase, if there existed an adequately staffed, vigorous agency which might view their action as onerous to consumers and illegal under the antitrust laws, or unwarranted under the regulatory statutes.

But perhaps the most important gain of all would come about as a result of the elimination of a serious gap in the political structure of government. It has long been axiomatic that the consumer interest tends to be ignored because consumers are not organized. Today because of the upward price spiral, it has become essential for the welfare of the country as a whole that the consumer interest no longer be ignored. Since it is unlikely that consumers can be organized, the only prospect for effective representation of the consumer interest is by the establishment within the Government of an agency specifically designed to perform that function. In a governmental structure which is heavily weighted by agencies representing producer interest, there is a compelling need for the countervailing influence of an agency which will bring to the attention of top policy officials the ways in which their actions may affect the American people in their capacity as consumers. Only through the establishment of a Department of Consumers will the voice of the consumer be heard in the land.

ADDRESS OF SENATOR ESTES KEFAUVER, DEMOCRAT, TENNESSEE, AT GEORGE PEABODY COLLEGE FOR TEACHERS CONFERENCE ON THE CONSUMER IN AMERICAN LIFE, JUNE 23, 1958, NASHVILLE, TENN.

I appreciate very much the invitation to address this group on the subject of "Administered Prices and the Consumer." By jointly sponsoring this conference on "The Role of the Consumer in American Society," Pi Gamma Mu and Consumers' Union can make a great contribution to knowledge on that long-neglected and almost-forgotten species—the great American consumer.

Like the Abominable Snowman of Tibet, we have reason to believe that the consumer actually does exist, although he is seldom seen and almost never heard from. Once in a while his tracks can be noted as he frequents loan companies or his diminishing savings account. Occasionally, his outraged wails can be heard coming from the supermarket as he gasps at the total at the bottom of his grocery bill. But by and large little is known of his customs, folkways, habits, and protective coloration. I am sure that the results of this conference will provide a scientific basis for further research into this strange and little-understood species.

Recently the Senate Subcommittee on Antitrust and Monopoly, of which I have the honor to be Chairman, has been holding hearings on a phenomenon which vitally affects consumers. I am speaking of our hearings on administered prices. We have been struck by the paradox of prices continuing to rise while production and employment fall. We have heard a variety of shallow rationalizations of this paradox, but nothing in the nature of a considered intellectual exposition.

Yet any economic system must rest on some intellectual foundation. The world as seen by the classical economists was made up of consumers and a large number of small businessmen. Enough firms would be engaged in the production of any single commodity, such as eggs or wheat, or steel or automobiles, so that no single firm could influence the market price of that commodity. Enough firms, in fact, so that even if a few of them entered some type of collusive agreement to influence the market, they would usually be unsuccessful.

In an economy of this type, the consumer would be in the driver's seat. The price of any commodity would be determined in a competitive market in which the demand of consumers for the product would be balanced against the economic costs of supplying the product. The market would determine the price, not any businessman or small group of businessmen. If consumers were to desire more of a commodity, the price would rise, and the industry might temporarily enjoy very high profits. Expansion of output and competition among producers, however, would soon bring price down to a level which permitted only a normal level of profit. To Adam Smith, General Motors' position that a return on investment, after taxes, of 20 percent a year is just a normal profit would seem incomprehensible.

The economic world has of course changed a great deal since the early 19th century. As a result of the industrial revolution and the growth of large corporate and financial organizations, production in many industries is now centered in the hands of a small number of giant corporations. In such industries, the firm now has the power to influence the price of the industry's product. And each firm knows that its large competitors have this same power. The safest course of action, from the standpoint of business managers, is for everybody in the industry to recognize one firm as the price leader, secure in the knowledge that such a leader will consider the interests of all in formulating his price policy. Once the leader has announced his price, his "competitors" seem to fall into line like dutiful schoolchildren.

Beyond price, the nature of the product which the consumer buys may be determined in the same way. If the three major automobile manufacturers decide that the consumer should have tail fins on his new car, he will get tail fins and pay for tail fins, whether he wants them or not.

In an administered-price economy, competition comes to have a new and unusual meaning.

According to Mr. Roger Blough, chairman of the United States Steel Corp., "competition" really means that when the other fellow raises his price you have to raise yours by an equal amount in order to meet competition. This is how Mr. Blough explained the fact that every major steel company raised its prices by $6 a ton within a period of a few days last July. If that is competition, what is monopoly?

It was inevitable, of course, that as organized large-scale business developed, there would be a parallel growth of large-scale organized labor. It takes a big union to bargain with United States Steel or General Electric or General Motors. The result has been the emerging of two great power blocs in our country—organized industry and organized labor.

Conspicuous by its absence is any comparable organization among consumers. This is not to belittle in any way the very valiant and encouraging work which has been done and is being done by Consumers' Union. The public is increasingly recognizing the great contributions made by Consumers' Union and rallying to its support.

But the absence of any consumer organizations comparable in strength and influence to the organizations of industry and labor means that business organizations, both as individual firms and as members of trade associations, are able to determine prices without paying much attention to the wishes of consumers as presented by consumers, other than during those rare and extreme circumstances when there is actual buyer resistance.

Even more serious is the lack of consumer representation in decision making at the governmental level. This is an area which is certainly not neglected by organizations of business and labor. As a consequence, Senators and Congressmen tend to hear only the positions of organized business and organized labor. There are, however, some exceptions. In our hearings on the automobile industry, the subcommittee did call several expert witnesses who have the consumers' interests at heart, among them Mr. Laurence E. Crooks of Consumers' Union. Mr. Crooks contributed a great deal of concrete knowledge on the touchy question of automobile design and quality. Generally speaking, however, legislation which is in the consumer interest stands a real chance of passage today only if it is also in the interest of, and has the active support of, some other group.

Some economists and political scientists tell us not to worry about the development of these powerful interest groups. Dr. John K. Galbraith, with whose views in many other matters I am in agreement, has a very attractive and reassuring theory of countervailing power. The development of the power of organized business, he maintains, has generated a presumably equal and opposing power in organized labor. Since the two systems of power are in opposition, they tend to immobilize each other and, according to Dr. Galbraith, the consumer interest is thereby protected.

But do big business and big labor actually immobilize each other in a sufficient number of instances to afford the consumer any real protection? Certainly what has taken place in the administered price industries provides little support to his thesis. If the union gets a wage increase which costs, say, $1 a unit, labor is happy. And if the company raises prices by $2 a unit, management and the stockholders will be happy. Since the consumer has no way to publicize the fact that he is unhappy about the price increase, he stays in his role of the forgotten man.

Something of this sort happened in the steel industry last summer, and will probably happen again next week. Wages went up, pursuant to an agreement with the United Steelworkers, by an amount which raised steel costs by no more than $3 a ton. The steel industry raised its prices by an average of $6 a ton. In this instance, and again in the case of the automobile industry, organized labor did make a very persuasive showing that no price increase was needed. But there was no consumer organization to support labor's argument on behalf of consumers.

What the ultimate solution to the problem of administered prices is, I do not know. But the first step which needs to be taken is clear. This is the correction of the lack of balance in the economy which results from the inability of the consumers to exert any influence over the economic decisions made by business and government. Consumers must find a way to give concrete expression to their wants and needs, through enlarged consumers' organizations.

The public should do this, not simply because of their individual self-interests as consumers, but because it is essential to the successful operation of our economic system as it now exists. Without such a check, we may anticipate a continuation of the paradox of rising prices accompanied by falling production and employment.

The United States has a position of leadership in the world today. Another country which denies the existence of private property and individual freedom is striving to take this position from us. We have some friends on our side, some of them strong friends and some a little shaky in their friendship. The same thing can be said of the Soviet Union. In between there is a group of nations, in most cases undeveloped and recently emerged from colonial subjection, who are trying to make up their minds which way to turn. We cannot bribe these people or force them to follow our leadership. We can only show them by our example that democratic capitalism offers a better hope for the future than totalitarianism. I can think of nothing more likely to shake the confidence of the free world in the United States than a continuation of the present economic decline. This is the reason why I have devoted most of my efforts in the recent past to finding out how to make our capitalistic system work just as well as it can, and must, work.

Mr. KEFAUVER. Mr. President, I ask unanimous consent that the bill lie on the desk until Monday, in order to give any other Senator who wishes to join in the sponsorship of the bill an opportunity to do so.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. KEFAUVER. I yield.

Mr. MORSE. Before I proceed with the subject which I wish to discuss in the Senate today, I desire to compliment the Senator from Tennessee for the very able speech he has just delivered in support of a bill of which it is my privilege to be one of the cosponsors.

I believe that the work done for the Senate by the Senator from Tennessee for some time in the past in this field places the entire Senate under a debt of great gratitude to him.

I want the Senator to know that I shall continue to stand ready and willing at all times to cooperate with him in furthering the very sound program which he has outlined here today.

Mr. KEFAUVER. Mr. President, I wish to express my appreciation for the Senator's thoughtful remarks. His encouragement, both in public statements and in the private work of the committee, have meant a great deal.

I also wish to express my appreciation to the members of the staff, including Rand Dixon, Chief Counsel of the Antitrust and Monopoly Subcommittee, and Dr. John M. Blair, Chief Economist of the same subcommittee. They have given us much encouragement to try to do even a better job.

I am grateful to the Senator from Oregon.

Mr. MORSE. I thank the Senator. I think he knows he is one of my favorite persons, and a Senator who, I believe, has made a remarkable record for statesmanship in the Senate on behalf of the people.

Mr. KEFAUVER. I thank the Senator.

Mr. KEATING. Mr. President, I desire to commend the distinguished senior Senator from Tennessee [Mr. KEFAUVER] for taking the initiative in drafting and introducing the important measure to establish a Department of Consumers, which I am cosponsoring. It is obvious this bill is the result of long and careful study and that it is a sincere attempt to rectify the present imbalance in our governmental structure which deprives the vast number of consumers in our Nation from adequate representation.

It has become increasingly clear in recent years that the economic structure of the United States is shifting and that as a result there is a crying need for enunciation of the consumer point of view in the formulation of general economic policies by the Federal Government.

The establishment of a Department of Consumers recognizes these economic facts of life and is at least partially motivated by an understanding of the difficulty of organizing consumers into any kind of an effective organization to work for their interests.

While I have certain reservations about specifics of this proposal, I believe it is a step in the right direction. There is simply not enough attention being paid today to the interests of the consumers who are often victimized because other groups are better organized or better placed to make their views known, felt, and implemented.

Mr. President, I hope the introduction of this bill will center attention on other neglected but important interests in our Nation. In addition to consumers, I believe strongly that it is time for us to come to grips with the ever increasing problems faced by our urban citizens. In the near future, I shall introduce legislation to create a Department of Urbiculture to coordinate Federal programs and studies dealing with the problems of city-dwellers. Again, I commend the distinguished gentleman from Tennessee for his leadership in this field of aid to the consumer—a field in which he has pioneered so ably and vigorously. I hope that hearings will be held on this measure and concrete steps taken so that the voice of the consumer will be heard in the highest governmental councils of the land.

GROWTH OF THE AMERICAN ECONOMY

Mr. MORSE. Mr. President, a few days ago, I announced my intention of addressing this body on the vitally important subject of the failure of this administration to adopt such policies and programs as would maintain the vigor and promote the growth of the economy which the Republicans took over as a result of the election of President Dwight D. Eisenhower.

However, in cooperation with the leadership of the Senate, I postponed delivery of the speech until today, when it was known that no business would be transacted in the Senate, and when it was known that today there would be a good opportunity to speak for the RECORD on this subject. That is what I am doing. I wish to make these observations a matter of record today, for future reference.

The theme of this speech is the documentation of my charge that this administration is failing to comprehend the needs of a Nation which must maintain its rate of growth in order to satisfy the basic requirements of an increasing population, while at the same time conducting a cold war that makes large and continuing demands on our economic resources.

This is no light charge, and I recognize it. The issue must be discussed because the present safety and future of the free world ride on the outcome. We will either reassert our vigor, employ our labor force to the full, and make good use of a growing plant and expanding industrial equipment, or we will fail in the race against communism and go down to that defeat which the Kremlin predicts so confidently.

That is how important this issue of growth really is.

That is why I demand a reversal of those policies and practices of this administration which are crippling our economy, and throttling down our rate of growth to the point of economic stagnation at the very time when we need a magnificent display of vigor and strength even greater than the burst of energy and cooperative action we reached during the peak of the war years.

In that effort nothing was too great for us to accomplish. The impossible became possible, the unreal reality. We won that war, and one form of totalitarianism disappeared forever; at least we hope it will be forever.

Now another, as vicious, as inhuman, as disrespectful of life and liberty as the other has taken its place. This communistic form of totalitarianism wages a relentless war against us and our free institutions. It makes the boast that we do not have the dynamic health and vigor of a growing economy, that we are in decline, that in the end we will fail of our purposes because we will cease to grow, cease to satisfy the needs of our people for a high standard of living, cease to employ all who join the labor force seeking jobs, be unable to aid our free world neighbors in the less developed parts of the globe in their efforts to cast off their shackles of feudal colonialism, and fail to hold the respect and loyalty of the democratic powers who are witness to our weakening decline.

A realistic appraisal causes one to wonder whether we will succumb to the easy way of inertia; whether we will allow a hard core of unemployed to grow as we limit production, even in the face of increasing productivity; whether business will maintain profits by administering prices; whether we will make venture capital hard to get, for small and new business; whether we will continue to drive farm families off the land, while piling up food surpluses; whether we will put a stop to new efforts to harness our rivers so that they may become the servants of man, turn our backs on the job of conserving and restoring our natural resources for the benefit of this and oncoming generations. All of that is what is meant by the slowdown in the growth rate of the Nation which has characterized the entire time span of this administration.

GOP ADMINISTRATION BEING SUSTAINED BY DEMOCRATIC STABILIZERS

This administration had a golden opportunity presented to it. Its years in office have coincided with years in which we have not been engaged in an active shooting war. We have been fortunate, if not lucky. I generously put it this way, for nothing I see in the foreign policy which the administration has pursued in its brinkmanship postures means we have actually developed a foreign policy which is proof against war.

During these years, the administration has had the opportunity of putting its outmoded economic philosophy to the test under peacetime conditions. Moreover, it has been the direct legatee of those beneficent social welfare policies and business programs initiated by the Franklin Roosevelt administration in the form of social security and business support programs which built into the economy a strong array of economic stabilizers.

It is my judgment that in both 1954 and 1957 this Nation would have been in the depths of a great depression comparable to the great depression of the early 1930's if these New Deal stabilizers had not been written into the law of the land.

We are too prone to forget that this administration has had the benefit of unemployment compensation, old-age and survivors insurance, a system of hospitals, a minimum wage law, commodity payments in agriculture, the Council of Economic Advisers working under the Employment Act, reforms in the securities and exchange laws, and the more responsible administration of the stock market, a series of Government credit institutions, and other such stabilizing forces.

It has been demonstrated that these built-in stabilizers can do much to prevent a depression of the depth, severity,

and duration of the 1930's. They aid in maintaining purchasing power and localizing the impact of an economic disturbance so that the result is a recession, harmful enough in itself, but not such a cataclysmic dislocation of the whole economy as was the Republican-led depression of the Hoover era.

Despite these favorable factors of peaceful surroundings and built-in stabilizers, this administration has pursued such policies right from the start as headed the Nation into recessions and onto the toboggan of declining economic growth whose end is the backlog of stagnation. One can only speculate on the extent to which the stabilizers of the Democratic administrations have saved the country from another great depression.

NATION HAS NEARLY STOPPED GROWING ECONOMICALLY

We measure growth in economic terms known as the gross national product. I quote now from figures assembled in the Government's Survey of Current Business, reported for July 1958, in which a conversion figure was established giving us like dollar values for the time span of 1947–57, and a dollar conversion figure made by the Council of Economic Advisers for 1958, bringing the series right up to the present time. I use 1954 dollars as the constant figure. Let me read what the official statistics show:

In 1947, the gross national product was $282.3 billion; by 1952 when the Democratic administration was leaving office for the time being, the gross national product had reached $353.5 billion, a gain of 25.2 percent.

Then came the Eisenhower administration in 1953, and that year the gross national product reached $369 billion. What did the new administration do to the national production figures by its immediate changes in economic policies?

REPUBLICAN PROGRAM STIFLED GROWTH

Here is a partial recital of these changes in economic policy which had visible effect on our gross national product—hiking the interest rate and ushering in the tight money policy within eight days after taking office; undermining the confidence of farmers and nearly destroying such magnificent cooperative efforts as the national Soil Conservation Service; launching the policy of McKay's "partnerships" which put a stop to new hydroelectric starts and sought to turn our natural resources over to the private monopolies; seeking to hamstring the REA; by raising the rate of interest and refusing more low cost hydroelectric institutions, trying to dismember the TVA with its illegal Dixon-Yates contract; favors such as the tax relief granted business profittakers; closing the door of the White House to the leaders of labor, while making seats at the Cabinet table the possession of management recruited from largest corporations; callously watching the mounting bankruptcies of small business while the dividend rate of the giant corporations grew and grew; working out a contract system for Government purchases which made these same giant corporations the direct beneficiaries of Government expenditures for atomic and missile development; refusing a program of building school classrooms after having given lip service to this proposal; seeking to cut back on slum clearance and public housing while vigorously fostering a plan to build costly super express highways; refusing to face recessions until they had about run their course with loss of human and economic values of staggering proportions.

That is the sordid record of this administration.

Need I continue this recital of policy and administrative changes affecting our economy, launched by this administration and followed to this day in its misguided belief that this constitutes a workable charter for healthy economic life?

Let me give the results of these misguided efforts, as detailed in the same series of Government figures on our gross national product, using those same constant 1954 dollars. Recall that this administration came to power and enjoyed the growth that had resulted in a 1953 GNP of $369.0 billion. It took at least nine months for its policies to be reflected in the economy. Five years later, in 1958, the gross national product had risen by $25.9 billion, a growth of only 7 percent in the 5-year span. This was an annual average growth in the physical product and services of the Nation in these 5 years during which Republican policies and practices were in effect of only 1.4 percent.

That compares with the average annual increase of over 5 percent each year from 1947 to 1952 under the Democratic administration. If 1953 is classed as a Democratic year because the new administration policies had little effect on it, until the last quarter, the average rate of growth from 1947 through 1953 was 4.7 percent. Note that the average was already beginning to decline.

Now let me turn to a truer picture of what is happening, to the real measure of our accomplishment. I am now about to put people into the economic picture. For during these years our population has been growing, new families are being formed, new demands are being made on our labor force and plant, a higher standard of living is in order, and our commitment to the free world in the cold war effort grows apace. But I stop to dwell on the picture inside the United States alone.

In the year 1947 the gross national product on a per capita basis—again using 1954 constant dollars in my series—$1,960. By 1952, this per capita production had risen to $2,252, an increase of 14.9 percent. In 1953, when the present administration took command, it had risen to a per capita level of $2,312. Here were visible signs of growth.

Then were ushered in those many changes in policies and administration, some of which I have just enumerated. And with what dismal results. By 1958 per capita gross national product had declined to $2,262, an absolute decline in the 5-year span of Republican rule of 2.1 percent. Here is economic stagnation with a vengence.

NATION WAS CAPABLE OF PROGRESS

I make the categorical charge that there was no external reason for this downturn in the economy. We had the trained labor force and the modern plant and equipment to sustain a continuing and increasing rate of growth. The changes which brought it about came from within the administration itself; they were the logical outcome of changes in Government policies and programs, in the changing behavior of business leaders as they came more and more to regard Washington not as the umpire but as a partner on the side of big business.

In the passage of the Taft-Hartley law and the rash of so-called right to work laws that broke out in State legislatures sponsored by the Republican reactionaries, there began a concerted drive to weaken and possibly destroy organized labor and collective bargaining, the cornerstone of labor-management peace. There followed such a deterioration of labor-management relations as we have not witnessed in a quarter of a century.

It came at a time when science and invention had created a productivity of astonishing proportions which should have provided the incentive for even greater production. Instead of good will and statesmanship between management and labor seeking to harness this tremendous productivity for the betterment of all, there was hostility and lack of cooperation engendered by the failure of the administration to meet the challenge and to bring the contending parties together under national policies fair to both and beneficial to the public.

Not the least of the causes of our economic stagnation is the blind unwillingness of this administration to chart a bold course of conservation and use of our natural resources. Fully three-fourths of our hydroelectric potential lies as yet undeveloped in the great falling waters of our rivers, rivers which seasonally go on a rampage to flood and destroy millions of dollars of property and take hundreds of human lives. Not one new start has been made in the years of the Eisenhower administration to mark a broadening of the foundation of resources which underpin our economy.

We cannot have economic growth without unlocking the vast energy resources of nature, for we live in the kilowatt age of history where man is made strong by using electric power. Tomorrow's man will have at his disposal power coming from the atom or from harnessing the solar system itself. But neither of these great boons will be his so long as our national policies are of retrenchment, and of fear and failure to meet the challenge of economic advance.

ADMINISTRATION ACCEPTS COSTLY RECESSIONS

No more revealing sign is known to me of the bankruptcy of this administration in ideas, of its tiredness and weakness in drifting from crisis to crisis, than its failure to come to grips with the recession. In two successive recessions, that of 1953–54 and the one in which we still find ourselves, the administration has only belatedly recognized their existence.

It fumbled from one pronouncement to another in a growing sense of futility, of commitment to letting nature take its course instead of offering any timely program to stem the decline and reassert the growth of the economy.

The earlier recession cost us $33 billion in gross national product. The current recession will add another $46 billion to the cost. So I find little to comfort me in the recent declaration of the February Survey of Current Business that gross national product for 1958 "was within 3 percent of 1957 in real terms." We do not make much progress by sinking into the morass of periodic, recurring recessions and then taking years to regain our footing again.

We in Congress are warned by the President that we must not take matters into our own hands, that we must not program the growth of the Nation.

An old and tired administration has suddenly embraced a balanced budget psychology which maintains that the status quo is a worthy goal.

STAGNATION AND RECESSION ARE REAL BUDGET UNBALANCERS

It took the administration 6 years to discover that a balanced budget "is the cornerstone of sound economy." Prior to this year it had accumulated a budgetary deficit of $20 billion. Now with religious zeal it defends its allegedly balanced budget after having led the national economy to a point of economic decline where an honestly balanced budget has become impossible. To achieve it would be to ask the Nation and our free world allies to pay an exorbitant price for a mirage. It would substitute for growth, along which road only a truly balanced budget can be reached, humiliating penny-pinching instead of an adequate military defense, a farsighted economic policy, a broadened welfare program, and a generous foreign-aid effort. None of these elements of growth is possible if we become the victims of this administration's capitulation to the fear of our future.

We are being told that we face the dangers of inflation if we do not retrench, cut Government costs, curtail Government outlays, and let the private sector of the economy nurse itself along in the comfortable policy of little or no growth and much stability. We are to close our eyes to the existence of a large and growing number of workers seeking jobs which a stable but nonexpanding economy cannot provide for them.

This, I submit, is the policy of defeat. This is the road to economic stagnation and ultimate ruin. This has no place in a dynamic society which is on the march to higher things. I deny it as either necessary or desirable.

INFLATION THREAT, TOO, SHOULD BE MET WITH EXPANSION NOT RETRENCHMENT

In doing so, I am prepared to meet head-on the charge that to expand is to court the disaster of inflation. Given a competitive economy, when the Government sector uses its great forces to expand its resource base, to enlarge the areas of cooperation and understanding between labor and management, to prevent monopolies and administered prices while fostering independent business enterprise, to establish sound fiscal policies and a fair tax system, then there is no basis for any real fear of inflation. For the employment of our labor force at wages resulting from the collective bargaining of equally strong parties, and the fixing of prices in competitive markets where goods are in sufficient supply, there is no real fear of inflation.

Inflation imperils the economy under existing conditions fostered by this tired, wornout administration because of the shackles its policies have welded onto the economy itself. Price inflation caused by bypassing of the marketplace of competition, by the restriction and control of output to a fraction of the public needs, is a fear ever present in the psychology of an administration lacking the courage and vision to provide for growth in a dynamic society.

I commend to this body the wise counsel of our majority leader, the eminent Senator from Texas [Mr. JOHNSON], who courageously urged upon us the establishment of a searching TNEC-type survey of the reasons for our present economic stagnation and the ways to overcome it.

In the forthcoming studies and investigations of the Joint Committee on the Economic Report under the able leadership of the senior Senator from Illinois [Mr. DOUGLAS], I see the prospect of assembling the facts which will amplify and prove beyond any shadow of a doubt the matters of which I have been speaking here today.

I urge upon the Senator from Illinois the consideration of this vital subject of the stagnation of this economy under the policies and practices of this administration.

The report of the Joint Economic Committee, which he heads, on the 1959 economic report of the President, brings out the concern among committee members about this matter, as expressed in its section entitled, "A Higher Rate of Growth Over the Long Run Should Be Emphasized."

The succeeding sections of the Joint Committee's report indicate some of the fields where changes are called for; for example, "Need for less restrictive monetary policy in 1959"; "Tax reform urged now"; "Research and development"; "Aid to education urgently needed"; "Depressed economic areas at home"; "Developing resources"; "Slum clearance and urban renewal"; and "Improve antitrust laws."

These are the areas where Government policies make the difference between progress and stagnation. I look forward anxiously to the study soon to be begun on the problem of providing full employment and maintaining an adequate rate of growth, while maintaining a stable price level.

CAPITAL BUDGET WOULD FURTHER THESE OBJECTIVES

One of the most important tools that we could, and should, use in this connection is that of a capital budget. I have already introduced Senate bill 1244, which calls upon the President to submit with the regular budget a further breakdown of funds, showing those that are classed as capital investments. My bill calls for capital investments to be separated, first, in the general sense of a capital investment which would include all public works, such as highways, regardless of whether the Federal investment in them is by grant or by loan. Second, these capital investments would further be refined, under my bill, to show those that completely repay themselves, including both interest and principal. The latter refinement would show us the budget items which would be repaid in full to the Treasury. They are the items that are direct and explicit investments in the economic growth of the country, for which the Treasury will be reimbursed.

By all rules of sound business, they should be separated from other items. Only by using such a budget procedure can we hope to judge properly our overall budgetary outlay.

In this connection, I should like to expand a little on the debate I had yesterday with the Senator from Minnesota [Mr. HUMPHREY] on this matter.

As I said at that time, I am delighted that he has introduced a capital budget bill. My bill, S. 1244, is somewhat different from his, but not in principle.

In brief, the only difference lies in the distinctions called for in separating capital investments from operating expenditures.

When I introduced Senate bill 1244, on March 2, I mentioned that in 1947 I had requested of the Budget Bureau a breakdown, by capital and operating expenses of the then-pending budget.

The resulting figures showed a capital budget in its simplest form, merely separating the capital expenditures, regardless of the form of the expenditure. Thus, there appeared on the capital investment side all Federal grants to the States for public works and similar capital improvements, as well as the Federal expenditures for such items.

There was no distinction as to which were self-liquidating and which were not. In my bill of that year, therefore, I called for a further distinction to show recoverable expenditures, too.

My proposals of 1949 and 1958 for a capital budget took the same form as the bill introduced yesterday by the Senator from Minnesota, and called only for the one distinction.

In working on the matter this year, I came to the conclusion that something more is desirable in presenting these figures to Congress and to the public. I am certainly in favor of the simple separation; and that is called for in my bill, S. 1244, as well as in the bill of the Senator from Minnesota.

But in that form, there is no indication of which capital investments are repayable to the Treasury; and this is where Senate bill 1244 goes beyond Senate bill 1560 and my bills of 1958 and 1949.

This year I returned to the concept of the 1947 bill, and proposed that the capital budget be further refined to show the outlays that are completely reimbursable, both as to principal and as to interest.

Thus, the REA loans, the power projects, the housing loans, and similar

items that are recouped 100 percent, including interest, would also be listed separately, under the provisions of my capital budget bill. These would be excluded from public debt.

In his speech on yesterday, the Senator from Minnesota [Mr. HUMPHREY] said:

> It should also be noted that many countries such as England and Sweden use a capital budget. In these countries, current operating expenses of the Government and outlays for military equipment and relief measures are kept distinct and separate from capital outlays. Capital outlays, in turn, are broken down into two parts: First, outlays for nonrevenue-producing public works such as public buildings, parks and monuments, and second, outlays which are revenue producing such as loan programs and power works projects.
>
> The budget in these countries is considered balanced when tax revenues are sufficient to cover all regular operating expenses, interest payments on the public debt, and amortization of the nonrevenue-producing capital outlays. Self-liquidating capital outlays are excluded from the regular budget.

Those paragraphs describe my bill almost exactly. However, Senate bill 1244 does not exclude the self-liquidating items from the budget, but only from the national debt; and it requires that they be listed separately in the budget.

In addition, I have related the capital expenditures to the work of the Council of Economic Advisers, by directing the Council to make recommendations on capital investment for inclusion in the economic report.

So I think the only differences between our bills are that mine is a little more refined in its definitions, in the first place; and, second, my proposal excludes the self-liquidating expenditures from the public debt.

If the way to start is with the simplest separation and definition of capital, I shall be happy to start in that way. But in order to have a really understandable budget, I think we should also know how much of the total will be repaid in its entirety; and that concept is included in my proposal.

Mr. President, it is my earnest hope that during the Easter recess the Senator from Minnesota [Mr. HUMPHREY] will study the differences between our two bills, and will see that the additional portion of my bill provides a very desirable improvement over his bill, and that he will, after the Easter recess, find his way to become a cosponsor of my bill.

CURRENT STAGNATION CONTRASTS WITH LONG-TERM GROWTH

Mr. President, the Department of Commerce has just published a study of the Nation's economic condition covering the past 50 years, which highlights the dismal record of the last 5 years. This study, called "U.S. Income and Output," shows that in the last half century, the Nation has averaged a 3 percent annual growth, even when the great depression and the recent recessions are taken into account.

In other words, the study shows the amazing strength of our economy and what it can do in spite of the adversities of Republican economic policies. I believe that if we had been relieved of these policies, our growth would have averaged considerably better than 3 percent a year.

For example, if the progress in the U.S. economy had not slowed down, and if the gross national product had continued to advance at the same rate as in 1947–53, it would have reached $536 billion in current prices in 1959, or about $66 billion more than the Council of Economic Advisers now promises to the Nation.

The cumulative loss in gross national product over the last 6 years, in comparison with the rate which prevailed before the change in administrations, will be roughly $200 billion by the end of this year.

OUR FUTURE WILL BE WHAT WE DECIDE TO MAKE IT

It is my contention that we must confront communism with the living proof of a dynamic society under the free institutions which we cherish. I am convinced that our free system of economic endeavor can continue to provide the highest standard of living in the world to a growing population living without fear either that inflation will wipe out their savings or that deflation will destroy their jobs. Growth and stability of prices are partners, or they can be if we choose to make them partners, in the upward march of our vigorous and progressive people.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point in my speech certain tables which provide the statistical data in support of the contentions I have made in various parts of my speech.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

APPENDIX TABLE I

1947–53: GNP, at 1954 prices, advanced (from $282.3 billion to $369.1 billion) by 30.7 percent, rising annually 4.7 percent (at compound interest).

1953–55: GNP, at 1954 prices, advanced (to $392.7 billion) by 6.4 percent, rising annually 3.1 to 3.2 percent.

1955–58: GNP inched up (to $394.9 billion) by 0.6 of 1 percent, rising 0.3 of 1 percent annually.

In terms of per capita real product, the annual rates of progress were: plus 3.0 percent in 1947–53, plus 1.4 to 1.5 percent in 1953–55; minus 1.4 percent in 1955–58.

APPENDIX TABLE II

According to the Council of Economic Advisers, expenditures of the Federal Government on civilian needs changed as follows (in billions of 1958 dollars):

Last Democratic budget, 1953, $9 billion; Republican budgets, 1954, $6.7 billion; 1955, $6.6 billion; 1956, $5.7 billion; 1957, $5.5 billion; 1958, $7.6 billion.

The increase in 1958 was forced on the administration by Congress, the pressure of public opinion and previous commitments.

APPENDIX TABLE III

The administration has had the chance to test its economic philosophy in time of peace, with the national economy protected against major depressions by the reforms and institutional changes introduced in the 1930's. What are the results of this test?

Gross national product (at 1954 prices): 1947, $282.3 billion; 1952, $353.5 billion; 5-year period increase, 25.2 percent.

1953, $369.0 billion; 1958, $394.9 billion; 5-year period increase, 7 percent.

On per capita basis: 1947, $1,960; 1952, $2,252; 5-year period increase, 14.9 percent.

1953, $2,312; 1958, $2,262; 5-year period decline, 2.1 percent.

Source: Survey of Current Business, July 1958.

Mr. MORSE. Now, Mr. President, in closing this speech, I desire to say a brief word on the political sacred cow called a balanced budget which the Republican administration is economically worshiping these days. I mentioned it briefly in my speech on the floor of the Senate yesterday in relation to another subject matter.

Mr. President, I am one Senator who recognizes that the terrific propaganda job being done by much of the American press in support of this very unsound position of the President of the United States—unsound when we consider the human needs of our country at the present time—is having its political effect on American public opinion. My mail shows it.

I say to the people of my State I have more confidence and faith in enlightened capitalism than the President of the United States apparently has, because I know that the wealth of this Nation, its real wealth, is bound to grow if we have the vision and the courage necessary to expand our economy.

To paraphrase the greatest economist in the Congress, and I think one of the greatest economists in this country, PAUL DOUGLAS, of Illinois, chairman of the Joint Committee which is making a study of the Nation's economic problems, the talk of inflation is talk about an economic myth.

PRESIDENT ENGAGES IN SCARE TALK ABOUT INFLATION

The President of the United States is trying to scare the masses of the people into believing that we should not expand the economy by such appropriations as are necessary to promote human values in the years immediately ahead. That is the direct relationship of this problem to my capital budget proposal.

When some of us are pleading for public works appropriations to create more energy for the national economy, recognizing, as we do, that the economy can expand only as the energy resources expand, we are not threatening the budgets of the United States, because such appropriations will pay for themselves over and over again by revenues paid into the Treasury of the United States.

I think it is most unfortunate that we have a President of the United States who gives us little evidence that he is aware of economic realities.

So I would say to him as I close my speech, "Mr. President, I should like to have you, to a greater degree than you have demonstrated in the past, think in terms of all the human beings of the country, and not merely the big boys, not only the bankers, to whom, under your administration, you have given millions of dollars in handouts and bonanzas as a result of increasing interest rates, to the point that bankers make more money by lending less money than at any time in our history. The time has

come for you, Mr. President, to put human values first and dollars second."

PRESIDENT SHOULD HELP FEED CHILDREN IN DISTRICT OF COLUMBIA

As I said before the Committee on the District of Columbia this morning, in discussing the question of human morals involved in the feeding of hungry children in the District of Columbia, the problem could be solved by the President of the United States lending the influence of his great Office in support of those of us who have been pointing out during the past several years that there is no moral right in the Congress of the United States to permit a single boy or girl in the District of Columbia to go hungry.

The President cannot have it both ways. Of course, I do not think the President should be involved in the government affairs of the District of Columbia, any more than the Governor of a State should be involved in the municipal government affairs of any State.

For 15 years I have taken the position that the President ought to be removed from any governmental participation in the administration of the municipality of the District of Columbia, and the people of the District of Columbia ought to be given the right of franchise to govern themselves, with the Congress exercising its control, under the Constitution, to work out with the municipal government a fair ratio of Federal contribution to the District of Columbia government. But every time a home rule bill for the District of Columbia is introduced President Eisenhower takes the position that control—ultimate control—must remain in the White House.

Thus, the administration bill for a Territorial form of government for the District would not only give the President the authority to appoint the Governor, but would give him the authority, in the last analysis, to veto the acts of the Territorial legislature.

I am opposed to that kind of home rule setup, Mr. President; but if that is the position the President of the United States is going to take, then I say that as the chief administrator of the District of Columbia he cannot avoid his moral responsibility to protect human values in the District. If the President is going to dabble in the affairs of the District of Columbia, then he should not be allowed to "pass the buck" or escape responsibility for more than 7,000 hungry children of grade school age in the District of Columbia. In my judgment, that is only a little example of the failure of our President to put human values first.

So again today, at this Easter time, I express the hope that my President, as he contemplates the meaning of great spiritual and moral values, will put the Cross above the dollar sign, and will recognize that, as the leader of the Nation, he has the social-conscience obligation to all the American people to give us some leadership in promoting and protecting human values and developing an expanding economy, which is our best weapon to meet the threat of communism in the hundred years ahead.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MORSE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. ENGLE in the chair). Without objection, it is so ordered.

OREGON CENTENNIAL AND LANSING, MICH., CENTENNIAL

Mr. MORSE. Mr. President, before my good friend the senior Senator from Minnesota is recognized I have a very important bit of information to supply for the RECORD.

Yesterday I received a very interesting telegram from the president of the Lansing, Mich., Centennial. I have served notice on the two Senators from Michigan that I have received this communication. I shall have a few things to say about it in a moment, but I want the RECORD to show the message from the Lansing Centennial, Inc., addressed to me, which reads:

> Lansing's hats are off to the Oregon Centennial—but not by choice. We do, of course, send greetings and felicitations to a great State from a great city as both celebrate their 100th birthday. This we do in a spirit of centennial chivalry, a code which you seem unable to uphold. You have monopolized the grey felt top hat market. As a result Lansing is ready to blow its topper. Portland's order for 10,000 dozen grey felt hats from Fostoria, Ohio, firm superseded Lansing's order for 440 dozen hats. Consequently Lansing received only a few hats and our beards aren't long enough to cover our heads. What have you done with our hats? Once more with feeling, Lansing's hats are off, etc.
>
> H. (FOR HATLESS) ANDREWS,
> *President of Lansing Centennial, Inc.*

I was deeply touched and moved by this message, because it presented a fine exhibition of the American free economy at work. I assume that the operators of the Lansing, Mich., Centennial believe in the competitive system.

I asked my good friend the Senator from Michigan [Mr. HART] if it was thought there should be granted some quotas, or administered price arrangement or some other monopolistic arrangement, and I had a feeling his reply was by way of confession and avoidance.

However, after receiving this telegram I got in touch with the officials of the Oregon Centennial and asked them for their advice as to what kind of a telegram I should send them. They authorized me to send a telegram, which will go out forthwith, but so that due notice will be served on my two Michigan colleagues, for whatever rebuttal or defense they may desire to make later in behalf of Lansing, Mich., I shall read the telegram into the RECORD. My reply to the Lansing, Mich., Centennial Commission reads as follows:

> In response to the telegram from the president of the Lansing Centennial, my office has been in touch with officials of the Oregon Centennial Commission.
>
> Oregon Centennial officials have issued an urgent call to the people of Oregon asking them to send their old, discarded hats to the mayor of Lansing, Mich., so he may distribute them to the bareheaded citizens of that great city, and the centennial need not suffer because of Oregon's mammoth order of centennial hats for Oregon's statewide celebration. Rain soaked straw hats, moth-eaten derbys, and frontier cowboy hats with bullet holes for ventilation, are being solicited to help protect the bare heads of Lansingites.
>
> We are tipping our hats, however, and not those manufactured in Fostoria, Ohio.

This, of course, gives me the opportunity—and of course no Senator from Oregon these days would ever miss such an opportunity, and certainly should not—to extend once again to all my friends in the Senate a cordial invitation to visit the great State of Oregon this summer as we celebrate our 100th birthday in a centennial the like of which has never before been conducted.

With that comment I yield the floor; and I shall listen to my friend the Senator from Minnesota.

EASTERTIME AND THE AMERICAN WILL FOR PEACE

Mr. HUMPHREY. Mr. President, in a few days we will see the dawn of another Easter. To us here in America and in other countries of the Western World Easter is a solemn, a reverent, and a meaningful day. It has so much significance because it is a day rich with the symbolism of peace and of hope. It is a day on which all of us, no matter how overwhelmed by the cares and harassments of the world we may be, pause and take a new look at life. It is a day on which we can lift up our hearts and heads and fix our gaze once more on the distant horizon.

Above everything else Easter is a day of peace and rededication. If the advent of the American democratic way of life into this world has meant anything during the past two centuries, it has meant fresh hope for peaceful living among men. The American way of life is founded on the basic principle of the respect of man for man, and of cooperation among men for the fulfillment of their dreams—the dreams which our forefathers succinctly summed up in the phrase, "Life, liberty, and the pursuit of happiness." Throughout our history the American people have worked and striven to achieve these ends in their personal lives, in the circle of their hearth and home, and in the broader sphere of the entire United States. In more recent decades we have widened the arc of our interests and endeavors to areas beyond our own national boundaries, for we have recognized that we are not a nation which can exist alone and apart. For this reason we have realized the importance of engaging in the work of achieving peace. We Americans by engaging in the work of peace have been faithful to the traditions originally set forth by our forefathers. Through this work America has become respected by the peoples of the world.

In the past few years, however, I fear that we have failed to direct our energies and attention as we should to our

traditional works of peace and that we have been straying from the road which leads with certainty toward the life, the liberty, and the pursuit of happiness which were established long ago as our national goals.

For reasons of weariness, perhaps, or because of a lack of awareness, we may be neglecting the works of peace that are our own proper heritage and obligation. We seem to be forgetting that it is only through unflagging vigilance and effort that we can attain well-being and peace for our own and other peoples. We appear to be shrinking from risks that must be assumed in what will always be a somewhat dangerous world.

As we approach this Easter season it is a proper occasion to rededicate ourselves to the tasks of peace. It is a proper time to open our hearts to our fellow men and to give them a sign of our friendship and our respect. It is a proper season to examine our minds and souls to determine if we are completely conscious of our role and obligation at this juncture in history.

Throughout the past 2 years I have attempted to outline what I call the "Works of Peace" program. After this Easter season, when the Congress reconvenes, it is my intention to offer a program entitled "Food for Peace," wherein I will detail a long-range program for the utilization of American agricultural production for humanitarian and economic purposes in many countries of the world. This will be a long-range program in terms of its objectives, but immediate in terms of its effect.

Secondly, I shall outline a program entitled "Education for Peace," which will embody coordination of our present efforts in the field of education on an international basis, and a further effort to broaden that program and to bring the blessings of education and literacy to many countries of the world. Let us have the image of America be that of the teacher and the good Samaritan.

This noon it was my privilege to be the host at a luncheon for a good and fine man, a great teacher and missionary. I refer to Dr. Frank C. Laubach. He has demonstrated in his life the effective work of a true Christian. He has made it his mission to bring knowledge, understanding, and literacy to the peoples of the world.

Norman Cousins, editor of the Saturday Review, had this to say about Dr. Frank C. Laubach:

> Frank C. Laubach is one of the noblest human beings of our time. What this world needs is moral literacy and the gift of compassion.

Norman Vincent Peale, in the current issue of Look magazine, refers to Dr. Laubach as being one of the truly great men of our time "who has lifted the blight of illiteracy from millions, an inspired missionary, educator, and preacher, a flesh-and-blood saint."

The Christian Herald, a great publication of the Protestant churches, speaking of Dr. Laubach, said "that many governments have called upon him to help reduce illiteracy among their peoples."

The programs and activities of Dr. Laubach's work are wide and inspirational. My reference to Dr. Laubach is made today because I feel that his work is symbolic of the kind of effort which is required at this time in human history if our Nation is to take unto itself truly the mantle of leadership of free men and women.

I have joined with the Senator from Alabama [Mr. HILL] in a program known as "Health for Peace." This program, too, will be expanded in some of the measures which will be offered after April 7, when the Senate reconvenes. I merely state now, in brief, that a series of projects and proposals will be laid before the Congress which I think will give a new sense of direction to the great energies and capacities of the American people. Today this Nation is suffering from a kind of moral frustration. It seeks to do the things that are right, but it lacks a sense of direction and leadership to fulfill its goals and ambitions. It is the hope that some of the proposed legislation will at least chart and direct those energies into constructive purposes.

This is a time to wipe despair from our hearts and to drink in all the hope that springs from the symbolism of this solemn season. There is no better time for us to stamp out any timidity and lethargy that may have crept in and to renew our decision to march forward with confidence and in a spirit of dedication to promote the works of peace and mercy.

It would be highly appropriate for this body to express, at this Eastertime—its willingness and determination to further the works of peace throughout the world. I believe that every Member of this body would like to see some progress made toward eliminating or curbing the instruments of mass destruction.

Sometimes some of us become a little weary of the constant zealous challenge of the Communists. I recall that during a brief visit with Mr. Mikoyan in Moscow, he gave me the definition of a modern Communist. He said that a modern Communist has the zeal of a Bolshevik and the practicality of a capitalist. I could not help but think how apt a description that was of the Communist leader and the young Communists of 1959.

It is my feeling that the people of the free world need the zeal that goes with the revolutionary spirit of those who sought life, liberty, and the pursuit of happiness, or, as the French would say, "liberté, egalité, fraternité."

We should, and must, state our convictions and ideals.

The gods of communism are Marx, Engels, and Lenin.

Our great spiritual values and principles come from Jesus of Nazareth, Moses, Mohammed, Buddha, Confucius, Gandhi, and the other great spiritual leaders of the world. We are richly endowed with a spiritual treasure that can, and does, give us overwhelming strength in any contest between totalitarianism and freedom. We should welcome the challenge of ideological struggle and competition.

By so doing perhaps we will find our way to a more meaningful purpose in this period of tension and uncertainty.

It would be highly appropriate for this body to express at this Eastertime its willingness and determination to further the works of peace throughout the world. I believe that every Member of this body would like to see some progress made toward eliminating or curbing the instruments of mass destruction.

For many years we have witnessed fruitless negotiation by the governments of the world to attain this end. Within the past couple of months, however, there is at least a genuine possibility of making the breakthrough toward real disarmament and peace. There is now almost within our grasp an agreement to end nuclear weapons tests under an effective and workable system of international inspection and control. The successful signing of such an agreement by the nuclear powers could be the opening of a door to a new chapter in the history of mankind. For the American people it could ease the grim threat of nuclear annihilation. For the Russian people it could be a political event of tremendous import—the first turning in the road to lead them out of the wilderness in which they have been so long lost. For everyone in the world it could be the dawn of a new day of hope, peace, and promise.

Although this possibility gives most of us encouragement at this Eastertime, there are still many who appear faint of heart. Their sole consideration is the preservation of a state of 100 percent security. Crouching in the hole of their fears, they dream only of survival. What we should want is to live a full life, with confidence and dignity like brave and free men—not merely to survive—to exist from one crisis to another.

It seems to me that this whole concept of survival is foreign to free people. Survival is not enough. What we need is to live a meaningful life of purpose, a life which leads to the enrichment and enlightenment of mankind.

We Americans should thank God that the older generation of Americans who bravely safeguarded life, liberty, and the pursuit of happiness as our national heritage were willing to take reasonable and moderate risks in the interest of a better and more peaceful world. Those who won the independence of this Nation, those who conquered the frontier, and those who made our country great in so many ways were not afraid of taking necessary and reasonable risks. The risk of continuing the present state of mutual deterrence with the threat hanging over us of mass annihilation is, in my estimation, however, an unreasonable and unnecessary risk.

The armament race could well bring death to millions of human beings. It is, in my judgment, too great a risk when there is a more prudent and practical alternative.

What I am attempting to say is that it is not enough merely to settle on keeping the peace through the threat of mutual annihilation, but that something more positive and constructive is needed. We must definitely try to turn the energies of mankind away from this armament race which literally drains

and erodes our economic and spiritual life.

This alternative is a highly effective inspection system for a suspension of nuclear tests. While there are admittedly risks in any disarmament agreement establishing an inspection system, they are risks that are manageable and not such as to threaten the very existence of mankind. To those who are so fascinated by the problem of risks I say, "Look at all the risks, not just one of them. Weigh all the risks, not just one of them. Compare all the risks, and then pick the one that has the least danger to mankind." I know what the choice will be if we but look at all the risks and compare all the risks.

The negotiations at Geneva for an agreement to suspend nuclear weapons tests with adequate inspection have now arrived at the heart of the problem. Yesterday, at the hearing of the Senate Subcommittee on Disarmament, we had before us our chief negotiator, Ambassador Wadsworth. He gave us a very detailed review of the negotiations thus far. I am happy that Ambassador Wadsworth was still an optimist and thought there was still a chance for a successful conclusion of an agreement.

This is not to underestimate the difficulties ahead. However it is good to point out that there is still a positive and constructive attitude on the part of our Government and on the part of those who are conducting our negotiations. I would say to my colleagues that it would be surely hoping for too much to presume that such an agreement could be arrived at between now and, let us say, the Foreign Ministers Conference pertaining to the situation in Berlin. I seriously doubt that the Soviets will come to any agreement on anything at least until the time of the Summit Conference. I have the feeling that they will wish to pile problem on top of problem to be discussed at such a Summit Conference. It is the way the Soviet power system works. My plea today is that nothing be done by our Government which will in any way impede the progress of these Geneva negotiations, and that nothing be done which will in any way cause them to be broken off by any action on our part.

I should like to have the United States, during these crucial negotiations at Geneva, to be the living example of a just nation, to be the living example of a nation dedicated to the pursuit of peace with justice and freedom. I wish the United States to stand before the world as willing to walk the extra mile to obtain some surcease from our sorrow which comes out of the armaments race and the cold war between ourselves and the Soviets.

We do not yet know whether the Soviet Union will accept the most essential element in an agreement to end nuclear arms tests, that is, a control system with full discretion to act, unhampered by the veto of any nation. We do not know as yet whether the Soviet Union will accept other features of an adequate inspection system, such as effectual on-the-site inspection procedures, in order to assure that a violator will not escape undetected.

We have a unique opportunity at this Eastertime, Mr. President, as the Geneva negotiations stand at a critical juncture and while they have been temporarily suspended for a rest period, to throw our own influence into the balance, an opportunity to communicate to the Soviet Union the deep conviction of the American people on this crucial subject, and to make clear to all the world our dedication to peace and justice.

Our message to the Soviet Union, demonstrating as it would the desire of the American people for a meaningful suspension system, could tip the balance in favor of the success of the conference.

In any case, it is imperative that the people of the world know where we stand. People are aware that the negotiations are at a critical point and they are watching for some hopeful and encouraging sign from us. It is for this reason, Mr. President, that I submit at this time a resolution for the consideration of the Senate on the subject of ending nuclear weapons tests. This resolution will make abundantly clear that the Senate of the United States, and the American people give complete support in principle to the endeavors of the President and of our representatives at Geneva in trying to reach an effective agreement.

Although simply worded, this resolution could have a powerful effect. It is a resolution regarding principle only, and it does not involve approval or disapproval of any specific details of negotiation. In the resolution endorsement is given to the key principle that an adequate inspection and control system must be created by any agreement to suspend nuclear weapons tests in order to guarantee that the agreement is not being evaded. But it refrains from specifying what constitutes an adequate inspection and control system.

This is a matter for the negotiators, for the technicians.

This is a matter which still must be negotiated by the representatives of the United States, the United Kingdom, and the Soviet Union when they reconvene in April. When the final treaty is signed and submitted, each Member of the Senate will have the prerogative of appraising its specific terms freely and as he sees fit. He will have no obligation merely because he might have voted in favor of the resolution.

I submit the resolution as a gesture of peace and as a sincere expression of the Senate and the American people for a better and more harmonious world. I hope it may receive prompt and favorable consideration. The resolution reads:

SENATE RESOLUTION 96

Whereas the goal of the people of the United States is a just and lasting peace; and

Whereas the peace of the world is threatened by an arms race of major proportions among the leading powers of which a key aspect is the continuing development of devastating nuclear weapons; and

Whereas for 13 years negotiations to control and limit these weapons have not led to agreement; and

Whereas representatives of the United States, the United Kingdom, and the Soviet Union are now meeting in Geneva for the purpose of drafting a treaty on the discontinuance of nuclear weapons tests; and

Whereas an effective international control system is a necessary component of any multilateral agreement on the cessation of nuclear weapons tests in which all states are to have confidence; and

Whereas an agreement regarding the discontinuance of nuclear weapons tests under an effective control system would provide an opportunity to ease world tensions and realize a small but significant first step toward the control and reduction of armaments: Therefore be it

Resolved by the Senate, That its Members support the efforts of the United States to continue to negotiate for an international agreement for the suspension of nuclear weapons tests; and

That it emphatically endorse the principle that an adequate inspection and control system must be part of any such international agreement involving a suspension of nuclear weapons tests; and

That the Senate requests the President of the United States to submit to the Soviet Government the contents of this resolution and that he ask the Soviet Government to transmit the resolution to the Soviet people so that leaders and people alike will know of the desire of the American people, speaking through their representatives in the Senate, for the successful outcome of the negotiations in Geneva for an effective and reliable agreement for the discontinuance of nuclear weapons tests.

Mr. President, it seems to me the resolution should have a very constructive effect upon the negotiations. It should also make it manifestly clear to one and all in America and throughout the world that the policy which is being pursued by our Government in negotiations at Geneva is a policy which is supported by the representatives of the sovereign States and of the people of the United States. That is why I have submitted the resolution.

I assure Senators that the resolution has been discussed with the members of the Subcommittee on Disarmament and was prepared with the cooperation of the State Department. This is not to say that it is endorsed by the State Department; it is merely to state that there has been a cooperative working relationship in the preparation of the language, so as to convey the desire of the American people for a relaxation in world tensions and the beginning of some accomplishment in the field of disarmament and peace.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. MANSFIELD. I commend the distinguished senior Senator from Minnesota for the Easter message he has delivered to the Senate, and I would hope, to the people of our country, to those of the free world, and perhaps the whole world as well. As always, he is thorough in what he attempts to do. Certainly he is considerate of the feelings of others.

I was happy to note that in an attempt to bring about a resolution which would face up to this momentous question he had considered what the reactions of the executive department would be, as well as those of the subcommittee

over which he has presided with such distinction for some years.

I think the Senator from Minnesota, as always, has performed a real service for his country. I want him to know that I appreciate more than I can say the consistent and outstanding efforts he has made to bring about some degree of stability and peace to the people of the world, because the people of the world are crying for peace.

Mr. HUMPHREY. I am deeply grateful to the Senator from Montana. I am certain that he knows and the Senate knows that I consider it a rare privilege to work with him in what I believe is a constructive endeavor to contribute to our peace and security, and to do whatever is possible, on the part of individuals, to direct our endeavors in paths which lead to peace with honor and peace with justice.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD an article entitled "West Owes Debt to Mr. Macmillan," written by Marquis Childs, and published in the Washington Post and Times Herald. The article refers to the courageous efforts of the British Prime Minister on his visit to Moscow, and to his recent visit to the United States. I am delighted that the President of the United States and the Prime Minister of Great Britain have had their conference. I am pleased that there has been so high a degree of cooperation and understanding between these two great leaders of the free world.

If the representatives of the free countries—the President of France, General de Gaulle; the Chancellor of West Germany, Dr. Adenauer; the Prime Minister of Great Britain; and the President of the United States—stand together and work together, we need have no fear of any meetings with the Soviets and no fears or doubts about our capacity and ability to stand up to the Soviets and to defend our principles and positions.

Mr. President, along with the article, I ask unanimous consent to have printed in the RECORD an editorial entitled "Moving Toward the Summit," published in the Washington Post of March 24, 1959. The editorial underscores the fact that "The chief significance of the Eisenhower-Macmillan talks may be the virtual assurance they give that the West will negotiate with Moscow on a continuing basis so long as there is any hope of averting a military showdown."

I believe I am correct in saying that it has been pretty much the view of the distinguished senior Senator from Montana [Mr. MANSFIELD], the distinguished Senator from Arkansas [Mr. FULBRIGHT], the chairman of the Committee on Foreign Relations, myself, and others, that there is no contradiction between standing firm and being strong in terms of rights and principles, and at the same time having the statesmanship and courage to negotiate honorably in the hope of finding answers and solutions, small as they may be, limited as they may be, to the terrible problems which beset the world today. It is to this view that I am committed.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald]

WEST OWES DEBT TO MR. MACMILLAN

(By Marquis Childs)

The extent of the debt owned by the West to Prime Minister Macmillan has become more evident in the course of his talks with President Eisenhower and the President's advisers on foreign policy.

It is hardly too much to say that he prepared the way for the negotiations which are to take place in the spring and summer. This might have come about in any event because of the widespread fear of a nuclear war touched off by the threat to Berlin. But the frank and on the whole hard-boiled talks that he held with Premier Khrushchev in Moscow greatly facilitated the process.

One thing he is credited with achieving there is not generally known. He is credited with persuading Premier Khrushchev to delay the signing of a separate peace treaty with East Germany at least until after negotiation with the West.

Macmillan when he arrived in Moscow found the irrepressible Mr. K. in a highly belligerent mood. After the official welcome, which was cordial enough, Khrushchev informed Macmillan that he was going to East Germany for the express purpose of signing a separate peace with the puppet regime of Walter Ulbricht and Otto Grotewohl.

Then came the brutal speech in which the Soviet Premier seemed to throw the whole idea of a negotiated settlement back in Macmillan's face. It was a grim experience and a less patient man might well have replied in kind and have departed in a huff.

It was against this background in the second round with Khrushchev that Macmillan talked turkey. He made it clear that a separate peace treaty would make any negotiation impossible since it would seem to confirm the intention of the Soviets to turn over full authority over West Berlin to the East Germans on May 27. If what Mr. K. wanted was to confront President Eisenhower at the summit then this was the surest way to prevent it.

Khrushchev went through with his plans to visit the Leipzig trade fair and East Berlin. And while he continued to throw out hints about the possibility of a separate peace, in private with the East Germans he took quite a different tack.

In an off-the-record talk to top officials of the East German Communist apparatus he said that patience was necessary. He pointed to the many years of struggle that the Russian Communists had gone through after the revolution of 1917, contrasting those bitter years with Russia's recent triumphs.

Ending on a note of inspiration he told the East German Communists that they were on the right track. Just a few more years, he concluded in his fiery, ebullient oratorical style, and you will find your system beginning to attract the West Germans and the flow of people will be from the West to the East rather than from East to West as it is today. This was a badly needed shot in the arm and reports to officials here indicate that the dispirited officialdom of the Pankow regime has perked up a little since the Khrushchev visit.

It is possible that they were relieved not to have the kind of showdown that would have been precipitated by a separate treaty of peace. This would have meant brinksmanship of a very dangerous order. On that slippery slope it might have been impossible to check the slide toward war.

How important it was to try to prevent the irrevocable step of a separate treaty between Moscow and East Berlin is seen in the light of the Western effort to put forward a treaty for the two Germanys as a major focus of discussion in the conferences to come. As currently considered in the working group set up by the three powers in Paris, the Western idea seems a long way from anything the Russians would accept. Nevertheless a treaty is still in the range of discussion.

On the day he arrived in Washington Macmillan got some magnificent news. Unemployment, which had risen so sharply as to make Laborites confident of an election victory over the Conservatives, took the sharpest drop in 12 years, going from 2.8 percent of the work force to 2.5 percent. This, combined with the prospect of meaningful negotiation, gives the Prime Minister the look of a lucky winner and at the same time it adds a new note of stability to the Western alliance.

[From the Washington Post, Mar. 24, 1959]

MOVING TOWARD THE SUMMIT

The chief significance of the Eisenhower-Macmillan talks may be the virtual assurance they give that the West will negotiate with Moscow on a continuing basis so long as there is any hope of averting a military showdown. The British Prime Minister and the American President appear to be in agreement that there is little hope for any spectacular settlement at the proposed summit conference to be held possibly in July or August. But if some progress toward understanding is achieved at that conference, other top-level meetings may be sought. The most hopeful aspect of this course is that so long as negotiations continue, even if comprehensive settlements fail to materialize, no bombs are likely to fall.

In this respect the discussions at Camp David appear to have altered the President's view of a summit conference in some degree. His speech of last week expressed a willingness to go to the summit if a preliminary foreign ministers' conference should afford ground for hope that a gathering of heads of states could be fruitful. Now it appears that the foreign ministers, probably meeting in May, will do little more than to explore the problems and arrange for the summit meeting. And the summit meeting itself may be only preparatory for further sessions of this kind aimed at gradually reducing the points of friction between the East and West.

This restraint on expectations may be disappointing to those who believe that a top-level meeting of statesmen can melt away basic policy differences. But it is a realistic appraisal which undoubtedly reflects what Prime Minister Macmillan learned in Moscow. It reflects also a firm determination on the part of the Western Powers not to retreat from their basic rights and obligations but at the same time to go as far as possible in eliminating running sores and in continuing to talk about unresolved problems.

It is no minor achievement to have brought British and American officials into complete agreement on this course. Presumably the French and West Germans, with whom Mr. Macmillan consulted just before coming to Washington, are also satisfied with the general outlines of this Western policy. Of course, this does not mean a complete meeting of minds on every detail of the plans that will be put forward at the proposed summit conference. But there appears to be complete understanding on the direction in which the Western Powers will move, without any sourness on the part of any of the participants.

For obvious reasons, whatever agreements were reached on offers to be made to Moscow cannot be spelled out at this time. The

indications are that Mr. Macmillan's idea of a "freeze" of forces in Central Europe, accompanied by inspection measures, as an an inducement to Moscow to take the heat off Berlin, has been accepted by the President. This is not, to be sure, a striking offer, but it may serve to open meaningful negotiations. Likewise there appears to be a disposition to accept an "international status" for Berlin if Western rights in the city and continued free access are amply guaranteed.

At least temporary acceptance of two Germanys seems inevitable for the simple reason that the Russians will not have it otherwise. The West has no ground for hope that it can bring about unification of Germany in the foreseeable future without a nuclear war, which would be unthinkable. Wisdom seems to lie in the pursuit of more limited goals within the realm of feasibility. If there is any progress toward the defusing of explosive situations and the achievement of lesser objectives, there will be ample opportunity to tackle the larger problems of a European settlement.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. MANSFIELD. I associate myself again with the remarks just made by the senior Senator from Minnesota. Along the lines which he has indicated, I agree that, so far as the Western Powers are concerned, and so far as our attitude, policy, and position are concerned, there will be no disengagement by the respective governments, because we will stand together and will work out this problem to the end.

Mr. HUMPHREY. I again thank the Senator from Montana.

It seems to me that it might be well at this time, also, to pay a deserved tribute to the President of the United States, who during recent weeks has had to assume very heavy burdens in preparing for the meetings which have been held and will be held.

I, for one, have been heartened by the message of the President, some 10 or 12 days ago, and by the recent conferences with Mr. Macmillan; and I am exceedingly hopeful that the same kind of leadership will continue, because it is sorely needed in the weeks ahead.

The PRESIDING OFFICER. The resolution will be received and appropriately referred.

The resolution (S. Res. 96) was referred to the Committee on Foreign Relations.

THE FAMINE IN HAITI

Mr. HUMPHREY. Mr. President, last Monday I addressed the Senate on the famine in Haiti. I am sorry I did not discuss this matter on yesterday, because not only is time running out, but lives are being snuffed out.

This situation has again been called to my attention by an editorial entitled "Famine in Haiti," which was published in the Washington Post and Times Herald. How paradoxical the situation in Haiti is, Mr. President.

I now read the editorial:

FAMINE IN HAITI

There is something especially distressing about the news of famine in a northern section of Haiti where some 45,000 people live. According to one report, about 200 people have perished as a result of a year long drought. Yet the food exists to ameliorate this pitiful situation. For 4 years, the United States has made available substantial foodstuffs to Haiti; this year alone, 6 million pounds of food is being provided on an emergency basis to the impoverished Caribbean country.

Appeals for relief from the stricken area seem to have been lost by the Haitian Government, which has never been a model of efficiency. In addition, the roads are bad and transportation poses some problems. Wouldn't it be possible for this country, working with existing church welfare groups, promptly to make some aid available, possibly through a helicopter airlift? It is bad enough to read about starvation conditions when this country's granaries overflow with unwanted food. It is worse when the situation is avoidable, and man's oldest adversary is allowed to win a round because of apathy and redtape.

Mr. President, the writer of the editorial has put his finger directly on the problem. The needed food is available, and it has been allotted to Haiti. Representatives of the welfare organizations are there, and are organized, and are prepared to feed the hungry. The only difficulty is that when the food comes to the port, there is no means of transporting it to the northern sections, where the 45,000 people live, and are dying—many more than the 200 whose deaths were reported a week ago.

Mr. President, I fully support the sound suggestion which was made. In short, if a helicopter airlift is not provided, then some other kind of airlift should be provided. I imagine that a helicopter airlift would be the best, because in that area the landing fields are limited in size and in number, and the country is rugged. But certainly an airlift of some kind would be most desirable for this errand of mercy.

Mr. President, what would be more wonderful than to have news go out, today, that the President of the United States had ordered some of our large transport helicopters to be loaded with milk, flour, vegetable oils, fruits, and vegetables, to be taken to these hungry people?

By such means we demonstrate to the world what democracy means—not merely by sending money or by piling the food on the docks, but also by seeing to it that the food reaches those who need it.

I hope that today someone will respond not only to my plea but also to the plea which was made the other day in the other body by Representative COOLEY, and to the pleas which have been made here by some of my colleagues in the Senate, in response to this editorial, and to the pleas which have been made by our churchmen of the various religious faiths that are attempting to serve these people in Haiti.

I hope the President, as the Commander in Chief, will authorize his field officers or those in the Department of Defense to utilize our helicopters to deliver this food to the points where it is needed, and also to deliver the necessary personnel, so that the food may be properly distributed.

THE NATIONAL MILK SANITATION ACT

Mr. HUMPHREY. Mr. President, a misleading campaign of radio, television, and newspaper publicity has been launched by monopolistic elements in the Washington area milk industry against competitive milk distributors, the Public Health Service, Representative LESTER JOHNSON, of Wisconsin, and the milk producers of Minesota and Wisconsin. Many mothers in the District of Columbia, in Maryland, and in Virginia have been led to believe that only milk produced in this immediate area is safe for their babies and their boys and girls to drink. For these reasons, I feel that it is essential that we review in the light of reason some of these charges.

Proposed changes in regulations governing the production and distribution for sale of milk and cream in the District of Columbia are the immediate cause of the publicity campaign.

Present District milk sanitation regulations have been in effect since 1950, even though improvements in dairy technology and sanitation have been made at an increasingly rapid rate in recent years. Milk and milk products form an essential and major part of the diet of most of us. Therefore, anything pertaining to a stable supply of wholesome milk at reasonable cost is a matter of public health; and regulations concerning its production, distribution, and cost should be under constant scrutiny, with an eye to possible improvement in the public interest. The Commissioners of the District of Columbia are in the process of hearing evidence as to whether District of Columbia regulations should be modernized, so as to bring them into agreement with the model milk ordinance and code recommended by the U.S. Health Service. The local operators, who supply about 90 percent of the milk consumed in the District of Columbia, oppose this change.

Although at first glance this controversy might seem to be a local one, I assure you, Mr. President, that it is not. The real question being discussed is whether there shall be a free movement of milk—good healthful milk that meets the standards of the U.S. Public Health Service—in interstate commerce. This is a question of national concern to both the producers and the consumers of milk.

In the 85th session of Congress, I, together with the Senator from Wisconsin [Mr. PROXMIRE], introduced a bill to establish standards of identity and sanitation related to the production, processing, transportation, and sale of fluid milk and fluid-milk products shipped in interstate commerce. Representative LESTER JOHNSON, who represents one of the heaviest dairy-producing districts in the great dairy State of Wisconsin, introduced an identical bill in the House of Representatives.

In April 1958, hearings on the Johnson bill were held before the Science and Education Subcommittee of the House Committee on Interstate and Foreign Commerce. The subcommittee heard many groups, including fluid-milk cooperative associations and local and State

health officials and sanitarians. Many matters relative to sanitary milk handling practices and methods of inspecting milk production and distribution processes were brought into thorough discussion during these comprehensive hearings. Also, the spotlight was sharply focused on the way in which local nonstandard sanitation and inspection regulations act as trade barriers, and prevent the free flow of milk in interestate commerce and intrastate commerce.

Representative JOHNSON, a member of the House Committee on Agriculture, who is well known as a fighter for the welfare of farmers and, in particular, for the welfare of dairy farmers, continued to work on the proposed legislation after the close of the hearings. He held many meetings with interested groups and individuals, with a view to perfecting the milk sanitation proposals.

The State and Territorial health officers, in full awareness of their responsibilities, discussed the national milk sanitation proposals at their annual meeting in October 1958, and based their considerations on a study conducted by a subcommittee of their own organization, with the cooperation of U.S. Public Health officials. This discussion led to the adoption by the Association of State and Territorial Health Officers of a resolution that recommended to Congress the adoption of Federal legislation regarding interstate milk shipments. It is noteworthy that this group, after giving the whole matter of milk sanitation and trade barriers careful study, has become the first such group to recommend Federal legislation in this field.

Representative JOHNSON revised the proposed milk sanitation legislation, so as to bring it into agreement with the expressed opinion of the officials who are in the best position of anyone in the country to know what is important and what is not important in maintaining a plentiful supply of clean, wholesome milk.

The revised Milk Sanitation Act was introduced in the present session of Congress by Representative JOHNSON. Companion bills were introduced by 17 other Members from Minnesota, Wisconsin, and Iowa.

As you know, Mr. President, I introduced the same measure on this floor, and was joined in its sponsorship by the junior Senator from Minnesota [Mr. MCCARTHY], and by the Senators from Wisconsin [Mr. PROXMIRE and Mr. WILEY].

On March 9, Representative JOHNSON and many of his colleagues took the floor of the House to discuss the benefits to interstate commerce from the establishment of uniform milk sanitation standards. They described fully, for the benefit of Congress, the high caliber of sanitary regulations provided by the U.S. Public Health Service milk ordinance and code, because these regulations had come under fire from the local dairy operators.

As a result of his efforts to bring order and reason into the discussion of milk marketing in this country, Representative JOHNSON has been vilified in the public press of Washington, D.C. His motives have been impugned. Inaccurate statements regarding the meaning of the uniform milk sanitation proposal were made. Since that time the local milk monopolists have undertaken a scare campaign, by way of radio and television announcements and newspaper advertisements, which has given an air of hysteria to the consideration of a matter that is wholly economic.

Mr. President, I want to make it clear that I am not opposed to the operation of milk producers cooperatives or any other kind of cooperative. The State of Minnesota has more co-ops and more members of co-ops than does any other State in the Union. I am proud of them. Cooperatives make it possible for producers to pool their efforts and their money in order to achieve some of the bargaining power that other groups have. I would not be fair to the many members of Minnesota milk producers cooperatives if I opposed the right of any cooperative to exist and to carry on its affairs in the interests of its members. However, I would be unfair to the same Minnesota co-op members if I did not point out that the entire milk industry has a responsibility to the general public, although in this case in the District of Columbia that responsibility has been badly overlooked.

The burden of the present discussion—a term that rather dignifies the imbroglio that is under way—is that Washington has the finest, purest milk in the world, produced by well-kept, well-tested herds, under the most modern, sanitary conditions, and that foreign milk—which is what milk from other States is called by some—should be barred from use in the District of Columbia.

That is just nonsense, Mr. President. The milk produced in this area is good, wholesome milk; but it is not better, purer, or more wholesome than milk produced in Minnesota, in Wisconsin, or in any other State where the U.S. Public Health Service model milk code is used as the basis for milk production and handling. Certainly the children in Minnesota and Wisconsin are suffering no ill effects from this good milk, nor are the patients at the world-famous Mayo Clinic, at Rochester, Minn.

The standards of the District of Columbia milk regulations are not the most modern. They have not been revised since 1950. They are not the most sanitary. Here is one instance which shows how ridiculous such a claim is. The District of Columbia regulations require annual physical examination of the milk handlers on dairy farms. The diseases of significance in milk sanitation are the communicable diseases; and freedom of a milk handler from such diseases at the time of an annual examination certainly does not exclude the possibility of infection during the ensuing year. In contrast, the U.S. Public Health Service milk ordinance and code prohibits persons infected with a communicable disease or having any infected cut or lesion on the hands or arms from working in any capacity which brings them into contact with milk or milk equipment. This regulation obviously has more import and bearing on milk sanitation than does a yearly medical checkup.

Mr. President, I do not want to belabor the point; but I shall give just one more instances of how misleading those allegations concerning the purity of local milk can be.

Anyone who reads the many public statements about bacteria counts would believe that milk that met only the Public Health Service milk code was impure and disease ridden, in comparison to milk that met the District of Columbia code. The revealing truth is that the District code allows a maximum bacteria count of 40,000 per cubic centimeter in pasteurized milk, whereas the Public Health Service code allows a bacteria count of only 30,000 in pasteurized milk. The District code allows a bacterial count of 100,000 per cubic centimeter in raw milk, whereas the Public Health Service code allows a maximum raw milk bacterial count of 200,000 for milk to be pasteurized.

The worried mothers in the District of Columbia and its suburbs have been misled by faulty reports. They do not realize that the significant bacterial count is that taken after pasteurization. We rely on pasteurization to destroy all of the disease organisms that may be in raw milk. In this process, most harmless bacteria are destroyed, as well. Mothers have been doubly misled into thinking that the word "bacteria" is synonymous with disease germs or dirt. With reference to bacterial counts, it is clear that the Public Health code is much more stringent than the District of Columbia code.

The local operators would have us believe that the District Commissioners and their limited staff are more capable of developing regulations to protect the public health than the array of dairy scientists, the bacteriologists, the veterinarians, and the Public Health officers and engineers who collaborated to develop the U.S. uniform milk ordinance and code. Such a position is absurd.

It is also absurd to suggest that milk producers in one area are more concerned with providing consumers with a pure, wholesome product than are those in another. I know that Minnesota and Wisconsin milk producers are proud of the wholesome, healthful properties of their fluid milk and fluid milk products; and I believe this is true of dairy farmers everywhere.

The Public Health Service has, through the years, worked as the protector and the benefactor of the people in this country. I want to state how the Public Health Service milk ordinance and code came into operation.

In the early part of this century, contaminated milk was responsible for a large number of outbreaks of disease, and

was a contributing factor to the high infant mortality experienced at that time. For this reason, since 1924 the Public Health Service has developed and published a model milk ordinance and code to assist the States and the municipalities in their control programs. Over the years this ordinance and code have been revised 12 times, to keep abreast of modern techniques and new knowledge in public health, dairy science, veterinary medicine, and related fields.

Each revision has been developed with the aid of the U.S. Department of Agriculture, Food and Drug Administration, and a national advisory committee whose members include public health and industry representatives, as well as experts in the field of dairy science.

This recommended code now forms the basis for the regulations of 36 States. It has also been adopted by more than 1,900 municipalities and counties. It has aided States, communities, and the dairy industry to reduce practically to the vanishing point the incidence of milkborne disease in the United States.

Because milk is a perishable product, and requires supervision from cows to consumers, the Public Health Service has advocated State and local control programs. The Public Health Service has recognized, however, that differences in sanitary regulations can result in economic trade barriers.

The objections by the local operators to the Public Health Service ordinance and code are based on their wish to restrain commerce in milk. This subject is not related at all to the purity or wholesomeness of milk. If the public realized this, their fears would be quieted. Expensive and unnecessary labeling requirements could be forgotten.

The issue here is whether an antiquated system of balkanization of the country's milk markets is to continue. Passage of the proposed Milk Sanitation Act of 1959 would go far toward correcting many of the difficulties encountered today in the marketing of milk, and would be beneficial to both milk producers and consumers.

Mr. President, that measure is now pending in the congressional committees concerned.

Mr. President, I yield the floor.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGE FROM THE HOUSE—ENROLLED JOINT RESOLUTIONS SIGNED

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the Speaker had affixed his signature to the following enrolled joint resolutions, and they were signed by the President pro tempore:

S.J. Res. 47. Joint resolution providing that certain communication activities at the IX Plenary Assembly of the International Radio Consultative Committee to be held in the United States in 1959 shall not be construed to be prohibited by the Communications Act of 1934 or any other law; and

S.J. Res. 73. Joint resolution extending an invitation to the International Olympic Committee to hold the 1964 Olympic Games in the United States.

WASTE OF TAXPAYERS' DOLLAR THROUGH FREE TRIPS TO INFLUENTIAL CITIZENS BY THE MILITARY SERVICES

Mr. DOUGLAS. Mr. President, one of the most costly and wasteful practices of our Military Establishment is that of using tax dollars to purchase support for their particular programs. One of the worst abuses is that of sending large numbers of private citizens to military displays and demonstrations at Government expense.

My curiosity concerning these practices was aroused when an Illinois constituent, Mr. Dale Noble, of Western Springs, Ill., wrote to me concerning the airpower display last fall at Eglin Air Force Base in Florida. I addressed a letter to the Comptroller General inquiring about this activity, and asking him to determine if it were true that large numbers of private individuals were flown to this affair at Government expense, and whether or not such activities were authorized. I have since received a reply from the Comptroller General, which gives the results of his investigation.

RESULTS OF INVESTIGATION

The Comptroller General's letter to me states, "that 161 military aircraft were used to transport 1,393 military personnel and 1,460 civilians to the demonstration" at Eglin Air Force Base. These numbers, Mr. President, are in addition to the planes, crews, and military personnel which took part in the demonstration. These are the visitors and the sightseers. They came from all parts of the country at Government expense.

The Comptroller General further wrote me that "no specific authority for demonstrations of this type has been given by the Congress or its committees." He states that the Department of Defense considers that these programs are within the general authority of the Department to "foster community relations," and that, according to the Department of Defense, the purpose of the JCOC program—which is the initial source of the abuse—is to acquaint the "public through its influential citizens, with the problems, workings, and accomplishments of the Defense Department and the disposition of their defense dollar." If I may say in passing, these individuals not only saw something of the disposition of their defense dollar, but helped to dispose of quite a few defense dollars themselves.

HOW LARGE ABUSES GROW FROM SMALL BEGINNINGS

How does such a situation come about? On two occasions each year, the Department of Defense holds a joint civilian orientation conference to which they invite approximately 75 influential citizens. These are either members of what are called the power elite of the country, or they are deputies of the power elite, or they are in the lower echelons of the power elite. I hold in my hand the program of the joint civilian orientation conference for the 5th to the 12th of October 1958.

These people come to Washington at their own expense, but are then flown to demonstrations by the Army, Navy, Air Force, and Marine Corps in various parts of the country. The authority for this particular program is very tenuous indeed and, according to the Comptroller General, is justified by the Department of Defense by a memorandum which Mr. James Forrestal wrote on January 14, 1949.

I have in my hand a list of the 75 more recent participants, but because of my desire always to be just and not to reflect upon individuals, I am not going to publish their names except to say they were representatives of various industries and organizations, including those from tobacco companies, banks, newspapers, railroads, oil companies, trade unions, women's dress shops, law offices, hair preparation companies, advertising firms, and food concerns; deans of colleges; television and film personalities; and even representatives of the National Association of Manufacturers, who, it is not unfair to say, probably complain more about Government expenditures than does any other group in the country.

Last fall, these 75 persons and their military and Defense Department escorts were taken from Washington to demonstrations by the military services at Quantico, Va., which is a Marine base; Patuxent River, Md., and Norfolk, Va., which are Navy bases; Fort Benning, Ga., which is an Army base; and Eglin Air Force Base in Florida. The services, in turn, then invited their own friends from various parts of the country to see the displays which they put on. In this instance, the facts in the Comptroller General's letter concern the display at Eglin Air Force Base, which was but one of four such demonstrations where abuses took place.

When one considers the number of planes and individuals which were flown in to witness the display at Eglin, and when this is compared with the original nucleus of only 75 guests, it is amazing that such a small body has such large satellites.

We can compare these original 75 with the sun or a star of a constellation traveling through space, but, curiously enough, with satellites much larger than itself—violating the Newtonian principle of the mutual attraction of matter, in that in this case it was the small center

of the solar system which attracted the huge satellites which dwarfed it in size.

INVITATION EXTENDED TO ALL PARTS OF THE COUNTRY

In the case of the Eglin Air Force demonstration, various Air Force commands throughout the country were allocated a number of invitations which they could extend to influential citizens and military personnel in their own command. The allocation of these invitations—although not necessarily those who actually attended—as provided to me by the General Accounting Office is given below:

Allocations of invitations to Eglin Air Force Base display

Command or activity	Military invitations	Civilian invitations
Air Force Staff College, Washington, D.C.	250	
Joint Civilian Orientation Conference	25	75
Headquarters, Air Force (300 military and civilians) Washington, D.C.	[1] 200	[1] 100
Air Defense Command, Colorado Springs	50	150
Air Training Command, Randolph Field, Tex.	50	150
Air Materiel Command, Dayton, Ohio	50	150
Air Research and Development Command, Washington, D.C.	50	150
Tactical Air Command, Langley, Va.	50	150
Strategic Air Command, Omaha, Nebr.	50	150
Military Air Transport Service, St. Louis, Mo.	50	150
Continental Air Command, Mitchell Field, N.Y. (reservists)	280	50

[1] Estimated.

The reservists came from all over the country:

Allocations of invitations to Eglin Air Force Base display

Command or activity	Military invitations	Civilian invitations
Air Force recruiting officers	50	150
Air National Guard, Headquarters, Washington, D.C.	50	150
Civil Air Patrol	100	200
Air University, Maxwell Field, Ala.	1,000	
Pensacola Air Station, Fla.	50	
Eglin Air Force Base, Fla.		1,000
Total	2,355	2,775

It will be noted from this table that individuals from almost every section of the country were invited to this demonstration. Virtually every command and major activity of the Air Force was allocated a number of invitations which could be extended to both civilian and military personnel. Not all of the total were flown in by plane at Government expense, but—as we shall see in a moment—a large proportion were flown in at Government expense.

The General Accounting Office has also furnished me with figures on who attended the demonstration. This information was obtained by the General Accounting Office from the Department of Defense:

Attendance at Eglin Air Force Base demonstration

Military:	
Major Air Force commands and other military services (includes civilians employed by Defense Department)	2,440
Air university	1,000
Local area military	205
Employees at Eglin	500
	4,145
Civilian guests: JCOC group and escorts	90

This is the original nucleus, or sun, of the constellation which is traveling through space, and which stopped for a time at Eglin Air Force Base:

Educators invited by CAP	300
Chamber of commerce representatives	280
CAA	50
Technical representatives of contractors	200

Oh, what a merry time, my friends, there was when they gathered together:

News media	180

Let me say in this connection that the newspaper men are continually denouncing Representatives and Senators for taking junkets in airplanes or on ships at Government expense, and I think with some justification, although there is more justification for Members of Congress going to these demonstrations than others, because the Members of Congress want to acquaint themselves with the facts—yet 180 representatives of news media were on these trips.

Local area civilians	900
	2,000
Total	6,145

Of the 6,145 persons who the Air Force states attended this demonstration, some 1,460 civilians and 1,393 military personnel were flown to the demonstration from all parts of the country by 161 military aircraft.

I will say we have analyzed our mail, and the letters from members of chambers of commerce protesting against Government expenses are, I think, more numerous than letters from any other group in the population, yet 280 went to the Eglin Air Force Base.

I read further from the chart:

WHERE DID THE MONEY COME FROM?

The Comptroller General states that, according to the Defense Department, "The expenses of military air transportation, as well as the expenses of the aerial demonstration, are considered as a part of regular military training costs and are not identified separately as being incurred for the purpose of the demonstration." He further states that "funds appropriated for the express purpose of public information or public relations programs were not involved."

Thus, Mr. President, without any specific authority and without charging any of the funds involved to public relations or public information, the Air Force flew in some 1,460 civilians from all parts of the country merely as a part of regular military training costs. This, I believe, is ridiculous on the face of it.

Without a great deal of further investigation and work, the Comptroller General was not able to give me a precise breakdown as to the specific geographical points from which each of these individuals came. However, we have seen that the commands at Washington, Denver, Omaha, San Antonio, and elsewhere were involved, and it is quite clear that many individuals came from very great distances. If we are to be generous and use the air distance from Chicago to Eglin, Fla., as the average distance flown, which is probably approximately correct, the round trip commercial air fare for each of these 1,460 individuals would be approximately $130 apiece, or a total of $189,800, or almost $200,000.

This, of course, does not include the costs of any meals served aboard the planes or at Eglin, the costs of putting on the demonstration itself, the time of the air crews, the aviation gasoline, lodgings and other prerequisites which are necessarily involved in such a mass demonstration. Further, it does not include the cost of bringing in civilians at Government expense to see the demonstrations which the Army put on at Fort Benning, the Navy put on at Norfolk and Patuxent, and the Marine Corps put on at Quantico.

I am certain that the Air Force will argue that this did not cost the Government any additional funds on the ground that these military personnel and air crews and planes would necessarily have to put in flying time anyway. This is always the excuse. But let us examine that excuse.

Would 250 members of the Armed Forces Staff College at Washington, D.C., have been flying on the day they were flown to Eglin? Would the Reservists from all over the country who were flown to Eglin have been in the air using fuel, food, and Air Force facilities on the days involved? Would 100 members of the Civil Air Patrol have been flying at Government expense on the day involved? Certainly the 50 Air Force recruiting officers would not have been flying in from all parts of the country on the day involved if it had not been for this special occasion.

Thus, the ordinary excuse that these planes and personnel would have been

used for these kinds of purposes on the days involved does not, in my opinion, ring true at all. The fact is that many additional man hours, air hours, ground personnel, meals, and extra aviation gasoline were necessary to put on this demonstration and to provide Government transportation free of charge for some 1,460 civilians who were flown in for the purpose of acquainting the public with the "disposition of their defense dollar."

There is a good deal of unconscious irony, Mr. President, in the statement that these people could see how their defense dollar was being disposed of.

PRACTICE SHOULD BE STOPPED

Mr. President, I believe that such practices as these should be stopped altogether. Basic support of the public for our armed services will come from their record and their performance—which are proud ones—and not from what some theatrical producer or manufacturer of women's hair preparation thinks about them as a result of a free trip to Eglin or Quantico or Norfolk or Fort Benning. The services do not need to create a host of "influential citizens" who act as permanent lobbyists for their appropriations. While tactical maneuvers and demonstrations are necessary, I believe that those who are invited to attend should come at their own expense and that our military funds—which we are told are in such short supply that we are being compelled to cut the Army by 30,000 and the Marine Corps by 20,000—should not be used for such purposes.

The fact is that several millions of dollars a year could be saved if such practices were discontinued. I have shown that the bedrock cost of flying in the 1,460 civilians to Eglin was approximately $200,000. This is done twice a year.

The program I hold in my hand is labeled "Joint Civilian Orientation Conference No. 27," which implies that the procedure has been going on for about 13 years. The figures which I have been quoting relate to simply one of the four demonstrations, the Air Force demonstration. Therefore, the cost, if these practices are normally followed, would be at least $400,000 a year for the civilians alone. Then there was almost an equal number of military personnel—in addition to the flight crews—who were flown in to witness the demonstration, and not as participants in the demonstration. This practice would certainly double the cost. When peripheral items such as food, lodging, gasoline, and other expenses are added, the expenditures for the Air Force for flying in these people must amount to at least $1 million a year for the JCOC demonstrations alone.

Then we know that similar expenditures in all probability are made by the Army, Navy, and Marine Corps for the JCOC program. In fact, Mr. President, I have addressed a letter to the chairman of the Government Operations Committee in the Senate asking that his committee determine how many military personnel and influential civilians were transported at Government expense to witness the demonstrations of the marines at Quantico, the Navy at Norfolk, and the Army at Fort Benning in connection with the JCOC program last October.

AIR FORCE SAVINGS COULD PROVIDE FOR ONE COMBAT MARINE BATTALION

Thus, there are many millions of dollars involved in these demonstrations. Yet, at the moment, the President is cutting back the strength of our Army and our Marine Corps from their authorized size of 900,000 men and 200,000 men, respectively.

As one combat marine can be supported for approximately $2,000 a year and as one combat soldier can be supported for approximately $3,000 a year, the savings from eliminating the Air Force abuses in connection with the JCOC program should be able to provide for at least an additional battalion of 500 combat marines or, if we include the peripheral costs as well as the direct costs, the savings from the Air Force abuses would be enough to provide the funds for a battalion of 500 combat infantrymen. If the practices of the Army, Navy, and Marine Corps in connection with the JCOC program were as bad as those of the Air Force, we may find that we could support several battalions without increasing our overall military expenditures.

I am for retaining the total for military expenditures. However, I submit that there is sufficient waste in connection with military expenditures, as I will try to show from time to time, so that by eliminating the waste we could increase our combat strength by 30,000 infantrymen and 25,000 marines. We could thus avoid disbanding one infantry division, and could keep our Marine units up to strength, instead of reducing them, as is now the case.

According to the administration, we have not money enough to provide for poor and starving people in this country. We have not money enough for defense, but we have money enough for such projects as I have described.

Let us cut out the fat and the waste and provide for combat troops instead of free trips for influential citizens and thereby ready ourselves for the kind of brush fire or limited wars which the Communists have engaged in in Korea, the Middle East, and perhaps will begin even in or around Berlin.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point as a part of my remarks the text of the letter which I received from the Comptroller General concerning the results of his investigation into this subject.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COMPTROLLER GENERAL
OF THE UNITED STATES,
Washington, D.C.

HON. PAUL H. DOUGLAS,
United States Senate.

DEAR SENATOR DOUGLAS: Further reference is made to your letter of October 27, 1958, requesting certain information pertaining to the aerial fire power demonstration at Eglin Air Force Base. You asked specifically whether large numbers of private individuals were sent to this affair at Government expense and whether such activities are authorized by the Congress.

Our review disclosed that approximately 2,000 private individuals attended the Eglin demonstration and that 1,460 of this number were provided military air transportation to Eglin at Government expense. The remaining number, largely from the Eglin area, provided their own transportation. The expense of military air transportation, as well as the expense of the aerial demonstration, are considered as a part of regular military training costs and are not identified separately as being incurred for the purpose of the demonstration. Funds appropriated for the express purpose of public information or public relations programs were not involved. No specific authority for demonstrations of this type has been given by the Congress, and the demonstrations are conducted within the general authority of the Secretary of Defense.

The Eglin demonstration was a part of the semiannual joint civilian orientation conference program (JCOC) of the Department of Defense. The purpose of the program is to acquaint the public, through its influential citizens, with the problems, workings, and accomplishments of the Defense Department and the disposition of their defense dollar. More than 26 demonstrations have been held under the program over several years. The October 1958 conference included briefings in Washington and demonstrations by the military services at Quantico, Va.; Patuxent River, Md.; Norfolk, Va.; and Fort Benning, Ga., as well as the demonstration at Eglin Air Force Base.

In addition to members of the JCOC, the Air Force, through its major commands and headquarters, USAF, invited to the Eglin demonstration a large number of officials and members of the military departments and private individuals including Members of the Congress, members of congressional committee staffs, State and local government officials, representatives of foreign governments, civic leaders, educators, and news media representatives. The Air Force states that approximately 6,100 persons, including the 2,000 private individuals, attended the Eglin demonstration of October 8, 1958.

We were advised that 161 military aircraft were used to transport 1,393 military personnel and 1,460 civilians to the demonstration. Also, we were advised that commercial transportation was not used for either JCOC members or Air Force guests and that funds approprated specifically for public information or public relations are not used for civilian information tours.

The 75 members of the JCOC are required to pay for commercial transportation to Washington where they started the field trip to scheduled demonstrations of each of the armed services. Members are required to pay for meals and incidental services while in Washington and at military installations except for one official reception at each installation. Military transportation was provided during the field trip and, on return to Washington, members used commercial transportation in returning to their homes. Similarly, we were advised that certain guests of Air Force Major Commands and the Headquarters, USAF, attending the Eglin demonstration were provided military air transportation from various locations to Eglin but were required to pay for meals while at the base.

The expenses of military air transportation provided to military members and civilian guests, as well as the expenses of the aerial demonstration, are considered by the Air Force to be a part of the costs of regular

military training and are not separately identified. As the principal costs involved were not identified to this demonstration, we did not attempt to isolate that part of the military training costs attributable solely to the Eglin demonstration.

We were advised by the Office of the Secretary of Defense that no specific authority for demonstrations of this type has been given by the Congress or its committees. The Department of Defense considers that the JCOC program is within the general authority of the Department to foster community relations. The specific authority cited to us for the JCOC program was a memorandum, dated January 14, 1949, from Mr. James Forrestal, then Secretary of Defense, to the Secretaries of the military departments which states briefly that the program of joint courses for orientation of civilians will be continued as originally provided by the War Council. The Office of the Secretary of Defense further advised that as individual Members of Congress and members of their staffs have attended on occasion the same demonstrations as members of the JCOC, as was the case at Eglin Air Force Base, many individual Members of the Congress are aware of this program and its purpose. Under these circumstances, the Department has not considered it necessary to seek specific authorization or sanction from the Congress.

We shall be pleased to discuss this matter with you or members of your staff if you desire.

Sincerely yours,

JOSEPH CAMPBELL,
Comptroller General of the United States.

Mr. DOUGLAS. Mr. President, we had an amusing denouement to this affair yesterday afternoon. I was called on the telephone by a professor at the University of Illinois who was very desirous of talking with me. I called him back, and I found that he was the director of a national program for disabled veterans, and was especially interested in paraplegics. It had been his custom to take groups of paraplegics each year to some central Army, Navy, or Air Force installation, and there, in the gymnasium, hold a basketball game, with the paraplegics participating in wheelchairs.

All arrangements had been made for them to fly to a central installation this year. This director had been called up by the Air Force that morning and told that the trip was canceled.

I said, "This is ironical, because it so happens that I have written a speech denouncing the practice of the Air Force in flying, not paraplegics, but influential citizens. It is possible that because of my inquiries knowledge of this may have leaked to the officials of the Air Force, and this may be a reprisal against me."

The director laughed in an interesting way. He said, "It was suggested to me that if we did not like this we should get in touch with our Senators and Representatives." So we may be witnessing a polite form of pressure designed to change the minds of Senators and Representatives who seek to introduce economies into the military services.

Without indulging in mock heroics, let me say that this did not change my intention. I am delivering this speech as scheduled. I am sorry that the paraplegics have been deprived of their trip; but I leave that subject without making any interposition for them. After the facts were explained to the gentleman who had called me, he did not urge me to make any interposition for them.

Mr. President, from time to time I intend to bring to the attention of the Senate other wastes, not only in the military services, but in civilian branches of the Government. I think it is quite likely that from time to time my constituents may be threatened with the removal of privileges or rights which they had previously enjoyed. I shall regret this, but the fault will not be mine if that happens.

I hope that the military will use in connection with transportation for generals, admirals, and influential civilians the same rigorous standards they have just applied in the case of paraplegics.

I intend to follow up this subject from time to time with further illustrations of the waste in this administration.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. DOUGLAS. I am glad to yield.

Mr. ALLOTT. I agree with a great deal the Senator from Illinois has said. Until his closing sentence, I was about to say that I heartily endorse everything he has said. However, as he knows as well as anyone else, this is a pernicious practice which grows out of big government, and can hardly be attributed to the administration, because it is a characteristic of every administration.

I agree with the Senator wholeheartedly in his comments on the subject he started to discuss. I believe that no one can hope to save money on any governmental budget, or operate a financially sound government in connection with major activities unless some attention is also paid to smaller things.

Mr. DOUGLAS. The Senator is correct.

Mr. ALLOTT. Like the Senator from Illinois, I deplore many of the junket type of trips which are conducted by the Air Force.

Above all, I cannot see the necessity of trying to sell our military forces to the public. To me, that is like trying to sell refrigerators to the Eskimos, because if a man does not realize what his military forces mean to him, he certainly is not a very good citizen in these days.

Moreover, if the Senator will indulge me a moment further, I feel that, while the opportunity should of course be given for holding necessary meetings, I can see no reason for incurring additional expense to bring citizens from all over the country to some of these gatherings.

I realize that it is difficult to draw the line. I have discussed this subject with the senior Senator from Virginia [Mr. BYRD], in an effort to determine when a flight ceases to be a training flight and begins to be something else.

I think the points made by the Senator from Illinois are extremely well taken.

While we are on the subject, I think we should discuss the chauffeured limousines.

Mr. DOUGLAS. I discussed them on Friday of last week.

Mr. ALLOTT. I am sorry I did not have an opportunity to hear the Senator. Last week I was in my own State among my constituents. I intend to discuss the subject further.

Mr. DOUGLAS. I hope the Senator will read my speech of last week, in which I catalogued the number of limousines with chauffeurs in the administrative agencies. There are 99 here. I recommended that they be reduced to 35. I proposed a cut all along the line, including a cut at the White House from 8 to 6 limousines. I believe the President can get along with 6 Cadillacs.

Mr. ALLOTT. That may be true. I merely wish to say that in this great Government of ours it has become the custom when a man reaches a certain grade to provide a car for him. Unlike Senators and Representatives, he does not have to drive his own car to work. A chauffeur picks him up in the morning and takes him home in the evening. That practice is inconsistent with good government. It is inconsistent with our responsibilities if we do not consider the small things, as well as the big ones.

I am willing to talk about saving a hundred dollars as well as to talk about saving millions of dollars. I join the Senator in that regard.

Mr. DOUGLAS. I have some insertions to make before I yield the floor. Before I do so I wish to say, first, that I welcome the support of my good friend from Colorado on the substantive features of my proposal. It is true that waste has not been confined to the Republican administration. It is true that the Democrats were wasteful too. The Senator from Illinois, in the period prior to the time that the Senator from Colorado came to the Senate, made himself somewhat unpopular with the administration of his party by criticizing waste under Democratic administrations.

However, we were told that if the Republicans were elected, they were going to cut out waste and give us an economical administration. Instead of that, they have been even more prodigal than the Democrats were.

While I do not wish to get into a partisan discussion on this point, since the Senator has touched upon it I will say that one of my chief objections to the practice of the leaders of the Republican Party is the unduly self-righteous attitude that some of them assume about these matters, and the implication that the Republican Party has a monopoly on virtue.

It reminds me of what Disraeli once said about Gladstone, his great rival. He said, "I do not mind if Mr. Gladstone has all the aces in the deck up his sleeve. What I do mind is his behaving as though the Lord had put them there." [Laughter.]

That is one of my objections to our Republican friends, who, when out of office talk about economy, and, when they are in office, practice extravagance.

I know this does not apply to the Senator from Colorado with whom I have worked on close terms and who I believe is a simple-living, fine Christian gentle-

man. I welcome his support for my substantive reforms. I am glad he is "steamed up" on the limousine question. I will send him a copy of my speech of last week. Perhaps we can bring about some reductions in the appropriation bills, including reduction of appropriations for limousines at the White House.

I want the President to travel in dignity, but I do not believe he needs eight Cadillacs. I do not believe he needs two helicopters. I should say that one should be enough, not two. After all, he is not a duality; he is a unity; he can only be in one helicopter at a time.

Therefore there are a great many economies which I will propose from time to time. If we adopt them we will save millions upon millions of dollars, perhaps even billions of dollars, and we will have money enough to provide for missiles for the Army, combat troops for the Marines, and aid for the unemployed—the unemployed who, in West Virginia and in Kentucky are starving, as well as aid for those who are unemployed in other sections of the country, and to whose entreaty the White House turns a deaf ear.

Mr. ALLOTT. Mr. President, I should like to add, for the benefit of my friend from Illinois, who chose to make this a partisan matter at the conclusion of his speech, that when he was speaking about Disraeli I thought he was referring to the man who said, "There, but for the grace of God, go I," and therefore was looking rather enviously upon Gladstone with the aces up his sleeve.

I do not believe anyone can well say "I am holier than thou." Let us make this clear and let us join the issue. I have never talked in this tone in the Chamber before, and I hope to do so very rarely in the future, but I have never seen anyone who has had a more holier than thou attitude than the Democratic Party had through the New Deal and Fair Deal days. That was one of the most nauseating things about it to me personally and to a great many other Members, I am sure.

Mr. President——

The PRESIDING OFFICER. The Senator from Colorado.

MORE DOLLARS FOR EDUCATION OR MORE EDUCATION FOR DOLLARS?

Mr. ALLOTT. Mr. President, I have just had an opportunity to read an excellent statement by Roger Freeman, presented to the Economic Club of Detroit on Monday of this week, entitled "Do We Need More Dollars for Education or More Education for Our Dollars?" I believe that the facts and thoughts brought out in his statement should be read by everyone interested in public education in this country. Mr. Freeman's book, "School Needs in the Decade Ahead," a report by the Social Science Research Institute in Washington, of which he is the vice president, has had a tremendous impact, since its release last year, on the thinking of many people in the field of education.

In addition to his wide experience in the field of private enterprise—in the merchandising ranks—he assisted Gov. Arthur Langlie, of Washington, in restoring orderly fiscal management to the State government there. He has written many articles on a variety of governmental problems and has been used as a consultant by congressional committees and administrative departments of the Federal Government. As a matter of fact, the Commission on Intergovernmental Relations, created in 1953, which conducted official studies of the distribution of powers and responsibilities between the Federal and State Governments, selected Mr. Freeman to direct the research of its education study.

As I read the statement, his thesis is that more money may well be needed to improve teachers' salaries, and further to reduce the classroom shortage, but that much could also be done to get more solid and real educational progress from existing personnel, equipment, and buildings, if we were willing to face up to some of the cold, hard facts of our public education program. From my experience on the Subcommittee on Education, there is a great deal to be learned from this distinguished analysis of our educational problems by Roger Freeman.

During the past few years many of us became very much concerned about education in the United States. Last year the Senate and the House passed the National Education Act. However, we have still not touched, except to a slight degree, the basic problems of education, in that we are simply failing as American citizens, and as fathers, mothers, and directors of school boards, to make certain that our schools provide for our children the maximum education which the children are able to accept and absorb. Until we Americans take hold of this problem and keep it firmly in our grasp, and keep the goal before us, we will fail in our educational responsibilities to our children.

Mr. President, I ask unanimous consent that the address delivered by Mr. Freeman be printed in the RECORD at this point in my remarks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

DO WE NEED MORE DOLLARS FOR EDUCATION OR MORE EDUCATION FOR OUR DOLLARS?

(Address by Roger A. Freeman, vice president, the Institute for Social Science Research, Washington, D.C.)

I feel greatly honored to have been invited to participate in the personnel exchange program between Washington and Detroit, if only on an extremely short-term basis. That program, I am told, was started about 6 years ago when Washington borrowed several of Detroit's outstanding citizens. Then Detroit reached out and took—on a permanent basis—the best Commissioner of Education the United States has had in many years. That probably evened the score or, more likely, put Detroit ahead in the game. It was my pleasure to work with Dr. Brownell while he was Commissioner of Education. I hope that he is not getting the same gruelling treatment in Detroit which some of your outstanding citizens received while they served in Washington.

I have been asked to discuss with you some of the findings of our research in the field of education, probably because I wrote a book last year, "School Needs in the Decade Ahead." Of course, a national study with national totals and averages does not necessarily hold the answers for every local school system, in a country as large and diversified as ours. More likely, the solutions to local problems must be found locally, in terms of the desires and aspirations of a community. A study by a representative lay committee or by a civic organization seems an excellent method of planning for the residents of a city the type of schools they want for their children. The splendid report which the Detroit Citizens Committee under the chairmanship of Mr. George Romney prepared, testifies to the dedication with which that group went about its task. I am also very much impressed with the "Profiles in Education" which the Citizens Research Council of Michigan recently prepared.

Of course, education is of more than local significance; it affects, for better or worse, the well-being of the Nation. We must ask: Does the sum total of education in our schools and colleges throughout the country measure up to the challenge of this atomic and space age? Many qualified observers, leaders in education, science, government, and business have answered in the negative. The president of Columbia University, Dr. Grayson Kirk, said at the dedication of the new NEA building in Washington last month that "there are millions of sensible men and women, educators, and laymen alike who are deeply troubled about the state of American education at all levels. Their diagnoses vary as much as their prescriptions, but their concern is common to all." Dr. Kirk concluded that "the actual source of our concern is a haunting feeling that our educational system is not now producing men and women adequately equipped to maintain in the future the leading position in world affairs that we have had in the recent past."

Nothing has aroused more anxiety over our schools than the appearance of the sputniks and subsequent reports on Russian education. Henry Chauncey, president of the Educational Testing Service in Princeton, wrote last year: "I, like others who have visited Russia, came away with one outstanding impression in my mind: in the Soviet Union, there is a complete, unstinting and tremendous commitment to education. It has to be seen to be believed. * * * It is true of the teachers, the parents, and most significantly, the students."

Whether we like it or not we are in competition with the Russians. The travelers who reported on Russian education did not propose that we copy the Soviet school system. But they did suggest that we cannot afford to fall behind in this "war of the classrooms." The obvious question is: What must we do to stay ahead in the battle for better education?

In size and numbers our educational system is truly something to behold. Forty-five million people—one-fourth of the Nation—are enrolled in educational institutions. The educational establishment—public and private combined—employs more than 3 million persons and expends over $20 billion a year. That ranks it with—or possibly ahead of—the country's biggest industries. In the public sphere, education is by far the largest service of government next to national defense. More persons are employed in education than by the Federal Government. About half the State and local government payroll is in education.

Ninety-nine percent of the children age 6 to 15, 80 percent of those 16 and 17, and 34 percent of those 18 to 21 are enrolled in schools and colleges. About 1½ million

high school diplomas and ½ million college degrees are awarded each year. No country on earth has ever attempted to keep so many young people in school so long. One of our most revered educators, I. L. Kandel, for many years professor of education at Teachers College, Columbia University, and editor of the magazine, School and Society, wrote in his book "American Education in the Twentieth Century":

"Quantitatively, the United States has in the past 50 years set an example to the rest of the world in the number of children, youth, and adults enrolled in the country's educational institutions and in the amount of money devoted to education."

Some may question the last remark. Have the American people given the schools enough money to cope with their tremendous task? Or have we—as has been charged—treated the schools like stepchildren and kept them on a starvation diet while lavishing the abundance of our material prosperity upon personal consumption? Are the complainants correct who say that private business and standards of living have flourished while the schools have had to subsist on the crumbs from the table of the rich? If so, are our educational shortcomings simply a result of inadequate finances?

The Rockefeller Brothers Fund Report on Education last year declared unequivocally: "All of the problems of the schools lead us back sooner or later to one basic problem—financing." It added that the American people have never been quite prepared to face the fact that good education is expensive.

It is impossible to say categorically how much a good education costs or how much money ought to be allocated to the schools. But we can try to answer such pertinent questions as: How large a share of the Nation's product is dedicated to education? How has education fared in relation to other activities? How does the United States compare with other nations? Are existing deficiencies the result of financial undernourishment? Are we making full and efficient use of the resources allocated to education? How can we best utilize the manpower and facilities for the major purposes of education?

I intend to deal with these questions one by one.

The share of the gross national product devoted to education has risen from 1.1 percent in 1890 to 4.6 percent in 1958. Far from being stable or declining, it has multiplied four times over the past 7 decades.

Foreign statistics are incomplete and not always comparable with our own. From whatever information is available from the United Nations, it appears that the United States spends almost as much on education as the rest of the world combined. According to a UNESCO survey for 1953, the United States allocates to education a larger share of its national income than almost all other countries. The Soviet Union reported spending 78 billion rubles or $7.8 billion on "educational-cultural activities" in 1957. That equals about 4.4 percent of the Russian GNP, slightly less than the corresponding figure for the United States.

Between 1890 and 1958 enrollment in our educational institutions almost tripled and prices more than tripled. This would call for a tenfold increase in educational spending. But expenditures for education multiplied over a hundred times. In other words, we now spend ten times as much per student, in dollars of constant purchasing power.

How has American education fared, compared with private business and living standards? Most economic statistics of the Department of Commerce go back as far as 1929; so the following comparisons are with 1929. All dollar figures are adjusted for price changes.

Since 1929 enrollment in public education (higher and lower) has increased 40.5 percent; the total U.S. population 42.9 percent. Contrary to a wide-spread belief, public school enrollment has grown proportionately less than the population of the United States. Over the same period, however, private educational enrollment increased 122 percent or three times faster than public education.

Employment in private industries has grown 44 percent since 1929, virtually at the same rate as the population of the United States. So the ratio between private employees and total population has remained unchanged at about 3.5 to 1. Over the same period employment in public education increased 125 percent and the number of students per employee dropped from 23.6 to 14.2.

Between 1929 and 1958 gross national product grew 118 percent, current school expenditures 200 percent. Personal consumption expenditures per capita—which may be called the living standard—has improved 48 percent since 1929. Expenditures per pupil in public elementary and secondary schools increased 129 percent. All of these figures, of course, are in constant dollars.

Over the same period all private construction (residential, commercial, industrial) increased 48 percent, public educational construction 136 percent. Between 1929 and 1957 (the most recent year available) the annual earnings of all wage and salary workers were raised 83 percent, teachers' salaries, 95 percent.

All of this does not mean that we are spending too much money on education. We are not. Moreover, there is no doubt but that in the years to come we shall have to spend far more. But the figures do show that education is not being discriminated against in the allocation of the Nation's resources, that its share has risen much faster than personal consumption, that it has improved its position relative to the rest of the economy in regard to manpower, construction and standards of expenditure. The emerging picture is clearcut and unequivocal: The American people have loyally and faithfully supported their schools. The record makes no persuasive case for holding insufficient funds responsible for shortcomings in the educational product.

Financing the schools in the years ahead would pose no major problem if per-pupil costs were kept stable. But per-pupil costs have approximately doubled every 20 years—in constant dollars—and this long-term trend shows no sign of weakening. At this rate, considering the rising enrollment, the cost of education will at least double over the next decade.

Speaking in the Senate 2 weeks ago, Senator JOSEPH CLARK, of Pennsylvania, proposed that national expenditures for education be raised from $20 to $40 billion over the next few years. Taking into account the expected growth in the national income, an increase in educational funds of $20 billion a year would boost the tax burden by the equivalent of at least 2 percent of the national income.

But education cannot be considered in a vacuum. We cannot expect other public services to stand still while education forges ahead. In the speech I just mentioned, Senator CLARK also proposed raising outlays for national defense, foreign aid, housing and urban renewal, airports, water resources, atomic energy, area redevelopment, health and welfare and unemployment compensation.

If only part of these recommendations is carried out, taxes and other governmental revenues which, last year, equalled 30 percent of gross national product or 36 percent of the national income, will soon rise to more than 40 percent of national income; they could well reach 45 percent. Such a development might be viewed with equanimity or a sense of accomplishment by those who feel that Government is not big enough and that the citizen now is permitted to keep a larger share of his earnings than he knows what to do with. You are, I am sure, familiar with the ideology so eloquently presented by Kenneth Galbraith in his book "The Affluent Society," namely, that the private economy and the individual enjoy unjustifiable abundance and luxury while Government and public services are being starved.

The various well-organized groups pressing for larger public funds for their special interests have succeeded in making Government as big as it is today. They may well make it still bigger—although there may be some doubt whether the majority of the American people feel that what this country needs most is higher taxes. The way to prevent major boosts in the tax burden which would further weaken incentive and retard economic growth, is to review critically demands for larger public funds. Education, which is the biggest item of governmental expenditure next to national defense, must get its share of attention.

The case for major increases in educational funds—beyond the growth of enrollment—is usually presented by pointing at existing material deficiencies: shortages of classrooms and teachers and inadequate teachers' pay.

The size of the classroom shortage has been the subject of intense debates in and out of Congress. Official estimates, within the past few years, ranged from 140,000 to 600,000 classrooms. These widely varying estimates came to be known on Capitol Hill as the "numbers game." In fall 1954, the Office of Education placed the deficiency at 370,000 classrooms; in fall, 1958, it reported a nationwide need for 140,000 classrooms. Taken at face value these figures would indicate a tremendous improvement. When the reports are analyzed they reveal so many internal inconsistencies that hardly any of them appear to merit much confidence.

Classroom shortages undoubtedly exist in many communities throughout the country. The pace of construction has been setting new records each year but is uneven. Many States and communities are catching up with their needs. Some seem to be waiting for Uncle Sam to do the job for them. The outlook is encouraging. If we accept the most recent Office of Education estimate of a need for 140,000 classrooms, and project enrollment and replacements to 1970, the average annual construction requirement is for about 60,000 classrooms. More than 70,000 classrooms have been completed in the average of the past 3 years. This means that the current annual volume of school construction will not have to be maintained over the next 10 to 12 years.

The high cost of school construction has cut into the number of classrooms which are being completed. Expensive projects have led to lengthy controversies in numerous communities. You may remember the articles on "School Palaces" in the Readers Digest and the Ladies Home Journal. Thousands of good schools are being built at costs much below $1,000 per pupil. Others run to $2,000, $3,000 and more. At the root of the increase and the wide range in school building costs lie building space allowances. One or two generations ago schools allowed about 40 square feet of building space per elementary pupil and 45 to 55 square feet per high school pupil. Today schools are more likely to measure 75 to 90 square feet per elementary pupil and 90 to 120 square feet per high school pupil.

No study has shown how much space per pupil is required for maximum educational effectiveness. Certainly, it has never been demonstrated that children learn more if they have 100 square feet of space instead

of 50. In parochial schools and in most foreign schools children get not much more than half as much space as in contemporary public schools. This does not seem to harm them. The justification for the more generous space allocations in today's public schools probably lies in modern educational methods. I intend to come back to this later.

Teacher shortages often are held to be more serious than classroom shortages. According to the Office of Education, the teacher shortage has almost doubled in the past 5 years. But strangely, the number of teachers has consistently increased faster than the number of pupils. William G. Carr, executive secretary of the NEA, wrote a few years ago: "The number of teachers doubled between 1900 and 1950, while the number of pupils enrolled increased by two-thirds * * *. The average number of pupils per teacher in public schools declined from a peak of nearly 37 in 1900, to 29 by 1940, and to 28 in 1950." This trend has continued undiminished in the years since 1950.

The declining teacher-pupil ratio may be all to the good because it seems reasonable to assume that children learn more in smaller classes. The troublesome fact is that research has been unable to prove that this is so. The Encyclopedia of Educational Research summarized studies of class size and pupil achievement as follows:

"On the whole, the statistical findings definitely favor large classes at every level of instruction except the kindergarten * * * the general trend of the evidence places the burden of proof squarely upon the proponents of small classes."

William G. Carr wrote some years ago, "Investigation has shown that when other factors are kept as nearly equal as possible, pupils in large classes make as good scores * * * as do pupils in small classes." Recent studies confirm this.

Teachers' academic qualifications have risen rapidly in recent years, as is shown in a new booklet of the NEA. Since 1946 the number of States requiring a college degree for certification has risen from 15 to 37, but the number of teachers in the public schools with less than a standard certificate dropped from 1 in 6 to 1 in 14. In 1946 about 55 percent of all teachers lacked a college degree; the figure is now down to 29 percent.

The adequacy—or inadequacy—of teachers' pay is probably the most involved—and most misunderstood—aspect of the school picture. The attractiveness of teaching has anything but declined. The percentage of college students preparing for teaching has steadily risen, from 21 percent in 1948 to 32 percent in 1957. Simultaneously, the number of certificated teachers in the public schools has increased five times faster than the civilian labor force. It is apparent that compensation and other benefits are inducing an increasing percentage of college students to choose a teaching career. With college enrollment expected to double over the next 12 years there is every reason to believe that the supply of candidates will be adequate.

In his regular survey of teachers' salaries in the magazine, the School Executive, January 1959, Harold Clark of Teachers College, Columbia University, reported:

"Beginning salaries of women teachers are substantially above the beginning salaries of all women college graduates. * * * The best figures available indicate that the profession is getting the above average in ability of the women college graduates and also paying substantially above the average wage."

So, there does not seem to be too much to worry about the three-fourths of the public school teachers who are women.

But there is justifiable concern over men teachers. The percentage of men teachers in the public schools has steadily increased, from 14 percent in 1920 to 22 percent in 1940, to 26 percent in 1959. More than 30 percent of the beginning teachers are men. However, not enough male college students who are above average in ability choose schoolteaching as a career. Some leave it after a few years because they find it difficult to support their families on a teacher's salary. The trouble usually is not with low starting pay but with the slow advance by $100 or $200 a year. In other fields, men with ability and ambition can progress faster—in keeping with their job performance. But most schools pay elementary and secondary teachers uniformly according to academic credits and years of service. As a result, good teachers are woefully underpaid.

It is unlikely that States and communities ever will be willing to pay all teachers as much as they believe good teachers to be worth. Unfortunately, teachers' organizations insist on union-type salary scales and strongly oppose recommendations for paying teachers as other professional workers are paid—according to merit and performance. Until this deadlock can be broken, we probably shall go on underpaying good teachers while not getting the caliber of candidates the schools need.

There is a compelling case for lifting teachers' salaries to a substantially higher level. Not that our present teachers are underpaid—many of them are not. But we must attract into teaching a higher caliber of candidates.

This problem goes beyond the schools. Many young people with a high IQ now forego a college education and take well-paying manual jobs after they graduate from high school. Their reason: the differential between manual and professional compensation has shrunk drastically in recent decades. This has made 4 to 5 years of college a less profitable investment. There is a smaller difference between professional and managerial earnings on one hand and manual workers' pay on the other in the United States than in other countries. Certainly the differential is much smaller than in the Soviet Union. It seems that we follow egalitarian principles while the Communists use incentives and competition.

What has enabled us to raise the wages and living standards of the great mass of workers is increased productivity due to technological progress and greater capital investment. The industrial worker now turns out twice as many goods as he did 30 years ago. No parallel development is evident in the field of education. In an excellent article, "The Low Productivity of the Education Industry," in Fortune, October 1958, Daniel Seligman demonstrated that productivity in education has declined and that "the return on the educational dollar has been diminishing steadily." He stated that "if the case for raising teachers' salaries were judged solely by statistics on teacher productivity, it would be a weak case indeed." He added "This low productivity is one of the troublesome elements in the teacher salary problem."

Various methods have been suggested for raising the teacher's productivity. Experiments have shown that instruction by television often is more effective than conventional methods and saves valuable manpower. But teachers' organizations have been fighting proposals which would tend to diminish the demand for teachers. When Compton Junior College last fall used one instructor to supervise four TV classrooms, the California Teachers Association lodged vigorous protests with the State board of education. Two months ago the board obliged and withdrew state support for TV-instructed children at Compton College.

It has been suggested to extend the school year and utilize teachers and classrooms for more than 180 days a year. Gov. George M. Leader of Pennsylvania said at the 1957 Governors conference: "It seems to me that we are trying to pay heads of families enough money in 9 months, on 9 months' work to maintain families for 12 months. I don't know any other area of activity where that can be done, and if we succeed in doing it in the field of education, it will be nothing short of a miracle."

I probably should mention that Governor Leader lost the next election.

Some observers have proposed to reduce the number and variety of course offerings and other programs which many schools have taken on. I suggest that you read the article "Schools for Everything" by Melville J. Homfield, superintendent of the Menlo Park city school district in California, in the March 1959 issue of the Atlantic Monthly. It starts with this sentence: "There are signs today that the school has become society's dumping ground, that the public school system has become a vast refuse heap for any and every unwanted service or task that other social or governmental institutions and agencies find too tough to handle."

Paul Woodring, one of our keenest educational thinkers, laid his finger on a sensitive spot when he wrote in the October 1958 Phi Delta Kappan:

"At the present moment in history [the public] is prone to agree with the critics that the schools have tried to do too much, have accepted too many responsibilities best retained by the home, and that as a result they have neglected their fundamental responsibility."

The key factor in educational efficiency is the size and composition of the class. Some decades ago, children were promoted to the next-higher grade when they had mastered the standards of the lower grade. But then the schools discovered the secret of perpetual promotion: Children are moved up each year according to age. As a result the members of a class may be 4, 6, or more grades apart in skills and knowledge. The teacher then divides the class into 3 or 4 groups and gives them different levels of instruction. Such a split-level class requires a larger room and fewer children. It may be hard to conceive a more inefficient method of teaching children.

Some school systems have tried to cope with the wide range of abilities by running three or more parallel tracks or by operating specialized high schools—vocational, commercial, science or academic. Such grouping of children by ability, aspirations and achievements, is regarded by some educational theorists as undemocratic because it tends to foster the development of an educational elite. Those theorists do not explain how we can motivate children to take tough subjects and to study hard under a system of automatic promotion and indiscriminate mixing of abilities.

A more realistic view was presented a few months ago by Prof. D. C. Ducasse of Brown University, a past president of the American Philosophical Association:

"Praise and blame, reward and punishment—which in adult life are omnipresent incitors and inhibitors of action—have a vitally important place in realistic education, not only as equally effective determinants of action, but also as initiators of the young into the similar, but far more severe, situations they will meet in adult life."

The late Reverend Bernard Iddings Bell once asked:

"What could be better calculated to promote an unhealthy psychosis than to prepare a child for a world of struggle and competition by wrapping his mind in the woolly illusion that achievement and negligence should receive the same reward?"

Vice President RICHARD NIXON stated well in his educational address in New York

in December 1957 that "the most fundamental weakness in many of our schools is that students are not allowed to face the challenge of failure."

It is well known that children in many foreign school systems are ahead of their counterparts in the United States. Alvin C. Eurich, former president of the State University of New York and now vice president of the Fund for the Advancement of Education, reported last year: "It is my impression that a student completing the Russian secondary school at the age of 17 probably has an education equivalent to that which we provide by the end of the first 2 years of college." This suggests that children learn as much in Russian schools in 10 years as they do in American schools in 14 years. James Bryant Conant, former president of Harvard University, said in a speech a few years ago that graduates of European secondary schools "when they enter a university have 2 or 3 times as much knowledge and acquired skills as the best college entrants in the United States."

It has been asserted that such comparisons are unfair because European secondary schools accommodate only a small percentage of the children while virtually all American children go through high school. This is in error. For example, all British children attend secondary schools: 15 percent are in grammar (academic) schools, 70 percent in modern secondary schools and the rest in technical schools. Those in modern and technical secondary schools graduate at age 15. By that time they have acquired a level of basic skills and knowledge which is at least comparable to that of our 12th graders. The main distinction between American and European school systems is not that we send all children to high schools and others only a select few, but that the American system stretches the education over more years.

There is a dire need for a thorough study comparing the material resources and educational achievements of Russian and European schools with those of American schools. Presently, only sporadic information is available. We know that, for example, a typical elementary class in Moscow has 40 to 45 pupils, a secondary class, 30, that schools operate on two shifts and that many teachers do likewise to earn a living wage. We know that in England many schools exceed the statutory size of 40 pupils in primary and 30 in secondary schools. We know that children in British and Russian schools have barely more than half as much space as our children have in contemporary schools. Similar conditions appear to exist in France, Switzerland, and other Western European countries. But the students' achievements are reported to be higher than ours. The reason was explained by Johns Hopkins University president, Dr. Milton S. Eisenhower last year:

"We are too casual about education. This is the primary reason why European students achieve scholastically in 10 years what ours do in 12—and it happens that most students do better work with a heavy load than a light one."

The Fund for the Advancement of Education said in its 1954–56 report: "Questions are being more and more insistently raised, not by small and disgruntled groups of citizens, but by leaders of opinion and large elements of the public, whether American education has become too soft, demands too little of our youth, encourages much too low expectations and effort from the students, and has been too busy with custodial duties to do well by its educational opportunities." This, incidentally, was said 1 year before sputnik.

What, then, is the answer to our school's problems? The magazine, the Nation's Schools, found in a personal survey among public school educators unanimity that "there is basically nothing wrong with American public education that more money wouldn't remedy."

However, there is surprisingly little evidence that quality of education is proportionate to the number of dollars spent. Ten days ago, a citizens committee which had been studying the schools of Scarsdale, N.Y., for 2 years reported this: Expenditure per pupil, at $971, was almost three times the national average, and among the highest in the Nation. One Scarsdale school building achieved notoriety as being one of the most expensive school structures in the country.

But Scarsdale High graduates tend to be C-plus students in college; the majority rank below average in college despite high IQ's. Nor is the school doing well by its slow students. The citizens committee made no effort to hide its disappointment at this record.

On the other hand we have the example of Utah, which has a record of outstanding educational accomplishments at costs much below the national average.

Vice President RICHARD NIXON said in his earlier quoted speech:

"Too often we hear the superficial and pat formula that the answer to all of our problems in the educational field is more classrooms, more teachers, more scholarships, and more scientists. Action on these fronts is essential. But we miss the target completely if we do not recognize at the outset that our major problem is quality and not quantity of education."

In an inspired article "American Education's Greatest Need" in the Saturday Review 2 weeks ago, Yale University President A. Whitney Griswold stressed that he saw the greatest need of the educational system not in more money but in a sense of purpose, in higher intellectual aims.

Dr. Clarence Faust, president of the Fund for the Advancement of Education, said over 2 years ago: "Our school system does need more buildings, more money for operating expenses, teachers' salaries, and more and better prepared teachers. But it needs even more to find ways of making better and more effective use of its resources for the major purposes of education."

Admiral Rickover outlined a program for the schools in his recent book, "Education and Freedom": "Only massive upgrading of the scholastic standards of our schools will guarantee the future prosperity and freedom of the Republic.

"We must spend substantially more for education. We must also spend school tax money more wisely. I venture to say that of all leading countries, we get the least in education for our tax dollars. For various reasons our school establishment is the most expensive in the world. We have set ourselves standards of luxury in buildings and equipment unknown elsewhere. We require 2 to 3 years longer to bring our students to approximately the same level of education as most European countries—this alone means 20 percent higher costs for the same end product."

I submit that we can afford to spend more on education than other countries and we should. But we cannot afford to get less education for it. Here then is the answer to the question which the title of my talk posed "Do we need more dollars for education or more education for our dollars?"

It is essential that the schools receive larger funds in the years ahead. Starving the schools of the necessary means and keeping teachers' salaries below a competitive level, will not improve education. But neither is money a substitute for higher standards and fuller and more effective use of the available resources. Our young people won't learn one iota more in a spacious glass and marble building than in a plain one. Too many of them will keep electing themselves out of an education if we offer them a cafeteria-type course program. They will learn more only if they study harder.

We cannot promote respect for learning if we treat achievement and failure without distinction, if we continue to pretend that giving recognition to educational accomplishment is undemocratic. We won't get the able children to take the solid subjects and work hard until we accord honor and visible reward to those who through a combination of talent and toil excel the rest. As long as we pursue the egalitarian trend—all children going to the same class, promoted each year without distinction, getting their diploma or degree for faithful residence, all teachers paid by the same scale—we shall not provide the education which this day and age require—no matter how many billions we pour into the system. We may be paying the price of excellence but we shall be getting mediocrity.

WHEAT ACREAGE ALLOTMENTS

Mr. SCHOEPPEL. Mr. President, I have introduced a bill which is aimed at correcting a provision in the present agricultural laws with respect to farms which exceed their wheat acreage allotments, but which, because of drought, hail, or other natural causes produce no marketing excess.

Under the provisions of the present law, a farmer who overseeds his allotment and raises a surplus may avoid or postpone penalty by storing the excess wheat in accordance with regulations. In so doing, the farmer is entitled to receive as acreage credit for that year the base acreage for the farm in figuring his future wheat acreage allotments.

In the case of a farmer who also overseeds his allotment, but raises no wheat at all, or no marketing excess, he is penalized by the loss of some of his acreage for that year. In fact, the acreage allotment in that year will be considered the acreage in figuring his future wheat allotments.

In other words, under present law, the farmer who produces no excess to add to existing surpluses, is penalized, while the farmer who does raise an excess, is not.

The bill would give the farmer producing no excess the same treatment as that accorded the one producing an excess.

The proposed legislation has the support of many wheat farmers throughout the wheat-producing areas of Kansas. It is my hope to enlist sufficient support in Congress to make its early enactment possible.

ENROLLED JOINT RESOLUTIONS PRESENTED

The Secretary of the Senate reported that on today, March 26, 1959, he presented to the President of the United States the following enrolled joint resolutions:

S.J. Res. 47. Joint resolution providing that certain communication activities at the IX Plenary Assembly of the International Radio Consultative Committee to be held in the United States in 1959 shall not be construed to be prohibited by the Communications Act of 1934 or any other law; and

S.J. Res. 73. Joint resolution extending an invitation to the International Olympic Committee to hold the 1964 Olympic games in the United States.

HOLY WEEK

Mr. CARLSON. Mr. President, as we conclude our deliberations in the Senate in the midst of Holy Week, it is appropriate that we free our thoughts from the burden of concern with material problems, and reflect on ills of the spirit which are a heavier weight on man.

In this hour of confusion and uncertainty, Holy Week holds the answer to our problems.

Father James Keller, who in 1945 founded the Christopher Movement, has written a beautiful message for Easter. It appeared in his book, entitled "A Day At a Time," and reads as follows:

With the fear of atomic and hydrogen warfare haunting men everywhere, the peace of the Risen Christ has a particular significance this year.

The more sincerely men look to the Prince of Peace for the way to true and lasting concord, the sooner we will all enjoy the precious peace for which all men yearn.

It is the tendency of most of us, however, to think that somebody else ought to provide peace for us, while we do little or nothing about it ourselves.

It is difficult to realize that the peace of the world begins with each one of us. There is a contribution to peace that you as one individual can render which no one else can make.

It is more than a matter of being at peace with one's self. God expects each of us to be an instrument or bearer of peace—to bring His peace not only into our homes, classrooms, and shops, but also into such vital fields as government, literature, entertainment, and labor relations.

The first words that Christ uttered to His disciples when He rose from the dead should stimulate all of us to be instruments of peace:

"Peace be to you. As the Father hath sent me, I also send you." (John 20: 21.)

Mr. President, it is my hope that when we return to our legislative duties, we shall have been strengthened in the faith we have in the wonderful heritage given to us by those who founded this great Nation, with its freedoms and its opportunities, and that we shall rededicate ourselves to the principles for which our country stands.

ADJOURNMENT UNTIL TUESDAY, APRIL 7, 1959

Mr. MANSFIELD. Mr. President, pursuant to House Concurrent Resolution 110, which was agreed to yesterday, I move that the Senate adjourn until Tuesday, April 7, 1959, at 12 o'clock noon.

The motion was agreed to; and (at 3 o'clock and 54 minutes p.m.) the Senate adjourned, the adjournment being in accordance with the terms of House Concurrent Resolution 110, until Tuesday, April 7, 1959, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate March 26, 1959:

NATIONAL SCIENCE FOUNDATION

Dr. Logan Wilson, of Texas, to be a member of the National Science Board, National Science Foundation, for the remainder of the term expiring May 10, 1964, vice T. Keith Glennan, resigned.

NATIONAL LABOR RELATIONS BOARD

Stuart Rothman, of Minnesota, to be general counsel of the National Labor Relations Board for a term of 4 years.

COLLECTOR OF CUSTOMS

Orley McGlothlin, of Colorado, to be collector of customs, with headquarters at Denver, Colo. (reappointment).

Harry D. Youse, of North Webster, Ind., to be collector of customs for customs collection district No. 40, with headquarters at Indianapolis, Ind. (reappointment).

HOUSE OF REPRESENTATIVES

THURSDAY, MARCH 26, 1959

The House met at 12 o'clock noon.

Rev. Charles W. Holland, Jr., pastor, Fountain Memorial Baptist Church, Washington, D.C., offered the following prayer:

In James 5: 15 we read: *The prayer of faith shall save the sick, and the Lord shall raise him up.*

Most Holy and Righteous Father, we petition Thee on behalf of our brother, Dr. Braskamp. We thank Thee, dear God, for his improvement. We pray that during his period of convalescence complete recovery will be accomplished.

We pray too, Father, for any who may be ill among our Congressmen and Congresswomen. We know that Thou art the Great Physician, and art able to restore when medical and surgical science and knowledge have failed. We entreat Thee to touch the bodies of sick loved ones of this group.

As this body recesses, guide them back refreshed and conditioned for the important work ahead.

And now as we experience these hours when we so vividly remember the suffering and agony of Jesus for us on Calvary, accept our humble thanks. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed without amendment a concurrent resolution of the House of the following title:

H. Con. Res. 110. Concurrent resolution establishing that when the two Houses adjourn on Thursday, March 26, 1959, they stand adjourned until 12 o'clock meridian, Tuesday, April 7, 1959.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 5640) entitled "An act to extend the time during which certain individuals may continue to receive temporary unemployment compensation."

MITSURU UCHIDA, CONGRESSIONAL FELLOW

Mr. O'HARA of Illinois. Mr. Speaker, I wish to take this occasion at the moment of our adjournment for the Easter recess to commend the American Political Science Association for its sponsorship of a program that brings to our country outstanding young students from foreign lands who on their return home will dedicate their lives to the cause of education and good government.

It has been my great privilege and pleasure to have as an intern in my office one of these young men. He has been of tremendous service to me and his enthiusiasm at the way democracy works here in the Congress has been most heartening.

He has been particularly impressed by the cordial manner in which American Congressmen meet their constituents when they drop in for a visit and the attention we give even to a postal card from a constituent perhaps not personally known to us.

During the period of his internship in my office, this young man has cheerfully given to the small chores the same attention as he has given to matters on a higher plane, as when he has accompanied me to the open sessions of the Committee on Foreign Affairs, or has represented me at the open sessions of other committees.

His name is Mitsuru Uchida and I shall miss him very much after the recess when he will be continuing his internship in an office in the other body. I hope that some day I shall meet him in Japan when he will be continuing the work of his dedication as a faculty member of one of the great universities of Japan.

I requested him to furnish me with a biographical sketch and this he has done with his usual graciousness in cooperation. I am extending my remarks to include this sketch, as follows:

MITSURU UCHIDA

I was born on the 4th of January 1930, in Tokyo. After graduating from the School of Journalism at Waseda University, Tokyo, I entered the graduate school at the same university.

I received the master's degree in political science in 1956, the thesis for which was on "The Role of Political Propaganda in Modern Politics." In it I particularly discussed the public relations activities of the political parties and the pressure groups in the United States.

I am now preparing for a thesis for doctorate, the title of which is to be "The Formation of Public Opinion in Modern Politics." Here again the American political scene is one of the major topics. I became a research assistant at Waseda University in 1958.

I came here as a congressional fellow in the congressional fellowship program sponsored by the American Political Science Association last November. My travel expenses are covered by the Asia Foundation.

I have got my assignment at Congressman O'HARA's office since January 19. After the Easter recess, I shall get an assignment at some Senator's office or at some Senate committee.

I have been really enjoying the work on Capitol Hill. The experiences and lessons I have got and will get hereafter will greatly help me to understand how the American democracy works. And surely they have helped me so much. I intend to make trips around the States after the program ends in August and visit some local governments, universities, research institutions, and so on.

CESSATION OF NUCLEAR TESTING

Mr. MONAGAN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

Mr. MONAGAN. Mr. Speaker, the time has come for our country to make another attempt to control the testing of nuclear weapons and for us as Representatives to recheck our sources of information about our studies of these tests. The lack of international agreement in this field threatens the health of our people and of coming generations of Americans and, we may assume, of other nations throughout the world.

Sunday's papers carried a release by Senator CLINTON P. ANDERSON, the chairman of the Joint Committee on Atomic Energy, of communications to him stating that the concentration of radioactive strontium 90 on the surface of the United States is greater than in any other area of the world. This byproduct of nuclear explosions may cause leukemia and bone cancer when taken into the body. It gathers on plants and grass and may be consumed in vegetables and food and thus cause these fatal diseases.

Also revealed was the fact that the retention time of radioactive materials in the stratosphere is much less than had earlier been believed.

In other words, in the language of Senator ANDERSON, "strontium 90 isn't staying up there as long as AEC told us it would and the fallout is greater on the United States."

We are assured that the risk of damage resulting from the testing of weapons is extremely small, and this is somewhat reassuring, but the frightening prospect that the fallout from such testing might well result in more physical casualties than the actual explosion of bombs in warfare demands that we redouble our efforts to obtain agreement on some form of international control of nuclear explosions with a view toward their ultimate elimination.

Another aspect of this matter which requires our attention is the statement of Senator ANDERSON that the Defense Department had been "gagging the Joint Committee" on making public these "important data on fallout from weapons tests."

Now, I certainly can understand the policy that up to this point has continued our testing in view of the Russian failure to submit to control. And I also agree that there is a necessity for some control of information in the interest of national security, but I submit that this control must not go too far and I urge the Congress to see to it that the public of this country promptly receive the facts on these governmental programs which they are entitled to have. This is no place for a blackout of information. The stakes are too high.

The Atomic Energy Commission and the Secretary of Defense urge the extension and improvement of our procedures in surveying the effects of nuclear explosions and this may be very desirable, so far as it goes. But the frustrating fact is that these recommendations assumed by implication that the testing of atomic weapons, complete with death-dealing fallout, will continue.

I suggest that we must attack this basic assumption. The alternative is too grim for us to continue placidly in our present course. It is not enough merely to improve our methods of gathering information about fallout. We must eliminate the source of the fallout itself.

With this end in view, I strongly urge that all our responsible officials from the President down do everything in their power to persuade our enemies that the continuation of nuclear testing will rain death on the people of the world and that the Iron Curtain will not bar radioactive particles.

The conference on the discontinuance of nuclear tests started 5 months ago in Geneva is still in progress. Although it seems to be stalled on dead center, nevertheless there is an opportunity to bring to the negotiations a new approach. There are suggestions which can be made and avenues which can be opened which hold some hope for breaking the deadlock.

The improvement of test detecting devices may allow some relaxing of the rigidity of the demand for on-site inspection. Some reduction in the size of the site-inspection teams might possibly be made without reducing their efficiency. Some variation of inspection areas might be made with reliance on off-site testing for the surveillance.

These are examples of possible ways of trying to bring some accomplishment out of the present conference. It is essential that we try to get agreement because the effect of failure is too serious.

If, on the other hand, we can obtain international agreement and a cessation of these tests, we will have made a gigantic stride forward in providing a better and safer life for our present population and for the generations which will come after us.

PRINCE JONAH KUHIO KALANIANAOLE

Mr. BURNS of Hawaii. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Hawaii?

There was no objection.

Mr. BURNS of Hawaii. Mr. Speaker, today, March 26, 1959, marks the 88th anniversary of the birth of one of Hawaii's most distinguished and outstanding American citizens. Certainly the Honorable Jonah Kuhio Kalanianaole should be ranked along with one of the greatest Hawaiians of all times. Also, without a question of a doubt, Delegate Kalanianaole is certainly, along with former Mayor John H. Wilson, one of Hawaii's outstanding citizens in the period since annexation, in view of his selection to 10 terms as Hawaii's Delegate to the Congress of the United States from the 58th Congress to the 67th Congress, inclusive.

The occasion of the anniversary of his birth is commemorated as a legal holiday by legislative act. This keiki hanau o ka aina—child of the land—was a prince of the royal family, by action of the Kingdom of Hawaii.

Delegate Kalanianaole, known to the Hawaiians as Prince Kuhio, sponsored the first statehood bill in 1919, just 40 years ago. He was also responsible for the legislation now known as the Hawaiian Homes Commission Act. His life and his deeds have been extolled many times. They were marked by dedication and devotion to his people of Hawaii and to the country of his adoption, the United States of America.

An opponent of annexation, primarily because of the method by which it was accomplished, he became reconciled to the fact and was an outstanding American constantly providing for his people of Hawaiian ancestry, particularly, and for all of Hawaii, an inspiring example in the practice of American principles and ideals.

His dream of statehood has been accomplished. There remains to be accomplished his deep desire to see the ownership of land as widely dispersed as possible among the people.

He was an honor and credit to his native Hawaiian people, to the people of Hawaii generally, and to his country of adoption, the United States of America. Even the following thumbnail sketch of his career clearly shows his greatness.

Prince Jonah Kuhio Kalanianaole was born on March 26, 1871, in Kola on the island of Kauai. He attended the Royal School and Punahou College in Honolulu. Subsequently, he studied 4 years in St. Matthews College, California.

He then journeyed to England where he was, for a time, a student at the Royal Agricultural College in England and was graduated from a business college there.

In 1884 he was created a prince by royal proclamation. He then occupied a position in the Department of the Interior of the Hawaiian Government. In 1895 he took a leading part in the revolution of the Hawaiians against the so-called Republic of Hawaii, and was, as a result, imprisoned for 1 year.

He visited Africa during the years 1899–1902 and fought in the British Army in the Boer War. He was elected as a Republican to the 58th Congress and to the nine succeeding Congresses. He served with great distinction from March 4, 1903, until his death in Waikiki on January 7, 1922. He is interred in the Royal Mausoleum in Nuuanu, Oahu.

Mr. Speaker, under statehood, which was first his dream and that of his people, his spirit, his example, will ever live and move among us. For in him is embodied the greatness of Hawaii's people.

COMMITTEE ON UN-AMERICAN ACTIVITIES

Mr. WALTER. Mr. Speaker, I ask unanimous consent that the Committee on Un-American Activities may have until April 6 to file a report.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

FOOD FOR PEACE

Mr. BREEDING. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Kansas?

There was no objection.

Mr. BREEDING. Mr. Speaker, I doubt that any greater problem faces this body and the American people today than the problem of our apparent inability or reluctance to match the hunger and starvation in the world with our magnificent capacity to produce food and fiber. I am not prepared to say where the fault may lie, but it is an inescapable fact that fault is to be found.

In a speech before the Kansas Association of Wheat Growers meeting in Hutchinson, Kans., on November 18, 1958, I stressed the moral responsibility which is ours in this matter. I received immediate and very favorable response from the people of my district, and from many other sections of our country. Our people are steadily becoming more aware of the fact that our over-filled granaries should and do shock the conscience when we dwell upon the millions of hungry mouths throughout the world.

On January 29, 1959, I submitted House Concurrent Resolution 63, which I should like to read to you at this time.

Whereas the abundance of food and fiber produced by the American farmer is the marvel of the world; and

Whereas most of the people of the world are undernourished; and

Whereas the American people historically have been concerned with the well-being of other peoples; and

Whereas in many nations of the free world vital economic development programs are retarded and political stability is threatened by an inadequate supply of food; and

Whereas the remarkable bounty of the free American farmer has resulted in accumulations of farm commodities for which there is insufficient domestic demand; and

Whereas the Congress seeks to reduce unnecessary expenditures, including, where possible, those for commodity storage and for foreign assistance; and

Whereas the Soviet bloc has publicly challenged the United States and her allies to economic competition in demonstrating before the world the viability of their respective economic systems: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that an agricultural abundance is one of America's greatest assets for raising living standards and promoting peace and stability in the free world; and that Congress favors action to resolve the paradox of American agricultural surpluses and world food needs by more fully utilizing the resources of the American farmer as an integral part of the U.S. foreign assistance program.

SEC. 2. This concurrent resolution may be cited as the "Food for Peace Resolution."

"Food for peace" might well be a most forceful and effective weapon in our unending determination and struggle to protect the blessed freedom which is ours, and which we would share with our fellow men throughout the world. Our present overproduction would strengthen people of foreign countries and would greatly assist them in their effort to resist Communist aggression. In the long run, by plain arithmetic, the strengthening of friendly people in foreign lands would reduce the spending in our own military budget. None can refute the statement that a people who have enough to eat are much less susceptible to the siren call of the Kremlin.

Divine providence has bestowed upon us the resources and the know-how to produce in abundance. Instead of cutting production on our farms, it is much more likely that we will know increased production with hybrids, with new fertilizers, and with continued advancement in methods and in farm machinery. It is the American way to produce more and better and we will, of course, continue in that way.

Let us stop thinking of surplus as an awesome and crushing thing, and instead recognize it as a bountiful blessing, and intended, by Almighty God, to feed the mouths of His children.

It is not my intent or purpose here today to preach a sermon, though perhaps sermons on the subject are needed. Prayer and good intentions alone will not solve the problem. Correlation of American overproduction of foodstuffs is, of course, fraught with many pitfalls. However, it is tempting and heartening to know that if we really set out to feed the hungry, with the same ingenuity and determination that we apply to weapons of war, we can and will overcome the difficulties.

The world and its hungry millions is a ready market for our farm production. I shall not go into this subject in detail for you know, as well as I, that the statement is true.

An example is to be had at this moment in Haiti, where after extended drought, human beings are actually facing death from starvation. They have not enough to eat. While we, with apparent easy conscience, eat, produce, and complain about having so much.

A very short time ago a delegation from India visited in my district and while there said, "India could use 500 million bushels of wheat per year to feed its hungry multitudes, but it is necessary to establish a steady flow of wheat over a period of years, while they build their economy and purchasing power. A large quantity of wheat one year and none the next would result in chaos and revolution."

I say to my good colleagues today, we will not have peace until we have honestly faced the dilemma of our bulging granaries and empty stomachs throughout the world.

Tomorrow is Good Friday, a day on which our thoughts would naturally turn to suffering humanity, wherever it is to be found in this world of ours. I know that my good friends, on both sides of the aisle, will join with me in a firm resolution to continue in the hallowed American tradition of extending aid to the needy. At this particular time of year, contemplating the promise of Easter morn, I call upon this distinguished body to bear well in mind those words, "whatsoever you have done unto these, the least of my brethren, you have done it unto Me."

PUBLIC DISCLOSURE OF REDEVELOPMENT PROPOSALS

The SPEAKER. Under previous order of the House, the gentleman from New York [Mr. LINDSAY] is recognized for 15 minutes.

Mr. LINDSAY. Mr. Speaker, today I have introduced a bill to correct a serious flaw which has developed in title I of the Housing Act of 1949—the urban renewal mechanism. The proposal would require full public disclosure of redevelopment proposals submitted by private redevelopers of title I land before any contract or commitment of any kind could be made between the redeveloper and the local public agency.

This proposal would, I firmly believe, have no restrictive effect whatever on the Federal urban renewal program. On the contrary, there is every reason to believe that the bill, if enacted, would go far toward restoring public confidence in Federal urban renewal. The problem this bill would resolve has arisen, I understand, in many metropolitan communities. I am of course especially familiar with the situation in New York City; but I have received mail on this problem from other areas as well. We have found in New York—in which, I might add, more than $93 million have been or was expected to be advanced by the Housing and Home Finance Agency for title I projects as of June 30, 1958—we have found in New York that urban renewal is rapidly getting a black eye because it has too often been resulting in the condemnation of the homes of low and middle-income dwellers and the subsequent redevelopment of the resold land into high-rent apartments. There is no answer I can give, Mr. Speaker, no evasion I can make, to the question so many have angrily written to me: "Why are millions of dollars of tax money being spent to turn inexpensive dwellings into expensive ones?"

I fully realize that it is of the essence of the Federal urban redevelopment program that the HHFA—that the Federal Government—shall not intrude on the prerogatives of the various localities to tell them how they must redevelop their cities. I wholeheartedly subscribe to that concept. But it can hardly be inconsistent with that concept to require that any locality seeking the benefit of a Federal grant shall give its citizens a fair chance to participate intelligently in the formulation of that locality's urban renewal plans.

What has been happening is that the redeveloper—the person or organization ultimately acquiring the renewal area by markdown sale—is being selected by the local public agency without an adequate opportunity being provided to other potential redevelopers or to the public at large to study his proposals. Commitments are being made either formally or informally under circumstances operating to conceal from the

public just who is redeveloping, what it will cost, what the rents will probably be, and what profit is anticipated.

I can cite one unhappy example. In Manhattan the Washington Square title I project has torn down low-rent apartments and lofts, and uprooted small businesses, only to build a string of large, luxury apartment houses, renting for better than $75 per room per month—in some apartments for a great deal more. Nothing beyond the vaguest information as to what the anticipated rents would be was made available when the commitment with the redevelopment syndicate was made. The names and interests of the investors in this project—which was made possible by grants of $8 million of Federal and $4 million of State funds—were shrouded for some time in secrecy and rumor. Mr. Speaker, if this redeveloper had been required at the first merely to make full and advance public disclosure of its cost, financing and profit projections, I seriously question whether an enlightened and aroused public opinion would have allowed this to go forward in view of the fundamental purpose of all housing schemes: to produce adequate housing within the reach of those who cannot now afford it.

My bill would require as a prerequisite to any redevelopment commitment the filing and public availability of a prospectus containing certain information. It would require no more. It would not intrude on local autonomy—it would facilitate it. I have discussed the bill at length with a great number of authorities on urban renewal. I urge its serious consideration—and its enactment—to this body.

Mr. Speaker, the bill is short and I ask under unanimous consent that it appear in full at this point in the RECORD.

A BILL TO AMEND TITLE I OF THE HOUSING ACT OF 1949 TO REQUIRE EACH PROSPECTIVE REDEVELOPER UNDER THE SLUM CLEARANCE AND URBAN RENEWAL PROGRAM TO FILE AND MAKE PUBLIC A PROSPECTUS SETTING FORTH ITS IDENTITY, ITS PROPOSED FINANCING, THE ESTIMATED RENTS AND PROFITS, AND CERTAIN RELATED ITEMS OF INFORMATION

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 105 of the Housing Act of 1949 is amended by adding at the end thereof the following new paragraph:

"(e) No contract or commitment of any nature whatever shall be made between the local public agency and any person for redevelopment of any part of an urban renewal area unless—

"(1) such person shall have theretofore submitted to the local public agency, at such time and in such manner and form as such agency (under regulations of the Administrator) may require, a prospectus setting forth in detail—

"(A) the name of the person proposing to redevelop the area and the names of its members, officers, and principal investors or shareholders;

"(B) the proposed financing and estimated total cost of any redevelopment to be carried out by such person;

"(C) the schedule of estimated rents per room or sales prices per unit, as the case may be, to be charged, and the estimated profit or rate of return to be derived, by such person with respect to all housing proposed for such redevelopment; and

"(D) such other information as the local public agency may require in order to insure that all interested parties in possession of such prospectus may be in a position intelligently to evaluate the proposed redevelopment before any such contract or commitment is made; and

"(2) the local public agency shall have theretofore made copies of such prospectus fully available to the public in such manner and for such periods as the Administrator by regulation may prescribe."

PAY TELEVISION

Mr. HARRIS. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. HARRIS. Mr. Speaker, on March 23, 1959, the Federal Communications Commission issued its third report in its subscription television proceedings.

The Commission decided that it would proceed with the issuance of authorizations for limited subscription television tests. The tests would be limited to one city per subscription system and to one subscription system per city. Furthermore, in case more than one television station decides to participate in such trials in any city, such stations would not be permitted to broadcast subscription programs simultaneously.

In issuing the third report, the Federal Communications Commission very materially modified the conditions under which it proposed to authorize subscription television tests in its first report adopted October 17, 1957. The first report contemplated trials of any one system in up to three cities. Furthermore, the first report left open the question of whether any receiving equipment might be sold to the public, while in its third report, the Commission decided that the public should not be called upon to purchase any special receiving equipment required for subscription television operations but not needed for the reception of free television broadcasts.

In January 1958, the Committee on Interstate and Foreign Commerce held extensive hearings on the subject of subscription television and the FCC's first report adopted October 17, 1957. As a result of these hearings the committee, on February 6, 1958, adopted a resolution expressing the sense of the committee that the Federal Communications Commission should not grant authorizations for subscription television operations as contemplated in its first report unless and until the Communications Act of 1934, as amended, had been amended so as to specifically empower the Commission to grant such authorizations.

On February 26, 1958, the Commission in its second report adopted February 26, 1958, announced that new applications for authorizations to conduct trial subscription television operations would not be processed until 30 days following the sine die adjournment of the 85th Congress.

On July 3, 1958, the committee requested the Commission to continue the status quo until the committee, during the 1st session of the 86th Congress, had an opportunity to consider legislation with respect to subscription television operations.

On July 23, 1958, the Commission advised the committee that it would not grant any applications for trial subscription operations until the sine die adjournment of the 1st session of the 86th Congress in order to afford an opportunity for the conduct of congressional hearings on the subject and the adoption of such legislation as Congress might deem appropriate.

On January 12, 1959, I introduced House Joint Resolution 130 to prohibit, except for technical tests, pay television operations until specifically authorized and regulated by Federal law. The resolution provides that such technical test operations with respect to any particular system of pay television may not be carried on by more than one person or in more than one area of the country and that no one person may carry on such technical test operations with respect to more than one system of pay television.

Mr. Speaker, the Committee on Interstate and Foreign Commerce has given most careful consideration to the subject of subscription television. The purpose of the detailed hearings held by the committee was to scrutinize the original proposal of the Federal Communications Commission contained in its first report of October 17, 1957, with regard to subscription television tests.

It was the testimony of most of the witnesses who appeared before our committee that the scope of the tests contemplated by the Commission in its first report was so broad that there was a grave risk that these tests would bring about the virtual establishment of a new subscription television service on some extended or permanent basis without the Congress having an opportunity to consider whether the operation of such a service on a permanent basis was in the public interest.

The tests proposed by the Commission in its third report are considerably more limited. Such tests would be conducted only in cities which have at least four commercial television services—including the applicant's station. There are 20 cities meeting this specific requirement.

The committee was informed that, at present, there are five subscription television systems which might be tested. Thus, a maximum of five cities would be involved in the test operations. Furthermore, television stations participating in subscription television tests would be required to continue the broadcasting of free television programs as prescribed by the Commission's rules. These rules require a broadcasting of a minimum of 24 hours per week for stations which have been in existence 2 years or more. Fewer hours are required for stations which have been operated less than 2 years.

It seemed to the committee that actual experience with such limited test operations could be helpful to the Congress

in determining whether or not legislation should be adopted to authorize subscription television operations on some extended or permanent basis, and to prescribe the conditions under which the Commission would have the power to grant such authorizations. Under these circumstances, the committee, on March 25, 1959, adopted a resolution to the effect that the earlier resolution adopted by the committee on February 6, 1958, should not apply to the subscription television test operations contemplated by the Commission's third report adopted March 23, 1959.

Mr. Speaker, let me briefly summarize the reasons which motivated the committee in adopting this resolution.

First. As a matter of principle it would seem unwise to prevent the conduct of test operations of any new development as long as the test operations themselves are not contrary to the public interest. The conditions under which such test operations should be conducted, however, must be such that the tests will not bring about the virtual establishment of a new service on some extended or permanent basis without the Congress having an opportunity to consider whether the establishment of such service on an extended or permanent basis is in the public interest.

Second. The conditions prescribed by the Federal Communications Commission in its third report will, in the opinion of the Commission and the committee, so limit subscription television test operations that they will not bring about the virtual establishment of a new subscription television service on a permanent basis without a congressional decision that such a service is in the public interest.

Third. Under the limitations of the third report, the financial risk is placed where it belongs, namely, on the promoters of subscription television, and these promoters are on notice that there is no assurance that at the end of the test period of 3 years they will be granted authority for continued operation of subscription television. On the contrary, the promoters are on notice that the Congress reserves to itself the right to determine whether or not to enact legislation to amend the Communications Act of 1934, as amended, to empower the Commission to grant, and to prescribe the conditions under which the Commission would have the power to grant, authorization for extended or permanent operations.

Mr. Speaker, therefore, in conclusion, under no circumstances can the action of the Federal Communications Commission and the action of the Committee on Interstate and Foreign Commerce be construed as placing a stamp of approval on subscription television as a permanent service. All that is authorized is the conduct of limited tests sufficient to determine the feasibility of subscription television, but not so extensive that they would bring about without further action by the Congress and the Commission the development of a new subscription television service on a permanent basis.

Mr. Speaker, I have taken this time to explain in some detail the action of the Federal Communications Commission and of the Committee on Interstate and Foreign Commerce with respect to subscription television tests. I trust that this explanation will forestall any erroneous interpretation of the action taken by the Commission and the committee.

There is no implication whatsoever in the committee action that the committee considers subscription television on a permanent basis to be in the public interest. All that the committee action implies is that the conduct of limited tests should proceed if the Federal Communications Commission determines that there are applicants who may desire to engage in such tests and that such applicants meet in every respect the conditions laid down by the Commission in its third report.

THE LATE HONORABLE SAMUEL WILDER KING

Mr. BURNS of Hawaii. Mr. Speaker, I ask unanimous consent to address the House for 15 minutes, and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Hawaii?

There was no objection.

Mr. BURNS of Hawaii. Mr. Speaker, I ask unanimous consent that all Members who desire to do so may extend their remarks on the life and accomplishments of the late Honorable Samuel Wilder King, following my own remarks.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

Mr. BURNS of Hawaii. Mr. Speaker, it is my sad duty to report to this House the terribly sudden and unexpected passing of a most distinguished former Delegate from Hawaii, the Honorable Samuel Wilder King, who died of a heart attack on the night of March 24, 1959, in Honolulu, Hawaii.

Delegate Samuel Wilder King was an outstanding citizen of Hawaii who had served Hawaii and his Nation, the United States of America, throughout a lifetime devoted to public service, to the welfare of his fellowman and his fellow citizens.

His death comes as a profound shock to all the people of Hawaii, for, with the passage of legislation to admit Hawaii as a State, former Delegate and former appointed Governor King had announced his plan to run for election as Governor of the State of Hawaii. And it is especially a shock, since his death comes so soon after the achievement of statehood, a matter upon which he had worked so hard, so long and so devotedly.

Mr. Speaker, in the death of Samuel Wilder King, Hawaii has lost a true keiki hanau o ka aina—"child born of the land"—whose love for Hawaii and her people was second only to his love for his wonderful and talented family. He was particularly and justly noted as an exemplary and wholly devoted husband and father.

Samuel Wilder King achieved great success in many fields of endeavor. Possessed of boundless energy, and dogged determination, and marked by tenacity in adherence to principle, Samuel Wilder King exemplified the ultimate in good citizenship. For his integrity of character, he had the greatest personal esteem of everyone in Hawaii. Certainly his great courage in support of his convictions was most admirable and worthy of emulation.

A great sailor, he was appointed to the U.S. Naval Academy in June 1905, by Delegate Kalanianaole. He graduated from the Naval Academy in 1910. In 1924 he resigned his commission in the regular Navy but remained in the Naval Reserve until 1928 at the rank of lieutenant commander.

In April 1932 he was appointed to fill a vacancy in the board of supervisors, city and county of Honolulu. Subsequently that year he was elected to the board, and in 1934 he was elected Delegate to the Congress of the United States. He was reelected in 1936, 1938, and in 1940.

Having been nominated for reelection in the Republican primary of 1942, he withdrew his candidacy and resumed his career in the Navy in defense of his country. He served in active duty with distinction and decorations until December 1945 and retired with the rank of captain in February of 1946.

In the succeeding years he served—among other things—as president of the State constitutional convention, as appointed governor of Hawaii, and most recently, until his death, as a member of the Territorial House of Representatives.

Even this brief and wholly inadequate résumé of his career demonstrates what the people of Hawaii, along with so many others in the Nation and the world, know—that the service of Samuel Wilder King in the cause of his country and in the cause of Hawaii is one that will not be equalled.

Mr. Speaker, while the passing of our beloved Samuel Wilder King is a distinct loss to Hawaii and to the Nation, his life and works provide all Hawaii and all America, at this historic time and hereafter, with an inspiring example of the highest ideals of citizenship. He will long live in the memory of all of the people of Hawaii.

Mr. ASPINALL. Mr. Speaker, I was greatly shocked and grieved to learn of the passing of our former colleague, Samuel Wilder King, Delegate from Hawaii during the 74th, 75th, 76th, and 77th Congresses.

I did not know Sam King as Delegate to Congress but during recent years he worked closely with us in the Committee on Interior and Insular Affairs—first, as a member and chairman of the Hawaiian Statehood Commission, and more recently as Territorial Governor from 1953 to 1957.

Governor King was a man of broad interests. He graduated from the Naval Academy in 1910 and served in the Navy until 1924 when he transferred to the Naval Reserve. Early in World War II he returned to active duty and served with distinction in the Pacific theater for 4 years. His four terms in Congress resulted in the enactment of a number

of important pieces of legislation. As a successful businessman, Mr. King engaged in real estate and insurance. Active in the cause of statehod for Hawaii, Sam King was one of the architects of the legislation which within the past month won the approval of Congress. Serving as appointed Governor from 1953 to 1957, Sam King helped the Territory ready itself for admission into the Union. Only a few months ago he came out of retirement and was elected to the Territorial Legislature in November 1958. He was serving in this capacity at the time of his death.

Sam King was part Hawaiian himself and a responsible spokesman for his people. He was greatly respected and served the Territory of Hawaii in a dedicated manner for more than half a century. Hawaii will miss Samuel Wilder King, naval officer, businessman, and statesman. I join our colleagues in extending sympathy to Mrs. King and other members of the family.

Mr. MAHON. Mr. Speaker, I wish to join my colleagues in expressing deep regret over the passing of Samuel Wilder King.

Mr. King was elected as a Delegate to Congress from Hawaii in 1934. At the same time I was elected to Congress from Texas. We began our service here together in 1935. We lived in the same apartment house and soon became good friends.

Sam King was a man of character and stature. He was a man of fine ability and great devotion to duty. He served his country ably and well in a political and military capacity and otherwise, as has been pointed out by others here today.

I wish to join others in paying tribute to the memory of Samuel Wilder King and in words of sympathy to the fine family who survives him.

FOOD FOR PEACE THROUGH THE UNITED NATIONS

The SPEAKER. Under previous order of the House, the gentleman from Iowa [Mr. WOLF] is recognized for 30 minutes.

Mr. WOLF. Mr. Speaker, I have taken the floor on the day before Good Friday to discuss the problem of the use of food for economic and industrial development in underdeveloped nations. Our Judeo-Christian heritage and the principles and ideals of our Nation demand that we, through the United Nations lend a hand to those people that are striving for a better life for themselves and their children. Last week I had the pleasure of discussing this problem with certain distinguished leaders at the United Nations: Mr. Myer Cohen, Director of Operations for the United Nations Special Fund; Mr. Philippe De Seynes, Under Secretary of the Department of Economic and Social Affairs for the U.N.; Mr. Max Finger, Senior Advisor, Economic and Social Affairs, U.S. Mission to the United Nations; Mr. Paul G. Hoffman, Director of the U.N. Special Fund, and former director of the Marshall plan; Mr. L. Michelmore, U.N. Technical Assistance Board; Mr. Maurice Pate, Executive Director, UNICEF; Mr. Stanley Sroka, also with UNICEF; and Mr. David Wilken, who is with the Bureau of Economic Affairs of the State Department. These men have all assured me that there is much that could be done in terms of the use of food for economic development. Furthermore, they impressed me as brilliant and dedicated men who could plan and administer such a program with the utmost of effectiveness.

Mr. Speaker, we are a land of abundance: there are millions of cars on the road, people of moderate means own their own homes; our working and white collar class work reasonably short hours and have a great amount of leisure time. We are dazzled by the use of science and technology for the promotion of individual comfort and the public good. There is, in this country, a level of material and political well-being that hitherto has been unknown in this world. No doubt we may criticize much in our society. No doubt we may suggest that many of our values have gone awry, no doubt we may question the drift, apathy, and disinterest which has gripped the United States. No doubt there is a subtle, yet perceptible drift toward what our President has called a garrison state. And, in the future, I intend to discuss these various problems of the American society. I intend to explore them and point out places where I think we are betraying our heritage of freedom. I intend to consider in a speech on the floor, the use of our agricultural resources for domestic consumption in our depressed and underdeveloped areas. And we all know, unfortunately, that a great number of these areas exist in the United States.

But for today, it is enough to say that we are a land of abundance as compared to the rest of the world. We are still a land which guarantees individual freedom and opportunity to its citizens. Our Nation and the high ideals we represent are still considered the hope of millions of people all over the world. These people look to the American society as a personification of a series of ideals that have been realized and could be realized in their own country. For this reason they judge the actions of the United States carefully and critically. The underdeveloped nations of Asia and Africa judge the way we use our economic plenty and agricultural abundance because they are just beginning to industrialize, they are acutely aware of the disparity between their economic status and our economic status. Yet one does not have to be either an African, Asian, or even a statistician to realize this intolerable disparity. For in these statistics one is able to see the suffering economically and consequently, sociologically and psychologically that is part of the lives of a billion people in this world.

In India the average income per capita is approximately $68 or $69 per year. In Indonesia the average income is $28 per capita per year, in the Philippines the average income per capita is approximately $44 per year. For over 1 billion people in this world the average income per year is $125 per capita. In the United States the average income per capita per year is $2,200. Needless to say, a widening gap between the have and have not nations of this world is a basic source of conflict.

We should never forget that right now 1 billion people in this world are living on the edge of starvation. These people toil 16 hours a day with their hands and with the most crude and rudimentary hand tools in order to obtain enough food for themselves and their families to keep alive only for the day they work. Each day is a fight to live. The gnawing pangs of hunger are never quieted. These people cannot think of nor can their governments consider for them vast programs of industrialization in which they can participate. Countries cannot consider employment for hundreds of thousands of men and women and children who are literally never more than 1 day away from starvation. For each day the struggle for food is the biggest and most uncertain factor in these countries. And, therefore, the people are ill prepared to participate in industrialization and the governments are unable to use funds which should go for industrializing purposes since such moneys must be used in part to keep these people alive.

Yet we in the United States know—especially we in the agricultural areas—that we have on hand an undistributed amount of food which totals some $8,700 million. We know that millions of dollars of these food resources are literally rotting away in storage bins. Indeed, something has clearly gone wrong in our thought and actional processes when we persist in saying we have surpluses when there are nations in this world that cannot industrialize because their people are starving.

We in the United States had better do what we can to rectify this shocking situation. We can ill afford to misjudge the awakening of the peoples of Asia and Africa to the feeling that they do not have to live on the edge of starvation. The latter fact is a result of proof that has been shown to these people by Western countries and particularly the United States. We have shown these people that there is no reason to accept the tragic fate of their forebears. We have shown them that life can be more than a perpetual search for the absolute necessities. But now that we have pointed the way toward the possibility of material well-being we cannot let the peoples of Asia and Africa down. We must be willing to show them that we are willing to spend greater amounts than in the past on economic development and give greater agricultural aid to these countries. In the past 10 years, according to the Library of Congress, the United States has spent an average of $33.6 billion on defense per year, whereas our economic assistance each year for the past 10 years has averaged $2.2 billion. We must show them that we will do everything in our power to reduce tensions on the international scene so that we will be able to reduce the projected 10-year military budget of $500 billion. We should always remember that military armaments and military armaments races do nothing but buy

time—and we do not even know if that is true. Military armament races never aid the people in any material or moral sense. Let us, however, accept the assumption that we need these arms. If it is true that we are buying time through military preparedness, we must also be willing to do something with this time. That is to say, we must have large-scale positive and comprehensive programs of aid to underdeveloped nations. For in such aid we are preserving peace through having people share in economic well-being.

Not only must we aid underdeveloped areas economically through the use of American dollars and increased private investment but we must use part of our vast agricultural resources to aid nations in their attempt to leap into the age of industrialization. There have been many proposals promulgated which have had as their basic idea the use of food to aid underdeveloped areas. One of these proposals is now known as Public Law 480. This law has operated well for the most part and should be strengthened. Both Public Law 480 and section 402 of the Mutual Security Act of 1954 are good laws but their purposes are far too limited. These laws are not aimed at the aiding of economic development of other countries. Section 402 merely gives recipient countries a choice of accepting a certain share of our aid dollars in the form of farm products. Our food abundance certainly should not be used to supplant the meager cash amounts that are presently received by the underdeveloped countries. The avowed purpose of Public Law 480 is to increase the export of farm commodities. The use of the proceeds from sales under this law for the goal of economic development is incidental and subordinate to our purpose of increasing our exportation of farm resources. Neither law provides a mechanism to insure that our commodity exports result in additional world consumption of these products which would not have taken place in the absence of such products. In the past few years other proposals have been put forward authorizing the use of food for an international agency which would then administer a program of use through the various underdeveloped areas. For example, S. 85 and S. 86 of the 84th Congress contained such a notion. Supported by 22 Senators, this resolution would have provided for (a) the acquisition and storage of sale products and other raw materials when overall surpluses would otherwise cause undesirable price investments (b) prevention of famine and starvation (c) absorption of temporary market surpluses and (d) use of currencies paid by agricultural goods to assist in financing improved economic and social development. However, Executive opposition to these resolutions ended any attempt to proceed further to the Senate.

But now a new time has come, a new chance to aid our fellow man has arisen, a new opportunity presents itself of which advantage must be taken.

Various studies have been carried out suggesting the possibility of using our food to aid economic development. Knowing that there are hundreds of thousands of unemployed and underemployed farmers and workers in underdeveloped countries there are a number of projects which could be undertaken that will put these people to work with local materials and local resources or with only small accounts of equipment. This would speed their country's development and increase its productive ability by building roads, telephone lines, wells, irrigation canals, schools, dams, warehouses, processing plants, and so forth. Obviously, there are problems. When unemployed people are put to work they have to be paid and their increased purchases of food and clothing will raise the levels of demand. This increase in demand for consumer goods, coming into the market before they can create facilities may result in an expansion of production which tends to cause inflation. It is at this point that our farm products could be used. These products could help to satisfy a large part of the increased demand from the extra people put to work until later expanding production satisfies it, thus making possible increased employment and consumption for the present and high productive power and demand for goods and sustained employment for the future. Such programs as the one outlined have been studied thoroughly by the United Nations. Furthermore, they are well equipped administratively, to aid, to some extent, the distribution of food items for economic development.

Our God-given abundance would help feed people working on these economy-building projects, or would be sold and the domestic currency would be used to pay part of the new project costs.

These foods thus sold in domestic markets would be offset by increased food demands from the additional people put to work. In this way, for example, the milk marketing development for the city of Calcutta could be financed three-fourths from our abundance while the forest development for the Andaman Islands could be financed entirely by our food supplies. I commend to the attention of those interested a report prepared for the United Nations entitled "Uses of Agricultural Surpluses To Finance Economic Development in Underdeveloped Countries—Pilot Study in India." Besides a project-by-project analysis this study presents a picture of how there may be an overall increase in the 5-year development program as a result of imported food. Amazingly enough, it is statistically shown that $100 million of food used for such an increase annually could finance an addition to the present 5-year plan of $240 million worth of projects over a 4-year period.

Many people have, of course, raised certain objections to the possibilities of utilizing economic surpluses on an international level through the United Nations. There is the fear that the United States will flood the agricultural market thereby destroying exports of other countries. There is the fear that out of a greater use of agricultural resource will result a possible flooding of the market of the importing country thereby adversely affecting the farmers in that country. But, nevertheless, there is still the basic fact that a billion people are on the edge of starvation and we have over $8½ billion worth of already grown farm resources rotting in our food bins. It is a proven assumption that national plans can result in the use of this food in a way which will not disturb the commercial markets of other countries or the commercial prices in the importing countries. Yet we should not deceive ourselves. There is no doubt that for this proposition to be true two economic conditions must be present. Firstly, the country that accepts the importation of food resources for economic development must lack sufficient resources of skilled manpower and of finance. Projects financed by food resources could expand such resources through providing more finance and through speeding up the education and training of skilled manpower or possibly by feeding the workers better. On the other hand, if the country is already doing all that it possibly can do even if more finance, more training or more food is made available, then obviously there is nothing that surplus products can do to help the program or increase the levels of consumption.

The second condition which must be present is that the increase in the consumption of foods of the same type as those added to the supply through the distribution of food must be as large as those additions to the supply. If not, additional supplies will have the effect of pushing farm prices and hence ultimately curtailing domestic farm production. These are all problems which can be guarded against through useful economic planning.

On the basis of the administrative excellence of the United Nations, and the important work the U.N. has done in this field, it is my suggestion that this Congress seriously consider the possibilities of aiding economic expansion through the use of American agricultural resources through the United Nations. Today the underdeveloped nations of the world look to the United Nations as their protector, as their hope for peace and security. They look to the United Nations because they owe a large degree of their independence and political sovereignty to the United Nations. These people feel that the kind of aid that is given to them by sovereign nations has too many political strings attached. And we know that this is so. We in Congress know that we have lost sight of the fact that people should be aided because they are people, that there is dignity in life, that people should not be aided because we think that this is the best way to bribe them into supporting our military and political position as against the Soviet Union. We do not seem to realize that our goals of peace and our national security will be better secured, and our political systems will be better secured if we do not constantly tie aid to nations in a way which forces their hand ideologically. By proposing the possibility of an expanded economic industrial development program for the United Nations which will have as one of its basic

features part of our agricultural resources we will have done much to prove our good faith, our good intention, and our hope that people all over this world, in Asia, in Africa, in Europe, may live in dignity and freedom from want. Furthermore, we will be showing the world that we hold the United Nations as our greatest instrument for peace and security in this world.

To these ends I am proposing that the Congress of the United States authorize the President of the United States to make food and fiber available to the United Nations or its appropriate agencies. I am introducing a bill within the next few days which will convey the interests of the citizens of the United States in their willingness to aid the cause of peace with a positive program aimed at abolishing the reasons for war. That is, to help to ultimately eliminate starvation, human exploitation, discrimination and other injustices. I propose that we demonstrate our responsibility as the world's most fortunate independent democracy by using our food and fiber resources to aid other nations in the improvement of their living standards. It is the policy, further, of my bill to aid through the United Nations, nations that do not have adequate food reserves, and are forever in peril of national catastrophe because of crop failure, droughts, and other causes which may tend to cause unsettled conditions and cutbacks in programs of industrialization and education resulting from inadequate food supply. Hence, it is the purpose of my bill to utilize food for the purpose of assuring continued industrialization and education for those nations not as fortunate as our own.

On this day before Good Friday it is a good time to remember our religious heritage. Missiles are only one way of fighting the Soviet threat. It may well be that the best way of thwarting the Soviet threat is to return to those basic religious principles which are so much a part of our heritage. It is written in the Book of Matthew, "Feed the hungry, clothe the naked, heal the sick." This is the tradition we must defend, remember, and apply. It is this way that we shall be successful against totalitarianism. It is only in this way that we shall have true national security while preserving the peace.

Mr. Speaker, I ask unanimous consent that those of my colleagues who wish to associate themselves with my remarks may extend their remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. KOWALSKI. Mr. Speaker, I wish to associate myself with the remarks of the distinguished gentleman from Iowa [Mr. WOLF]. Indeed it is a great paradox to me why in a world which is learning the means of becoming both richer and smaller than it has ever been, why we cannot learn to remove the evils of alternations of glut and scarcity. I certainly believe that United States through the United Nations could very well help in the world's efforts to solve this problem. The moral code of our Western World calls for intelligent and charitable action.

It is certainly clear that the careful use of food resources in needy, underdeveloped areas could do much to strengthen and facilitate industrialization. India is clearly one example of where the careful use of food resources could release capital for industrializing purposes.

Mr. Speaker, I have spent most of my life in the military, much of it in bringing order from chaos in Japan after World War II, but I know and I hope that my colleagues also know that we must do much more than just be militarily secure. It was my job in military government to help distribute American food in Japan, and so I was privileged to see the appreciation on the faces of that great people.

Today in the world, as the people of the underdeveloped nations seek greater economic security, well-being and dignity, I hope that we will explore fully the idea presented by Mr. WOLF.

Mr. KASTENMEIER. Mr. Speaker, I wish to associate myself with the remarks of the gentleman from Iowa [Mr. WOLF]. I compliment him on his articulate presentation of the basic ideas and facts on the program of food for peace through the United Nations. It is seldom we find a proposal which accomplishes such important several objectives concurrently.

First. It accomplishes the end of administering to the needs of starving peoples on a global basis in keeping with the finest traditions of our country in being morally responsive to human indigence, no matter where found;

Second. The program would operate through the United Nations thereby relieving this country of the concomitant objections of adversely affecting the food markets of friendly agricultural export countries or the domestic currencies of recipient nations; and

Third. This program would materially alleviate our domestic problem of agricultural surpluses.

I sincerely hope, Mr. Speaker, that this proposal will be translated into legislation, and that this Congress will give it the serious and thoughtful consideration it merits.

CONGRESSIONAL EMPLOYMENT PRACTICES

Mr. HENDERSON. Mr. Speaker, I ask unanimous consent to address the House for 5 minutes and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. HENDERSON. Mr. Speaker, secrecy and silence are like darkness. They hide many things. The recent attacks upon some Members of Congress spring from the secrecy which surrounds their employment practices. All Members suffer from these attacks because they are a reflection upon the Congress itself.

Many will concede that in a great number of cases the employment of relatives in the offices of Members has resulted in an efficient, well-run office organization that has served the district well. But it must also be conceded that there have been abuses of the practice which have created a cloud of suspicion upon the practice in any form, as well as upon the House of Representatives itself.

Because of the abuses it would probably be wise to discontinue the procedure entirely. However, I realize that any action of such finality would penalize those who employ relatives and obtain from them conscientious and efficient service.

Since few misdeeds occur in the bright light of disclosure, I propose to tear away the veil of secrecy which surrounds the employment of Members' staffs. I have introduced legislation which would require a Member to file a statement with the Clerk at the time of employment, setting forth the relationship by blood, marriage, or business relationship existing between the Member and the employee, together with a description of nature of work to be performed, place of work, and approximate hours of employment. Such records will be available for public inspection.

It is my feeling that this measure will advise the public sufficiently of the nature of the employment practices. I feel that most Members would willingly subscribe to its provisions for it would lift from them the finger of suspicion. And most of all it would discourage those who might be disposed to engage in a practice which would appear unwise or unconscionable in the light of public appraisal.

INVESTIGATION OF UNITED STATES AIR NEGOTIATIONS

Mr. HENDERSON. Mr. Speaker, I ask unanimous consent that the gentleman from New York [Mr. DEROUNIAN] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. DEROUNIAN. Mr. Speaker, on numerous occasions during recent years, Members and committees of the Congress have expressed concern that the Department of State, in negotiating international air agreements, has failed adequately to safeguard the interests of the United States and our international air carriers.

Often, there has been a tendency on the part of our Government to yield vital operating rights to foreign carriers in exchange, not for equivalent rights for U.S.-flag air carriers, but rather for other diplomatic concessions or simply to pacify another head of state. As a consequence of this sacrifice of U.S. interests, we have seen the U.S. carriers percentage of international air traffic shrink steadily, despite the fact that a vast percentage of international air travelers are American nationals.

I bring this to the attention of the House today because of a current situation which I regard as the most disturbing example of the failure of the Department of State to protect U.S. economic rights yet to come to my attention.

In this instance our Government has not merely adopted an unduly generous attitude during international negotiations. Instead, the State Department proposes to give to the United Kingdom air rights between the two largest cities in the world—Tokyo and New York—without negotiations, and without securing any compensatory rights for the U.S.-flag carriers in return.

The original exchange of air rights between the United States and the United Kingdom was negotiated with great care. Routes were outlined and terminal and intermediate points spelled out in great detail to make certain that each Government was receiving rights of equivalent value.

This bilateral agreement, known as the U.S.-U.K. Air Services Agreement, or more commonly, the Bermuda Agreement, also included a section in the annex, section IV(b), which provided that with proper notification to the other Government concerned, additional points could be added to a given route. It was understood that the addition of such points would be limited to points of limited traffic potential which were directly on the existing route and did not involve substantial additional mileage.

Among the routes granted the British were two which would permit service between Hong Kong, Midway, Wake, Guam, Honolulu, San Francisco, and New York.

About 2 years ago, on January 22, 1957, David Proudlove, the U.K. Civil Air Attaché in Washington, advised the Department of State that the United Kingdom was adding Tokyo as a point on its transpacific route No. 7, utilizing the provisions of IV(b) of the bilateral.

Despite the fact that Tokyo is scarcely a minor point, that substantial route deviation was involved, neither the State Department nor the Civil Aeronautics Board made any objection.

They made no objection, in fact, despite the utterly incredible fact that the second paragraph of Mr. Proudlove's letter, after advising that IV(b) was being used to add Tokyo, said:

> In doing this, I would like to make it clear that we are not in any way departing from our previously expressed views that IV(b) procedure is inappropriate for the addition of minor points.

In short, said the U.K. in effect, "We are doing this to you, even though we know it is wrong, but do not you dare try it on us."

A few weeks later, after observing the United Kingdom action, Trans World Airlines sought to use the same procedure in an effort to close a long existing gap between Frankfurt and Zurich on its European route. TWA made a request of the Department of State that the IV(b) procedure be employed for this purpose, reasoning that Frankfurt was a traffic point of much more limited significance than Tokyo.

The State Department replied, on March 15, 1957, over the signature of Thorsten V. Kalijarvi, Acting Deputy Under Secretary of State for Economic Affairs, who advised that it would not be desirable to utilize the IV(b) procedure in this instance.

> The British authorities and the U.S. authorities are in agreement that the IV(b) procedures be used only for the addition of points of limited significance—

He wrote.

Recently, British Overseas Airways Corp. applied to the Civil Aeronautics Board for a foreign air carrier permit to begin operations on a transpacific route, and included Tokyo as a point on the route. Several American airlines objected, and Northwest Airlines, Inc., a U.S. carrier operating transpacific which would be economically affected by a Tokyo authorization for BOAC, intervened in the case before the CAB. The Air Transport Association also petitioned to intervene, but was denied.

Northwest asked permission to argue before the CAB the question of whether Tokyo had been properly added to the BOAC route under the provisions of the Bermuda agreement. Bureau Counsel for the CAB then asked the State Department for its opinion on whether Tokyo had in fact been properly added to the route.

The CAB received a reply dated February 27, 1959, signed by Laurence C. Vass, Director, Office of Transport and Communications. Wrote Vass:

> Considering first the question whether Tokyo can be added to BOAC's route pursuant to section IV(b) of the Annex to the Agreement, the answer is affirmative. * * *
>
> Had the Department of State concluded either that the addition of Tokyo was not legitimate exercise of section IV(b) right, or that improper procedures had been employed, it could have requested consultation on the dispute and, if the question was not thereby satisfactorily resolved, resorted to arbitration under article 9 of the Air Transport Services Agreement. However, the Department of State at the time of notification was of the opinion that section IV(b) was being properly utilized in this particular instance.

In short, according to Mr. Vass, the State Department believed it proper, on January 22, 1957, for BOAC to add the major traffic point, Tokyo, to its route despite the fact a few weeks later, on March 15, TWA was being advised by the same Department that IV(b) was proper only for points of limited significance.

As a result of this letter, the CAB ruled that Tokyo had been added as a point on route 7 in the bilateral agreement, and denied Northwest's petition for argument. Hearings are scheduled on the BOAC application, but now will be limited to public interest questions.

Thus, we have the incredible spectacle of officials of our State Department, whose obligation it is to defend the interests of the United States and its business enterprises, citing two directly opposite interpretations of section IV(b). Moreover, each interpretation was utilized to favor the British air carrier's interests at the expense of international air carriers of the United States.

Mr. Speaker, this situation is not only ridiculous, it is intolerable. The Department of State has, in effect, given BOAC a wholly new route—one which they were never intended to have under the bilateral—connecting the two largest cities in the world. In operating this service, BOAC will be in direct competition with the U.S. carriers operating between Tokyo and the United States. Millions of dollars in revenue will become subject to diversion.

Yet the State Department has made this major concession, which will result in serious economic effects on U.S. carriers, without securing any new compensating rights for the U.S. carriers. The Department of State failed even to secure Frankfurt-Zurich rights for TWA or an entry into Hong Kong for Northwest, both of which have been authorized by this Government for nearly a decade, and neither of which the British through protracted negotiations have been willing to approve.

Mr. Speaker, I believe that this appalling action of the Department of State, and the action of the Civil Aeronautics Board in acquiescing to it, actions which will result in substantial economic damage to U.S. companies, merit investigation by the appropriate committee of the Congress and, following the Easter recess, I intend to propose that such an investigation be undertaken.

FOCUS ON GERMANY—INSTITUTE ON U.S. FOREIGN POLICY, MILWAUKEE, WIS.

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Wisconsin [Mr. REUSS] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. REUSS. Mr. Speaker, the attention of the world continues to be focused on Berlin, on Germany, on central Europe. Much of our hope for acceptable solutions to the problems of these areas rests in full discussion of the many points of view held by persons who have devoted serious thought to them.

Such a discussion was held in Milwaukee on Saturday, February 21, 1959—the third annual Institute on United States Foreign Policy, sponsored by the department of political science of the University of Wisconsin—Milkaukee; the World Affairs Council of Milwaukee; the League of Women Voters of Wisconsin, and the Bureau of Government of the University Extension Division. Cooperating organizations were the Wisconsin Committee on World Affairs; the American Association of University Women (Wisconsin chapter); the American Association for the United Nations (Wisconsin and Milwaukee chapters); the United World Federalists (Midwest region); the Milwaukee County Federation of Women's Clubs; the Milwaukee Public Library; the Business and Professional Women's Club of Milwaukee; the Federation of German-American Societies; the International Institute of Milwaukee; the Steuben Society of Milwaukee; and the Deutschen Schulesprachverein of Milwaukee. The institute planning committee was composed

of Profs. Donald R. Shea, chairman; Carl P. Runge, Robert Hattery and LeRoy Peterson of the University of Wisconsin; David Beckwith, C. E. Burnett, and J. Wm. Stack, Jr., of the World Affairs Council of Milwaukee; Mrs. L. L. Freeman, Mrs. Donald W. Davis, Mrs. Wendell Phelps, Mrs. W. G. Hyde, Mrs. John S. Johnson, Mrs. Robert L. Stepp, and Mrs. H. N. Putnam of the League of Women Voters.

It was my distinct privilege to appear on this program, along with such distinguished speakers as Mrs. Eleanor Lansing Dulles, special assistant to the Director, Office of German Affairs, Department of State; and Paul H. Nitze, president of the Foreign Service Educational Foundation, director of the Foreign Policy Association, and, under former Secretary of State Dean Acheson, director of the State Department policy planning staff.

I have just received the transcribed texts of the remarks given by Mrs. Dulles, Mr. Nitze, and myself. Because of the importance to all of us of the German situation, I offer for the RECORD the texts of these three addresses:

GERMANY AND THE BERLIN CRISIS

(By Mrs. Eleanor Lansing Dulles)

I think you will find that all of us who speak to you today will say that you cannot separate the Berlin crisis from the German question. It is one question. Therefore, if I talk a little more about Germany and a little less about Berlin, it is because of this threat to our whole position in Europe. The threat to Berlin is not new. It was reiterated several times by the leaders of the Communist bloc and it has been expressed in all the Communist newspapers.

It challenges our basic German position and our position in Europe. They are not merely questions of detail of access to a city placed 100 miles behind the Iron Curtain. They are challenges to our philosophy.

How did this threat come to take place at this time? There is a good deal of discussion and argument about this point, but there are many of us, including leading Berliners, who say that the condition in West Berlin, the brilliance of the reconstruction, the fine new buildings built with American help, built with to some extent American money—and I underscore the fact that its been the ideas and the planning almost more than the money that has brought forth the Memorial Library, the Congress Hall, the new housing that will crect a new teaching center in Berlin, Medical Teaching Center, which is going to be one of the best in the world, all this going up in a city living under extremely difficult conditions—and constituting a magnet for thousands and thousands of refugees who come to Berlin every week. The East Germans feel that this situation causes instability and prevents their building their regime solidly on the Communist principles of dictatorship. There is always an escape hatch, there is always a basis for comparison, there are always people who will say, "Look what the free world has done in West Berlin." We know that Ulbricht went to Moscow, we know that he presented a complaint there. We know that as a result of this and various erroneous appraisals which the Kremlin made of the Western Alliance, underestimating its solidity and disregarding the facts of democracy involved in our debate here in the United States of various issues, that they thought the time came now to challenge what I call basic principles.

A NEW POLICY

These basic principles were for a new Germany and a new Europe in which many ideas were worked over and discarded. We came to understand that the past was no guide to the future in the treatment of Germany, that is the post-Versailles Treaty period, so we devised a new policy. And I make the turning point the speech of Secretary Byrnes in Stuttgart in 1946. From then on, we with our allies have helped the Germans in their energetic rebuilding of the country. Now the principles which we have used and which we have followed in developing this program, are mainly four and they are so closely related that they make a coherent whole, even though portions of them can be looked at separately.

The first principle, and one which I would maintain in spite of a good deal of newspaper and magazine and learned statements to the contrary, is that of security—of horrors of vacuum. There is no possibility of having an area without a secure separate relationship and without some defense potential that will not be rushed into by the most aggressive and the most destructive forces that are for the moment outside that vacuum. It is sometimes hard to make people who have been playing with this idea follow through all the reasoning, but where you have Germany in a very strategic geographic position and where you have a people who have demonstrated for more than a century their basic vitality, their energy, their resourcefulness, their determination, it is to most of us who know the German situation unthinkable that they should be left unattached without well worked out challenges for their energies and their creative potential.

So the first principle that I would mention is that security must consist of international relations of a recognized and dependable sort and adequate defense.

ECONOMIC STABILITY

The second major principle is that economic stability and economic cooperation in the present day world depends on stability and help in all the major elements of that world. Germany has proven by vigorous reconstruction, by her export trade, her foreign exchange policies, and in other ways the capacity to be a strong element in a reconstructed Europe. No one can question that strength.

The third principle, and this comes very close to the specific challenges in the Berlin crisis, is that the will of the German people must have adequate expression, there must be a true democracy, there must be elections, there must be debate, there must be a freedom from police state methods.

Now the German elections are as active, as energetic, as full of differences of opinion, and capable of bringing out leadership on different sides of many questions as any that I have witnessed in any other country. I can say that German democracy may not be perfect, it may have limitations, but I think it can compare favorably with that of most other free countries, most other countries in the world would perhaps be a better way to state it.

On the fourth principle which has become a part of our general approach to international problems, to bring together and try to enlarge the sphere of cooperation—that principle is that Germany has to be integrated into the network of European production, fine arts, and activities of a cultural, political, parliamentary and other nature.

SYSTEMS OF COOPERATION

Germany, clearly with the will of the people, has voluntarily become a part of the European systems of cooperation, she has shown eagerness and capability in joining such organizations as the OEC, NATO, the European Payments Union, The Coal and Steel Community, and others. There is no point that I can think of where Germany has failed to try an adequate share of responsibility or be an important element in the thinking and planning in these many organizations. We believe this is important in the postwar world, we believe we cannot go back to the fragments of the past and that this has to be held as an element in our security, in our stability, in our decent operations in the world.

Now the testing of these principles which has come with the Berlin challenge is very serious, extremely grave and holds potential that I think we have to face in the most solemn manner. The peace treaty that has been presented, the draft peace treaty, and the speeches, and the newspaper declarations, all indicate that a vacuum is to be opened up in the area of Germany into which eventually forces of incalculable magnitude will rush. It indicates that from the economic system of Germany which is now stable and expanding—and I include in that Berlin—must come something other, it must be faced with a kind of price, wage, material, competition which will break down the structure of that economy.

PART OF RUSSIAN PLAN

It is quite clear on a number of statements that this conflict between the two systems is a part of the Russian plan and it is what would result in fact if there was a withdrawal of Western strength from the scene.

The challenge also is against free elections, against the expressing of the will of the German people. Sometimes this takes the form that this will is irrelevant, sometimes it takes the form that Germany is unregenerate, sometimes it takes the form of statements that the security of Europe calls for keeping Germany more or less in shackles and subordinate, and in a submerged condition as far as democratic expression is concerned. Anyway, in any case it is a direct challenge.

Now one can look at Berlin as a separate item in this crisis, although it does not make a great deal of sense. The question of access to Berlin is something of great moment, but at the same time it does not represent the true problem. There is nothing you can do to gain access to Berlin that would protect that access if the surrounding area is governed by hostile forces, by Soviet dominated or Communist dominated troops, whether they be German troops, and there are considerable numbers of East German troops under Communist control, or whether they are Russian troops. The difference is not very great, the orders come from the same place in any case. So nothing can be done about the access to Berlin that has any meaning, unless there is strength in the support of the principles which we have adopted and which we hold to as basic in connection with the German situation as over a broader field.

CAN'T STAND IMMOBILE

Now then one looks to see what can be done, we cannot stand immobile, we must search for any possible ground where by making what might seem to be a concession we could make a gain. There can be no concession which is not matched by gain for the free world. Therefore, we have to analyze each move, each puzzle in that connection.

There are certain limits set to the expiration, negotiation and the plans to meet this crisis. We cannot tolerate or consider anything which will encourage or permit Soviet Communist aggression and subject free peoples to new aggression, new tyranny which will further perpetuate the situation in which people who are now menaced stand. Such further aggression we cannot tolerate in any plan, and any plan has to be considered in that light. We cannot give most substantial advantage to any regime which

has said that it is out to conquer and to control. We cannot give away anything that we have under those conditions. The third limit to our latitude for negotiation is in my opinion the will and the clear thought and purpose of the German people themselves.

If we believe in the other principles that we hold, we must believe that the Germans are in a position and I mean West Germans—and to a limited extent East Germans—and certainly the Berliners are in a position to express what they think is a tolerable degree of accommodation or adjustment. They live with this problem, it is their country, it is their people.

People talk as if the Germans have an inflexible and illogical position at times. It is not that. It is that the stakes are greatest for them, at least in the first instance, and they can and must make clear what they think is a possible adjustment of minor matters which will not lead to abdication or will not lead to tragic concessions. And then finally, we must do everything that is at all possible, that is within our scope to protect the people of Berlin—these people who have stood 14 years in perilous condition, who go about their daily life just as you do, who carry out their Christmas shopping and their Christmas celebrations sandwiched in between two Khrushchev notes as if they didn't exist.

These people have a pledge and the only way we can with honor carry through our European program is to recognize that pledge and its meaning. Whatever the difficulties may be about working out the details we must recognize that here vital principles are at stake.

Prospects for a German Settlement

(By Paul H. Nitze)

Mr. Chairman, ladies and gentlemen, I propose a joint exploration with you of certain elements of the German problem. I should think that we could agree that there are three principal elements. The first is the situation in Germany itself. This situation has had a long and involved history. It has a certain dynamic of its own. Senator Mansfield in his recent speech before the Senate based his argument on the proposition that German unity is inevitable. He said that "the key question has never been: Will Germany be unified? The question has long been: When and how will Germany be unified?" He implied that the history of the German situation and the dynamics of that situation leave no possibility for Soviet actions or influence, or for our actions or influence, to halt the process of unification. It is by no means obvious or certain that Senator Mansfield is correct in this judgment. It is therefore necessary to give close consideration to two other elements.

The second element is the question of what the Soviet Union wants to do and can do with respect to Germany and how it is apt to react to various types of actions we on the Western side might take.

The third element is what we and our allies can do, should do, and are apt to do.

After we have explored these three elements it may be possible to step back and make some kind of a guess as to the prospects for a German settlement.

Let us now go back for a few minutes to the German situation and the dynamics of its history.

POSTWAR GERMANY

At the end of the war there was wide disagreement in the United States, and in the West generally, as to what our attitude toward the German question should be. Many felt that it would be possible in the postwar world to continue the wartime collaboration between the Western allies and Russia. They felt that the main danger to be guarded against was the possibility of some renewed attempt on the part of Germany to establish hegemony on the continent of Europe. Secretary Morgenthau was the most extreme exponent of this point of view, but there were many not so extreme who shared this general thesis. The other group felt that a continuation of wartime collaboration with the Russians would not be possible after the defeat of the German threat the common danger which alone had made that collaboration possible. They also felt that Germany had been so thoroughly defeated in both its attempts at a German hegemony through force that Germany no longer presented a problem comparable to that of the rising power of the Soviet Union. It was their view that if the rising power of the Soviet Union and its communist associates was to be balanced, Germany and Japan would have to be brought back promptly into the community of nations as sovereign and independent powers. At the end of the war this second group was, however, in the minority and the main thrust of Western policy was therefore directed to an attempt to continue the wartime collaboration with Russia into the postwar world.

SOVIET ATTITUDES

The Soviet Union, however, had quite a different view of the German situation. The history of the Soviet party in Russia and its attitudes toward foreign relations in general have been deeply molded by their historic experience with the German question. These go back to the early days of Lenin's seizure of power. He and many of his associates thought that the Russian revolution was of minor importance to the Communist movement in comparison to the German Communist revolution which they anticipated would shortly follow. Their initial experience with foreign relations was with the negotiation of the Brest-Litovsk Treaty. Their first collaboration with a non-Communist country was with Germany. With General Seekt they developed secret arrangements for the manufacture of armaments and the training of military cadres by Germany in Russia in circumvention of the provisions of the Treaty of Versailles. Their first diplomatic relations were with Germany. These led to the Rapallo agreement. In 1939 they negotiated the Hitler-Stalin Pact which led to World War II. In 1941 they felt the full force of German military power in Hitler's attack. As a result of these experiences, the Communist leadership has consistently given full weight, and perhaps excess weight, to the importance of the German problem.

STALIN'S PROGRAM

At the end of the war Mr. Stalin was clear as to the program he proposed to follow. His program could not be acceptable to the Western Powers. Continued collaboration by the Western World would, therefore, have to be entirely one sided and could not be expected long to continue. Therefore, it was important for Russia vigorously to nail down whatever it held in Germany. As a result Germany became divided with Berlin a tenuous enclave within the Soviet sector.

By the spring of 1947 all but the most blind could see what the Russians were up to and that the policy of attempting to continue into the postwar world the wartime collaboration with the Soviet Union was bankrupt. But what new policy could be followed? The only one that was practicable was to merge the U.S., British, and French zones, to permit and encourage the creation of the Bonn government, and to restore that part of Germany, not under Russian occupation, to freedom, to sovereignty, and to responsible collaboration with its western neighbors. The German economy was restored by the Marshall plan. German relations with France improved.

During this entire period, German reunification did not appear to be a practicable short-term objective. It was clear that the Russians had no intention whatever of withdrawing from their zone on any terms. German reunification was a long-term objective deeply held by the German people. It was vigorously supported by the West. Some of those on the Western side believed that no real security for Europe could be achieved until German reunification was accomplished. Others, who feared the strength of a reunified Germany, saw no prospect of its being accomplished and therefore no danger in supporting it as an objective.

REUNIFICATION CONSIDERED

The first serious consideration of German reunification, as a program rather than merely as an objective, took place after the lifting of the Berlin blockade in May 1949. As a condition to lifting the blockade, we had agreed with the Russians to convene a meeting of the Council of Foreign Ministers in Paris to discuss matters arising out of the situation in Berlin and matters affecting Germany as a whole.

George Kennan, who was then Director of the State Department Policy Planning Staff, was in change of the planning work in preparation for the upcoming meeting. I was among those who worked with him at that time. We were uncertain as to what it was the Russians wanted to accomplish at the meeting or what they would propose. One possibility was that they might consider or possibly propose, the withdrawal of foreign forces from Germany and the reunification of Germany. We developed two alternative proposals for consideration by the Western delegation. One was called plan A and contemplated the phased withdrawal of foreign forces from Germany, the reunification of Germany under free elections and the limitation of German rearmament under four-power control. Plan B contemplated no commitment to withdraw Western forces from Germany. It endeavored to go as far as might be practicable within that limitation toward German reunification, the limitation of unilateral controls by the individual occupying powers in their respective zones and the substitution therefor of four-power control operating by majority vote—except for certain basic limitations on German rearmament which could be changed only by unanimous agreement among the occupying powers.

PROGRESS IMPOSSIBLE

It was finally decided to base the Western negotiating position on plan B and not on plan A. This was done because few people believed the Russians would in fact agree to any plan requiring the withdrawal of their forces from the eastern zone. The negotiations completely confirmed this view. General Chikov, Soviet high commissioner of the eastern zone, said one day at lunch, "Anyone who suggests the withdrawal of our forces from Germany is mad. These people hate us." It proved impossible during the negotiations to make any progress at all toward a mitigation of the unilateral control by the Soviet Union of the eastern zone, toward German reunification or toward the improvement of the situation in Berlin. During that portion of the negotiations devoted to Berlin, the Russians insisted on a continuing veto power of even the most minor details of the administration of the city. Their plan would have given them a permanent veto power over the appointment of janitors in the Berlin Art Museum.

From 1949 up to last year discussion about German reunification remained pretty well frozen. There was much talk about the objective of reunification through free elections, but no program was envisaged by which this could be brought about. In the meantime, the economic and political strengthening of the Federal Republic went ahead apace. It became a member of NATO, and the decision

was finally made to urge Germany to make its fair contribution in military forces to the common defense.

KENNAN LECTURES

Last spring George Kennan reopened the discussion on the Western side in his Rieth lectures over the British Broadcasting System. In effect, he urged the reconsideration of the basic ideas behind plan A as opposed to plan B. His proposals received wide support from the British Labor Party and from the SPD in Germany. They received little support in the United States. Even those of us who had worked on plan A with Mr. Kennan and agreed with it at the time, subject only to the reservation that there seemed little prospect that the Russians would agree to it—were doubtful that it would be helpful in today's quite different situation. In 1949 the United States still had a monopoly in the atomic field; Germany was not a member of NATO, and a German military contribution was not considered essential to Europe's security. These factors have since changed, and withdrawal of Germany from NATO and the withdrawal of U.S. forces from Germany would today leave Europe in a most insecure position.

RUSSIAN GOALS

Let us leave here our brief review of the historical development of the current situation and turn to the second element that we proposed to explore—the question of what it is the Soviet Union wants to do and intends to do with respect to Germany.

Last November Mr. Khrushchev sent us a note dealing with Berlin. In January he sent us a draft of a proposed peace treaty with Germany. What do these documents indicate as to Soviet intentions?

The note on Berlin says that the Soviet Union regards the agreements concerning Berlin arising out of the termination of hostilities as being void. The governmental arrangements set up in Berlin as a result of the agreements and the presence in Berlin of French, British, and American troops are illegal and detrimental to Russian interests. He proposes that these troops be withdrawn, that the three Western sectors be made a self-governing free city with international guarantees of its independence and of its access to and from Germany. The Russians have said that while they are prepared to discuss how and when the withdrawal of Western forces will take place, they will not discuss whether it shall take place. Furthermore, they say a solution of the Berlin question must be found in a plan which provides for the demilitarization of Germany, the withdrawal of all foreign troops from Germany, and the withdrawal of both East and West Germany from the Warsaw and NATO alliances.

The Western allies are given 6 months to think this proposal over and to discuss it with the Russians, or to negotiate a German peace treaty with a group of 28 nations chosen by the Russians. At the end of that time, if no progress has been made, the Russians will move their troops out of Berlin and turn over the control of all traffic, including military traffic between Berlin and West Germany, to the East Germans, with whom everyone must deal in the future. Finally, a warning is given that any violation of the frontiers of East Germany will be regarded as aggression against all the Warsaw Pact countries, of which the Soviet Union is one, and will result in appropriate retaliation.

GERMANY STILL DIVIDED

The draft treaty does not provide for German reunification. It contemplates a continuation both of the German Federal Republic and of the German Democratic Republic, at least until they mutually agree between themselves on some form of confederation. It provides for the withdrawal of all foreign troops from both parts of Germany, and the withdrawal of East Germany and West Germany from the Warsaw and NATO Alliances. It places limitations upon German military forces, and it places far-reaching prohibitions against political parties, political action, and propaganda in any way hostile to the U.S.S.R. and its associates. In reading the draft treaty, one gets the impression that the U.S.S.R. may not seriously intend that this treaty be a basis for agreement with the West. As indicated in Khrushchev's speech at Tula last Wednesday, it may be designed to form the basis of a treaty of peace by the Communist world with East Germany alone.

RUSSIANS OFFER LITTLE

From these documents and from the innumerable speeches, articles, and statements which issue from the Soviet side of the Iron Curtain we can try to decipher what it is the Russians wish and intend to accomplish. They wish to get United States forces out of Berlin, out of Germany, and, if possible, out of Europe. They wish to get West Germany out of NATO and neutralize its power. They offer very little in return. They offer only the withdrawal of Russian forces from East Germany under conditions designed to make free political life in West Germany virtually impossible and designed to minimize the risk that the East German regime would be overthrown once Russian forces are removed. If we don't negotiate an agreement with them on approximately these terms, they then intend to give the East Germans all the trappings of a sovereign and independent state, to negotiate an independent treaty of peace with them, and let them eliminate what they call "the cancer of West Berlin" either by gentle means or by more forceful means.

We all know pretty well what we want. We want a reunified Germany, reunified in a way that permits a normal, responsible, and not an imposed, political development for the country as a whole. We want Germany to collaborate in the free world's economic and political life and to contribute to the common defense against aggression. We want the freedom of the Berliners and their access to the rest of the world to be maintained and secured. We want our legitimate rights to be respected. We do not want to be pushed around and hectored by an ugly little man brandishing the threat of attack with nuclear rockets on every third day.

The question, however, is not so much what we want, or who wants it more than the next man; the important question is what we can and should do about it.

We can lump the various things we can do under two headings. One hearing can be summarized by the phrase "standing firm"; the other by the word "negotiations."

STANDING FIRM

Obviously standing firm and negotiating are not two opposed things. You can only negotiate successfully if you are prepared to stand firm. You can only command the political support in the Western world necessary to stand firm, if your negotiating position is reasonably clear and understandable.

Let us first look at the various ways in which we can stand firm.

We can be firm in our declarations and united with our allies in the various speeches, notes and statements of policy we make. This is important. It takes a lot of careful work. It requires a high degree of thought and clarity about what it is we can and should do in action rather than just in statement.

We can refuse to remove our forces from Berlin. We have about 8,000 troops in Berlin; the British and French have smaller numbers. They have large stockpiles of supplies, are shooting no ammunition and can stay indefinitely even if blockaded.

AIRLIFT POSSIBLE

We can institute an airlift. Even if the East Germans attempt to jam our radars enough could be got through to support our forces in Berlin. An airlift, however, could not sustain the economy of Berlin which is now the largest industrial city of Germany. Whether an airlift could long sustain the population even from starvation, let alone sustain its economy, is doubtful. We must also reckon with the possibility that the East Germans, backed by the Russians, may shoot down our transport planes.

If the East Germans refuse to permit either our military convoys or the normal civilian traffic to move freely to and from the West, we can shove aside the East German guards and make them let our convoys go through or themselves initiate shooting to prevent it. I have a hard time, however, visualizing the shoving and pushing that might go on while we attempt to remove roadblocks and repair bridges and force on them the onus of firing the first shot.

We can start an armored column on its way to Berlin with instructions to shoot if it is blocked or shot at. We can back that column up with various increments of additional non-nuclear force.

OTHER ALTERNATIVES

We can back up our nonnuclear forces with tactical nuclear weapons. And finally, we can back up our tactical nuclear forces with the full power of our strategic forces.

We can also do a number of things away from the immediate area of Berlin, which can bear importantly on the Berlin situation.

We can reinforce our forces in Europe. We can increase their state of alert and readiness. We can go to various levels of increased mobilization at home.

We can counter a blockade of Berlin with a blockade of East Germany, of the U.S.S.R., or the entire Soviet bloc.

At the moment of crisis—if a blockade has been initiated and we have determined to send an armored convoy on its way—we can put our strategic Air Forces on full alert and evacuate our cities, both to indicate the full measure of our determination and to be in the best possible position to survive the likely consequences if the Russians choose to challenge that determination.

Now I have merely been cataloging the various things it is conceivable that we could do under the heading of standing firm. What it may be wise to do—what we should do—what informed public opinion both here and among the peoples of Europe will go along with—what will commend itself to the conscience of the world—may be something quite different.

A few general considerations can be advanced on the relationship between these possible actions and what it is wise to do.

COURSE TO FOLLOW

In the first place, there is a definite relationship between the nature of the provocation and the course of action which is appropriate and wise. If the provocation is, and appears to the world as being, merely technical, or legalistic, we would hardly be justified in adopting forceful and highly dangerous courses of action. If the provocation is an actual and not merely a technical obstruction to Western military traffic moving to Berlin, more serious measures would be justified. If the provocation is an actual blockade of the civilian population of West Berlin, a far more serious situation would have been created, and far more serious countermeasures would be appropriate. This is so not merely because of the differing support which our actions would receive from public opinion under these differing circumstances. It is also because of the greater credibility to the Russians that a show of determination on our part will be backed up, if necessary, by still stronger measures, if that determination is challenged. The greater the provocation the more credible it becomes to the Russians that we may well follow up forceful measures even with desperate measures. It would seem to me to be most unwise to

start to push a convoy through from Helmstad to Berlin if the provocation has been merely technical, or is restricted to miiltary traffic. We would have much greater public support and a much greater chance of getting through unchallenged by the Russians if we reserve that action for the situation that would exist if it had become clear that the freedom of the 2½ million citizens of West Berlin was being jeopardized by an effective blockade directed against them.

AVOID SHOOTING FIRST

The second point is that, if it is at all possible, we should avoid being the first to shoot. The onus of initiating the crisis about Berlin is already the responsibility of the Soviet Union. Let us not fuzz up that responsibility by incurring ourselves the onus of having initiated the shooting—if it must come to that.

The third point is that the initiation of the use of nuclear weapons, tactical or strategic, is, in my opinion, to be avoided at all cost. If the stakes involved in the Berlin situation, immense as they are, have not justified a higher degree of preparedness in the past, a willingness to make greater sacrifices and to pay higher taxes, and are not interpreted even now that the Russians have made their intentions reasonably clear, as warranting such action now, I can hardly see how they can justify the initiation of a nuclear war.

Let us now turn from the business of standing firm to the business of negotiation.

NEGOTIATION

This part of the problem can be broken down into three interrelated aspects. What can be negotiated about German reunification? What can be negotiated about the mutual withdrawal, thinning out, or limitation of forces in central Europe? What can and should be negotiated about Berlin?

As pointed out earlier, the Soviet draft peace treaty for Germany really says nothing about German reunification. The only position the Russians have taken on reunification is that East and West Germans should sit down together and see what they can work out between themselves. What this amounts to is a way for the Russians to avoid their agreement to work out the problem with the British, the French, and ourselves. There is no very good way to make them work it out with us.

ALL-GERMAN COUNCIL

Let us look at the ideas Mr. Ulbricht has expressed on reunification. He proposes an all-German Council of 100 members selected equally by the parliaments of East and West Germany and an executive organ, called the Praesidium of the Council, whose powers are vague. The Council would appoint Commissions to deal with limits on armaments, financial settlements, foreign trade and cultural matters. The Council would have no power to give directives to the two German states which would remain sovereign. A separate organ under the Council would be asked to draft a constitution and develop preparations for all-German elections.

To accept this would be to recognize the division of Germany into two separate states, and get in return only worthless debating machinery with no powers whatsoever. Reunification may not require immediate free election but it requires something better than Ulbricht has proposed.

WEST GERMAN DOMINANCE

I am inclined to agree with Senator MANSFIELD that talks between East and West Germans do not need to involve recognition. I would like to see what such talks would come up with. The basic question is how one can give a central German government any real powers, powers that are not subject to veto by the East Germans, and still have the arrangement acceptable to the East German regime. The dominance of West Germany in numbers and economic strength, but above all, in political strength, is such that the Ulbricht regime could not long survive even the most elementary nonvetoable powers given to a central government. I should think that the most elemental power would be the guarantee of, and the power to enforce, the right of habeus corpus. If such a power were given to the central government, the people in East Germany would be assured that they could not be arbitrarily held in jail. Ulbricht's control over East Germany would, then, tend to melt whether or not there were free elections. My point is that all kinds of guarantees could be given the East German regime that the central government would not interfere in its local affairs other than to protect people from crass injustice and there still would be every prospect that Ulbricht's rule, and what the Communists euphemistically call "the benefits of domestic progress" would be undermined.

I, therefore, see little prospect for agreement on any true reunification unless the other benefits to the U.S.S.R. of the settlement as a whole are so great as to make it reasonable for them to take the chance and make Ulbricht take the chance that the Ulbricht regime in East Germany would not long survive.

This brings us then to the other benefits that might be offered the Russians in terms of the mutual withdrawal, thinning out, or limitation of forces in central Europe.

LIMITED FORCES?

I happen to think that tactical nuclear weapons add little to our true security or to that of Europe. It is hard to imagine circumstances in which tactical nuclear weapons could be usefully employed in Europe unless backed up by the use of the full power of our strategic nuclear forces. I believe the Russians take a serious view of the possibility that the West Germans might eventually be armed with nuclear weapons. It is, therefore, conceivable that some variation of the Rapacki plan, coupled with an agreement on Germany and Berlin acceptable to us, might form a basis for a German settlement. The rub, however, is that any plan that involved true German reunification, or even a major risk to the Communists that true reunification would flow from it, must also provide for the mutual withdrawal of foreign forces from Germany, and the withdrawal of Germany from NATO, if it is to be negotiable with the Russians under today's circumstance. I don't think this is a price which the West, and particularly the West Germans, are prepared to pay for a German settlement. Some think we should. Under today's circumstances I don't think they are right. In any case I do not think we will pay such a price. Therefore it seems to me that a German settlement involving German reunification has very small prospect of being negotiated at this time.

What is more likely is that the Russians will go forward with their plan to make the German Democratic Republic as sovereign and as permanent as they can. To do this they must attempt to eliminate what they call the cancer of West Berlin. What possibilities there are of negotiating a settlement of the Berlin issue apart from an overall German settlement Mr. Dulles has already discussed. I would only like to say that I would not exclude the possibility of bringing the UN into the picture, not merely as a forum before which to bring our complaints about Soviet behavior, but also to share the responsibility, through UN forces and observers, that the West Berliners remain free.

FIRMNESS PLUS DISCRETION

In conclusion I should like to make one final point. I see little prospect of weaving through the next 12 months without war and without the surrender of Berlin, unless we combine firmness with great discretion. Basic and irreconcilable positions have been taken by both sides. The prestige of both sides is involved. I am sure that the Soviet Union wants a nuclear war no more than we do. The stakes involved are immense. The process of action and reaction to be expected over the next year will test the resolution of both sides. It will be comparable to the process of peeling off the successive layers of two onions. At the center of each onion is a kernal of self-knowledge that no stake, even the German stake, is worth a nuclear war. Each side will try to peel off successive layers of the other side's onion of resolution, while trying to prevent the layers being peeled off its own. This is a dangerous game. A misplay can start a chain reaction difficult or impossible to get back under control. I believe for instance that the Russians are quite likely to meet an armed convoy with tanks of their own. If our planes are fired on I think we will fire back. Great care must be used to avoid a misplay. I believe it can be done. It will take the greatest patience and fortitude. God wish us luck.

RECONSTRUCTING OUR FOREIGN POLICY: TOWARD A PEACEFUL CENTRAL EUROPE

(By HENRY S. REUSS)

Mrs. Dulles and Mr. Nitze have talked at considerable length about some of the problems which beset our consideration of Berlin and Germany and indeed Central Europe. While seconding their remarks about the thistle of danger, I shall concentrate my focus this afternoon on the flower of hope, which also is a possibility in this agonizing and disordered era.

Paul Nitze has showed how truly ludicrous is the proposal of Ulbricht that West Germany and East Germany be confederated or united on a basis of equality, as he says, 50–50—each of them to get 50 delegates It is like that stew that is served in certain of the lower regions of Paris known as Belgian pate, consisting of horse and rabbit in equal proportions—one horse—one rabbit. That is precisely what would happen to West Germany if such a phony equality were accepted.

But let's view the matter in its larger perspective, and see what it is we're dealing with.

EIGHTY MILLION PEOPLE

First of all, we're dealing with some 80 million human beings, 17 million in East Germany, and more than 60 million in the other countries of Eastern Europe, who are now living under tyranny. We're dealing with a situation where all the hostile major powers of the Western World are facing each other. We're dealing with a situation where, despite the passage of 14 years since the end of World War II, there is still no peace treaty. And we are dealing with a situation where every day the road toward more armaments, toward nuclear armaments, rolls on.

What is the position of the two principal contenders—the East and the West? Well, Russia asks that we recognize all her past conquests, and hints that it would be a nice idea to give her entree to West Germany and West Europe, so that she could try more of the same. For our part, what the West is in effect saying to Russia is that while we've dropped our initial talk about "liberation by airdrop," Russia should sit still and allow the reunification in freedom of East and West Germany, and the liberation of the captive states, and that all of them should be permitted, if they elect, to join NATO, that they be permitted to arm without limit as to size or as to nature of armaments. The Russians are not interested in that kind of proposal.

The Berlin crisis gives us an opportunity, and a challenge as well, to put forward a

set of Western proposals which will go to the heart of the problems of central Europe.

CAN MOLD HISTORY

Often in the past we have had illustrations that a broadly based set of objectives, announced to the people concerned in due time, does have a capacity to mold history. During World War I our Government announced a set of propositions. The idea of self-determination of peoples was in large measure responsible for the fact that the emerging Czech Republic, the emerging nation of Poland, were able to resist the threat of communism and were able, for a time at least, to establish themselves as democratic and independent states. On the other side of the coin, we had the unhappy example in World War II where in 1943 at Casablanca the leaders of the West got together and announced that what they had to offer the German enemy was unconditional surrender. Is it any wonder that the resistance movement in Germany was discouraged? Is it any wonder that Germans felt it necessary to fight at every last ditch and prolong the war to the ultimate? How much better it would have been—when one thinks in retrospect—had we actually envisaged what our policy toward Germany after the end of hostilities would be. If we could have given some inkling of the generosity and warm-heartedness with which we were actually going to approach this problem, it might well have been that the outcome could have been different.

So I suggest that we take a look at some of the fundamentals of American policy, and see how they could be applied to a more hopeful solution for the problem of central Europe than exists today.

What are these elements? In the last century at least, the only wars that we have fought have been wars for national survival, or wars for the suppression of tyranny. With some sad exceptions, we have stood for human rights and for free institutions at home as well as abroad. More recently, we have been willing to submerge our nationalism and turn to international cooperation as a method of world organization. And finally, since the invention of nuclear fission, we have been deeply concerned with doing something to keep the world from going up in smoke.

THREE SETS OF GOALS

How can those principles be applied to a settlement in central Europe which would be a little more hopeful than the present policy that we have? I am going to throw out for your consideration three sets of goals which I think are worth considering as steps in this direction.

First of all, from the military point of view, we have to explore the possibility of troop withdrawals, by Russia back toward the historic borders of Russia, and on the side of the West back to a point where the strategic advantages and disadvantages will be relatively in balance. If this means the west bank of the Rhine, if this means back out of Germany, these details are a question for the military strategists. It is not suggested that U.S. troops should retire from Europe. The number of U.S. divisions which we now have on the Continent are certainly necessary for some time to come, not only for their military significance but for their psychological effect. Equally, the main strategic retaliatory power which we now maintain in Europe would not be affected by a withdrawal.

Assuming that this whole area between the Rhine and Russia is freed of foreign occupation, there need to be certain freely agreed and self-imposed limitations on armaments, not so drastic as to prevent a country such as a reunited Germany from having adequate ground forces for domestic order, and to prevent it from becoming a pushover for a foreign invasion, but probably with a limitation on a number of divisions not unlike that presently envisaged for the NATO forces in Germany, and probably not including nuclear and similar weapons.

Finally, there needs to be guarantees by NATO on the west, and by Russia on the east, against aggression anywhere in this area.

Politically, the basis has to be the idea of freedom. Specifically, in a reunited Germany there cannot be any substitute, in the last analysis, for the principle of free elections. I agree with Secretary of State Dulles that it is not vital that free elections be a first step. But they surely need to be a step. If the United Nations could be used as a supervisory force at some phase of this, so much the better.

As to other countries of central and Eastern Europe, such as Poland and Czechoslovakia, while it may not be possible to write in the principle of free elections with quite the precision that I think it needs to be written into the German peace treaty, the West must recognize the principle of freedom and human rights and democracy as the only ultimate aim for a wholesome order in central Europe.

Thirdly, the vision of a central Europe, once the nightmare has been lifted, has to be a vision not of the old excessive nationalism, to the old economic separation, the old political totalitarianism which plagued so many of the states of central Europe in the interwar period, but a vision characterized by political federation and economic integration. If we take some of the curse off nationalism, we will have begun to find the solution for burning territorial problems like the trans-Oder-Neusse territories. If, for example, a reunited German people had free access to that area in the economic and cultural sense, if that area is not made the political and economic exclusive possession of any one, there is a much greater hope for working out a solution.

AN ULTIMATE VISION

Now in most fields of arms control it is not wise to have a package solution. I suggest, however, that when you're talking of something as cosmic as middle Europe and its problems, you need to have some vision of what you're driving for, because unless you have that ultimate vision, even though it is not immediately capable of realization, you may make intermediate steps that are false. So the days to come give us a superb opportunity to concert a Western proposal on middle Europe which relies on the three main ideas of military disarmament, of political freedom, and of economic integration.

Now, what would be the advantages to the West if such a proposal, by some miracle, were accepted and carried out? First and foremost, 80 million human beings now in chains would be freed.

Secondly, it would remove from Communist domination areas in central Europe which are usually conceived of as being necessary for Communist world domination.

Thirdly, it would place some hundreds of miles between Russian and NATO troops. I have not used words like "disengagement" or "neutralization" or "demilitarization," because these concepts are not really relevant to what I have been discussing. I don't suggest that thinning out of troops would in and of itself go to the heart of any of the basic differences which infect the relations between East and West. But each point of hostile contact that can be removed is a net gain. It was a net gain for our side when the Austrian treaty was signed 4 years ago. It was a net gain for our side a year ago when the Lacey-Zarubin agreement was signed allowing the exchange of people between East and West. I don't suggest that merely removing troops from the general area where they now confront each other is in and of itself a sensible thing to do. On the contrary, if all you did was to withdraw troops and let a hostile East and West Germany confront each other, you would indeed be recreating the sort of situation we had in Korea, where the major powers withdrew their troops, and hostile North and South Koreans confronted each other, and one day there was a war. What is needful is that military propositions be accompanied by political and economic propositions. It is only by this concurrence that the dangers can be brought to the minimum.

What are some of the difficulties and objections which may be made to the general goals which I have sketched here?

It is said that this would mean the end of NATO. As far as I am concerned, it would mean no such thing. NATO, as long as the tension between East and West persists, is a highly necessary part of our arsenal. NATO's strategic striking power would remain; NATO's ground forces would remain.

NATO MEMBERSHIP

Exactly how significant is future German membership in NATO? Under the proposal, they have the advantage of the NATO guarantee; they would miss the advantage, if it be one, of the stationing of NATO troops in Germany in peacetime. The political, economic, and social togetherness which comes from NATO could be acquired by other federal arrangements. So it need not be vital either to a reunited Germany or to the West to have continued formal German membership in NATO, assuming that this was the remaining rock upon which the whole agreement was foundering.

Next it is said that Germany is too vigorous and dynamic a country to be a neutral like Switzerland or Austria. We should look closely at this concept of neutrality. I wouldn't for a moment suggest that we shouldn't redouble our efforts to bring Germany into the most wholesome political, cultural, economic, and social kinship with the West. Let her membership in the Coal-Steel Community and Euratom, in the Common Market, in the Council of Europe, and in the other supranational agencies, continue and expand. What is suggested is solely that in the military field, Germany, as her contribution toward a start away from ever greater and greater armaments, voluntarily limit her military striking power, and that the same thing be done by the reborn free countries of eastern Europe.

Again it is said that Germany might turn to Russia. In the last analysis, the best guarantee that Germany, divided or reunited, will want to stay on the side of the West is in the devotion to free institutions which the new West Germany is showing. If West Germany wanted to nuzzle up to Russia today, she could do so. There is nothing to stop her. So in the long run the best guarantee of German adherence to the West is the Germans themselves.

Again it is said that the Russians might break their promise and refuse to withdraw were such an agreement reached. So they might, and if they did, the West could equally stop its withdrawal. A corollary is that the Russians might withdraw, but then re-enter the present captive states, particularly if they saw that the Communist regimes which they have left there were about to topple. But would Russia even consider these propositions unless she is prepared to sit idly by while the progressive liberalization of these regimes occur? Russia is hardly going to withdraw if she is planning to fight her way back again the hard way the minute one of the political inevitabilities of central Europe occurs. Finally, if you say "We can't take any steps to get Russia out of central Europe, because they might come back again," you are, in effect, condemning the 80 million people now in chains to perpetual captivity. For until the Russian

soldiery withdraws, you aren't going to get the beginning of respect for human rights.

Again it is said that the Russians, freed of some of their obligations in central Europe, might turn their attention to Asia, Africa, and the Middle East, to our great embarrassment. This is certainly true. But their attention is pretty well turned to these decisive areas anyway, and if Russia is willing to bear some part of the burden of lifting up the living standards of developing peoples, far from being distressed, we American taxpayers ought to be glad that Russian taxpayers are bearing some part of the burden. Russia's attention is going to be devoted to these areas anyway. That's where our attention ought to be devoted too. Anything we can do to achieve tentative solutions in central Europe will better enable us to concentrate our attention on the developing portions of the world.

WHO'S INTERESTED?

Having sketched out some of the advantages of the acceptance of a proposal like this, and having taken a sober look at some of the apparent disadvantages, let's ask ourselves the final question: What chance is there that either the United States or France or Western Germany or Great Britain and above all—Russia—is going to be interested in this?

In each of the countries of the West there are divergent bodies of opinion. There are people in Congress who feel that we Americans are not putting our best foot forward; that there are some propositions, along the lines here discussed, which are in our interest, which would make us feel better ourselves, and make us look better in the eyes of the uncommitted people of the world. Similarly in the United Kingdom and in western Germany there are influential blocs of opinion, mostly in the opposition party, but including some in the Conservative Party in Great Britain and the Christian Democratic Party in Germany, the parties in power, who look toward a new formulation of our policy toward middle Europe.

And what of Russia? If Russia's dynamic is to conquer the world, and to milk forever the captive states of eastern Europe, of course they aren't going to listen to a proposition like this for one moment.

If, on the other hand, there might come to power in the Kremlin, a sensible and patriotic Russian, freed of megalomaniac fantasies, he might perceive that in these propositions is something very good for the genuine interest of the Russian people. It would reduce the daily threat of atomic war. It would remove Russia from a most dangerous position in the satellite states. It would provide real assurance against the resurrection of fascist states on her border. It could help her international trade position. It could allow Khrushchev's 7-year plan for more consumer goods for the Russian people a much greater opportunity for fulfillment. Whether you could ever bring into being in the Kremlin such a hypothetical patriotic and reasonable Russian, I do not know and will not attempt to guess. But the best way of bringing into being such a person is to table before the bar of public opinion the world over a set of propositions which would give that kind of person a chance to say, "Here is something better for Russia than the alternatives of world conquest, or living in the fear of renewed conquest by some of the people who have given Russia trouble in the past."

Meanwhile, we must go on with the unpleasant business of rearming. We must be firm in our determination not to yield West Berlin to communism. It is a long winter from now until next May. I am encouraged that the people in our State Department are buckling down to the long, hard task of evolving a western policy which, while it prepares for the worst, also offers some hope of better things. In a democracy such as ours, it is highly important that the people start debating those propositions, because we are very soon going to be called upon to face a very difficult situation in West Berlin. I hope that our firmness and boldness carries the day. We are going to carry the day with a lot more fervor and a lot more moral enthusiam if we know that, if we have to fight, we fight for ideals of whose justice and wisdom we are deeply convinced.

ANTIFARM REVOLT

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Massachusetts [Mr. BOLAND] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. BOLAND. Mr. Speaker, there appeared in yesterday's Washington Post a column by Roscoe Drummond, of the Herald Tribune Syndicate, which forcefully sets forth in an understandable manner the true situation regarding the farm problem.

FARM PROGRAM MIGHT COLLAPSE

It clearly says that, unless the irresponsible wasting of the Nation's resources which is taking place under existing law is allowed to continue, the entire farm program might collapse, to the detriment not only of farmers but to the general public as well.

CONSUMERS HAVE COSTLY STAKE IN PROGRAM

The consumers of my district have a real stake in seeing that the abuses in the present farm program are corrected on a reasonable basis, instead of permitting the situation to explode. If that happens, we might have something substituted which is considerably worse.

Mr. Speaker, under unanimous consent, I include Mr. Drummond's article with my remarks:

ANTIFARM REVOLT—REBELLION SEEN UNLESS WORKABLE PROGRAM IS FOUND

(By Roscoe Drummond)

If Congress doesn't soon rescue the American people from an irrational, unworkable, extravagant, and deteriorating mess of a farm program—the third most costly in the whole budget—something is going to happen.

That, I think, is putting it mildly.

What is going to happen, if the farm bloc doesn't join with the rest of Congress to halt the Frankensteinian monster of mounting surpluses, aggravated by price supports which pile up bigger surpluses, is that, as sure as a hangover follows a lost weekend, there will be a massive political revolt by the voting consumer.

And then watch out. It won't be good. It won't be good for the farmer. It won't be good for the country. It will be a furious revolt against an evil too long tolerated. The effect will be to strike down what is wrong—a nearly $9 billion agricultural budget which is making matters worse, not better—with little likelihood of putting something worth while and reasonable in its place.

The key fact to bear in mind is that the policy of paying farmers—mostly wheat, cotton, and corn farmers—to grow more crops they can't sell except to the Government, which already has to spend a billion dollars a year just to keep them, is a failure.

It is a failure because it is not solving the farm problem; it is aggravating it.

It is a failure because those parts of the agricultural economy which are not living in the oxygen tent of Government subsidy are better off than those which are, and they may soon be poisoned by the same medicine.

It is a failure because, unless every American farmer is to be put in the vise of Federal control, high rigid price supports will continue to bring larger crops, more surpluses, more drain on the Treasury, and will keep more uneconomic farmers farming.

It is a failure because the bulk of the farm payments do not go to the little farmer, to the neediest farmer or even to the bulk of all farmers. Take the wheat subsidy, the biggest of all. The bulk of Federal payments go to 10 percent of those who grow wheat. Those who least need the subsidy inevitably earn most of it.

This is not going to go on forever. The American people are going to call a halt to it, and they will call a halt with a crash if Congress doesn't replace it soon with something rational.

No sensible person wants to see all Federal assistance to agriculture thrown out the window. That's not the answer. But that will almost certainly be the consequence before long unless Congress begins to put some sense and sanity into the program.

I hope we don't waste much time trying to point the finger at who's to blame. Both major parties have a large responsibility for the plight we are in, and there are still some cynical politicians who suggest that there is perhaps one more election to be won, at least in their districts, by perpetrating the present unsavory, unsatisfactory, and insolvent mess.

It is well that Secretary Benson is beginning to speak out more bluntly, as he did at Cornell University this week. Obviously he has been pained beyond endurance by the crack that he has become the most expensive Secretary of Agriculture in history. It hurts, because it is true, and it hurts more because, as some may not realize, he has been faithfully administering a set of laws and price formulas which this and other Congresses framed and which neither the President nor he has ever had the power to change.

I would like to see Secretary Benson be given, for once, a chance to administer a farm program he believes in and which would adjust price supports to levels leading to the marketplace, not to storage bins.

The premises of such a program would be: (a) It mustn't cost more than the present program preferably less; (b) should give the farmer greater freedom, not less; (c) should reduce, not increase, farm surpluses.

Secretary Benson believes that $1 billion can be saved and farmers greatly benefited by adjusting wheat supports alone to a point which would lead to sales.

My own conviction is that unless a workable and tolerable program is forthcoming soon, a political rebellion hurtful to the farmer will be fanned into flames.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to Mr. RAY, for week beginning April 7, 1959, on account of official business, committee hearings.

SPECIAL ORDER GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to Mr. THOMPSON of New Jersey (at the request of Mr. ALBERT) for 1 hour, on April 14.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. HARRIS and to include a speech.

Mrs. ROGERS of Massachusetts and to include extraneous matter.

Mr. PELLY.

Mr. PRICE.

Mr. BOW.

(At the request of Mr. HENDERSON, and to include extraneous matter, the following:)

Mr. BROOMFIELD.

Mr. BENNETT of Michigan.

Mr. WIDNALL.

Mr. SCHWENGEL.

(At the request of Mr. ALBERT, the following Members, and to include extraneous matter:)

Mr. HOLTZMAN.

Mr. RABAUT.

Mr. IRWIN.

ENROLLED BILLS SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 5247. An act to increase the authorized maximum expenditure for the fiscal year 1959 under the special milk program; and

H.R. 5640. An act to extend the time during which certain individuals may continue to receive temporary unemployment compensation.

BILLS PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, bills of the House of the following titles:

H.R. 5247. An act to increase the authorized maximum expenditure for the fiscal year 1959 under the special milk program; and

H.R. 5640. An act to extend the time during which certain individuals may continue to receive temporary unemployment compensation.

ADJOURNMENT

Mr. ALBERT. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 43 minutes p.m.), pursuant to House Concurrent Resolution 110, the House adjourned until Tuesday, April 7, 1959, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

767. A communication from the President of the United States, transmitting an amendment to the budget for the fiscal year 1960, involving an increase in the amount of $400,000, and proposed supplemental appropriations for the fiscal year 1960 in the amount of $1,563,200,000 for the Department of Defense military functions (H. Doc. No. 102); to the Committee on Appropriations and ordered to be printed.

768. A letter from the Assistant Secretary of Agriculture, transmitting a report for the month of January 1959 of the General Sales Manager concerning the policies, activities, and developments, including all sales and disposals, with regard to each commodity which the Commodity Credit Corporation owns or which it is directed to support; to the Committee on Appropriations.

769. A letter from the Director, Legislative Liaison, Department of Air Force, transmitting a report of the Air Force military construction contracts awarded without formal advertising for the period July 1 through December 31, 1958, pursuant to Public Law 85-241; to the Committee on Armed Services.

770. A letter from the Secretary of the Army, transmitting a report of claims paid and settled relating to the Texas City Disaster Relief Act, pursuant to Public Law 378, 84th Congress; to the Committee on the Judiciary.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. MURRAY: Committee on Post Office and Civil Service. H.R. 4601. A bill to amend the act of September 1, 1954, in order to limit to cases involving the national security the prohibition on payment of annuities and retired pay to officers and employees of the United States, to clarify the application and operation of such act, and for other purposes; without amendment (Rept. No. 258). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ADAIR:

H.R. 6086. A bill to amend the Agricultural Adjustment Act of 1938, as amended, to broaden the exemption from wheat marketing quota penalties where all the wheat crop is fed or used for seed or food, and for other purposes; to the Committee on Agriculture.

H.R. 6087. A bill to amend the Agricultural Adjustment Act of 1938, as amended, to exempt certain wheat producers from liability under the act where all the wheat crop is fed or used for seed or food on the farm, and for other purposes; to the Committee on Agriculture.

By Mr. ADDONIZIO:

H.R. 6088. A bill to expand the public facility loan program of the Community Facilities Administration of the Housing and Home Finance Agency, and for other purposes; to the Committee on Banking and Currency.

H.R. 6089. A bill to amend the Federal Credit Union Act; to the Committee on Banking and Currency.

By Mr. ANDERSON of Montana:

H.R. 6090. A bill to amend the act entitled "An act relative to employment for certain adult Indians on or near Indian reservations," approved August 3, 1956, so as to enable certain Indians who do not reside on trust property to participate in the program authorized by such act; to the Committee on Interior and Insular Affairs.

By Mr. ASPINALL:

H.R. 6091. A bill to amend certain laws of the United States in light of the admission of the State of Alaska into the Union, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. BROWN of Georgia:

H.R. 6092. A bill to amend the lending and borrowing limitations applicable to national banks, and to authorize the appointment of two additional Deputy Comptrollers of the Currency; to the Committee on Banking and Currency.

H.R. 6093. A bill to amend the national banking laws to clarify or eliminate ambiguities, to repeal certain laws which have become obsolete, and for other purposes; to the Committee on Banking and Currency.

By Mr. BYRNES of Wisconsin:

H.R. 6094. A bill to amend section 8(e) of the Soil Conservation and Domestic Allotment Act; to the Committee on Agriculture.

By Mr. EDMONDSON:

H.R. 6095. A bill to amend the act entitled "An act relative to employment for certain adult Indians on or near Indian reservations," approved August 3, 1956, so as to enable certain Indians who do not reside on trust property to participate in the program authorized by such act; to the Committee on Interior and Insular Affairs.

By Mr. FINO:

H.R. 6096. A bill to amend the Internal Revenue Code of 1954 to grant an additional income tax exemption for a taxpayer supporting a dependent who has attained age 65 or is blind; to the Committee on Ways and Means.

By Mr. HALPERN:

H.R. 6097. A bill to amend the Internal Revenue Code of 1954 to allow a deduction for income tax purposes of expenses incurred by an individual for transportation to and from work; to the Committee on Ways and Means.

H.R. 6098. A bill to amend title 38, United States Code, to increase the annual income limitations governing the payment of pension for disability or death, and for other purposes; to the Committee on Veterans' Affairs.

H.R. 6099. A bill to increase rates of death compensation and of disability and death pension payable under laws administered by the Veterans' Administration; to the Committee on Veterans' Affairs.

H.R. 6100. A bill to provide further bases for determinations with respect to disability for pension purposes; to the Committee on Veterans' Affairs.

H.R. 6101. A bill to amend title 38 of the United States Code to provide pensions for widows and children of veterans of World War II and of the Korean conflict on the same basis as pension is provided for widows and children of veterans of World War I; to the Committee on Veterans' Affairs.

By Mr. HENDERSON:

H.R. 6102. A bill to regulate the foreign commerce of the United States by amending section 350 of the Tariff Act of 1930, as amended, and for other purposes; to the Committee on Ways and Means.

By Mr. HOLTZMAN:

H.R. 6103. A bill to raise the minimum wage under the Fair Labor Standards Act of 1938, as amended, to $1.25 an hour, and for other purposes; to the Committee on Education and Labor.

By Mr. LINDSAY:

H.R. 6104. A bill to amend title I of the Housing Act of 1949 to require each prospective redeveloper under the slum clearance and urban renewal program to file and make public a prospectus setting forth its identity, its proposed financing, the estimated rents and profits, and certain related items of information; to the Committee on Banking and Currency.

By Mr. METCALF:

H.R. 6105. A bill to amend the act entitled "An act relative to employment for certain adult Indians on or near Indian reservations," approved August 3, 1956, so as to

enable certain Indians who do not reside on trust property to participate in the program authorized by such act; to the Committee on Interior and Insular Affairs.

H.R. 6106. A bill to establish fair labor standards for employees engaged in wool and mohair shearing operations, and for other purposes; to the Committee on Agriculture.

H.R. 6107. A bill to amend title II of the National Defense Education Act of 1958 to provide a new method of distributing Federal capital contributions to institutions of higher education in a State, if a State's allotment is insufficient to permit each such institution to receive the total amount requested by it; to the Committee on Education and Labor.

By Mr. NORRELL:

H.R. 6108. A bill to provide for the establishment of the Arkansas Post National Park in the State of Arkansas; to the Committee on Interior and Insular Affairs.

By Mr. O'BRIEN of New York:

H.R. 6109. A bill to amend certain laws of the United States in light of the admission of the State of Alaska into the Union, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mrs. PFOST:

H.R. 6110. A bill to amend the Flood Control Act of 1950 as it applies to the Libby Dam on the Kootenai River in the State of Montana; to the Committee on Public Works.

By Mr. ROOSEVELT:

H.R. 6111. A bill to amend the Longshoremen's and Harbor Workers' Compensation Act, so as to provide that an injured employee shall have the right to select his own physician, and for other purposes; to the Committee on Education and Labor.

By Mr. SAYLOR:

H.R. 6112. A bill to amend certain laws of the United States in light of the admission of the State of Alaska into the Union, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. SIKES:

H.R. 6113. A bill to repeal the excise tax on amounts paid for communication services or facilities; to the Committee on Ways and Means.

H.R. 6114. A bill authorizing and directing the Secretary of the Interior to undertake continuing research on the biology, fluctuations, status, and statistics of the migratory marine species of game fish of the United States and contiguous waters; to the Committee on Merchant Marine and Fisheries.

H.R. 6115. A bill to direct the Secretary of the Interior to establish a research program in order to determine means of improving the conservation of game fish in dam reservoirs; to the Committee on Merchant Marine and Fisheries.

By Mr. TOLLEFSON (by request):

H.R. 6116. A bill to authorize the Secretary of the Interior to provide a headquarters site for Mount Rainier National Park in the general vicinity of Ashford, Wash., and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. WALTER:

H.R. 6117. A bill to amend chapter 15 of title 38, United States Code, to provide pension for widows and children of veterans of service on the Mexican border on or after April 21, 1914, who died while entitled to compensation for a disability incurred in such service; to the Committee on Veterans' Affairs.

H.R. 6118. A bill to amend section 6 of the act of September 11, 1957; to the Committee on the Judiciary.

By Mr. SANTANGELO:

H.J. Res. 329. Joint resolution providing that the union of the flag of the United States shall have 50 stars effective as of July 4, 1959, irrespective of the date on which Hawaii is admitted into the Union as a State; to the Committee on the Judiciary.

By Mr. HENDERSON:

H. Res. 227. Resolution requiring each Member of the House to disclose certain information with respect to his employees; to the Committee on House Administration.

By Mr. WALTER:

H. Res. 228. Resolution authorizing the printing of additional copies of House Report No. 187, current session; to the Committee on House Administration.

MEMORIALS

Under clause 3 of rule XXII, memorials were presented and referred as follows:

By the SPEAKER: Memorial of the Legislature of the State of Idaho, memorializing the President and the Congress of the United States relative to the payment of the national debt and the financing of the general obligations of Government; to the Committee on Ways and Means.

Also, memorial of the Legislature of the State of Maryland, memorializing the President and the Congress of the United States to enact appropriate legislation similar to that proposed in S. 269, S. 541, and H.R. 703 of the 86th Congress; to the Committee on Armed Services.

Also, memorial of the Legislature of the State of Montana, memorializing the President and the Congress of the United States requesting the enactment of necessary legislation to authorize the construction by the Federal Government of Glacier View Dam on the North Fork of the Flathead River in the State of Montana; to the Committee on Public Works.

Also, memorial of the Legislature of the State of Ohio, memorializing the President and the Congress of the United States, relative to expressing the pleasure of the 103d Ohio General Assembly on the recent action by Congress to admit Hawaii to statehood; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the Commonwealth of Puerto Rico, memorializing the President and the Congress of the United States relative to a proposal consistent with our common interest in developing the Commonwealth of Puerto Rico as a fully self-governing community of American citizens, freely and permanently associated to the United States of America; to the Committee on Interior and Insular Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. FINO:

H.R. 6119. A bill for the relief of Ngoc Ong, also known as Dorothy Ong; to the Committee on the Judiciary.

By Mr. HEALEY:

H.R. 6120. A bill for the relief of Jeanne Adelphine Rougeron; to the Committee on the Judiciary.

By Mrs. WEIS:

H.R. 6121. A bill for the relief of Placid J. Pecoraro, Gabrielle Pecoraro, and their minor child Joseph Pecoraro; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

137. By Mr. SIMPSON of Pennsylvania: Petition of the residents of Waynesboro, Pa. and members of the Waynesboro Council of Churches for increased expenditures for foreign economic aid; to the Committee on Foreign Affairs.

138. By the SPEAKER: Petition of Mrs. Joe Patterson, Houston Federation of Garden Clubs, Houston, Tex., petitioning consideration of their resolution with reference to supporting Congress in their efforts to make Padre Island a national park; to the Committee on Interior and Insular Affairs.

139. Also, petition of the county clerk of the county of Hawaii, Hilo, T.H., expressing appreciation to Congress for admitting the State of Hawaii into the Union; to the Committee on Interior and Insular Affairs.

EXTENSIONS OF REMARKS

Thirty-third Anniversary of Signing of Long Island University Charter—Address by Secretary of the Interior Fred A. Seaton

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, March 26, 1959

Mr. MANSFIELD. Mr. President, on March 24 Secretary of the Interior Fred A. Seaton delivered an address at Long Island University, Brooklyn, N.Y.

Secretary Seaton, in my opinion, is one of the outstanding members of the President's Cabinet. He comes from the Midwest. He has served in this body. He has had a distinguished career. At all times he has exhibited a great degree of common sense.

While Secretary Seaton and I do not agree on all things, usually our disagreements are of a minor nature. I think, by and large, he has been one of the outstanding public servants of this country.

I ask unanimous consent that the address which he delivered on the occasion of the 33d anniversary of the signing of the charter of Long Island University, at Brooklyn, N.Y., be incorporated in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SECRETARY OF THE INTERIOR FRED A. SEATON AT LONG ISLAND UNIVERSITY'S 33D ANNIVERSARY OF THE SIGNING OF THEIR CHARTER, BROOKLYN, N.Y., MARCH 24, 1959

It is an honor and a pleasure to join with you here on the 33d anniversary of the signing of the charter of Long Island University.

These, indeed, are active and troublesome times.

Russia's Premier Nikita Khrushchev boasts that the Communists will permit us to exercise our rights in Berlin only at their sufferance; and we witness the President of the United States once again standing with firmness and reasonableness in the face of an ugly and unjustifiable threat from Moscow.

Serious as the Berlin question is, this is no isolated instance of crisis, but rather one of a continuing series engineered by the Soviet Union and its satellites.

The pattern—in the Middle East, in the Formosa Straits—has become familiar to all of us: Communist military threats met and turned back by free world firmness and unity.

And I remind you that the free world's success in dealing with this conspiracy is due in enormous measure to the intelligence and courage of two men, the President and the Secretary of State of the United States.

As a backdrop to such immediate crises, there are, of course, the military and scientific competition and—perhaps even more important in the long run—the economic contest. You will recall that Premier Khrushchev asserted that by 1970, or even sooner, the Soviet Union will surpass the United States in production and that our grandchildren will live under socialism—the latter being, of course, the Soviet's current idiom for Russian communism, which isn't even Marxist communism, much less historical socialism.

Even if we discount Russia's boasts in the scales of fact, we clearly have our work cut out for us.

We should never forget that proving Khrushchev's prophecy to be false depends only in part upon what the Russians do or don't do. The answer also largely depends upon what we do.

With that fact firmly fixed in our minds, I suggest there are certain things which, in the years ahead, all of us Americans must learn to do better for our own good and the good of people everywhere.

First of all is to develop the habit of examining only in the cold light of reason certain commonly alleged facts, rather than glancing at them through the cloudy looking glass of mental laziness or prejudice. A fact is a fact, no matter what, and all the fools in the world to the contrary, it remains just what it is, a fact.

Above all, it ought to be apparent that we must avoid every temptation or invitation to fly into a frenzy. Now, please make no mistake. I am not preaching complacency. What I am saying is that to become panicky over the spurious can be as bad as to be indifferent to the serious.

To illustrate, consider some allegations versus facts in the realm of economics.

The claim is loudly being made by some people that the gross national product of the Soviet Union is increasing at a faster rate than ours. On the face of it, that is quite true, if the published Soviet statistics are true. But it is just as true that the Russian's probable gross national product in 1957 was less than half of ours, to be exact, 40 percent. Perhaps more importantly, as their economic base has grown in the past decade, even their claimed rate of increase in output has been on an escalator going down, from 26 percent to 16 percent to 10 percent. That makes all the difference in the world when you are asked to make comparisons between our rate of economic growth and that of the Russians.

Again, make no mistake. No prudent people would pooh-pooh the economic advances made by a formidable and malevolent opponent. Neither would a prudent people fail to analyze those advances for what they actually are.

There is something else I suggest we all should do. That is to subject to the most intense kind of public scrutiny everything that Government does and spends for, continually asking ourselves these questions: Is this function vital? Is it something nice to have but not absolutely necessary now? Or is it luxurious or even ludicrous when contrasted with some other program, including the dire necessity of bringing our national finances into order by balancing the budget so we can be fiscally strong for the long ideological and economic struggle ahead?

As citizens, of course we are determined to invest every nickel necessary to keep this country's defenses strong, to help keep its economy flourishing, and appropriately and properly to aid in furthering the security, health and education of every one of our citizens. Try as you will, however, there is no way to divorce our security, health, education and happiness from the sensible management of the citizens' tax dollars. We simply must be determined—if we believe at all in the public good—that the Federal budget contain not one single cent for the care and coddling of a sacred cow which is there only because we seem to be pathologically afraid to look at it, judge its merits, and, if necessary, cut its throat.

In this time of rising prosperity and comparative world peace we should be determined to pay the price ourselves for any program we decide is necessary, not to charge it, plus interest, to our children.

What a shabby thing it is to toss into every baby's bassinet a mortgage, payable to yesterday and then wish the little tot well. And yet that is exactly what some of our political pediatricians would have us to do when they demand we spend more than we take in.

The mortgage on the future is altogether too big now. In 1939 the Federal debt limit was $45 billion. By 1945 it was up to $300 billion. It now stands at $288 billion.

Some people profess to believe all that means little or nothing. "We owe it to ourselves" they say, "so what?"

They couldn't be more wrong.

In fiscal 1960 we shall be spending over $8 billion for interest on the public debt; that is to say 10½ percent of the total 1960 budget. That's for yesterday.

For the conservation, management, and development of all the natural resources of the United States, excluding agriculture, we can invest only $1,710 million—2.2 percent of the total budget. That's for today and tomorrow.

In other words, we will be expending five times as much on yesterday as we can invest in tomorrow. Five times as much for dead horses as those we must ride to our destiny.

The Eisenhower administration believes Americans do want to invest in the future, not forever be paying for the past at the expense of tomorrow. That's one major reason it is fighting all reckless spending proposals, whatever they are. I have cheerfully joined in that fight, politically rough and tough as it is, because as Secretary of the Interior I intend neither to preside over the bankrupting of our Nation's conservation programs, nor to participate in bankrupting the Nation.

In presenting to the Congress a balanced budget for 1960, the President of the United States has shown his awareness of another sure fact: That to pile up bigger and bigger Federal deficits is to do something more evil than just to pass the check to our children; it is actually to issue a reckless and open invitation to that historical killer of free governments—inflation.

Yes, I know, there are some people who ask, "What's wrong with inflation?"

Lots of things.

Inflation hurts the Government. If today's dollar is tomorrow's dime, who then will buy Government bonds?

Inflation hurts confidence—confidence of the people in the future as well as in the present. We must never drift to the point where people believe to speculate is to be safe but to save is to gamble.

Inflation hurts defense: You and I will have less security, not more, if for every foot that weapons' spending goes up, weapons' prices go up 3 feet.

Inflation hurts our trade abroad: The higher American prices go, the easier it is for everybody to undersell us in the world's markets, at home as well as abroad.

That costs dollars. Worse, it costs men and women their jobs.

Inflation, by further debasing the dollar and raising prices, hurts people—you and me and nearly everybody; and, most of all, it hurts the poor, who can protect themselves the least.

Don't fool yourself. Inflation is no Robin Hood, robbing the rich to help the poor. It's cruelest and deadliest to the old, the widowed, and the families of the poor. Inflation is no graduated tax. For the Nation and the individual it is the quicksand of security.

Finally, we must recognize the revolution of rising expectations which is taking place in the less developed countries of the world.

It is with us, and it won't go away.

There is, unfortunately, much to support the generalization that if a poverty-stricken man has a choice only between four freedoms and four sandwiches, he will choose the sandwiches. Unless we do our fair share to help such people—in the Middle East, in Africa, in Asia, in Latin America—to get both, all too often their tendency is to listen to the Communist agent who promises both but, in the end, delivers neither.

In his "Reflections on the Revolution in France," Edmund Burke wrote, "In the groves of their academy, at the end of every vista, you see nothing but the gallows." In the 20th century, at the end of every vista in the Communist formal garden we see with our own eyes the spectre of Hungary—and other once independent nations—and the image of Imre Nagy.

It is for us, the free, to help people everywhere to see this fact for themselves, to encourage their rejection of Russian domination disguised as aid. We must stand ready to help them better themselves.

Thus far, we have done rather well despite some mistakes and the constant carping of those who profess to see no good whatever to be derived from American money invested abroad in our mutual security programs.

In another area, too, there is hope for the future. Today in the Department of the Interior, for example, the Office of Saline Water is working with scientists throughout the United States and many other countries to change a key fact of human history—that up to now nearly all the people of the world have necessarily depended for life entirely on fresh water upon and beneath the land. Science has now come to the verge of learning how to convert ocean water economically into fresh water for human consumption, and ultimately for agriculture and industry.

This year, the Department of the Interior is preparing to begin construction of five such demonstration plants in the United States. On March 2, I announced the selection of the first of the five conversion processes to be used in these plants. The others will be announced at the rate of at least one each 3 months.

The first plant, we have considerable reason to hope, will bring the cost of conversion down below $1 per thousand gallons. As that price continues to descend in community after community, it will approach that of getting water from other sources—rivers, lakes, and wells. More importantly, it will enable people to obtain water economically where any other source is insufficient or even absent.

Last August 13, in addressing the United Nations here in New York City, the President of the United States spoke of the great common shortage, water, throughout the Middle East.

Today we can have hope that the end of water shortages on many continents is in

sight and that the troubles and poverty and suffering they aggravate or cause are near solution as we near the perfection of economical processes for saline water conversion.

Consider the case of Israel. There the people grow their food on a million cultivated acres. Already, pressed to expand this acreage, they have had to pipe fresh water from the Yarkon River near Tel Aviv, about 60 miles south to the northern edge of the Negev Desert a vast wasteland with little fresh water either on or known to be beneath its surface. It is a 3-million acre expanse stretching from Beersheba in the north to Elath on the Gulf of Aqaba in the south, a part of the world which some travelers have likened to the surface of the moon.

Here in the United States, water impoundage, plus irrigation, has transformed the Imperial Valley of California and the salt desert of Utah, making them gardens bringing forth vegetables and trees and fruit. In a similar way, saline water conversion, plus irrigation, should one day make it possible to transform the Negev. Think of saline water conversion units dotting that whole area, drawing up brackish waters from underground or bringing salt waters from the sea, and pouring them, fresh, into canals and laterals to revive the now dead land. If only half the entire Negev should turn out to be suitable for farming—and that may be a conservative estimate—Israel could double its cropland.

From where we stand, here in 1959, we can gaze toward the horizon and see this prospect more clearly than human beings have ever seen it before. For the future of life on this planet the implications in saline and brackish water conversion stagger the imagination.

The United States is now engaged, in concert with 16 nations, in working on a hundred and one facets of a scientific breakthrough to solve the problem of cost.

Here I should note that among the scientists engaged in saline-water research are some from the Soviet Union, and that may prove to be a most significant fact.

Indeed, can we not hope and pray that along with the political competition of the years ahead a second theme will begin to emerge and steadily grow in intensity?

We need to encourage the theme of international cooperation, designed to overcome the problems of ignorance, poverty, hunger, and disease which today are the piteous portion of millions upon millions of members of the human race. If that theme could gradually grow strong enough to overcome the current one of suspicion, doubt, and fear, then whenever a Russian child learns to read, whenever a Russian scientist makes a discovery, we could have much more cause for hope than for apprehension over the uses to which this learning and this science might one day be put.

Here our problem is clear and demands solution. It is to make certain that the hope and not the apprehension is justified in the end; that the peace of the world is preserved; and that liberty and representative government do not perish here in our beloved America and from this troubled earth.

Veterans' Administration Hospital Costs

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 26, 1959

Mrs. ROGERS of Massachusetts. I am gathering information to show why there has been a yearly increase in the cost of operation in the Veterans' Administration hospitals. I find that the Veterans' Administration has a better record in the cost of operation than civilian hospitals.

The Veterans' Administration hospitals' cost of operation last year is 5 percent more, compared to 8.8 percent for civilian hospitals. The Veterans' Administration tells me that the increased cost of operation is due somewhat to the new hospital buildings, which require more personnel to run due to the fact of modern treatments and new modern medicines.

When Congress reconvenes I will give to the Congress a more detailed account.

People-to-People Program

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, March 26, 1959

Mr. ENGLE. Mr. President, last week I addressed a joint meeting of the International Municipal Cooperation Committee of the American Municipal Association and the Civic Committee of the people-to-people program. My remarks dealt particularly with the township-affiliation activities under the President's people-to-people program. In these days when there is much talk of war, it was a distinct pleasure to meet with a group of people who are dedicated to improving international understanding. The State of California has been taking the lead on the township-affiliation program, and I am very proud of this vital interest it is showing in strengthening the ties of people of the free world. I ask unanimous consent to have my remarks at the joint meeting printed in the RECORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

PEOPLE-TO-PEOPLE PROGRAM: TOWNSHIP-AFFILIATION ACTIVITIES

(Excerpts from address by Senator CLAIR ENGLE at joint meeting of the American Municipal Association's Committee on International Municipal Cooperation and the Civic Committee of the people-to-people program, Washington, D.C.)

I am delighted to see you fellow citizens taking an active part in your country's foreign relations through this wonderful people-to-people medium. You are to be commended for giving your leadership to this vital aim of building understanding into our formal and informal relationships with peoples and nations in other parts of the world. Your activities contain a huge potential for peace.

No matter how much we talk about mutual understanding in theory, there is no substitute for getting to know the cultures of other peoples in practice. The friendships that develop with close association can do much to offset the tendencies to be irritated when other countries do not act according to our own standards and traditions. When we know from first-hand experience the motivations and thought patterns which underlie human behavior, we are much better able to develop a spirit of tolerance. This tolerance is not a neutral feeling but rather a positive desire to work together for common ends—even when the means we choose sometimes differ. The close human relationship that is developed under the people-to-people program is just the ingredient needed to give flesh and blood to our formal diplomatic agreements.

Of all the projects that have been developed under the President's people-to-people program, I find that the town affiliation program is perhaps the most important. Certainly it is the most intriguing. I am impressed with the ambitious plans your organization is laying for expanding these town affiliations. I am sure that with the exercise of some imagination the coupling of cities around the world will reap tremendous rewards in developing mutual understanding—in bridging the barriers of language, culture, and politics.

While much remains to be done, the leadership taken by the State of California should serve as a great inspiration to all Americans. The cultural, educational, and artifact exchanges between California and cities and foreign cities, mostly in Japan, have already been of great value in breaking down barriers of misunderstanding. The six California cities now taking part in the town affiliation program have enriched the lives of their inhabitants as well as built good will in such places as Osaka, Japan, and Santa Ana, El Salvador. San Diego's affiliation with the city of Yokohama, Japan, has been so successful in cementing good will and providing far-reaching mutual benefits that it may well serve as a model for many other communities. We have only begun to see the possibilities in terms of the potential betterment of relations around the world.

The untapped strength of the people-to-people program reminds me of our efforts to harness atomic power for peaceful purposes. In each case, we are aware of enormous energy and its promise to do enormous good. Yet, so far, atoms for peace is only a partial reality. True, the radio isotopes and controlled radiation have served mankind agriculturally and medically to some extent; and the heat of atomic reactors has been transferred into electrical force that lights cities and runs ships. But, scientists are still doggedly chiseling away at the unknown that lock up the atom's greatest power, which, to date, we've seen only in its warlike form.

And you dedicated scientists of peace are still seeking to release the full resources of the people-to-people idea. I think you are much closer to success than the atomic scientists. In fact, the formula may well be your town affiliation program.

Your panel workshops have taken you through the mechanics of how to run these affiliations. I will not try to add to the excellent thinking that you have already done on the nuts and bolts, so to speak. But I do have three thoughts on how best to tap the people-to-people potential. They're based on the implied spirit of this program. I hope you will consider these reactions of mine and pass them on to those whom you will enlist to help you make this vital scheme grow.

First, let me emphasize again that although the people-to-people program is growing, I'm afraid it is a long way from fulfilling its great potential. Many, many more Americans should get into the program. When you return to your home towns and cities to develop more affiliations, I hope you will goad your fellow citizens who have not awakened, as you have, to the need for more participation in your country's most vital business, peace and freedom.

Recently, I saw in Life an editorial that may be useful in alerting others to join with you. Life said: "The United States grew into a great and free society precisely because the Nation could always count on a widespread instinct among its citizens for translating private moral conscience into public virtue, a virtue made operational by the citizens' action in the Nation's life. At the moment this instinct is dangerously weak. The resultant gulf between private conscience

and public virtue cannot be bridged by easeful living, spectatoritis, or a 'let George do it' indifference. The wider this gulf becomes, the narrower grows our margin of national survival." This quote sums up the need for broadening our people-to-people program.

Second, no matter how sophisticated your affiliation schemes become, I presume you'll try to make as many contacts as possible among ordinary citizens overseas. The people-to-people program is, of course, founded on this thought and I believe it is tremendously important to keep it in mind throughout all your activities. The tendency to have the exchanges limited only to officials of organizations must be resisted. No such program can succeed unless its basis is in the grassroots. It is the average person who needs enlightenment more than anyone else, and to neglect him is to court disaster. The measure of the success of your efforts will be the extent to which you are able to sink these roots of friendship and understanding into the hearts and minds of the common people of the participating countries.

Third, a tradition of American foreign policy is its bipartisan nature. Although there may be differences within the Nation or Halls of Congress on various aspects of this policy, when the policy is set and translated at the diplomatic table overseas, it represents a United States of America. The people-to-people philosophy, too, has bipartisan backing. On both sides of the aisle, Members of your Congress not only espouse and support the idea today, but they believe it should continue far into the future. I want to reassure you that both Democrats and Republicans would like to see you carry forward your great work until people-to-people activities become as frequent and natural, and pleasant, between Americans and other citizens of the world as they are in your own home town.

The development of the people-to-people program is one of the most encouraging things that has taken place since the end of World War II. The potential achievement is impossible to estimate. But there will be rebuffs and disappointments. You cannot expect to have uniform success in all your undertakings. The human weaknesses that have cursed the world with wars since the beginning of time cannot be erased overnight. One factor that all of you must possess in great abundance is a sense of humor. If you will roll with the punch and not take yourselves too seriously, you will have no trouble creating great interest in your program and, more than that, you will be able to sustain that interest. You have it within your power to make an enormous contribution to world peace at a time when there is much talk of war, and your dedication gives me hope that we can yet find the magic answer to the needs of all mankind.

Power Among Men

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 26, 1959

Mr. IRWIN. Mr. Speaker, under leave to extend my remarks, I would like to call the attention of my colleagues to NBC's television program Easter Sunday when "Power Among Men," a motion picture dealing with man's capacity both to create and to destroy, will be color cast in its first color showing of "Omnibus" between 5 and 6 p.m.

Filmed in many parts of the world with local residents in place of professional actors, "Power Among Men" explores man's innate ability to build, destroy, and build again on the ashes of destruction. It seeks to answer a question especially vital in the atomic age—which of these human drives is dominant, the creative or the destructive?

Dr. Ralph Bunche will appear on the program to introduce the presentation of "Power Among Men." In his words:

"Power Among Men" deals not with the U.N. but with human psychology.

He goes on:

"Power Among Men" looks at power—man's paradoxical power to build and to destroy with equal genius. It also looks at motivation in the use of power.

The United Nations has made numerous films, but it, and possibly no one else, has ever undertaken such a production. I commend it to your viewing.

U.S. Department of Agriculture's Food Inspection Insures Delivery of Quality Milk and Other Farm Products to All Sections of the Country

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 26, 1959

Mr. SCHWENGEL. Mr. Speaker, prescribing a cure for the ills of agriculture is a popular sport these days. One reason for the wide range of ideas is the great variety of farm products grown in this country which are produced under so many different conditions.

That is one reason it is heartening to see a farmer-owned and operated group, such as the Maryland and Virginia Milk Producers Association, work together as a solid unit. Cooperation is something agriculture needs to maintain its vital and free place in the American economy. I am troubled, however, to note the advertisements sponsored by the Maryland and Virginia farmers in the press and on the radio and television of the Washington area which are abusing the remainder of the Nation's farmers in an effort to preserve the status quo in the Washington milkshed.

Specifically, I am referring to the association's advertisements about "tired old milk" joggled thousands of miles, which has not been inspected "by your own inspectors." This gives the impression that milk not produced within the Washington milkshed area is unfit for consumption in this area. Fifty years ago this was probably true. Agricultural research has solved the problems of long range milk shipping. Milk from the Middle West or the South, which is produced to meet the Federal milk regulations, is as safe as that produced in Montgomery or Loudon Counties.

The argument of the milk cooperative might be carried a step farther to include many other perishable agricultural commodities. Are the people of the east coast to stop buying the quality beef and pork, eggs, poultry, fresh fruits, and vegetables shipped to them just because they have to be joggled over roads and rails to reach their dinner tables? It is equally silly to attack the U.S. Department of Agriculture's long years of experience in food inspection because these checks are not made locally. I believe the most of our Nation's consumers are much more willing to leave this critical inspection service to the trained, professional personnel of USDA.

Every segment of American agriculture suffers when a group of farmers attacks the quality of farm products. Agricultural research has provided the knowledge to produce foods that are high in quality as well as bountiful in supply. Americans never have to worry about buying unsafe food when purchasing groceries in the neighborhood stores. This is not true of most of the rest of the world.

I am proud that the farm commodity groups in Iowa, such as the Iowa Beef Producers Association and the American Dairy Association of Iowa, have directed their efforts toward the production and marketing of commodity products, not just to furthering the local farm interests.

The old adage of "United we stand, divided we fall" certainly applies to agriculture today. We have but a short time to present a united front for agriculture if farmers are to get a suitable program to fit their needs. Otherwise we shall have a program forced upon the agriculture of Iowa—and Maryland and Virginia—that will not benefit any sector of agriculture.

Reduction in Subsidies to CAB Feeder Lines

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 26, 1959

Mr. BOW. Mr. Speaker, during the debate on the second supplemental bill this week I had expected to call the attention of the House to the reduction made by the committee in the subsidies allowed for service carriers of CAB. These are the small air carriers or commonly known as feeder lines. There was a substantial reduction in the amount of subsidies allowed because the testimony before the committee did not substantiate the full amount requested. It was felt the amount allowed would be sufficient to carry on until the next fiscal year appropriations were made.

Mr. Speaker, some of the operators of these lines have expressed the fear that the reduction in the appropriation might show congressional intent to reduce all subsidies in the future. This is not true. I believe I can speak for the committee in saying that we recognize that as of

this time it is necessary to have subsidies for these air carriers and that such amounts as may be necessary under law will be appropriated. Also, if the amounts here appropriated are not sufficient, appeal may be made to the other body and if a proper record is made, undoubtedly the matter can be worked out in conference between the two bodies. I repeat, Mr. Speaker, that there is no intention to destroy the feeder lines or the small operators in this Nation. It has been the policy of the Congress in the past to do that which is necessary to keep them in proper and safe operation. They may be assured that this is still the policy of the Congress of the United States.

Tax Ruling Discriminatory to Small Businesses

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 26, 1959

Mr. PELLY. Mr. Speaker, I should like to call the attention of my colleagues in the House to legislation which I introduced on Tuesday last, March 24, 1959, H.R. 5982, to amend section 1371 of the Internal Revenue Code of 1954 to provide that a husband and wife shall be treated as one shareholder for purposes of determining whether a corporation is a small business corporation.

The occasion for initiating this legislation was brought about by reason of a ruling of the Commissioner of Internal Revenue on November 26, 1958, to the effect that, in a community-property State like my own State of Washington, a married stockholder must be counted double, once for the husband and once for the wife.

Mr. Speaker, you will recall, in an effort to provide sorely needed tax relief to small business corporations, in 1958 Congress enacted an amendment to the Internal Revenue Code providing that small business corporations with less than 11 stockholders can elect to have their income taxed to their individual stockholders, thus placing these stockholders in the same class with business partnerships for tax purposes. The November 1958 ruling of the Commissioner in effect denies this privilege to small business corporations within community-property States.

I believe there are some eight States in the Union, of which my own State is one, which fall under this discriminatory ruling, by reason of their community-property status. It is my opinion that this ruling is completely inconsistent with other portions of the Internal Revenue Code and does not reflect the intent of Congress, in the light of past legislation approved by this body. For the record I can cite at least two instances when the Commissioner of Internal Revenue attempted to treat residents of community-property States differently from residents of separate-property States. In this connection you will recall that formerly only the people residing in community-property States were permitted to take advantage of the tax-saving benefit of income splitting by a married couple making a joint tax return. Congress acted to strike down this discrimination, in favor of community-property States, to provide that married couples in all States of the Union filing a joint tax return may apply the tax-saving benefits of splitting all income between husband and wife. Also, Mr. Speaker, I refer to the matter of estate taxes. Here again Congress legislated to remove any differences in the manner with which the Internal Revenue Service treated survivors residing in community-property States as against survivors residing in separate-property States.

It would seem to me these two instances alone should provide sufficient precedent for the Commissioner of Internal Revenue to enable him to establish nondiscriminatory rulings in applying the 1958 amendment to the Internal Revenue Code. It is entirely within the administrative authority of the Commissioner to do so. However, in discussing the matter with the Secretary of the Treasury although he has agreed to review the Commissioner's ruling, unfortunately he has also indicated that he feels the new regulations are proper.

Consequently, it appears the only sure relief available to constitutents in the State of Washington and other community-property States is through legislative processes. Therefore, believing that the Commissioner's ruling is obviously contrary to the intent of Congress in enacting the 1958 amendment to the Code, and also contrary to the spirit of past congressional enactments, as suggested previously, as well as being inconsistent with other aspects of the Internal Revenue Code, I have introduced the legislation previously referred to—H.R. 5982—in order to eliminate discriminatory and unfair treatment of residents of community-property States. I sincerely believe that the Commissioner's ruling creates an inequity in the tax status of the people living in these States as compared to those living in the rest of the United States, and I certainly hope that my colleagues on the House Committee of Ways and Means will see fit to take early and positive action on this bill.

Result of Oakland County, Mich., Opinion Poll

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 26, 1959

Mr. BROOMFIELD. Mr. Speaker, for those of us who are removed at some distance from our constituents by our responsibilities here in Washington, we are constantly faced with the problem of determining the needs and wants of the people of our districts. Except for letters, occasional visits, telephone calls, and telegrams from those back home, we quite often are cut off from effective communication with those we represent and who elected us to office.

To help correct this situation, I mailed out some 12,000 questionnaires to my constituents in Oakland County, Mich., earlier in this session. For the past few weeks, my office staff and myself have been deluged with replies in a much greater volume than we had anticipated.

It seems as if a great many of the people of Oakland County like this method of expressing their opinions on important national issues which are now facing Congress. And the results of this public opinion pool have paid large dividends to me in many ways. In the first place, I was able to contact a great many people who ordinarily do not get in touch with their Congressman. These people, in the main, have no axes to grind or projects to push. They are acutely aware of our Federal Government and what it is doing to their pocketbooks and and purchasing power. But in many instances, they kept these views to themselves.

Secondly, by carefully selecting the areas in which these questionnaires were mailed, I was able to eliminate one-party answers to the questions, and I believe that I was able to receive a very good sampling of the opinions of my constituents on a number of key matters.

Third, very few of those who returned the questionnaire stopped with straight "yes" or "no" answers. Most included their reasons for answering the questions as they did, or voiced their opinions on other subjects involving our Federal Government. These written replies ran into the thousands, and were of great interest and help to me. Problems were raised of which I was not aware, solutions were offered which were worthy of a great deal of consideration by all of us here in the House of Representatives, blank spots and shortcomings in our Nation's laws were uncovered.

For all these reasons, the answers to this questionnaire were of great help to me. Some definite conclusions can be drawn as to the views of my constituents on many of our pressing problems through this sampling of opinion. Some of these results were surprising to me, and I am quite certain they will be surprising to my colleagues.

For instance, more than 62 percent of those who replied favor an increase of 1½ cents in the gasoline tax if such action will mean more and better highways in our Nation. This expression is particularly important because my district is in the heart of the automobile manufacturing area, and a great many of the auto firms have voiced opposition to this proposed increase in the gasoline tax.

Some 81 percent favor an increase in the present limit on outside earnings from $1,200 to $3,000 for those receiving social security. I hope that the members of the Ways and Means Committee will take note of this expression of public opinion on a bill, H.R. 2735, which I reintroduced this session of Congress.

Our farm subsidy program was viewed with special disfavor by 82 percent of those who replied. Many said they want the agriculture subsidy program eliminated completely, while others thought it should be drastically cut in the face of our mounting surpluses and the tremendous cost to our taxpayers.

About 69 percent favored a freer flow of political leaders, students, farmers, and others between the United States and the Soviet Union.

Rather than increase our national debt, more than 62 percent said they would be willing to pay increased taxes if such action is necessary to provide adequate Federal services. This endorsement of a balanced Federal budget is outstanding, and should be observed closely by my colleagues. Coupled with the many comments on the need for further economy in our Federal Government, the fiscal principles as outlined by our President to Congress appear to have a great deal of backing in my home district.

My constituents favored the President's budget recommendations in such fields as housing, postal subsidies, aids to mineral industries, community facilities, and airports. But on three subjects, there appears to be some disagreement. Those who replied are almost evenly divided on the matters of Federal aid to school construction, aid to depressed areas, and further payments into the highway building fund.

The comments enclosed with the questionnaires covered almost every phase of our Federal Government's operations. But the largest number of comments was on the need for further economies in Federal expenditures, a balanced budget, and an end to deficit spending. Some questioned our foreign-aid program, others were critical of our defense effort, either stating that we were spending too much money or not enough in providing an adequate defense force for our Nation.

At this point, it might be well to point out that the results of this questionnaire are not going to tie my hands here in the House of Representatives. If I feel that I have more knowledge of the subjects and a better understanding of the problems involved on particular issues, then I most certainly will vote my own convictions on these matters. However, the results of this or any other survey I make in the future will be considered very carefully, as I have found that my constituents have shown a very great awareness of the issues involved, and they have some very definite opinions on how our Nation's problems should be solved.

Following is a tabulation of the results of this survey:

The President's budget for the year beginning next July 1 calls for expenditures of 77 billion and an estimated income of 77.1 billion. Additional expenditures totaling several billions are being proposed by some Members of Congress. How would you vote on the following?

Questions		Yes	No	No comment
Aids to housing	$1,000,000,000	24.2	65.8	10.0
Added payments under soil bank	700,000,000	4.3	67.1	28.6
Increased payment to civil service retirement fund	600,000,000	25.4	70.1	4.5
Aid for school construction	480,000,000	46.0	49.7	4.3
Postal subsidy (over amount proposed in 1960 budget)	350,000,000	12.7	80.9	6.4
Payments to highway building fund	250,000,000	46.0	48.6	5.4
Aid to minerals industry	160,000,000	9.3	82.4	8.3
Financing community facilities	150,000,000	12.9	80.0	7.1
Grants to airports	110,000,000	26.1	66.9	7.0
Aid to depressed areas	100,000,000	46.7	46.7	6.6
If you have answered "Yes" to any of the above, would you recommend paying for the projects by—				
An increase in taxes?		64.0	36.0	------
Or, an addition to the Federal debt?		23.0	77.0	------
Do you favor increasing the limit on outside earnings for those receiving social security benefits from the present $1,200 to $3,000 per year?		81.2	14.5	3.3
Do you favor a freer flow of political leaders, students, farmers, businessmen, etc., between the United States and the U.S.S.R.?		69.0	24.9	6.1
Do you favor a trial test for pay TV?		33.7	58.8	5.5
Do you favor increasing the Federal gas tax from 3 to 4½ cents per gallon to maintain pay as you go in building Federal-aid highways?		62.6	32.0	5.4
Should extra funds be provided for veterans' hospital facilities?		27.1	64.1	8.8
The prices of 12 farm commodities are supported by Federal law at prescribed minimum levels. In general, do you approve of the support program?		13.3	82.2	4.5

A Bill To Increase the Minimum Wage

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 26, 1959

Mr. HOLTZMAN. Mr. Speaker, I am today introducing in the House of Representatives a bill which will provide for an increase in the minimum wage to $1.25 per hour, and extend the coverage of the Fair Labor Standards Act. I had introduced similar legislation in previous Congresses, but favorable consideration had not been given the same by the committee.

You will recall, of course, that the Congress in 1955 during the 84th Congress passed legislation amending the Fair Labor Standards Act bringing the minimum wage from 75 cents per hour to $1 per hour, effective March 1, 1956, but no extension of the coverage of the act was enacted at that time. President Eisenhower, in his state of the Union speech on January 6, 1955, had recommended an increase in the minimum wage to 90 cents, and extension of the coverage to bring protection to many others, at that time excluded. A few days later, Secretary of Labor James P. Mitchell, at a press conference, indicated that the administration planned to include retail and service workers under the coverage. However, when the administration bill was introduced, it did not include any provisions for extension of the coverage, although it did advocate the increase to 90 cents per hour.

The President's Economic Report transmitted to the Congress earlier this year again calls for extension and improvement in the coverage of the minimum wage. In addition, the recent conference of the AFL–CIO executive council held in Puerto Rico renewed its recommendations to the Congress to increase the present $1 per hour rate to $1.25, and that the coverage be extended to approximately 8 million workers now exempt, including certain employees of the retail industries. At the present time, with the lingering unemployment problem, and in view of the continuing rise of living costs, such recommendations are certainly not out of line. There is no question about the fact that the minimum wage, even with the increase of several years ago, has failed to keep up with the cost of living. The unemployment figures for last year were tragic, and despite all the talk about expanding economy and healthy and vigorous recovery, the cold fact is that unemployment has increased steadily each month since last November. In February of this year it stood at 6.4 percent of the labor force.

The $1.25 hourly minimum and the extension of the coverage, called for in my bill, would put a more realistic floor beneath current wage levels, and would prevent the exploitation of many substandard, seasonal and low-wage workers. In addition, more purchasing power would be made available to our workers, thus stimulating our national economy, and bettering our standard of living.

I certainly hope that the Committee on Education and Labor, and the House itself will be in a position to consider this legislation favorably this year.

Clear Nation's Water Supply of Pollution

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 26, 1959

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a statement I submitted to the House Committee on Public Works in support of H.R. 246, to amend the Water Pollution Act:

STATEMENT OF REPRESENTATIVE MELVIN PRICE BEFORE THE HOUSE COMMITTEE ON PUBLIC WORKS IN SUPPORT OF H.R. 246 TO AMEND THE WATER POLLUTION ACT

Mr. Chairman, I appreciate your courtesy in allowing time for this statement as the committee renews its study of the vital need for expanding the role the Federal Govern-

ment plays in clearing the Nation's water supply of pollution, and the bill I introduced on the subject, H.R. 246.

This committee and the Congress have demonstrated their belief that the Federal Government has an absolute need to support the efforts of local communities in the construction of municipal waste treatment plants.

The Congress last year exercised its right as a coordinate and equal branch of the Government to decline agreement with an Executive recommendation that the Federal antipollution program be halted. With all respect for the authority of the Executive to make such proposals, the Congress used its own authority and discretion in the legislative field to express its conviction that the recommendation was shortsighted.

We now have an additional year of experience, Mr. Chairman, to inform us of the need for continued and additional Federal aid to our hard-pressed municipalities in the water-pollution field.

We have abundant evidence that water pollution is a national problem—that it affects all our major rivers, bays, and streams. We know that water poisoned high on a river system adversely affects the health and welfare of communities perhaps hundreds of miles downstream.

Our rivers have been turned by carelessness and neglect into open cesspools. We are debarred from the full exploitation of our water resources by pollution that prevents the reuse of water in otherwise perfectly feasible and economical ways.

We observed that in the first years of the Federal antipollution program, more than 90 percent of the communities with projects that were approved averaged only slightly more than 9,000 in population.

These communities do not have the resources to build expensive waste treatment plants from their tax funds alone. Yet the record shows that with Federal encouragement and reasonable aid, they are anxious to move ahead. For every Federal dollar obligated, at least a total of $4 was planned by the separate communities. The smaller municipalities are not unwilling to do their part in the gigantic task of making our rivers once again the pure streams that we inherited. Wise and discriminating Federal aid, with full participation by the States to make sure that projects are useful, is an enormous stimulus to action.

In my bill, I express the conviction that the time has come to increase the total authorized expenditure of Federal funds, to raise the maximum grant for single projects from $250,000 to $500,000, and to ease the existing single-grant restriction that makes it impractical for two or several communities to coordinate plans and to cooperate in their projects.

The chairman of your Subcomimttee on Rivers and Harbors, the Honorable JOHN BLATNIK of Minnesota, in the bill on which Congress acted 3 years ago proposed that the total Federal authorization be placed at $1 billion. Only $500 million was authorized, and time has proved that a Federal expenditure of $1 billion is clearly needed.

Hundreds of communities now have projects underway, and we know from the applications that much wider and more vigorous action is essential. The municipalities that want to live up to their responsibilities for restoring and preserving a pure water supply deserve the encouragement of a broadened Federal commitment.

We know, also, that smaller communities would willingly undertake significant projects if the single-grant restriction were removed.

In numerous areas there are two, three or more communities contiguously located that cannot meet their waste treatment needs on an artifically separated basis. We ought to make it possible for them to cooperate in planning projects, in working together, and in actually proceeding with coordinated construction in which each community can use most productively its grant of Federal assistance.

H.R. 246 also proposes that if any State allotted sums for projects does not actually obligate funds for any project by approving it, the sums shall then be reallotted by the Surgeon General to the States which have approved projects otherwise lacking aid.

The provision would not deprive any State of Federal assistance for projects that in its own authority it approves or certifies as entitled to priority. It simply proposes that if a State withholds approval or certification after a Federal allotment is made, the sum thus not actually obligated shall go to other States that have approved projects but which have exhausted their normal share of the total annual amount available.

The bill, H.R. 246, contains one other section that seems to me of considerable importance. It would add to the original act a Davis-Bacon clause providing for the payment of prevailing wages on projects financed through the program.

This committee is familiar, of course, with the fact that in the highway program the Congress adopted the Davis-Bacon provision for the payment of prevailing wages. The Davis-Bacon Act, laying the foundation of this, was adopted originally in 1931 and was signed into law by President Hoover. It expressed the philosophy that Federal grants should not be used to finance projects wherein the wage scales would be so low as to exercise a depressing effect on the wages paid elsewhere in a locality on similar construction projects.

This philosophy seems to me wholly reasonable and proved in its usefulness. It encourages the stabilization of the construction industry and it safeguards against the danger that Federal funds might be spent in ways that produce socially undesirable results. It is a provision that is willingly met by responsible construction firms and it limits the possibility that other firms would gain a competitive advantage in bidding on projects stimulated and partially financed with Federal money by calculating their bids on wages below the normal amount actually paid as the going wage on similar projects in each locality.

A New Decade in Transportation

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 26, 1959

Mr. HARRIS. Mr. Speaker, the Washington chapter of the National Defense Transportation Association has extended to me an invitation to be guest speaker at its annual dinner tonight.

Under leave to extend my remarks in the RECORD, I include the speech I have prepared for delivery at the dinner:

I am humbly and deeply grateful to your chapter for the great honor which you have extended to me tonight for this recognition by distinguished members in the Government and the transportation industry I shall ever cherish—and I thank you very much.

When your Mr. Mappes came to my office and asked me to be with you for this occasion, I must confess I was rather reluctant. As a matter of fact, I was at that time deeply involved with committee work and important legislative proposals, and perhaps did not manifest a great deal of enthusiasm. Of course, I had no idea that I was to be signally honored as you are doing.

I suppose, then, that I could not be considered as a volunteer, under the circumstances. Certainly not as it was with the young man who went to the county courthouse to obtain his marriage license and the clerk asked where was the bride-elect. The young man said: "Actually there was no election—the old gal just volunteered."

I have enjoyed the association with the transportation industry, and the work in connection with legislative problems that vitally affect the future welfare of the American people. Transportation and communications are two subjects very close to my heart. I suppose it is because I feel so deeply about the importance of them in every facet of our lives.

I only hope that my activity in connection with the problems of transportation has been such that this recognition—the honor you confer on me tonight—is deserving. I do feel that any such tribute which I receive must be shared in by the Committee on Interstate and Foreign Commerce. We work as a team and I feel it is the committee that deserves the distinguished service award of this chapter of the National Defense Transportation Association.

I welcome this opportunity to express some views on the transportation outlook of the next decade.

Much of what I have to say tonight has been said before by others more expert than I. The forward look at a new decade will also be a subject for other speakers, but perhaps my views, based on my experience as a public servant and one who has been concerned with the legislative needs of the great American transportation system, so vigorous in its competitive growth and so vital to every single American, will add a few brush strokes to this large and many-faceted picture.

First, of course, I find myself speaking on this occasion to experts in every field of transportation. While the situation provides a most sympathetic audience, it is also fraught with the perils of a layman discoursing on a technical subject to those who really know the subject. Here, perhaps, is a view of a citizen user of transportation and from one who has listened with keen interest to the views of each form of transportation in quest of fair and equitable legislation.

In retrospect, we can see that the period following Columbus' discovery of America was charged with an excitement stemming in large part from the adventures on strange waters and unknown lands. This excitement, and these discoveries, entered into all forms of life and influenced every aspect of thinking. There folowed what we know as the Age of the Renaissance—a revival of poetry, literature, and the arts, a revolution in science, and a change in man's concepts of man, of his religion, and of his philosophy.

It goes without saying that today we stand on the threshold of another great Renaissance. Through the developments of science and the discoveries of the scientists during this International Geophysical Year, we have greatly extended the physical and psychological frontiers on earth. More than that, we now believe it is only a matter of time when man is no longer earthbound, that man's physical frontiers now are somewhere far out in space.

The excitement that goes with these new horizons, both on this earth and beyond it, is boundless. It is a terrific challenge to all engaged in the various fields of science. But that is only part of it. Veritably we stand today, as did the people of the age of Columbus, where a new Renaissance can be ours. It can be ours if we rise to the challenge that these new horizons present to our thinking in all phases of knowledge,

to the need for readjusting, for revitalizing, for reappraising all of our past concepts, whether in the arts, philosophy, politics, geography, or in transportation and commerce.

After some years of consideration on the part of leaders in all fields of transportation, the Congress in 1940 passed a Transportation Act which included a statement of transportation policy. At the time it seemed the last word in an expression of policy concerning the Nation's approach to our great national transportation system and to each mode of transportation. It was a good statement. I subscribed to it. I presume that you did, too.

But tonight I should like to suggest that the times well may call for a reassessment of that policy. Does it fully express what our policy should be under the fast moving impact of the space age? What must be our policy to provide the transportation system so essential to our economy, to our defense, to the shipping and traveling needs of the public?

"The old has passed away, behold, and the new has come."

Basically, I think we can all agree that no modern nation can grow or prosper without an efficient and rapid system of transport. Each form of transportation has contributed its share in the development of our Nation. Each means of transport has had its day of support from Government and has repaid the American people manifold for such support. No one medium of transportation could supply all of the needs of our complex civilization or meet our defense needs today. The 1950's have seen an adjustment in the relative volume position of the various forms of transport but each has shown a substantial growth and ability to meet the Nation's needs. We see throughout the world many countries blessed with more raw materials, equally suitable climate for high standards of living and yet, due to inadequate transport and communications, unable to compete in this fast-moving world. We have also seen the phenomenon of Great Britain where a great transport and communications concept for hundreds of years provided growth and prosperity to a nation seriously short of raw materials and limited in geography.

Equally it is apparent that rapid, efficient systems of transport and communications is a military necessity for any nation aspiring to high standing in the world community. The Armed Forces today of our Nation are completely dependent for the production and movement of necessary force for our national welfare and defense upon the adequacy and continuous improvement of our great national transportation network.

We cannot, as a Nation, for reasons of the national economy or national defense permit our transportation system to stand still or deteriorate. The Congress, representing the people, must exercise a minimum of legislative controls and a maximum of legislative encouragement to permit the continuous and healthy growth of our transportation network as the base of our prosperity and military strength.

We Americans are being challenged today by a different concept of the individual human being. Our transport system has been developed by free enterprise to the highest level of efficiency the world has ever seen. Our shipping and buying public enjoys many pleasures and luxuries impossible without the low-cost, competitive, rapid transport available today to move anything from hairpins to giant turbines quickly and at a cost which the shipper can afford to pay. But the requirements increase—the need is great for our economy and our military strength to keep pace with the Soviet challenge for world domination. No nation or individual can maintain a status quo growth and improvement is the only antithesis or deterioration. With our utter dependency on transportation for the welfare of our Nation, the challenge to our way of life on every front can only translate itself into a challenge to the transportation industry.

Many advances have been made in our transport system in the 1950's. In every phase of transportation great strides can be noted. In fact, I believe it can be said the 1950's saw the growth to maturity and relatively equal acceptance of the various segments of the American transportation system. We have seen in the 1950's the rapid replacement of less efficient steam locomotives by diesel power, representing a tremendous advance in the speed of service and the reductions of cost to our Nation's railroads. Had it not been for this and many other improvements, the railroads would have had hard sledding in meeting the demands and needs of the military and the public.

We have seen rapid strides in our motor carrier transportation system in the 1950's. More efficient units with lower costs and ease of handling has enabled the motor carrier industry to expand its services to the public and the national defense, and to meet the tremendous demand for high-speed door-to-door delivery. A vast improvement in our highway system was begun in the 1950's to be carried to conclusion in the decade ahead.

All of us have been excited by the phenomenal growth of air transport in the 1950's with complete acceptance, domestic and worldwide, for the movement of passengers and light freight, and a gradually opening phase of the movement of heavier types of freight needed by industry and peculiarly adapted to movement by air. The American air system is the world standard of competency.

The rapid expansion of our Nation's waterways and coastal shipping has astonished those of us who watch from the sidelines. Low costs and roll-on-roll-off ships and barges offer a real challenge in ideas to other forms of transport and a real service to the public.

I did not by any means intend to leave until last the many advances and improvements in overseas shipping. We are even now in the throes of a vast modernization of the movements of people and things by fast modern vessels geared to the rapid movement of our age. Nor do I fail to recognize the contribution of the Nation's vast pipeline network, greatly expanded and improved by new methods of automation in the 1950's, opening up entirely new industries in the field of chemicals produced from natural gas and providing new outlets for our petroleum products and new sources of fuel to industries throughout our Nation.

The 1950's have been a truly great chapter in the history of American transportation. No one knows this better than you gentlemen in the National Defense Transportation Association. You are both those who have dreamed and developed these modern miracles of technological progress and simultaneously put these innovations to work in the interest of the welfare and security of our people.

Much more must be done to improve this seemingly unimprovable system in the decade ahead. The public will demand the further reductions of relative cost to combat inflation and to continue to provide the base for our industrial growth and standards of living. (Even more, the challenge from abroad now shaping up so clearly not only in military and political areas but now more obviously in economic competition in the underdeveloped areas and for the markets of the world.) Wars are no longer fought primarily on the field of battle, as we all know. To lose the battle on any front, economic, political, or military, will be to lose the battle on all fronts.

Many may ask how the motor carrier and railroad industries have anything to do with meeting a Communist economic threat in South America, Africa, or Asia. For those who may ask the question, I believe the answer will be so evident as to be apparent even as the question is asked. Good transportation will be a part of every product, military or civil, which becomes a tool to defend our system of freedom against any threat, from any source. Inadequate transportation could contribute to the loss of the battle on any front.

In an effort to stimulate the thinking of you experts in transportation, but without the temerity to suggest how to accomplish the needed miracles of the 1960's, let me touch on only two major items which I feel most important to our Nation in the decade ahead.

Firstly, I feel this is the decade when we need to eliminate unnecessary expense in each form of transport. In other words, this must be a decade of cost consciousness. When growth has been as fast as in the 1950's—when new ideas and new developments come with great rapidity—wasteful procedures, excess personnel and sheer fat accrue. These contribute to passing on cost to the public and in turn becomes a part of the cost of every item consumed by the American public. In turn, each unnecessary rise in transportation cost makes more difficult our ability to compete in the world market. So, I would appeal to our modern miracle men of transportation to make the 1960's the decade of cost consciousness—a battening down of the hatches—keeping pace with the continuous flow of new ideas and new technological progress which I am sure will be forthcoming under our free enterprise competitive system.

This thought of increased efficiencies and cost controls leads me to the point which I consider the most challenging to transportation in the 1960's and one which will contribute the most to our national welfare. I refer to transportation integration. Too much sound and fury has been devoted to common ownership problems—too little to the integration of transport systems to benefit the shipping public, military and civil, with lower costs and faster delivery times. Each form of transport will have reached, by the end of this decade, a position of relative maturity. It is now no longer a question of monopoly and restraint of growth that is our national transportation problem. The real question is how can the special virtues of each mode of transport be harnessed together to benefit the shipping public and the national economy.

For example, the railroads are acknowledged to be among the very low cost transportation mediums. Yet, the railroads have a difficult problem with less than carload lot movements from shipper to consumer. The truck is an integral part of such movement and has found a positive place in the transportation world due to its flexibility. We Americans cannot do without either of these vital forms of transportation. Why not make a real breakthrough in the 1960's in the integration of truck and rail—whether it be piggy back, integrated container system, or combination rail and highway cars such as are now under development by our friends in the Chesapeake & Ohio Railroad. The question of who owns the system, developed by such integration is far less important to our Nation than the speed and flexibility of the truck combined with the speed and low-cost of the rails.

We find this improvement factor available to us in other combinations. The airplane and the truck are natural partners for door-to-door, one waybill, one responsibility handling. For the things which can properly move by air transport, with its great speed, the truck-air combination is needed and must come in the 1960's.

We have seen some real examples of combined transport in our combination of railship in roll-on-roll-off programs. Truck ship experiments are also opening new vistas for integrated transportation. The military has done an outstanding job in container experiments to prove the efficiencies of combined transport. To a great degree combined pipeline-rail-truck transport has shown the way to combining efficiencies of various modes of transport.

Costs of terminal and transfer freight handling are the plague of each mode of transport. These are the seemingly uncontrollable facts of life to each of us. Why should we have to rehandle a military shipment from production to battle area 5 to 10 times when if we could find the proper method of integrated transportation, we could package the product at production point, deliver it and store it if necessary in its own package by five different modes of transport without handling.

This great need for integrated transportation is the challenge to you transportation experts, military and civil. Here is the area which will most benefit America in the next decade. For high value items and perishables and the postal services, overnight, door-to-door service from any point in the United States to any other point is a possible and needed achievement for the 1960's. This can be achieved by combination surface and air transport, properly integrated.

The combination of truck-rail, further exploitation of pipeline-rail-truck-barge and ship will speed deliveries of all commodities and combat inflation by the efficiencies achieved. The military benefits could be staggering in inventory and obsolescence factor alone.

Let us then accept the transportation challenge of the 1960's—integrated transportation. Let each mode of transport give its best in accomplishment in its own field and integration with other modes.

The Congress will be receptive where legislation is needed, if such legislation is progressive and in the public need. In maturity no mode of transportation needs fear for its existence. If common ownership comes as a result of integration of two or more modes of transport it will be an obvious and desirable move, not as a means of domination by one mode of another. We Americans need all forms of transportation, but now we need the best elements of all, combined in the task of providing the best in transportation at the lowest cost.

Let us accept this challenge.

The Nation's Responsibility for Its Unemployed

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 26, 1959

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I place in the RECORD my statement to the Ways and Means Committee on the subject of the Nation's responsibility for its unemployment. The statement follows:

THE NATION'S RESPONSIBILITY FOR ITS UNEMPLOYED

Mr. Chairman, not long ago the Detroit Free Press carried a picture of a 29-year-old unemployed worker—a veteran of 13 months of fighting in Korea—who was picked up by the police as a vagrant because he was searching in garbage cans for food. He informed the judge that he was not a vagrant because he had a home—a pup tent. Asked how he had managed to stay alive during Detroit's zero weather he replied that he had a big shaggy dog that slept with him to keep him warm. His problem—he was able and willing to work but he couldn't find work. And so this man who had, in defense of his country, slept in tents in the hills of Korea was now forced by circumstances beyond his control, to sleep in a tent and seek food in garbage cans in one of the great cities of the wealthiest nation in the world.

I begin my remarks with this story because I want to emphasize the point that while we deliberate and, I'm afraid, procrastinate on what to do about our unemployment insurance plan, we are compounding human misery. Let us always remember that we are talking about men and women who until they were laid off, were accustomed to providing their family with a weekly paycheck. During the subsequent weeks of discouraging job hunting they learned to squeeze an existence out of minimal income provided by unemployment insurance. When they exhausted the unemployment benefits their situation became really desperate and most of them had to fall back on the already swollen general relief rolls.

When we are told, therefore, that unemployment in this country rose to 4,749,000 in February of this year—the highest for any February since the war with the exception of 1958—let us never forget that these alarming statistics are not just ledger entries. They are concerned with our own fellow Americans. And I believe I speak here today for the 4¾ million people now out of work, for the approximately 2 million workers who will exhaust their benefits in the year ahead, and the 10 or 12 million Americans who will become unemployed for some substantial time during the year ahead.

Mr. Chairman, Congress has not come to grips with the real and permanent problems of unemployment in this country. We have known, during sunny weather, that the cracks in the roof were growing wider and deeper, and when storm clouds have appeared on the horizon we have, from time to time, stuffed a little paper into these growing gaps. But it seems to me to be abundantly clear that the facts of our time call for a whole new roof, and a temporary tarpaulin to protect us until we can build that roof.

The statesmanlike approach to this problem, in my considered opinion, is contained in two proposals now before this Congress. The first, S. 1323, the McNamara-Hart bill, provides the temporary tarpaulin in the form of Federal grants of up to 16 weeks for the approximately 2 million unemployed workers who have currently exhausted their rights to State and Federal benefit or who were never covered by unemployment insurance and are still unemployed. In addition, about 1½ million persons who exhaust their benefits in the coming year will receive payments under the bill. The second, H.R. 3547, the Karsten-Machrowicz bill, builds the kind of roof which provides genuine and equitable protection for the problems we are facing now and which will inevitably grow in the future. I firmly believe that if the Federal standards in this bill as to benefit amount and duration were now in effect, the terrible tragedy of the current recession would be significantly reduced both for the unemployed and for the entire economy. We must pass these standards this session to prepare our Federal-State unemployment insurance system for future recessions.

We in Michigan—and in other hard hit States—are particularly interested in the reinsurance provisions of the Federal standards bill. This was one of the points made by the eight Governors who visited President Eisenhower on Monday of this week. They stated: "We favor adequate Federal advances to meet emergencies where the problems of unemployment are beyond the ability of the affected State governments." Michigan, I am afraid, fits this description. Its unemployment compensation system paid out about $324 million in benefits in 1958, while collecting only about $122 million in taxes and interest. Our State had to borrow $113 million under the Reed Act and through December 1958 it had obligated itself for another $64 million under the expiring Temporary Unemployment Compensation Act. The situation has gotten so bad that some Michigan employers have volunteered to pay their unemployment tax early so that benefit payments could be met. The Karsten-Machrowicz bill, which provides that the Federal Government will pay three-fourths of the money for benefit payments which exceed 2 percent of taxable payroll, is a reasonable way to approach the situation where an unemployment emergency has pushed a State unemployment compensation system to the wall.

If we are willing to look at the facts, it must become clear to all of us that we are not here concerned with a temporary problem which yields to the kind of passive patchwork approach which has so far prevailed. The cold fact is that although industrial production and the gross national product have improved, unemployment has increased steadily each month since last November. Some 256 major and minor labor areas are now on the critical list, with more than 6 percent of their total work force unemployed. Some 80 areas in 20 different States have, during the past 24 months, had more than 6 percent of their work force unemployed for a period of 18 months out of 24 months. My own State of Michigan, one of the Nation's leading producers of durable goods, has felt the brunt of the nationwide business recession of last year. As of February 15, Michigan had 364,000 unemployed, or 12.4 percent of the total labor force. In Detroit we have 229,000, or 15.4 percent of the total labor force unemployed.

Moreover, we have not only a problem of numbers but of depth. For, as Max Horton, director of the Michigan Employment Security Commission told the Senate Finance Committee last Friday, of the 229,000 unemployed workers in Detroit some 85,000 are "what we call hard core unemployed. In other words, they have been out of the factories so long and they have no attachment, and for that reason we feel that we have an economic disaster."

We face a situation, Mr. Chairman, which is not going to be solved by reassurances from the administration that we have nothing to worry about. There are many reasons why unemployment hangs on.

Automation is permanently eliminating many jobs in industry. On February 6 of this year the Federal Reserve Board pointed out that if the level of production in the automotive industry as of December 1958 is compared to that of December 1956, production in 1958 was only 4 percent less but the number of workers required was 20 percent less. Automation is making similar inroads in the electrical industry, in steel, and in the coal industry. We must recognize that the man who loses his job to a machine—especially if he is middle aged or over—is not going to find it easy to find another one, nor is his son going to be able to take over his father's old job.

The rate of economic expansion is too slow to provide new jobs for displaced workers or to absorb new entrants into the labor force. At the same time, the growing pool of unemployed helps to prevent wages from rising to supply needed purchasing power.

I am aware of the fact that the Governor's conference has just issued a statement to the effect that the States do not want Federal standards. But I remind the Congress that most of these States have failed to

respond to the repeated exhortations of the administration that they act themselves to liberalize their own laws.

I am also aware of the fact that some of our more fortunate communities do not face the heavy problem we face in Michigan. But I have tried to indicate that our situation reflects the kind of industrial changes which are, increasingly, going to affect other communities in the land.

We face a situation which will not be solved by any source. It will not be solved by honeyed phrases. It will not be solved by conferences or councils. It must be solved by the Congress acting courageously and because we care. I believe that the measures here presented are that kind of program.

DAV Services in South Dakota and Elsewhere

EXTENSION OF REMARKS
OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 26, 1959

Mr. CASE of South Dakota. Mr. President, an exceptional record of vital rehabilitation services freely extended to thousands of South Dakota citizens has recently come to my attention. Since I think these splendid humanitarian services may not be fully appreciated by all who have benefited thereby, directly and indirectly, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a statement regarding DAV services in South Dakota and elsewhere.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

DAV LIMITED TO DISABLED VETERANS

Among the several congressionally chartered veteran organizations, which have State departments and local chapters in South Dakota, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have benefited every compensated disabled veteran. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Eimer M. Freudenberger, its national director of claims, Cicero F. Hogan, and its national director of employment relations, John W. Burris—all located at its national service headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation in 1920, I am informed that the DAV national headquarters, located in Cincinnati, Ohio, has maintained the largest staff of any veteran organization of full-time, trained national service officers, 138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration, and in its central office in Washington, D.C. These service officers have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less well-informed claimants.

SOUTH DAKOTA CENTER AT SIOUX FALLS

The DAV national service officer in South Dakota is Mr. Eldo Swenson located at the VA Center, Sioux Falls. The department commander is Mr. Vernon R. Pierce, 504 South Fifth Avenue, Sioux Falls, and the department adjutant is Mr. Donald A. Caldwell, 1614 South Prairie, Sioux Falls.

Four VA hospitals are located in South Dakota: a 720-bed neuropsychiatric hospital at Fort Meade; a 255-bed general medical hospital at Hot Springs; a 548-bed DOM hospital at Hot Springs, and a 270-bed general medical hospital at Sioux Falls. There is also a State Soldiers and Sailors Home at Hot Springs, which had an enrollment of 213 last year, where the DAV State department provides various services by reason of its annual State VAVS appropriation of $900.

During the last fiscal year, the VA paid out $27,326,000 for its veteran program in South Dakota, including $4,635,719 disability compensation to its 6,184 service disabled veterans. These Federal expenditures in South Dakota furnish substantial purchasing power in all communities.

The outstanding record of personalized service activities and accomplishments of the DAV National Service Officer in behalf of South Dakota veterans and dependents during the last 10 fiscal years, is revealed by the following statistics which have been supplied me:

Claimants contacted (estimated)	6,139
Claim folders reviewed	5,116
Appearances before rating boards	1,319
Compensation increases obtained	694
Service connections obtained	342
Nonservice pensions	196
Death benefits obtained	101

Total monetary benefits obtained, $261,568.65

These above figures do not include the accomplishments of other national service officers on duty in the Central Office of the Veterans' Administration, handling appeals and reviews, or in its three District Offices, handling death and insurance cases.

Over the last 10 years, they reported 83,611 claims handled in such District Offices, resulting in monetary benefits of $20,850,335.32, and in the Central Office, they handled 58,262 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for South Dakota veterans, their dependents and their survivors.

SERVICE BEYOND THE FIGURES

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel and assistance extended to all of the claimants who have contacted DAV national service officers in person, by telephone, and by letter.

Pertinent advice has been furnished, I am told, to all disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation, or pension, VA guaranty loans for homes, farms and business, and so forth.

Helpful advice was also given as to counseling and placement into suitable useful employment (to utilize their remaining abilities), civil service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim I know from our own work in this field, presents different problems. Few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans. They are not given on a silver platter.

Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service connection of a disability becomes extremely difficult—too many times impossible. A Claims and Rating Board obviously cannot grant favorable action merely based on the opinions, impressions, or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

Good service officers advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations and schedule of disability ratings.

No proper service officer will ever use his skill, except in behalf of worthy claimants, with claims where there is substantial evidence of merit which should be evaluated.

The VA has denied more claims than it has allowed—many times because claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their power of attorney to some qualified advocate.

CLAIMS ARE REVIEWED AT TIMES

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others at an aggregate loss to them of more than $28 million per year.

About three-tenths percent of such discontinuances and reductions have probably occurred as to disabled veterans in South Dakota, with a consequent loss of about $84,000 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed.

I suggest that disabled veterans in South Dakota who have such experience give their power of attorney to the National Service Officer of the DAV, or of some other veteran organization, or of the American Red Cross.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or, again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increase obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service

officer setup. Moreover, such benefits will generally continue for many years.

HOW THE WORK IS FINANCED

I am told that the DAV receives no Government subsidy whatsoever. It maintains its nationwide staff of service officers primarily through income from membership dues collected by its local chapters and from the net income on its Idento Tag (miniature automobile license tags) project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project in thus furnishing them with useful employment.

Incidentally, without checking as to whether they had previously sent in a donation, I am told that more than 1,400,000 owners of sets of lost keys have received them back from the DAV's Idento Tag department, 1,753 of whom, during the last 8 years, were South Dakota residents.

Every eligible veteran can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis.

During the last 10 years, the DAV has also been helped by a separately incorporated trustee, the DAV Service Foundation, which has provided $3,300,000, exclusively for salaries to its national service officers. However, the reserves of the DAV Service Foundation are nearly exhausted. They have come from direct donations, designations in insurance policies, bequests in wills, assignments of stock and bonds, and the establishing of special types of trust funds by thoughtful and thankful Americans.

Those who are interested may send their donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington, D.C.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first perpetual rehabilitation fund of $1,000 with the DAV Service Foundation. Recently it added another $100 thereto. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from $100 to $1,100, equivalent to about $4 per DAV member—an excellent precedent for all other States.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—churches, labor unions, trade associations, and various religious, fraternal, and civic associations. I hope that all of America's eligible veterans become members of one or more of our patriotic, service-giving veteran organizations.

SENATE

TUESDAY, APRIL 7, 1959

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

Our Father God, who hast ordained that in trial we shall find our triumph, Thy goodness faileth never.

Yet, defying Thy will and forsaking Thy ways, wayward man has blasted the good earth with bombs, scorched it with fire, and drenched it with blood. Thy mercy on Thy people, Lord.

Above the selfish contentions, the suspicions, the hatreds of these bitter days, we would see lifted up the wondrous cross on which the Prince of Glory died—eternal symbol of life that is found by losing, of gain that is the reward of giving.

Father of all men—
We stand atremble and afraid
On the small world that we have made.
Afraid lest all our poor control
Shall turn and rend us to the soul.
Afraid lest we should be denied.
The price we hold our ragged pride
But in the end we pass all by
For a lone cross against the sky.

In the shadow of that cross, give us grace to live and by that sign to conquer. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Thursday, March 26, 1959, was dispensed with.

MESSAGES FROM THE PRESIDENT—APPROVAL OF JOINT RESOLUTIONS

Messages in writing from the President of the United States were communicated to the Senate by Mr. Miller, one of his secretaries, and he announced that on April 3, 1959, the President had approved and signed the following joint resolutions:

S.J. Res. 47. Joint resolution providing that certain communication activities at the IX Plenary Assembly of the International Radio Consultative Committee to be held in the United States in 1959 shall not be construed to be prohibited by the Communications Act of 1934 or any other law; and

S.J. Res. 73. Joint resolution extending an invitation to the International Olympic Committee to hold the 1964 Olympic games in the United States.

EXECUTIVE MESSAGES REFERRED

As in executive session,

The VICE PRESIDENT laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

APPOINTMENTS BY THE VICE PRESIDENT

BOARD OF VISITORS TO THE U.S. MILITARY ACADEMY

The VICE PRESIDENT, pursuant to the provisions of 70A Stat. 245, appointed as the members on the part of the Senate of the Board of Visitors to the U.S. Military Academy the following Senators: Mr. BRIDGES and Mr. MCGEE, from the Committee on Appropriations, and Mr. KEATING.

BOARD OF VISITORS TO THE U.S. NAVAL ACADEMY

The VICE PRESIDENT, pursuant to the provisions of 70A Stat. 434, appointed as the members on the part of the Senate of the Board of Visitors to the U.S. Naval Academy the following Senators: Mr. SALTONSTALL and Mr. HOLLAND, from the Committee on Appropriations, and Mr. BEALL.

BOARD OF VISITORS TO THE U.S. AIR FORCE ACADEMY

The VICE PRESIDENT, pursuant to the provisions of 70A Stat. 567, appointed as the members on the part of the Senate of the Board of Visitors to the U.S. Air Force Academy the following Senators: Mr. CHAVEZ and Mr. DWORSHAK, from the Committee on Appropriations, and Mr. ALLOTT.

COMMITTEE MEETING DURING SENATE SESSION

On request of Mr. MCNAMARA, and by unanimous consent, the Subcommittee on NASA Authorization Legislation, of the Committee on Aeronautical and Space Sciences, was authorized to meet during the session of the Senate today.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. JOHNSON of Texas. Mr. President, under the rule there will be the usual morning hour for the introduction of bills and the transaction of other routine business. I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

THOMAS H. MACDONALD

Mr. JOHNSON of Texas. Mr. President, today, April 7, marks the second anniversary of the death of Thomas H. MacDonald, for 34 years the Chief of our Bureau of Public Roads, and the architect of our cooperative Federal-State highway system.

As a living, growing memorial to the work of this great public servant, his friends are raising funds to establish a chair in transportation at Texas A. & M. College to help carry on the fine work which he began there in the last years of his life.

When Tom MacDonald became head of our Federal highway program, there was no national system of highways in this country. There were only 6 million motor vehicles and only 12.5 miles of road had been built in the United States with the first Federal-aid funds.

Serving under 7 Presidents and 17 Congresses, Tom MacDonald was the guiding genius behind the development of the world's greatest system of highways, which now carries 67,500,000 vehicles to the remotest corners of our land.

Alongside this great contribution to our Nation's physical and economic growth ranks his new philosophy of transportation, which may be of even greater importance in its long-range effects upon the future of our land.

With a rare perspective, born of his unique association with the development of our highway system, Tom MacDonald saw the need for men to study and understand the true nature of transportation in all its facets, how these

facets are related to and dependent upon each other, and the impact of transportation upon our national well-being.

This realization sparked his plans for a new type of transportation research institute, and he lived to lay out the fundamental pattern for basic research into the economic and social aspects of the entire transportation field.

The finest tribute that can be paid to this man, who gave so much to making possible our way of life as we know it today, is to see that his dream is brought to reality. The MacDonald chair of transportation will truly symbolize in its public service the great public servant for whom it is named.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following communications and letters, which were referred as indicated:

PROPOSED SUPPLEMENTAL APPROPRIATIONS, DISTRICT OF COLUMBIA (S. DOC. NO. 20)

A communication from the President of the United States, transmitting proposed supplemental appropriations and other authorizations for the fiscal year 1959 involving $12,845,526 in new obligational authority for various agencies and $264,300 for the District of Columbia (with accompanying papers); to the Committee on Appropriations and ordered to be printed.

PROPOSED AMENDMENTS TO THE BUDGET, FISCAL YEAR 1960, FOR THE DISTRICT OF COLUMBIA (S. DOC. NO. 21)

A communication from the President of the United States, transmitting, for the consideration of the Congress amendments to the budget for the fiscal year 1960, involving a net decrease of $708,000, payable from District funds, for the District of Columbia (with an accompanying paper); to the Committee on Appropriations and ordered to be printed.

REPORT ON REAPPORTIONMENT OF AN APPROPRIATION

A letter from the Director, Bureau of the Budget, Executive Office of the President, reporting, pursuant to law, that the appropriation to the Veterans' Administration for "Inpatient care" for the fiscal year 1959, had been apportioned on a basis indicating a need for a supplemental estimate of appropriation; to the Committee on Appropriations.

REPORT ON NATIONAL INDUSTRIAL RESERVE

A letter from the Secretary of Defense, transmitting, pursuant to law, a report on the National Industrial Reserve, dated April 1, 1959 (with an accompanying report); to the Committee on Armed Services.

AMENDMENT OF ARMED FORCES RESERVE ACT OF 1952, RELATING TO DEFINITION OF TERM "MEMBER OF A RESERVE COMPONENT"

A letter from the Acting Secretary of Defense, transmitting a draft of proposed legislation to amend section 265 of the Armed Forces Reserve Act of 1952 to define the term "a member of a Reserve component" so as to include a member of the Army or Air Force without specification of component (with an accompanying paper); to the Committee on Armed Services.

AMENDMENT OF TITLE 10, UNITED STATES CODE, RELATING TO COMPENSATION OF ACADEMIC DEAN OF NAVAL POSTGRADUATE SCHOOL

A letter from the Acting Secretary of Defense, transmitting a draft of proposed legislation to amend title 10, United States Code, to provide that the Secretary of the Navy shall prescribe the compensation of the academic dean of the Naval Postgraduate School (with an accompanying paper); to the Committee on Armed Services.

CONSTRUCTION OF NATIONAL GUARD ARMORIES AT ISHPEMING, MICH., AND MOBRIDGE, S. DAK.

A letter from the Assistant Secretary of Defense, reporting, pursuant to law, that construction has been approved of a one-unit-plus National Guard armory with motor vehicle storage building at Ishpeming, Mich., and a one-unit National Guard armory at Mobridge, S. Dak.; to the Committee on Armed Services.

REPORT OF DEPARTMENT OF THE ARMY CONTRACTS FOR MILITARY CONSTRUCTION AWARDED WITHOUT FORMAL ADVERTISEMENT

A letter from the Secretary of the Army, transmitting, pursuant to law, a report of the Department of the Army contracts for military construction awarded without formal advertisement, covering the period July 1 through December 31, 1958 (with an accompanying report; to the Committee on Armed Services.

REPORT ON DEPARTMENT OF THE ARMY RESEARCH AND DEVELOPMENT CONTRACTS

A letter from the Director of Research and Development, Department of the Army, Washington, D.C., transmitting, pursuant to law, a report on Department of the Army research and development contracts, for $50,000 or more, which were awarded during the period July 1 through December 31, 1958 (with an accompanying report); to the Committee on Armed Services.

NOTICE OF PROPOSED DISPOSITION OF CERTAIN QUININE

A letter from the Administrator, General Services Administration, Washington, D.C., transmitting, pursuant to law, a notice of a proposed disposition of approximately 13,860,000 ounces of quinine now held in the national stockpile, to be published in the Federal Register (with an accompanying paper); to the Committee on Armed Services.

AMENDMENT OF TITLE 10, UNITED STATES CODE, RELATING TO READINESS OF INDUSTRIAL CAPACITY FOR DEFENSE PRODUCTION

A letter from the Deputy Secretary of Defense, transmitting a draft of proposed legislation to amend title 10, United States Code, to provide for the readiness of industrial capacity for defense production or mobilization reserve purposes (with accompanying papers); to the Committee on Banking and Currency.

REPORT ON BORROWING AUTHORITY

A letter from the Deputy Director, Office of Civil and Defense Mobilization, Executive Office of the President, transmitting, pursuant to law, a Report on Borrowing Authority, for the quarter ended December 31, 1958 (with an accompanying report); to the Committee on Banking and Currency.

CONSTRUCTION OF DEPOSITORY FOR STORAGE OF FEDERAL RESERVE NOTES

A letter from the Acting Secretary of the Treasury, transmitting a draft of proposed legislation to provide for payment by the Federal Reserve banks of the cost of constructing a depository for the storage of Federal Reserve notes (with an accompanying paper); to the Committee on Banking and Currency.

REPORT ON PRIME CONTRACT AWARDS TO SMALL AND OTHER BUSINESS FIRMS FOR WORK IN THE UNITED STATES

A letter from the Assistant Sceretary of Defense (Supply and Logistics), transmitting, pursuant to law, a report on Army, Navy, and Air Force prime contract awards to small and other business firms for work in the United States, during the month of January, 1959, and in fiscal year 1959 through January (with an accompanying report); to the Committee on Banking and Currency.

REPORT OF EXPORT-IMPORT BANK OF WASHINGTON

A letter from the President, Export-Import Bank of Washington, Washington, D.C., transmitting, pursuant to law, a report of that bank, covering the period July–December, 1958 (with an accompanying report); to the Committee on Banking and Currency.

PROPOSED DISTRICT OF COLUMBIA NURSING ACT

A letter from the President, Board of Commissioners, District of Columbia, transmitting a draft of proposed legislation to provide for examination, licensing, registration, and for regulation of professional and practical nurses, and for nursing education in the District of Columbia, and for other purposes (with an accompanying paper); to the Committee on the District of Columbia.

AMENDMENT OF DISTRICT OF COLUMBIA TEACHERS' SALARY ACT OF 1955

A letter from the President, Board of Commissioners, District of Columbia, transmitting a draft of proposed legislation to amend the District of Columbia Teachers' Salary Act of 1955, as amended (with an accompanying paper); to the Committee on the District of Columbia.

SUPPLEMENTAL REPORT ON OPERATIONS OF D.C. TRANSIT SYSTEM, INC.

A letter from the President, D.C. Transit System, Inc., Washington, D.C., relating to the operations of that company, for the year ended December 31, 1958, and transmitting revised statements to be substituted for the original statements transmitted with letter of January 30, 1959 (with accompanying papers); to the Committee on the District of Columbia.

AMENDMENT OF INTERNAL REVENUE CODE, RELATING TO INCREASE OF TAXES ON MOTOR AND AVIATION FUEL

A letter from the Acting Secretary of the Treasury, transmitting a draft of proposed legislation to amend the Internal Revenue Code by increasing the taxes on motor and aviation fuel, and for other purposes (with an accompanying paper); to the Committee on Finance.

EXEMPTION OF U.S. COAST GUARD FROM CERTAIN TAXES

A letter from the Acting Secretary of the Treasury, transmitting a draft of proposed legislation to exempt the U.S. Coast Guard from the tax imposed upon the sale or transfer of firearms and ammunition (with accompanying papers); to the Committee on Finance.

EXTENSION OF RENEGOTIATION ACT OF 1951

A letter from the Acting Secretary of Defense, transmitting a draft of proposed legislation to extend the Renegotiation Act of 1951 until September 30, 1961, and for other purposes (with an accompanying paper); to the Committee on Finance.

EXTENSION OF PERIOD OF FREE IMPORTATION OF CERTAIN GIFTS

A letter from the Deputy Secretary of Defense, transmitting a draft of proposed legislation to extend for a period of 2 years the privilege of free importation of gifts from members of the Armed Forces of the United States on duty abroad (with an accompanying paper); to the Committee on Finance.

EXTENSION OF FEDERAL-STATE UNEMPLOYMENT COMPENSATION TO PUERTO RICO AND ESTABLISHMENT OF A NEW ACCOUNT IN THE UNEMPLOYMENT TRUST FUND

A letter from the Secretary of Labor, transmitting two drafts of proposed legislation (1) to extend the Federal-State unemployment compensation program to Puerto Rico, and for other purposes, and (2) to establish a new account in the unemployment trust

fund to which an amount equal to all Federal unemployment taxes collected shall be appropriated, and out of which all employment security administrative expenses shall be paid, to increase the amount of the reserve in the Federal unemployment account for advances to the States, to increase the amount of wages subject to taxation under the Federal Unemployment Tax Act, and for other purposes (with accompanying papers); to the Committee on Finance.

EXTENSION OF UNEMPLOYMENT COMPENSATION PROGRAM

A letter from the Secretary of Labor, transmitting a draft of proposed legislation to extend the unemployment compensation program (with accompanying papers); to the Committee on Finance.

AMENDMENT OF MUTUAL DEFENSE ASSISTANCE CONTROL ACT OF 1951

A letter from the Acting Secretary of State, transmitting a draft of proposed legislation to amend the Mutual Defense Assistance Control Act of 1951 (with accompanying papers); to the Committee on Foreign Relations.

REPORT OF U.S. INFORMATION AGENCY

A letter from the Director, U.S. Information Agency, Washington, D.C., transmitting, pursuant to law, a report of that Agency, for the period from July 1 to December 31, 1958 (with an accompanying report); to the Committee on Foreign Relations.

AUDIT REPORT ON GOVERNMENT SERVICES, INC.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on audits of Government Services, Inc., and of Government Services, Inc.'s employee retirement and benefit trust fund and supplemental pension plan, for the year ended December 31, 1958 (with an accompanying report); to the Committee on Government Operations.

AUDIT REPORT ON FEDERAL NATIONAL MORTGAGE ASSOCIATION

A letter from the Comptroller General of the United States, transmitting, pursuant to law, an audit report on the Federal National Mortgage Association, Housing and Home Finance Agency, fiscal year 1958 (with an accompanying report); to the Committee on Government Operations.

REPORT ON EXAMINATION OF ECONOMIC AND TECHNICAL ASSISTANCE PROGRAM FOR PAKISTAN

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the examination of the economic and technical assistance program for Pakistan, International Cooperation Administration, Department of State, fiscal years 1955–57 (with an accompany report); to the Committee on Government Operations.

AUDIT REPORT ON OFFICE OF DEFENSE LENDING, TREASURY DEPARTMENT

A letter from the Comptroller General of the United States, transmitting, pursuant to law, an audit report on the Office of Defense Lending, Treasury Department, fiscal year 1958 (with an accompanying report); to the Committee on Government Operations.

REPORT ON EXAMINATION OF PRICES NEGOTIATED UNDER CERTAIN AIR FORCE CONTRACTS

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the examination of prices negotiated under certain Department of the Air Force contracts with Friden, Inc., San Leandro, Calif., dated March 1959 (with an accompanying report); to the Committee on Government Operations.

REPORT ON FOREIGN EXCESS PROPERTY DISPOSED OF BY DEPARTMENT OF COMMERCE

A letter from the Acting Secretary of Commerce, reporting, pursuant to law, on foreign excess property disposed of by that Department, during calendar year 1958; to the Committee on Government Operations.

APPLICATIONS FOR LOANS UNDER SMALL RECLAMATION PROJECTS ACT OF 1956

A letter from the Secretary of the Interior, transmitting, pursuant to law, an application for a loan under the Small Reclamation Projects Act of 1956 to the Centerville-Deuel Creek Irrigation Co., near Centerville, Utah (with accompanying papers); to the Committee on Interior and Insular Affairs.

A letter from the Secretary of the Interior, transmitting, pursuant to law, an application for a loan under the Small Reclamation Projects Act of 1956 to the Santa Ynez River Water Conservation District in California (with accompanying papers); to the Committee on Interior and Insular Affairs.

PROPOSED PUBLIC LAND TOWNSITE ACT

A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation to consolidate, revise, and reenact the public land townsite laws (with an accompanying paper); to the Committee on Interior and Insular Affairs.

LAWS ENACTED BY LEGISLATURE OF VIRGIN ISLANDS

A letter from the Under Secretary of the Interior, transmitting, pursuant to law, copies of laws enacted by the Legislature of the Virgin Islands in its 1957 regular and special sessions (with accompanying papers); to the Committee on Interior and Insular Affairs.

PROJECT PROPOSAL UNDER SMALL RECLAMATION PROJECTS ACT OF 1956

A letter from the Assistant Secretary of the Interior, reporting, pursuant to law, that the Weber-Box Elder Conservation District of Ogden, Utah, has applied for a loan of $304,000 on a small project estimated to cost $332,000; to the Committee on Interior and Insular Affairs.

REPORT OF SPECIAL ADVISORY COMMITTEE ON TELECOMMUNICATION

A letter from the Director, Office of Civil and Defense Mobilization, Executive Office of the President, transmitting, for the information of the Senate, a copy of the report of the Special Advisory Committee on Telecommunication, dated December 29, 1958 (with an accompanying report); to the Committee on Interstate and Foreign Commerce.

JOSEF JAN LOUKOTKA

A letter from the Secretary of the Army, transmitting a draft of proposed legislation for the relief of Josef Jan Loukotka (with an accompanying paper); to the Committee on the Judiciary.

VINCENTE SOLVIA EMPLEO

A letter from the Secretary of the Army, transmitting a draft of proposed legislation for the relief of Vincente Solvia Empleo (with an accompanying paper); to the Committee on the Judiciary.

REPORT ON TEXAS CITY DISASTER CLAIMS

A letter from the Secretary of the Army, transmitting, pursuant to law, a report on Texas City disaster claims; to the Committee on the Judiciary.

REPORT OF DIRECTOR OF ADMINISTRATIVE OFFICE OF THE U.S. COURTS

A letter from the Director, Administrative Office of the U.S. Courts, Washington, D.C., transmitting, pursuant to law, his report for the fiscal year 1958 (with an accompanying report); to the Committee on the Judiciary.

AMENDMENT OF BANKRUPTCY ACT, RELATING TO COURT AUTHORITY TO REEXAMINE CERTAIN ATTORNEY FEES

A letter from the Director, Administrative Office of the U.S. Courts, Washington, D.C., transmitting a draft of proposed legislation to amend subdivision d of section 60 of the Bankruptcy Act (11 U.S.C. 96d) so as to give the court authority on its own motion to reexamine attorney fees paid or to be paid in a bankruptcy proceeding (with accompanying papers); to the Committee on the Judiciary.

SUSPENSION OF DEPORTATION OF CERTAIN ALIENS

Four letters from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders suspending deportation of certain aliens, together with a statement of the facts and pertinent provisions of law pertaining to each alien, and the reasons for ordering such suspension (with accompanying papers); to the Committee on the Judiciary.

ADJUSTMENT OF IMMIGRATION STATUS OF CERTAIN ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders entered in the case of certain aliens, relating to adjustment of their immigration status (with accompanying papers); to the Committee on the Judiciary.

GRANTING ADMISSION INTO THE UNITED STATES OF CERTAIN DEFECTOR ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders entered granting admission into the United States of certain defector aliens (with accompanying papers); to the Committee on the Judiciary.

GRANTING OF STATUS OF PERMANENT RESIDENCE TO CERTAIN ALIENS

A letter from the Commissioner, Immigration and Naturalization Service Department of Justice, transmitting, pursuant to law, copies of orders granting the applications for permanent residence filed by certain aliens, together with a statement of the facts and pertinent provisions of law as to each alien, and the reasons for granting such applications (with accompanying papers); to the Committee on the Judiciary.

ADMISSION OF CERTAIN ALIENS AFFLICTED WITH TUBERCULOSIS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, reports concerning individuals admitted to the United States notwithstanding affliction with tuberculosis (with accompanying papers); to the Committee on the Judiciary.

SUSPENSION OF DEPORTATION OF ALIENS—WITHDRAWAL OF NAME

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, withdrawing the name of Yee Yong Sang from a report relating to aliens whose deportation has been suspended, transmitted to the Senate on January 15, 1959; to the Committee on the Judiciary.

EXTENSION OF HOSPITAL AND MEDICAL CARE FOR CERTAIN VETERANS

A letter from the Administrator, Veterans' Administration, Washington, D.C., transmitting a draft of proposed legislation to extend the existing authority to provide hospital and medical care for veterans who are U.S. citizens temporarily residing abroad to include those with peacetime service-incurred disabilities (with an accompanying paper); to the Committee on Labor and Public Welfare.

REPORT OF GIRL SCOUTS OF THE UNITED STATES OF AMERICA

A letter from the President and National Executive Director, Girl Scouts of the United States of America, New York City, N.Y., transmitting, pursuant to law, a report of that organization, for the fiscal year ended September 30, 1958 (with an accompanying

report); to the Committee on Labor and Public Welfare.

SUPPLEMENTAL COMMENTS OF PROGRAM FOR REDUCING THE NATIONAL FLOOD DAMAGE POTENTIAL

A letter from the Chairman of the Board and Director, Tennessee Valley Authority, Knoxville, Tenn., transmitting, for the information of the Senate, additional comments on the program for reducing the national flood damage potential (with accompanying papers); to the Committee on Public Works.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the VICE PRESIDENT:

A joint resolution of the Legislature of the State of Alaska; to the Committee on Interior and Insular Affairs:

"SENATE JOINT MEMORIAL 8

"TO THE HONORABLE DWIGHT D. EISENHOWER, PRESIDENT OF THE UNITED STATES; THE HONORABLE RICHARD NIXON, PRESIDENT OF THE SENATE; THE HONORABLE SAM RAYBURN, SPEAKER OF THE HOUSE OF REPRESENTATIVES; THE HONORABLE E. L. BARTLETT AND THE HONORABLE ERNEST GRUENING, SENATORS FROM ALASKA; THE HONORABLE RALPH J. RIVERS, REPRESENTATIVE FROM ALASKA:

"Your memorialist, the Legislature of the State of Alaska in first legislature, first session assembled, respectfully submits that—

"Whereas the State of Alaska under the provisions of Public Law 85–508 is granted 103,550,000 acres of land for selection; and

"Whereas one-third of Alaska's land area is already appropriated in such manner as to be unavailable for selection; and

"Whereas an equal amount of land constitutes mountainous and glacial areas unsuitable for selection; and

"Whereas committee reports on the statehood bill for Alaska very clearly emphasized that Alaska must have maximum management of its natural resources for economic reasons; and

"Whereas section 6(h) of Public Law 85–508 establishes an arbitrary date of July 7, 1958, which limits State selection for oil and gas lands to those actually under lease prior to said date; and

"Whereas the State of Alaska has not yet received rules and regulations from the Secretary of the Interior controlling land grant selections; and

"Whereas the Interior Department is presently issuing oil and gas leases covering 2 million acres per month, which action precludes State selection of these areas;

"Now, therefore, your memorialist, the Legislature of the State of Alaska, urges that action be taken to have the restricting phrase "* * * unless such lease, permit, license, or contract is in effect on the date of approval of this Act, and * * *" stricken from the first sentence of section 6(h) of Public Law 85–508.

"Passed by the senate February 28, 1959.

"WILLIAM E. BELTZ,
"*President of the Senate.*

"Attest:

"KATHERINE T. ALEXANDER,
"*Secretary of the Senate.*

"Passed by the house March 6, 1959.

"WARREN A. TAYLOR,
"*Speaker of the House.*

"Attest:

"ESTHER REED,
"*Chief Clerk of the House.*"

Two joint resolutions of the Legislature of the State of Arizona; to the Committee on Interior and Insular Affairs:

"SENATE JOINT MEMORIAL 3

"Joint memorial requesting the Congress of the United States to prevent enactment of a proposed bill establishing a national wilderness preservation system and designating certain areas to be maintained as a wilderness

"*To the Congress of the United States of America:*

"Your memorialist respectfully represents a bill has been introduced into the Congress of the United States providing for the designation and maintenance of wilderness areas within the States, and such areas shall be supervised and maintained by the Federal Government.

"It is acknowledged that the Government of the United States now owns approximately 70 percent of the land in Arizona. The enactment of this oppressive legislation would have the tendency to either increase the Federal lands within the State or to cause the Federal Government to exercise more stringent regulations over the land it already owns and controls.

"Federal lands within this State now include an abundant supply of wilderness reservations. It is entirely possible that rigid regulations, which might well be imposed, would deny the scenic wonders of these areas to many thousands of visitors annually. Moreover, such regulation might make fire protection difficult or more expensive or it might encroach upon the water rights of the State of Arizona. All these factors would retard the economic development of this State.

"Wherefore your memorialist, the Legislature of the State of Arizona, prays that the Congress of the United States consider carefully the impact of the proposed legislation relating to a national wilderness system since it appears to the Legislature of the State of Arizona that enactment of such a measure will unduly restrict the use of the wilderness areas and retard the economic development of this State. Moreover, the U.S. Government now controls vast areas of land within this State and any approach to this problem should be in the direction of relinquishing control rather than subjecting additional areas of land within this State to Federal control or cumbersome regulations."

"HOUSE JOINT MEMORIAL 1

"Joint memorial requesting the establishment of a national cemetery in Arizona

"*To the Congress of the United States of America:*

"Your memorialist respectfully represents the State of Arizona does not have a national cemetery within its borders even though, proportionately, there are more veterans in Arizona than in most States of the United States. The influx of veterans into the State of Arizona is due to the fact that for many years there have been many military installations located in the State. Moreover, thousands of veterans have moved to Arizona to take advantage of the dry, healthful climate.

"A deceased veteran, who has expressed a desire to be buried in a national cemetery, has to be transported to a distant point in another State for burial.

"Wherefore your memorialist, the Legislature of the State of Arizona, prays that the Congress provide for the establishment of a national cemetery in the State of Arizona."

A resolution of the House of Representatives of the State of Arkansas; to the Committee on Labor and Public Welfare:

"HOUSE RESOLUTION 14

"Whereas millions of veterans of World War II and of the Korean conflict have been educated under the provisions of the veterans' education program established by the Federal Government; and

"Whereas many veterans were able to obtain further education through the benefits of the veterans' education program which would not otherwise have been possible; and

"Whereas the education of millions of veterans has contributed to an increase in the educational level of this country and has produced a major national asset which has contributed much to the economy of this country; and

"Whereas reliable statistics have proved that increased income to veterans arising out of their higher education level will more than reimburse the National Treasury of the entire cost of the GI training program by 1970; and

"Whereas the President of the United States, by Executive order on January 31, 1955, stopped the educational benefits for persons serving in the Armed Forces of the United States after February 1, 1955; and

"Whereas such Executive order has deprived millions of Americans serving in the Armed Forces of the educational benefits previously extended to veterans; and

"Whereas it is believed that as long as the draft is continued that all persons serving in the Armed Forces should be extended the educational opportunities enjoyed by veterans serving prior to February 1, 1955; and

"Whereas it has been demonstrated that the investment in the education of such veterans will be more than repaid to the Public Treasury through increased taxes resulting from higher incomes of such veterans: Now, therefore, be it

"*Resolved by the House of Representatives of the 62d General Assembly of the State of Arkansas,* That the House of Representatives of the Arkansas General Assembly does hereby memorialize the Congress of the United States to extend GI educational benefits to all veterans who entered, or who enter, military services from and after February 1, 1955, and that such educational benefits be extended so long as the provisions of the draft law exist; be it further

"*Resolved,* That upon adoption of this resolution that a copy thereof be mailed, by the chief clerk of the house of representatives, to the President of the Senate and the Speaker of the House of Representatives of the Congress of the United States, and to each Member of the Congress from the State of Arkansas."

A joint resolution of the Legislature of the State of California; to the Committee on Agriculture and Forestry:

"ASSEMBLY JOINT RESOLUTION 12

"Joint resolution relative to enactment of a national food allotment stamp plan

"Whereas reports from county welfare departments in California show an increasing number of low-income families, especially those engaged in agricultural occupations at both the farm and processing level, forced to resort to appeals to public assistance agencies to provide food as well as other necessities during the winter and spring; and

"Whereas surplus foods furnished by the U.S. Department of Agriculture are available to public assistance recipients in only a limited number of counties and even where available do not provide a balanced diet, merely furnishing flour, cornmeal, dry skim milk powder, rice, and sometimes butter; and

"Whereas retail prices for food continue to rise along with the cost of all other living items; unemployment reached 317,000 in December representing 5.3 percent of the California labor force; many counties, faced with welfare department deficits, are refusing supplementary food allotments to employables or those drawing unemployment compensation benefits which are totally in-

adequate for large families and for which thousands of other families are ineligible, to say nothing of the growing thousands who have exhausted their benefits yet cannot find jobs; and

"Whereas there is a constant surplus of farm commodities forcing down the price paid to California farmers, which commodities are bitterly needed by the unemployed here and nationally, now numbering more than 4 million; and

"Whereas a national food allotment stamp plan would distribute these surpluses, as they arise, through retail channels, upgrading the diets of those most in need, increasing prices to farmers and stimulating retail sales; and

"Whereas the State Department of Social Welfare, the California Association for Health and Welfare, the California Institute of Social Welfare, the organized labor movement, county welfare directors, farmers, and city people through community and civic organizations favor reestablishment of this means for getting surplus foods to hungry people; and

"Whereas a number of measures to establish a national food stamp program have been introduced in the 86th Congress: Now, therefore, be it

"Resolved by the Assembly and Senate of the State of California (jointly), That the Legislature of the State of California respectfully memorializes the Congress of the United States to enact a national food allotment stamp plan as a means toward strengthening our national health and developing a more equitable distribution of the abundance which California and the Nation's farmers are in a position to provide and to make such food available in addition to, and not in place of, any welfare assistance (financial or otherwise) granted needy persons; and be it further

"Resolved, That the chief clerk of the assembly is directed to transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of California; to the Committee on Interior and Insular Affairs:

"SENATE JOINT RESOLUTION 4

"Joint resolution relative to the conversion of sea water

"Whereas the critical deficiency in the water supply of the State of California necessary to meet the needs of the ever-growing population of this State demands that every potential source of water be utilized to the fullest extent; and

"Whereas with the continual influx of population from other parts of the Nation, this State is encouraging great difficulties in developing water supplies sufficient to meet the growing demands; and

"Whereas the study of means of economically converting sea water to fresh water to meet these demands and to supplement natural supplies of water would be of immeasurable assistance not only to this State but to other States encountering the similar problem of diminishing supplies and increasing population: Now, therefore, be it

"Resolved by the Senate and Assembly of the State of California (jointly), That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States to expedite without delay, current studies of means of economically converting sea water to fresh water; and be it further

"Resolved, That the secretary of the senate be hereby directed to transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of California; to the Committee on Public Works:

"SENATE JOINT RESOLUTION 11

"Joint resolution relative to Federal highway legislation

"Whereas the California Legislature, by the adoption of Senate Joint Resolution 28 (ch. 126 of resolutions, statutes of 1955), and Senate Joint Resolution 4 (ch. 24 of resolutions, statutes of 1956 regular session), and Assembly Joint Resolution 4 (ch. 11 of resolutions, statutes of 1956 first extraordinary session), urged the enactment of Federal highway legislation substantially as set forth in the Federal-Aid Highway Act of 1956 except for the provision limiting the apportionments for each fiscal year for the National System of Interstate and Defense Highways to the amounts available in the Highway Trust Fund as provided in section 209(g) of the act approved June 29, 1956; and

"Whereas it now appears that in the absence of Federal legislation during the current session, due to said provision, there will be no funds available for apportionment for expenditure upon the National System of Interstate and Defense Highways during the fiscal year commencing July 1, 1960, and ending June 30, 1961, and only a very small amount would be available for the National System of Interstate and Defense Highways during the succeeding fiscal year; and

"Whereas, as pointed out in the resolutions adopted by the California Legislature above referred to, one of the essentials of a successful program is a system of financing which permits long-range planning, with a definite and certain apportionment formula to permit construction in an orderly manner; and

"Whereas the failure to provide for the continuance of progress on the National System of Interstate and Defense Highways for a period of 2 fiscal years would not only prevent the orderly prosecution of work already planned but would seriously disrupt the organization of the California Division of Highways and in all probability would have the same results in many other States so that the completion of said National System of Interstate and Defense Highways would be delayed much longer than 2 years; and

"Whereas the economy of California depends upon the completion of an adequate highway system therein, including as an integral part the National System of Interstate and Defense Highways, and it was for the reason that the Federal-aid highway program was so written as to assure the completion of the Interstate System that the Legislature of California indicated its support therefor: Now, therefore, be it

"Resolved by the Senate and the Assembly of the State of California (jointly), That the Congress is urged to provide for the continuance of the Federal-aid highway program as set forth in the Federal-Aid Highway Act of 1956 with the exception of the provision contained in section 209(g) thereof, including the approval of the cost estimates submitted to the Congress by the Bureau of Public Roads of the Department of Commerce as a basis for apportionment for the fiscal year ending June 30, 1962; and be it further

"Resolved, That the secretary of the senate is directed to transmit copies of this resolution to the President and Vice President of the United States, the chairmen of the appropriate committees of the Congress, and to each Senator and Representative from the State of California in the Congress of the United States."

A concurrent resolution of the Legislature of the State of Kansas; to the Committee on Interior and Insular Affairs:

"HOUSE CONCURRENT RESOLUTION 31

"Concurrent resolution memorializing the Congress and the President of the United States to safeguard and preserve established State and individual rights to the use of water within the separate States

"Whereas despite repeated congressional recognition in many statutes such as the Federal Power Act, and the Water Supply Act of 1958, that the States have and should have the primary interest, a series of judicial decisions in the last decade and a half has undermined the ability of the States to perform their appropriate tasks in this field and has suggested the possibility of unlimited Federal prerogatives concerning water which cast doubt on the basis of vested rights and weakens the ability of the States successfully to coordinate water use; and

"Whereas recent opinions and assertions from the U.S. Department of Justice would deprive States and persons of rights which said States and persons previously enjoyed, to regulate and control the use of water in those respective States; and

"Whereas said decisions of the Federal courts and opinions and assertions of the U.S. Department of Justice are further a part of a general pattern developing gradually into Federal supremacy and usurpation over water, which, if continued will destroy individual and States rights over water, and substitute in lieu thereof an all-powerful centralized government control thereover; and

"Whereas Kansas and the numerous Federal agencies do now and have always enjoyed a spirit of cooperation in the development of flood control and water resources programs and it is the wish of the people of Kansas that such interest and cooperation be preserved and continue in the future; and

"Whereas factors involved in water use development are peculiarly dependent on local geography, climate, and economic needs and are consequently best handled within our Federal system by the State level of government; and

"Whereas the traditional role of the States in the administration, conservation, and utilization of their water resources has led in the direction of optimum harmonious development of these water resources; and

"Whereas Federal agencies which have complied with State water law in obedience to the expressed intent of Congress have not jeopardized any of the legitimate interests of the Federal Government; and

"Whereas doubts raised by these judicial decisions and Department of Justice opinions as to the basis of vested water rights, present and future, and doubts as to the relationships between the Federal and State government will, without corrective congressional action, tend to delay much needed water development for an indefinite time and discourage the States in their efforts to make much needed improvements in their facilities for water resources planning and development: Now, therefore, be it

"Resolved by the House of Representatives of the State of Kansas (the Senate concurring therein), That the Congress and President of the United States and the representatives of Kansas in the Congress of the United States be, and they are hereby respectfully urged and requested to take all necessary action to (1) preserve the water rights of the individual and the States and to prevent Federal usurpation of those rights; (2) to see that legislation is initiated and supported to reestablish to the individuals and to the States, the rights taken from them by the Federal courts and the Justice Department; and (3) in every possible way reaffirm, renew, and defend the concepts that water rights are property rights and that these established

rights to the use of water, by a State or an individual, should not be taken away without due process of law and adequate compensation; be it further

"Resolved, That the secretary of state be instructed to transmit enrolled copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives of the Congress, to the chairman of the U.S. Senate and House Committees of Interior and Insular Affairs, to U.S. Senator ANDREW F. SCHOEPPEL, to U.S. Senator FRANK CARLSON, and to U.S. Representatives WILLIAM AVERY, NEWELL GEORGE, DENVER HARGIS, ED REES, FLOYD BREEDING, and WINT SMITH.

"I hereby certify that the above concurrent resolution originated in the house, and was adopted by that body March 13, 1959.

"JESS TAYLOR,
"Speaker of the House.
"A. E. ANDERSON,
"Chief Clerk of the House.

"Adopted by the senate March 21, 1959.

"JOSEPH W. HENKLE, Sr.,
"President of the Senate.
"RALPH E. ZARKER,
"Secretary of the Senate."

A joint resolution of the Legislature of the State of Maryland; to the Committee on Armed Services:

"JOINT RESOLUTION 6

"Senate joint resolution urging the enactment of appropriate legislation by the Congress of the United States to amend the Military Pay Act of 1958 to equalize the retirement pay of members of the Armed Forces of the United States

"Whereas there is now pending before the 86th Congress of the United States legislation, including S. 269, S. 541, and H.R. 703, to equalize the pay of retired members of the uniformed services who receive their retired pay under the provisions of the Career Compensation Act of 1949; and

"Whereas the Military Pay Act of 1958, Public Law 85–422, failed to provide for the computation of the retired pay of such members of the uniformed services, retired prior to June 1, 1958, on the basis of the newly established pay rates provided in said law, at the same time providing that the retired pay of those retired after that date be computed at the newly established higher rates; and

"Whereas there appears to be no basis for this gross discrimination against such retired personnel who, by reason of past meritorious services, should be equally entitled to benefits granted to retired personnel retired after the effective date of the Military Pay Act of 1958, Public Law 85–422; and

"Whereas a failure to maintain the same standard for the computation of retired pay of all members of the uniformed services of the United States, regardless of the date of their retirement, will cause defections from active service of career officers and thus prove detrimental to the national defense and security of the United States; and

"Whereas retired members of the uniformed services of the United States reside in every portion of our country; however, the State of Maryland is privileged to have great numbers of such retired personnel who have served their country faithfully and with distinction: Now, therefore, be it

"Resolved by the General Assembly of Maryland, That the General Assembly of Maryland respectfully memorializes the Congress of the United States to enact appropriate legislation, similar to that proposed in S. 269, S. 541, and H.R. 703 of the 86th Congress, to provide that the retired pay of those retired before June 1, 1958, be computed on the same basis as the computation of the retired pay of such members retired after June 1, 1958; and be it further

"Resolved, That the secretary of state is hereby directed to transmit copies of this resolution to the President and the Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from the State of Maryland in the Congress of the United States."

Resolutions of the General Court of the Commonwealth of Massachusetts; to the Committee on Banking and Currency:

"RESOLUTIONS MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO ENACT LEGISLATION FOR THE BENEFIT OF DISTRESSED AREAS

"Whereas many communities of the Commonwealth are suffering from substantial and persistent unemployment and underemployment; and

"Whereas it is the responsibility of the Federal Government to help assure maximum employment; and

"Whereas Federal assistance to distressed areas will enhance the national welfare: Therefore be it

"Resolved, That the General Court of Massachusetts respectfully urges the Congress of the United States to give prompt and favorable consideration to the enactment of legislation to provide loans for industrial projects in industrial and rural areas, to provide loans to States or organizations representing redevelopment areas in order to help finance public facilities, to provide information and technical assistance, to provide for participation by industrial areas in the urban-renewal program, and to provide for expanded Federal participation with State and local agencies in the fields of vocational training and industrial retraining; and be it further

"Resolved, That copies of these resolutions be transmitted forthwith by the secretary of the Commonwealth to the Presiding Officer of each branch of the Congress of the United States and to each Member thereof from this Commonwealth.

"Senate, adopted March 16, 1959.

"IRVING N. HAYDEN,
"Clerk.

"House of representatives, adopted in concurrence March 23, 1959.

"LAWRENCE R. GROVE,
"Clerk.

"A true copy.
"Attest:

"Secretary of the Commonwealth."

Resolutions of the General Court of the Commonwealth of Massachusetts; to the Committee on Finance:

"RESOLUTIONS MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO ENACT LEGISLATION FOR THE BENEFIT OF THE TEXTILE AND FISHING INDUSTRIES

"Whereas the textile and fishing industries of the Commonwealth of Massachusetts have continued to be adversely affected by national and international policies without receiving the benefit of supplementary assistance: Therefore be it

"Resolved, That the General Court of Massachusetts memorializes the Congress of the United States to enact legislation to alleviate the burdens presently existing on the textile and fishing industries of the Commonwealth; and be it further

"Resolved, That copies of these resolutions be transmitted forthwith by the secretary of the Commonwealth to the Presiding Officer of each branch of the Congress, and to each Member thereof from this Commonwealth.

"Senate, adopted March 16, 1959.

"IRVING N. HAYDEN,
"Clerk.

"House of representatives, adopted in concurrence March 23, 1959.

"LAWRENCE R. GROVE,
"Clerk.

"A true copy.
"Attest:

"JOSEPH D. WARD,
"Secretary of the Commonwealth."

A joint resolution of the Legislature of the State of Minnesota; to the Committee on Finance:

"RESOLUTION 3

"Resolution memorializing the President, the Secretary of the Treasury, and the Congress of the United States to oppose measures altering the tax status of cooperatives

"Whereas business enterprises are made up of several types of business organizations, including proprietorships, partnerships, corporations, and cooperatives all of which have contributed greatly to the tempo of economic activity within the State; and

"Whereas the largest number of cooperatives is in the State of Minnesota and the people of this State, particularly within the rural areas, have been greatly benefited thereby and have received many services through the various cooperative organizations; and

"Whereas the tax position of cooperatives has been thoroughly investigated by the Congress of the United States over a long period of time and these investigations have revealed that under the present laws, the cooperatives have faithfully abided by the principles and regulations under which they have been organized; and

"Whereas cooperatives do pay taxes and in many communities of this State are the largest taxpayers; and

"Whereas the Secretary of the Treasury has recommended to Congress to require cooperatives patronage savings to be paid in cash within 3 years and to draw not less than 4 percent interest, or otherwise to be classified as income to the cooperative and be thereby subjected to corporation income taxes; and

"Whereas this alteration of the present tax status would seriously hamper and restrict the services which the cooperatives are performing within the State; and

"Whereas the Minnesota Legislature did once before, in 1951, consider and pass a resolution opposing similar unfair and punitive tax proposals against cooperatives: Now, therefore, be it

"Resolved, by the Legislature of the State of Minnesota, That the Congress of the United States be requested to recognize that indebtedness which is owed by a cooperative or any other taxpayer to its patrons or customers is not income to such taxpayer even though it may be income to its patrons or customers; and be it further

"Resolved, That the Congress of the United States be specifically requested to oppose any measures which would prescribe any minimum interest rate or any maximum maturity dates for securities which are issued by cooperatives in payment of patronage savings payable to their patrons; and be it further

"Resolved, That the secretary of state of the State of Minnesota be instructed to transmit copies of this resolution to the President of the United States, the Secretary of the Treasury, the President of the Senate, and the Speaker of the House of Representatives of the United States, and to each Member of Congress from the State of Minnesota.

"E. J. CHILGREN,

"Governor of the State of Minnesota.

"Filed March 23, 1959.

"JOSEPH L. DONOVAN,
"Secretary of the State of Minnesota."

A joint resolution of the Legislature of State of Minnesota; to the Committee on Public Works:

"RESOLUTION 5

"Resolution memorializing the Congress of the United States to adopt the Blatnik amendment to the Federal Water Pollution Control Act

"Whereas the Congress of the United States has recognized the benefits resulting to the public health and welfare by the prevention and control of water pollution; and

"Whereas it is the declared policy of the Congress of the United States to recognize, preserve, and protect the primary responsibilities and rights of the States in preventing and controlling water pollution, to support and aid technical research relating to the prevention and control of water pollution, and to provide financial aid to State, and interstate agencies and to municipalities in connection with the prevention and control of water pollution; and

"Whereas the Honorable JOHN A. BLATNIK, a Member of Congress from the State of Minnesota, has proposed an amendment, H.R. 3610, to the Federal Water Pollution Control Act, which amendment provides for a more effective control and prevention of water pollution, and for increased financial aid to State and municipalities for such purpose, and is known as the Blatnik amendment to the Federal Water Pollution Control Act; and

"Whereas the President has named a nine-man advisory board to study the water pollution situation and make recommendations, which board has filed its report and recommendations, which recommendations are incorporated in H.R. 3610: Now, therefore, be it

"Resolved by the Legislature of the State of Minnesota, That the Congress of the United States enact H.R. 3610, an amendment to the Federal Water Pollution Control Act; be it further

"Resolved, That the secretary of the State of Minnesota be instructed to transmit copies of this resolution to the President of the Senate and the Speaker of the House of Representatives of the United States, and to each Member of Congress from the State of Minnesota.

A resolution of the Legislature of the State of Nebraska; to the Committee on Interior and Insular Affairs:

"LEGISLATIVE RESOLUTION 23

"Whereas recent decisions of the Federal courts and recent assertions from the U.S. Department of Justice have deprived States and persons of rights which said States and persons previously enjoyed to regulate and control the use of the water in the respective States; and

"Whereas said decisions and assertions are further a part of a general pattern developing gradually into Federal supremacy and usurpation over water which, if continued, will destroy individual and State rights over water and substitute in lieu thereof an all powerful centralized government control thereover: Now, therefore, be it

"Resolved by the members of the Nebraska Legislature in 69th session assembled:

"1. That the Congress and President of the United States and the Representatives of Nebraska in the Congress of the United States be, and they are hereby urged and requested to take all necessary action to (a) preserve the water rights of the individual and the States and to prevent Federal usurpation of those rights; (b) see that legislation is initiated and supported to recognize and protect rights of individuals and States which have been taken from them by the Federal courts and the Department of Justice; and (c) in every way possible, to reaffirm, renew, and defend the concepts that water rights are property rights and that established rights to the use of water, by a State or an individual, should not be taken away without due process of law and adequate compensation.

"2. That certified copies of this resolution be promptly transmitted to the President and Vice President of the United States, Speaker of the House of Representatives of the United States, chairmen of the U.S. Senate and House Committees on Interior and Insular Affairs, U.S. Senator ROMAN L. HRUSKA, U.S. Senator CARL T. CURTIS, U.S. Representative PHIL WEAVER, U.S. Representative GLENN CUNNINGHAM, U.S. Representative DONALD F. MCGINLEY, and U.S. Representative LAWRENCE BROCK.

"DWIGHT W. BURNEY,
"President of the Legislature."

A concurrent resolution of the Legislature of the State of New York; to the Committee on Armed Services:

"RESOLUTION 89

"Concurrent resolution memorializing Congress to provide for the utilization of Camp Drum in Jefferson County on a year-round basis

"Whereas in recent years the facilities of the U.S. Army installation known as Camp Drum in Jefferson County in New York State, have been utilized only during certain months of each year; and

"Whereas the commanding general of the 1st Army and the commanding general of the Continental Army of the United States have recommended that training troops should be stationed at Camp Drum during the entire year; and

"Whereas the above-mentioned commanding generals as well as many other Army officers who are familiar with the situation have stated that the above stationing of troops at Camp Drum would not only be beneficial to the morale of the officers and troops who are trained there but would also improve their training and efficiency; and

"Whereas the carrying out of such recommendation would eliminate much shifting and transportation of troops and would not involve any increased expenditure of funds: Now, therefore, be it

"Resolved (if the senate concur), That the Congress of the United States be and it hereby is respectfully memorialized to take such action as may be necessary to provide that the above-mentioned Camp Drum shall be utilized and kept in operation during the entire year; and be it further

"Resolved (if the senate concur), That copies of this resolution be transmitted to the President of the United States, the Secretary of the Senate, the Clerk of the House of Representatives, and the Secretary of the Army and to each Member of Congress duly elected from the State of New York.

"By order of the assembly,

"ANSLEY B. BORKOWSKI,
"Clerk."

A joint resolution of the Legislature of the State of Washington; to the Committee on Public Works:

"HOUSE JOINT MEMORIAL 34

"To the Honorable Dwight D. Eisenhower, President of the United States, and to the Senate and House of Representatives of the United States of America, in Congress assembled, and to the Secretary of Commerce of the United States:

"We, your memorialists, the House of Representatives and the Senate of the State of Washington, in legislative session assembled, respectfully represent and petition as follows:

"Whereas in order to facilitate the flow of traffic across the State of Washington from centers of population south of the city of Seattle to the central and southwestern parts of the State, and to the States of Idaho and Oregon it is urgently necessary that a second highway be improved; and

"Whereas there is no all-weather highway across the State of Washington on the National System of Interstate and Defense Highways; and

"Whereas primary State Highway No. 8 is an all-weather highway across the southern part of the State of Washington connecting the western part of the State with the eastern part; and

"Whereas said primary State Highway No. 8 would connect the National System of Interstate and Defense Highways in the vicinity of Toppenish westerly to a connection with the National System of Interstate and Defense Highways at Vancouver; and

"Whereas the headquarters of the 104th Reserve Infantry Division stationed in Vancouver, Wash., must use primary State highway No. 8 in going to and from Yakima, Wash., for its summer training; and

"Whereas primary State Highway No. 8 is so narrow and congested as to impair the defense of the State of Washington and the United States; and

"Whereas the lack of an adequate highway discourages industry from locating in the State; and

"Whereas the scenic beauty of the Columbia Gorge along the Columbia River due to the lack of an adequate highway may not be enjoyed to its fullest extent; and

"Whereas industry is discouraged due to lack of adequate highways in the Interstate System; and

"Whereas the third largest industry in the State of Washington is the tourist trade which would be impaired; and

"Whereas for the protection of the dams located on the Columbia an Interstate Defense Highway is needed; and

"Whereas it is believed that the intent of Congress in passing the new Federal Interstate Highway System was to encourage the free flow of commerce and people: Now, therefore, be it

"Resolved by the House of Representatives and the Senate of the State of Washington in legislative session assembled, That we respectfully memorialize and petition the President of the United States and the Secretary of Commerce of the United States to take whatever steps that may be necessary to designate Washington primary State Highway No. 8 as strategic, and to incorporate said primary State Highway No. 8 into the National Interstate and Defense Highway System; and be it further

"Resolved, That copies of this memorial be transmitted to the President of the United States, the Secretary of Commerce of the United States, the President of the United States Senate, the Speaker of the House of Representatives of the United States, and to

each Senator and Representative in Congress from the State of Washington.

"Passed the house March 6, 1959.

"JOHN L. O'BRIEN,
"Speaker of the House.

"Passed the senate March 7, 1959.

"JOHN A. CHERBERG,
"President of the Senate."

A joint resolution of the Legislature of the State of Washington; to the Joint Committee on Atomic Energy:

"HOUSE JOINT MEMORIAL 38

"To the Honorable Dwight D. Eisenhower, President of the United States, and to the Senate and House of Representatives of the United States of America, in Congress assembled:

"We, your memorialists, the Senate and House of Representatives of the State of Washington, in legislative session assembled, respectfully represent and petition as follows:

"Whereas in 1950 the Atomic Energy Commission condemned the Wahluke Slope irrigation project which is a substantial portion of the best part of the Columbia Basin irrigation project in the State of Washington. The land condemned for the most part, was acquired 30 or 40 years ago through homesteads by people who wanted it as a home for themselves and their families, and represents in value to these people in taxes and in interest, at least $150 per acre. The area condemned would have produced an income in excess of $20 million annually of new wealth for this State; and

"Whereas the Atomic Energy Commission has released 87,000 acres but as to the balance retained is attempting to avail itself of an antispeculation law enacted by Congress relating to the farm lands in the Columbia Basin area to prevent these Washington citizens from obtaining the fair market value of their land under condemnation. To date the Atomic Energy Commission has paid for only a minor part of the land taken. The Commission has adopted a policy of starving out the owners, even though a number of United States district court jury trials have established the fair market value of this land, and United States Supreme Court has upheld these decisions; and

"Whereas your memorialists feel that the Atomic Energy Commission is taking an unreasonably long time in compensating the owners for the value of their land; and

"Whereas since the condemnation of this land, many atomic installations have been constructed in heavily populated areas under the assurance from the Atomic Energy Commission that there is no danger to the population:

"Now, therefore, your memorialists respectfully petition that, if there is no danger in the Wahluke Slope area, the Atomic Energy Commission be directed to return the land to its owners. If the taking of the land continues to be necessary for the health, safety, or security of the United States, that the Atomic Energy Commission be directed to make prompt the payment for the land taken on the basis of land valuations fixed by the U.S. district court and jury.

"Be it resolved, That copies of this memorial be transmitted to the President of the United States, the Vice President of the United States, the President of the U.S. Senate, the Speaker of the House of Representatives of the United States, and to each Senator and Representative in Congress from the State of Washington.

"Passed the house March 1, 1959.

"JOHN L. O'BRIEN,
"Speaker of the House.

"Passed the senate March 9, 1959.

"JOHN A. CHERBERG,
"President of the Senate."

A joint resolution of the Legislature of the State of Wisconsin; to the Committee on Interstate and Foreign Commerce:

JOINT RESOLUTION 24

"Joint resolution memorializing Congress to utilize the shipbuilding facilities of Wisconsin and other States in the Great Lakes area

"Whereas the U.S. Maritime Commission and the Department of the Navy now specify that the delivery point for ships built under contract to them be at eastern or southern ports; and

"Whereas such delivery points make it impossible for Great Lakes shipbuilders to compete with eastern and southern shipbuilders; and

"Whereas there is a grave need for additional contracts to bolster the employment of skilled workers in the Great Lakes shipbuilding areas: Now, therefore, be it

"Resolved by the senate (the assembly concurring), That the legislature urge the Congress of the United States to assure the designation of a delivery point on the Great Lakes for ships built for the Federal Government in order to provide equality of opportunity to bid for such contracts; and be it further

"Resolved, That the Congress of the United States be asked to direct contracts for shipbuilding to Wisconsin shipbuilding yards which have a reputation for turning out fine, seaworthy vessels; and be it further

"Resolved, That copies of this resolution be submitted to the Secretary of the U.S. Senate, the Chief Clerk of the House of Representatives, and to each member of the Wisconsin delegation in Congress.

"GEORGE MOLINARO,
"Speaker of the Assembly.
"NORMAN COLINDEAU,
"Chief Clerk of the Assembly.
"PHILLIP UAL,
"President of the Senate.
"LAWRENCE R. LARSEN,
"Chief Clerk of the Senate."

A concurrent resolution of the Legislature of the Territory of Hawaii; to the Committee on the District of Columbia:

"SENATE CONCURRENT RESOLUTION 57

"Concurrent resolution supporting the aspirations of the citizens of the District of Columbia for a measure of self-government

"Whereas the people of Hawaii have just been accorded the sacred privilege of enjoying all the rights and duties of full citizenship in the United States of America; and

"Whereas, it is the deep and sincere conviction of the people of Hawaii that all other citizens of the United States of America should be accorded as full participation in their government as possible; and

"Whereas the 826,000 Federal taxpaying residents of the District of Columbia, our Nation's Capital, have long lacked any voice in the government of the District and are without even a voteless Delegate to represent them in the Halls of Congress: Now, therefore, be it

"Resolved by the Senate of the 30th Legislature of the Territory of Hawaii (the House of Representatives concurring), That the Congress of the United States be respectfully requested to give full support to measures now before it which would grant to the District of Columbia such status as will enable the citizens of the District to participate in their own governance; and be it further

"Resolved, That certified copies of this concurrent resolution be transmitted to the President of the United States and to the President of the Senate and the Speaker of the House of Representatives of the Congress of the United States."

The memorial of Halvor N. Hansen, of Orange Park, Fla., remonstrating against an administrative order by the Chief of Naval Operations which would discontinue the Naval Air Technical Training Center at Jacksonville, Fla.; to the Committee on Armed Services.

The petition of Hugh F. O'Neil, of Ogden, Utah, praying for the enactment of legislation to eliminate all appropriations for foreign aid; to the Committee on Appropriations.

The petition of Quirico Del Mar, of Cebu, Philippine Islands, relating to the payment in pesos, instead of dollars; the pensions of veterans of the Philippines in the last World War; to the Committee on Finance.

A resolution adopted by the Association of Life Underwriters, Kauai, T.H., relating to pensions of self-employed persons; to the Committee on Finance.

A resolution adopted by the Small Craft Harbors Commission, Department of Natural Resources, State of California, relating to inadequately treated sewage from Tijuana, Mexico; to the Committee on Foreign Relations.

The memorial of John J. Lockeby, of Macon, Ga., remonstrating against the enactment of House bill 1015, the anti-Government competition bill; to the Committee on Government Operations.

A resolution adopted by the Manhattan Beach Community Group, Inc., of Brooklyn, N.Y., protesting against the sale of the Manhattan Beach Training Station at Oriental Point, Brooklyn, N.Y.; to the Committee on Government Operations.

A resolution adopted by the steering committee of the Washington Metropolitan Regional Conference, Washington, D.C., favoring the enactment of the bill (S. 910) to authorize the payment to local governments of sums in lieu of taxes and special assessments with respect to certain Federal real property, and for other purposes; to the Committee on Government Operations.

The petition of Rufino Mendez, of the Bronx, N.Y., relating to the internal affairs of Puerto Rico, and so forth; to the Committee on Interior and Insular Affairs.

A resolution adopted by the City Council of the City of Minneapolis, Minn., relating to the reported cancellation by the Air Force of the Bethel Airport development in Minneapolis; to the Committee on Interstate and Foreign Commerce.

A resolution adopted by the Chamber of Commerce of the City of West Covina, Calif., favoring the enactment of legislation to provide for the elimination of racketeering and corruption in trade unions; to the Committee on Labor and Public Welfare.

A resolution adopted by Branch 20, National Association of Postal Supervisors, Pittsburgh, Pa., favoring the enactment of Senate bill 94, and House bill 208, providing for health and hospitalization insurance for Federal employees and their families; to the Committee on Post Office and Civil Service.

A resolution adopted by the Board of Supervisors of the County of Los Angeles, Calif., favoring the enactment of legislation to continue the Federal Aid Highway Act of 1956; to the Committee on Public Works.

GEN. ERNEST O. THOMPSON—RESOLUTION OF TEXAS SENATE

Mr. JOHNSON of Texas. Mr. President, for many years we Texans have looked to Gen. Ernest O. Thompson for leadership in many areas of our public life.

General Thompson's knowledge of mineral resources and conservation is legendary. His service to the Texas National Guard, to the American Legion, and to the World Congress for Allied Veterans has been equally outstanding.

On March 24 the Texas Senate adopted a resolution expressing their congratulations to General Thompson on his birthday. The spirit of that resolution is shared by millions of Americans.

Mr. President, I ask unanimous consent that this resolution of the Texas Senate be printed at this point in the body of the RECORD.

There being no objection, the resolution was referred to the Committee on the Judiciary, and, under the rule, ordered to be printed in the RECORD, as follows:

SENATE RESOLUTION 235

Whereas Lt. Gen. Ernest O. Thompson has passed another milestone in a long and illustrious career of public service to Texas and to the Nation as he celebrates the anniversary of his birth on March 24, 1959; and

Whereas as chairman of the Texas Railroad Commission his wisdom and courage have contributed to the prosperity of Texas, and as a representative of the United States at four sessions of the World Petroleum Congress, his leadership and knowledge have secured economic progress for all nations; and

Whereas he has long been a leader in the Texas National Guard, an internationally known figure in the American Legion and World Congress for Allied Veterans, and a champion of freedom for all peoples; and

Whereas he is a beloved Texan of superior intelligence with special faculties for effective performance and with a natural gift for expert and skillful relations with other people: Now, therefore, be it

Resolved, That the Senate of Texas congratulate Lt. Gen. Ernest O. Thompson on this anniversary of his advent into the world with deep respect and sincere appreciation for his contributions to his State and country.

BEN RAMSEY,
President of the Senate.

I hereby certify that the above resolution was adopted by the senate on March 24, 1959.

CHARLES SCHNABEL,
Secretary of the Senate.

FEDERAL AID TO EDUCATION—JOINT RESOLUTION OF OREGON LEGISLATURE

Mr. MORSE. Mr. President, House Joint Memorial No. 2 of the Oregon Legislature resolves that the Congress of the United States is urged to provide and pass legislation giving grants to the various States on the basis of each State's school-age population, providing funds for the use of the States for the assistance of elementary and secondary public school education. It further resolves that Oregon Members of the Congress promote and support such legislation.

As a cosponsor of S. 2, the Murray-Metcalf bill, I am delighted to enter this Oregon legislative memorial into the CONGRESSIONAL RECORD.

Let the RECORD also show that it was in 1947 that the senior Senator from Oregon first helped draft an aid-to-education bill, one that was subsequently passed by the Senate. I have worked continuously ever since, sometimes when there was not much support for it in the Senate, for a Federal grant program for education.

This resolution from my State legislature is welcome because it indicates the growing recognition among State and local authorities that they simply do not have the revenue-raising powers to cope with the Nation's need for a good education program. Good education has become a national, as well as a local responsibility insofar as financing it is concerned. I pledge to my State legislature and the people of Oregon that I shall pursue my efforts to promote the enactment of S. 2 in every way I can.

I ask unanimous consent that the joint resolution may be printed in the RECORD and appropriately referred.

There being no objection, the joint resolution was referred to the Committee on Labor and Public Welfare, and, under the rule, ordered to be printed in the RECORD, as follows:

HOUSE JOINT MEMORIAL 2

To His Excellency, the Honorable Dwight D. Eisenhower, President of the United States, and to the Honorable Senate and House of Representatives of the United States of America, in Congress assembled, and to the Oregon Members of these legislative bodies:

We, your memorialists, the 50th Legislative Assembly of the State of Oregon, in legislative session assembled, most respectfully represent as follows:

Whereas increasing school costs are imposing a steadily increasing burden upon the taxpayers of the State of Oregon; and

Whereas the present tax collection policies of the Federal Government fall heavily upon State and local sources, with little corresponding return to the State for the assistance of public school education; and

Whereas under such taxation policies the Federal Government should assume its rightful obligation to the preservation of our American way of life by assisting the cause of education; and

Whereas the Soviet Government poses a real and terrible threat to the leadership and existence of the free world through its accomplishments in the field of science; and

Whereas added financial resources will be needed by our States and local communities to enable them to maintain an educational program not only to compete with the Soviet Government in the field of science, but also to explore and solve the basic problems of living and leading in a world teetering on the brink of atomic catastrophe; and

Whereas the Federal Government has vastly superior taxing powers, and it is the announced policy of both major political parties that the Federal Government should contribute moneys to the support of local elementary and secondary education: Now, therefore, be it

Resolved by the House of Representatives of the State of Oregon, (the Senate jointly concurring therein): That the Congress of the United States is hereby urged to provide and pass legislation giving grants to the various States on the basis of each State's school-age population, providing funds for the use of the States for the assistance of elementary and secondary public school education; be it further

Resolved, That the Oregon Members of the U.S. Senate and House of Representatives promote and support such legislation; be it further

Resolved, That His Excellency, the President of the United States, is hereby urged that he give such legislation his full support and leadership, and that he use the full influence and resources of his great office to insure the passage of this legislation; and be it further

Resolved, That the chief clerk of the house of representatives be and hereby is directed to send a copy of this memorial to the Honorable Dwight D. Eisenhower, President of the United States, to the President and Chief Clerk of the U.S. Senate, to the Speaker and the Chief Clerk of the House of Representatives of the United States, and to all members of the Oregon congressional delegation in the Congress of the United States.

Adopted by house February 16, 1959.
Readopted by house March 16, 1959.

RUTH E. RENFROE,
Chief Clerk of House.
ROBERT B. DUNCAN,
Speaker of House.

Adopted by senate March 12, 1959.

WALTER J. PEARSON,
President of Senate.

(The VICE PRESIDENT laid before the Senate a joint resolution of the Legislature of the State of Oregon identical with the foregoing, which was referred to the Committee on Labor and Public Welfare.)

TOLL-FREE OPERATION OF PORTLAND-VANCOUVER INTERSTATE BRIDGE—JOINT RESOLUTION OF OREGON LEGISLATURE

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the RECORD, and appropriately referred, the text of the Oregon House Joint Memorial No. 4. This memorial which was adopted by the House and the Senate of the Legislative Assembly of Oregon, urges Congress to take legislative action to assure continuation of the operation of the Portland-Vancouver interstate bridge as a toll-free portion of the Interstate Highway System, and that the cost of the bridge improvement be paid from Federal gasoline taxes and other revenues applicable to the Interstate Highway System.

There being no objection, the joint resolution was referred to the Committee on Public Works, and, under the rule, ordered to be printed in the RECORD, as follows:

HOUSE JOINT MEMORIAL 4

To His Excellency, the Honorable Dwight D. Eisenhower, President of the United States, and to the Honorable Senate and House of Representatives of the United States of America, in Congress assembled:

We, your memorialists, the 50th Legislative Assembly of the State of Oregon, in legislative session assembled, most respectfully represent as follows:

Whereas U.S. Highway 99 crosses Washington, Oregon, and California extending from Canada to Mexico as a truly interstate, interregional, and international highway; and

Whereas U.S. Highway 99 has been designated as an integral portion of the new "National System of Interstate and Defense Highways," commonly known as the Interstate Highway System; and

Whereas there is now no toll road, toll bridge, or other toll charge anywhere along this important throughway; and

Whereas the brunt of the toll charges at the Portland-Vancouver interstate bridge would fall on workers who must daily commute to their jobs; and

Whereas section 109 of the Federal Highway and Highway Revenue Acts of 1956 (Public Law 627, approved June 29, 1956) provides in part as follows:

"It is hereby declared to be the intent and policy of the Congress to equitably reimburse those States for any portion of a highway which is on the Interstate System, whether

toll or free, the construction of which has been completed subsequent to August 2, 1947, or which is either in actual use or under construction by contract, for completion, awarded not later than June 30, 1957 and such highway meets the standards required by this title for the Interstate System. It is also declared to be the policy and intent of the Congress to provide funds necessary to make such reimbursements to the States as may be determined": Now, therefore, be it

Resolved by the House of Representatives of the State of Oregon (the Senate jointly concurring therein), That the President of the United States recommend, and the Congress of the United States enact, legislation clarifying the provisions of the Federal Highway and Highway Revenue Acts of 1956 for the purpose of having that portion of the Interstate Highway System known as the Portland-Vancouver Interstate Bridge continued to be operated as a toll-free bridge, and that the costs of improving navigation on the Columbia River and improving the existing highway be borne and paid for out of funds provided by the Congress from gas taxes and other revenues for the Interstate Highway System, and be it further

Resolved, That copies of this memorial be transmitted to the President of the United States, Secretary of the U.S. Senate, Clerk of the U.S. House of Representatives, and to each member of the Oregon congressional delegation.

Adopted by house February 25, 1959.
Readopted by house March 17, 1959.

RUTH E. RENFROE,
Chief Clerk of House.
ROBERT R. DUNCAN,
Speaker of House.

Adopted by senate March 13, 1959.

WALTER J. PEARSON,
President of Senate.

(The VICE PRESIDENT laid before the Senate a joint resolution of the Legislature of the State of Oregon, identical with the foregoing, which was referred to the Committee on Public Works.)

CONSTRUCTION OF ACCESS ROADS IN NATIONAL FORESTS—JOINT RESOLUTION OF OREGON LEGISLATURE

Mr. MORSE. Mr. President, I ask unanimous consent that there be printed in the RECORD and appropriately referred, the text of Oregon Senate Joint Memorial 3. This memorial, which was adopted by the Oregon Legislative Assembly in mid-March, expresses the sense of the Oregon Legislature that the Congress appropriate for the construction of access roads in our national forests the full amount of the $30 million authorized for appropriation under existing law for fiscal 1960, and that $19,500,000 be appropriated by Congress for Operation Outdoors for the coming fiscal year.

I may say, Mr. President, that the people of the West know full well that this administration has not been for the full development of the West. These two programs have received consistent support and interest in the Congress. The House of Representatives, in acting upon the President's budget, increased the funds available for timber access roads to $27 million. It is my hope that the Senate will provide the full authorization.

In Operation Outdoors the administration, after announcing the program in 1957, has consistently failed to ask for the full amount needed. Last year the Congress found it necessary to add funds, and it is my hope that this year the Congress will again help better fulfill the needs that exist.

It is not my intention today to discuss the capital budget legislation which I and other Senators are sponsoring. I do want to point out, however, that the access road program is an absolutely clear example of a capital budget-type item. It is an investment made by the Government which is not only recaptured with interest, but also enhances the value of the Federal demand, and generates direct revenues as well as indirect benefits.

It is penny wise and pound foolish to hold back this vital program.

There being no objection, the joint resolution was referred to the Committee on Appropriations, and, under the rule, ordered to be printed in the RECORD, as follows:

SENATE JOINT MEMORIAL 3

To His Excellency, the Honorable Dwight D. Eisenhower, President of the United States, and to the Honorable Senate and House of Representatives of the United States of America, in Congress assembled:

We, your memorialists, the 50th Legislative Assembly of the State of Oregon, in legislative session assembled, most respectfully represent as follows:

Whereas the economy of the State of Oregon is largely based on timber and recreation; and

Whereas the national forests of the United States contain the key timber supply and recreational resources within the State of Oregon; and

Whereas the economy and welfare of the State of Oregon are therefore dependent upon the quality of the management of the national forests; and

Whereas sound management of the national forests requires adequate financing; and

Whereas at hearings conducted by the Subcommittee on Public Roads of the Committee on Public Works of the U.S. Senate in December 1957, in Oregon, and at other points throughout the Western States, Members of the U.S. Senate and House of Representatives, authorized officers of the U.S. Forest Service, representatives of State and local governments and knowledgeable citizens of the Western States unanimously agreed that proper management of the national forests for the most effective and efficient development of their recreational and timber resource requires the development of a permanent access road system within such national forests; and

Whereas the budget presented by the executive branch of Congress for its consideration requires appropriations for this purpose that are substantially below the sum that only 1 year ago Congress authorized to be appropriated for the fiscal year commencing July 1, 1959; and

Whereas the said budget requires an appropriation of only $8,500,000 to finance Operation Outdoors, the 5-year plan announced by the U.S. Department of Agriculture for modernizing and expanding recreational facilities in the national forests to meet the heavily increasing use made of the national forests by our citizens for recreation; and

Whereas such plans for successful completion of Operation Outdoors specifically contemplated that an appropriation of $19,500,000 would be required for the fiscal year commencing July 1, 1959: Now, therefore, be it

Resolved by the Senate of the State of Oregon (the House of Representatives jointly concurring therein), That the Congress of the United States is hereby urged to appropriate for the construction of access roads in the national forests during the fiscal year commencing July 1, 1959, the full amount of $30 million that is authorized therefor by law; be it further

Resolved, That the Congress appropriate for Operation Outdoors the full amount of $19,500,000 previously agreed upon as a necessary expenditure during the fiscal year commencing July 1, 1959; be it further

Resolved, That the Oregon Members of the U.S. Senate and House of Representatives be asked to promote and support such appropriations; and be it further

Resolved, That copies of this memorial be sent to the Honorable Dwight D. Eisenhower, President of the United States; to the President and the Chief Clerk of the U.S. Senate; to the Speaker and the Chief Clerk of the House of Representatives of the United States; and to all members of the Oregon congressional delegation.

Adopted by senate March 10, 1959:

MEDA COLE,
Chief Clerk of Senate.
WALTER J. PEARSON,
President of the Senate.

Adopted by house March 13, 1959:

ROBERT B. DUNCAN,
Speaker of House.

(The VICE PRESIDENT laid before the Senate a joint resolution of the Legislature of the State of Oregon, identical with the foregoing, which was referred to the Committee on Appropriations.)

RESOLUTION OF WISCONSIN FARMERS UNION

Mr. WILEY. Mr. President, I have received a resolution from the Wisconsin Farmers Union, which has its office in Chippewa Falls, Wis., my home city. I ask unanimous consent that the resolution be printed in the RECORD and be appropriately referred.

There being no objection, the resolution was referred to the Committee on Banking and Currency, and ordered to be printed in the RECORD, as follows:

RESOLUTION ADOPTED BY WISCONSIN FARMERS UNION AT ANNUAL CONVENTION FEBRUARY 22–24, 1959—PRICE-SPREAD INVESTIGATION

Whereas there is a great difference in the amount of money received by the farmer for his products as compared to the amount of money that the consumer pays; and

Whereas the farmer's share of the consumer's dollar is getting less and less; and

Whereas there are excessive price spreads, increases, and profiteering in business and industry causing the present high cost of living: Therefore be it

Resolved, That the delegates attending the 28th annual Wisconsin Farmers Union convention at Wausau, Wis., February 22–24, 1959, go on record requesting the Congress of the United States that it conduct an investigation into the cause of the widening price spread between the farmer and the consumer, and the excessive profit-taking in business and industry, for the purpose of formulating legislation to be acted upon by the Congress to correct these abuses; and be it further

Resolved, That a copy of this resolution be sent to our U.S. Senators ALEXANDER WILEY and WILLIAM PROXMIRE and to all Wisconsin Congressmen.

RESOLUTIONS OF UPPER MISSOURI ELECTRIC COOPERATIVE, SIDNEY, MONT.

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD resolutions adopted at the annual meeting of the members of the Upper Missouri G. & T. Electric Cooperative, held at Sidney, Mont., on March 17 and 18, 1959.

There being no objections, the resolutions were ordered to be printed in the RECORD, as follows:

I

Whereas the Upper Missouri G. & T. has heretofore urged the Senate Committee on Interior and Insular Affairs to take such steps as were deemed necessary to forestall approval by the Secretary of the Interior of a power pooling contract prepared by the Eastern Missouri Basin Power Conference of Minneapolis, Minn.; and

Whereas we are informed that a sixth draft of a proposed power pooling agreement is now being circulated to interested participants in the Missouri Basin by the chairman of a special contract committee, who is an employee of the Bureau of Reclamation; and

Whereas there has not been a showing made by official report from the Department of Interior as to the benefits that are expected to accrue to the Federal Government, both in terms of dollars of additional power revenue and additional firm power made available for sale to preference customers: Now, therefore, be it

Resolved, That the chairman of the Senate Committee on Interior and Insular Affairs does again request the Secretary to defer further action on this power pooling agreement until there can be completed and placed in the hands of the committee and all of the preference customers in the Missouri Basin, a complete, comprehensive and official report from the Secretary of the Interior, setting forth in detail, the specific benefits that are expected to accrue to the Federal Government and the preference customers, both in the form of dollar of additional revenues and increased firm power supply, with all such conclusions backed up by engineering facts and figures which can be verified by independent review and that pending the completion of such report, that no additional staff time of the Bureau of Reclamation employees be devoted to furtherance of the gaining of consents and approvals for the power pool agreement in the Missouri Basin.

II

Whereas Nebraska has offered to sell the Bureau of Reclamation winter firm power in ample quantity to furnish all the customers in the Missouri Basin their needs through 1963, which power can be purchased under the Fort Peck Act: Now, therefore, be it

Resolved, That we request the Bureau to immediately start negotiations for the purchase of this power from Nebraska, that all customers in the Missouri Basin will receive all of their requirements as preference customers through 1963, in order that the preference customers may have time to make the necessary arrangements for ample power after 1963 when the new allocation of power which is now in progress of being allocated is completed; and be it further

Resolved, That a copy of this resolution be forwarded to Secretary of Interior Seaton, Assistant Secretary of Interior AANDAHL, Senator MURRAY, Senator MANSFIELD, Senator LANGER, Senator YOUNG, Representative ANDERSON, Representative METCALF, Representative BURDICK, and Representative SHORT.

III

Whereas we hereby endorse Senate Resolution 71 which has been introduced by Senators MURRAY, CARROLL, and NEUBERGER to investigate the water and power problems of the United States: Therefore be it

Resolved, That we urge the Senate to approve Resolution 71; and now be it further

Resolved, That we send copies of this resolution to Senators MURRAY, CARROLL, NEUBERGER, YOUNG, LANGER, and MANSFIELD.

IV

Whereas it is becoming increasingly difficult for consumer-owned electric cooperatives to obtain satisfactory service and use of the existing federally owned, as well as privately owned transmission facilities which by law should be dedicated to public service; and

Whereas the use of such transmission facilities, and especially the excess capacity thereof, is becoming more and more essential to the survival of such cooperatives: Now, therefore, be it

Resolved by the Upper Missouri G. & T. Electric Cooperative, Inc., at its annual meeting duly assembled, That this federation respectfully urges the passage of H.R. 3142, in order to assure the maximum use of such facilities by the consumer-owned electric cooperatives: be it further

Resolved, That copies of this resolution be sent to the Senators and Representatives of the State of Montana and North Dakota, as well as to the chairmen of the appropriate committees of the House and Senate.

V

Whereas we commend the action taken by the National Rural Electric Cooperatives Association in assisting electric cooperatives and public power groups that have been threatened by sellouts to power companies: Be it therefore

Resolved, That we urge the National Rural Electric Cooperatives Association to explore the idea of setting up a task force to assist the electric cooperatives and public power groups being attacked.

VI

We recommend the executive committee of Upper Missouri G. & T. to—

1. Explore the possibility of a 230-kilovolt line from the Bonneville Power Administration to the Bureau of Reclamation.
2. Check on the Rocky Point power site on the Missouri River.

VII

Whereas we recognize the tremendous job the executive board and personnel of Upper Missouri G. & T. have done for our organizations, we wish to express our wholehearted appreciation by a rising vote of thanks.

RESOLUTION OF ADELPHOTIS ARAHOVITON KARYAE

Mr. JOHNSTON of South Carolina. Mr. President, in March 1944 the ravages of World War II struck the small town of Karyae Laconias, Greece. The city was burned and its 1,800 inhabitants were rendered homeless. I am advised that some 110 of these inhabitants were either executed or died as a result of the conflict being extended in Greece.

Many of the good people who survived this frightful disaster of war have, since the close of hostilities, emigrated to the United States. Many are now naturalized American citizens. A substantial portion of them settled in North and South Carolina. A considerable number live, as neighbors and friends of mine, in Spartanburg, S.C. They have organized themselves into a society or group known as Adelphotis Arahoviton Karyae.

Recently I received a resolution from Mr. George N. Harakas, president of the Karyae. I desire this resolution to appear in the RECORD following my remarks, and ask unanimous consent that it may.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. JOHNSTON of South Carolina. Mr. President, I am concerned and have great sympathy for these unfortunate victims of the aggressive and brutal warfare conducted by Hitler and his Nazi forces. Their plight is such as to compel our most considerate attention. These constituents of mine write me because I am serving as chairman of the Trading With the Enemy Act Subcommittee of the Committee on the Judiciary. This subcommittee, as Senators will recall, is charged with the responsibility of examining and reviewing legislation affecting vested assets and war claims legislation.

The principal appeal in the resolution is for the enactment of legislation to provide damages for the losses sustained by the members of Karyae. One paragraph of the resolution also is directed against the return of vested assets or their proceeds until the valid claims of all American citizens are satisfied and paid in full. Since the adoption of this resolution, the subcommittee and I have received a number of personal letters from my Greek-American friends in North and South Carolina. These letters give in detail the losses sustained. They arouse within me deep emotion. It is difficult at times for us and them to separate in our minds the distinction between vested assets and the obligation of the German Government to make full and complete restitution for the brutal and inhuman acts of its former dictator government under Hitler.

Our Government has no seized or vested assets belonging to the Hitler government. We have the proceeds of the vested assets of several hundred thousand German citizens, many of whom having faith and confidence in our constitutional protection, our free way of life, and our free institutions placed their earnings and investments here. I have been reliably informed that many of them sought the security of the United States for their property in order to place it beyond the greedy control of Hitler. Many, I am told, invested here to prevent Hitler from confiscating their properties.

There is another factor relating to vested assets which we must not overlook. A very substantial portion of the vested German assets consists of American owned and earned properties. These consist of decedent and trust estates, as well as guardianship estates. The greater part of these vestings and seizures have taken place since the close of hostilities in 1945. Seizures continued until April 17, 1953, at which time the President by informal order directed that there be no more vesting or seizure of alien property.

To use these vested assets to pay American war damage claims would result in the confiscation of the private property of a few to satisfy the obligation of the many. There are about 60 million people in West Germany. Included among the vested properties in

the United States of the several hundred thousands of Germans are properties of thousands of American citizens whose estates were bequeathed and devised to their relatives abroad.

I have repeatedly contended that it is not in our interest as Americans to adopt the Communist principle that there is no sanctity to private property. Why? There are two obvious reasons: First, we have spent billions upon billions in our foreign aid and overseas defense programs to spread and maintain our American free way of life throughout the world. This expenditure which causes the heavy tax burden we all bear will have been useless indeed should we adopt the Russian concept of property rights and should travel down the road of confiscation. Secondly, the United States is the largest creditor nation in the world. Our citizens have more investments in foreign countries than the citizens of all the rest of the free world combined. If the United States should adopt a program of confiscation, we would imperil every investment of every American abroad. We, who set the moral and business tone of the world, simply cannot, in our own interest, be guilty of confiscating the property of a few to satisfy the obligation belonging to the many.

In the light of what I have just said, I have had to relate to my friends a hard fact of international law followed by our Government. Our Government as a rule will pay damages only to American citizens who were citizens at the time of their loss. Our Government does not and cannot assume the obligations of another government. The government to which these citizens owed their allegiance is responsible for the presentation of such claims. Until there is some modification of such rule of international law, it is my conviction that any bill which would require the United States to assume the burden of claims in this category would meet with Executive disapproval. While many thousands of newly made citizens are adversely affected by this rule of law, I cannot possibly see how a change in it can be expected.

Human suffering and loss appeal to us. They have great appeal to me, but this appeal has to be tempered by the factors I have related and the abilities of our Government in its consideration of them. Difficult as it is at times to make the necessary distinctions involved, we must do so unless we wish to open a Pandora's box full of intricate and insoluble problems.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION BY ADELPHOTIS ARAHOVITON KARYAE

Having before us that the birthplace of our first generation, Karyae Laconias, Greece was completely burned down and destroyed by the German occupying forces in Greece in several raids and in the final raid of March 1944, rendered 1,800 of its inhabitants homeless and more than 110 executed or died from the brutalities of these forces, and also having the report of the special committee for the rehabilitation of Karyae that to this date and although more than 15 years have elapsed no remedial act by the Congress has been enacted: Be it

Resolved unanimously by the Adelphotis Arahoviton Karyae with its headquarters in Gastonia, N.C., and with members in every State of the Union and Canada, in a general meeting assembled on this the 15th day of February 1959, That the Congress of the United States and particularly the Subcommittee of the Judiciary on Trading With the Enemy Act headed by the most Honorable OLIN D. JOHNSTON the Senator from South Carolina, be respectfully requested to act upon the several bills submitted and succeed in having an act enacted in this session of the Congress providing full compensation to American citizens and members of their immediate families who were either executed, imprisoned or have suffered loss or damage to their real or personal property located in Greece by the German occupation forces during World War II; be it further

Resolved, That besides the real property that has been burned down these damages shall include clothing and furniture which were either looted by the truckload and were sold in the black market or shipped to Germany or were completely destroyed with their homes despite the international law; be it further

Resolved, That this act shall include all American citizens on the day of the enactment of such act and thus provide compensation for those who were rendered homeless and were forced to emigrate to the United States under the Refugee Relief and the Displaced Person Acts and who have since their arrival here become naturalized American citizens; be it further

Resolved, That no monies or properties or other vested assets be returned to Germany or others before or until all valid claims of American citizens are fully satisfied and paid in full.

George P. Diamaduros, General Secretary; George N. Harakas, President; Peter J. Mandanis, Chairman of the Committee; Geo. N. Harakas; Gus N. Trakas; Dr. Perry N. Trakas; Geo. Bofotes; Pete Kleitcher; G. K. Karegeannes; James G. Leventis; Andrew Kalangis; Somedeher; James Couchell; James G. Boukedes.

RESOLUTIONS OF ORGANIZATIONS OF STATE OF NEW YORK

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the RECORD sundry resolutions adopted by organizations of the State of New York.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTION CONCERNING BALANCED FEDERAL BUDGET

Whereas the Government has been spending beyond its income for many years; and

Whereas the mounting Federal debt weakens a sound fiscal structure most conducive to security and progress; and

Whereas continued borrowing must be paid for later at up to 150 percent of the amount, thereby lessening the prospect of any foreseeable relief in taxation, and saddling our children and our children's children with extra indebtedness; and

Whereas spending beyond our means sets up pressures of undue inflation under which everyone suffers; and

Whereas our debt should be kept manageable to provide for an abnormally heavy debt increase in case of national emergency or economic distress:

Therefore the Newark Chamber of Commerce strongly urges that the Federal budget be balanced now and that, excepting adequate national defense, this goal should have precedence at this time over any nonvital increases in budgetary items and over any new spending program or programs, desirable as they might be.

Adopted February 24, 1959.

JOHN D. MEYERS,
Secretary-Treasurer, Newark, N.Y., Chamber of Commerce.

HOLIDAYS ESTABLISHED BY STATE LAW

Whereas the Veterans of Foreign Wars are always urging the American public, not only to vote, but also to get others out to vote on election day;

Whereas private industries in many areas give their employees time off for voting;

Whereas New York State is liberal in giving its employees time off for voting;

Whereas postal employees must vote before or after working hours: Therefore be it

Resolved, That postal employees as well as Federal employees be given sufficient time off to vote on election day as embodied in the bill S. 118 introduced by Senator JACOB K. JAVITS on January 9, 1959; and be it further

Resolved, That Adrean-Smith, D.S.C. Post 368 of the Veterans of Foreign Wars, go on record endorsing S. 118 and a copy of this resolution be sent to Senators JACOB K. JAVITS and KENNETH B. KEATING and to Congressman ALEXANDER PIRNIE advising them of our action; be it finally

Resolved, That three copies of this resolution be sent to the Mohawk-Adirondack Counties council seeking their endorsement and support.

Respectfully submitted.

EDWARD J. GEORGE,
Senior Vice Commander, Adrean-Smith D.S.C. Post 368, VFW.

RESOLUTION OF HOLY NAME SOCIETY, CHURCH OF ST. ANDREWS AVELLINO, FLUSHING, LONG ISLAND

Whereas the Federal Bureau of Investigation has been a bulwark of our country in Federal law enforcement and against subversion; and

Whereas its effectiveness has been endangered by hampering restrictions; and

Whereas it is being subjected to a campaign of vilification;

Resolved, That we commend the Federal Bureau of Investigation and oppose any further diminution of its powers and urge the passage of appropriate legislation restoring its former effectiveness so that it may properly function to insure our Nation's safety.

HOLIDAYS ESTABLISHED BY STATE LAW—RESOLUTION OF LOCAL 1820, UTICA, N.Y., NATIONAL FEDERATION OF POST OFFICE CLERKS

Whereas it is the duty of all American citizens not only to vote, but also to get others out to vote on election day;

Whereas private industries in many areas give their employees time off for voting;

Whereas New York State is liberal in giving its employees time off for voting;

Whereas postal employees must vote before or after working hours: Therefore be it

Resolved, That postal employees as well as Federal employees be given sufficient time off to vote on election day as embodied in the bill S. 118, introduced by Senator JACOB K. JAVITS on January 9, 1959; and be it further

Resolved, That local 1820, of the National Federation of Post Office Clerks go on record endorsing S. 118 and a copy of this resolution be sent to Senators JACOB K. JAVITS and KENNETH B. KEATING and to Congressman ALEXANDER PIRNIE, advising them of our action; be it finally

Resolved, That a copy of this resolution be sent to our State and National officers seeking their endorsement and support.

Respectfully submitted.

EDWARD GEORGE,
Past President, Local 1820, National Federation of Post Office Clerks.

RESOLUTION 41—SUPPORT OF LOCAL INDUSTRY

Whereas an agency of our Federal Government has recently awarded a contract for a large steam turbine generator to a foreign firm; and

Whereas many of the employees of the Schenectady plant of the General Electric Co., are residents of Schoharie County; and

Whereas the economy of this county and of all other areas adjacent to Schenectady have been adversely affected by the aforesaid award, and would be adversely affected by any future awards of this nature; and

Whereas the defense effort and capability of our country will be deterred by any future awards of this nature: Therefore, be it

Resolved, That it is the opinion of the Schoharie County Board of Supervisors that appropriate legislation be adopted whereby agencies of our Federal Government would be required to confine the award of contracts to domestic firms when such action will be in the best interests of the economy and defense of our country; and be it further

Resolved, That the clerk of the board of supervisors be and he is hereby directed to forward copies of this resolution to Hon. Dwight D. Eisenhower, President of the United States, Senator Jacob Javits, Senator Kenneth Keating, Congressman Ernest Wharton, Congressman Samuel Stratton, and to the clerks of the boards of supervisors of the counties of Schenectady, Albany, Montgomery, Rensselaer, Saratoga, Fulton, Otsego, Greene, and Delaware.

Dated March 20, 1959.

Filed March 20, 1959.

STANLEY A. FRANCE,
Clerk.

Approved as to form and legality.

JOHN S. MAUHS,
Schoharie County Attorney.

RESOLUTION UNANIMOUSLY PASSED BY ST. GEORGE COMMANDERY NO. 41, KNIGHTS OF ST. JOHN, AT ITS REGULAR MEETING, JULY 1, 1954

Whereas the St. George Commandery No. 41, Knights of St. John, an organization of Catholic men dedicated to Christian principles and the practices of civic duties for the betterment of all mankind; and

Whereas it has been brought to our attention that various goods manufactured and produced in Communist and Communist satellite countries have been exported to the United States for sale and distribution to its citizens; and

Whereas communism is atheistic and its philosophy opposed to the American way of life and its objective is the destruction of our form of government; and

Whereas we as knights and as citizens of the United States believe that any trade with these mentioned countries is not only harmful to the American way of life; but that it also helps to keep the peoples of those countries under tyrannical rule: Now, therefore, be it

Resolved, That the St. George Commandery No. 41, Knights of St. John, condemns any trade with Communist and Communist satellite countries by the United States of America; and be it further

Resolved, That the Government of the United States be urged to cease at once any trade with Communist or Communist satellite countries; nor to enter into any future trade contracts with any countries whose government subscribes to communism and its godless objectives of world revolution and the enslavement of mankind; and be it further

Resolved, That copies of this resolution be sent to the Hon. Dwight D. Eisenhower, President of the United States; Hon. John Foster Dulles, Secretary of State; Hon. Harold E. Stassen, Director of the Mutual Security Administration; Hon. Alexander Wiley, chairman of the Senate Foreign Relations Committee; Hon. Robert Chiperfield, chairman of the House Foreign Affairs Committee; Hon. Irving M. Ives; Hon. Herbert H. Lehman, and the Honorable William R. Williams.

Passed unanimously July 1, 1954.

Certified to by:

FRANCIS C. PLETL,
Secretary.

RESOLUTION OF NATIONAL COMMITTEE OF AMERICANS OF POLISH DESCENT

The National Committee of Americans of Polish Descent at its 17th annual convention, held at Newark, N.J., on November 29 and 30, 1958, while examining the situation of world affairs, resolved:

"What President Eisenhower said in his speech of September 11 was a confirmation of the principles which the National Committee of Americans of Polish Descent has been advocating for long years; namely, that concessions to Communist powers are the last thing that will open the road to a lasting peace.

"The President recalled Munich as the symbol of a futile hope of appeasing dictators. He also reminded the world that Hitler, Mussolini, and Japan had attacked various countries unopposed while the Western democracies were keeping aloof because of their fear of a war, which eventually came about precisely as a result of concessions to and retreats from the aggressors. Had the great democracies taken a firm stand from the very beginning, there would not have been a World War II.

"The President, however, failed to mention the agreements concluded in Teheran and Yalta; the concessions made there to Russia by President Roosevelt, his advisers, and Great Britain's Prime Minister Churchill, were but another Munich meant to appease Communist Russia by abandoning to her domination the countries of Central and Eastern Europe. This was a grave political error committed under the pressure of Stalin's expansionist aims.

"The United States and the whole democratic world are now paying for that error which allowed Russia to become a hard-to-defeat military power. What the President said about Fascist dictators became true once more: emboldened by their successes, the Communist dictators are reaching for one country after another; appeasement tactics have failed; and the world continues to hover on the brink of war.

"There is some consolation in the fact that these bitter lessons have not been forgotten, since, in the concluding part of his speech, the President stated that a "Far Eastern Munich" could not buy us peace or security and would only encourage the aggressors.

"The present firm policy of the United States in the Middle and Far East is the only right answer to Communist schemes and threats. We welcome that favorable change in the State Department's political thinking, since we know that the only thing the Communists fear and respect is force.

"Nevertheless, we believe that a fundamental change in political thinking of the Western democracies under U.S. leadership would require them to insist on a withdrawal of Soviet armies to Russia's 1939 border and on the liberation from Communist domination of the countries of Central and Eastern Europe; free of that domination, these countries would become a safety zone protecting the Western World from Communist expansion."

We sincerely hope that you will give this resolution serious consideration.

Respectfully yours,

NATIONAL COMMITTEE OF AMERICANS OF POLISH DESCENT,
GEORGE BRAYNACK, *President.*

REPORT ENTITLED "THE FEDERAL GOVERNMENT'S FOREIGN LANGUAGE TRAINING PROGRAMS" (S. REPT. NO. 153)

Mr. HUMPHREY. Mr. President, I submit a report from the Senate Committee on Government Operations entitled "The Federal Government's Foreign Language Training Program." I ask unanimous consent for this document to be filed as a Senate report.

Mr. President, this staff study conducted by the Subcommittee on Reorganization and International Organizations, of which I am chairman, points up emphatically the grave deficiencies existing in the training of linguists vitally needed to win the cold war. I commend it to the attention of every Member of this body.

As a nation we find ourselves deplorably unprepared linguistically, either to defend ourselves in the event of a third world war, or to exercise the full force of our leadership in the building of a peaceful world. The sad fact is, while we are trying to win friends all over the globe, we cannot communicate with three-fourths of the world's population in their native tongue.

The Soviet Union today is placing great emphasis on foreign language training. We see the results in the effective Communist infiltration and the successful winning over of countries once considered friendly to the United States. In the opinion of many, the relative success of the Russian effort is not due to the magnanimity of its foreign aid program or to the cunningness of its political agreements. The Russians through their linguistic capabilities are better able to communicate with populations of the world, and are thus better able to win their allegiance and to influence them.

A start has been made by the Congress to revitalize foreign language training in America by enactment of the National Defense Education Act of 1958, which provides training institutes for teachers, foreign language centers for students, and for research studies of the existing needs. This, however, is but the beginning of a vastly expanded program necessary to give the United States the linguistic capacity it must have in the years ahead.

The exigencies of the situation demand that immediate emphasis be given to improving the language fluency of our Foreign Service Officers, our military personnel, the members of our economic missions, and the hundreds of thousands of others who are serving the U.S. interests abroad. This is of the highest urgency because these skills are needed—not tomorrow—but now.

It has been demonstrated that with the tested training techniques developed by the Foreign Service Institute, the Army Language School at Monterey,

Calif., and certain private institutions, such as Syracuse University, the Government can greatly improve the capabilities of its oversea representatives, at least in vital areas, in a relatively short period of time, provided these programs are given expanded support from the highest levels down. This, in my opinion, we must do without delay.

It is time we give full recognition to the indisputable fact that foreign language training is indispensable to our military effort, to our diplomatic successes, to our oversea economic programs, and, without question, the key to our ability to win friends throughout the world. It is high time that we do something about it.

The VICE PRESIDENT. The report will be received and printed.

EXECUTIVE REPORTS OF A COMMITTEE

The following favorable reports of nominations were submitted:

By Mr. FULBRIGHT, from the Committee on Foreign Relations:

Ellis O. Briggs, of Maine, a Foreign Service officer of the class of career minister, to be Ambassador Extraordinary and Plenipotentiary to Greece; and

Carl W. Strom, of Iowa, a Foreign Service officer of the class of career minister, to be Ambassador Extraordinary and Plenipotentiary of Bolivia.

BILLS AND JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. JOHNSON of Texas (for himself and Mr. BRIDGES):

S. 1582. A bill to authorize appropriations to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction and equipment, and for other purposes; to the Committee on Aeronautical and Space Sciences.

(See the remarks of Mr. JOHNSON of Texas when he introduced the above bill, which appear under a separate heading.)

By Mr. KEATING (by request):

S. 1583. A bill for the relief of Yom Tov Yeshayahu Brisk; and

S. 1584. A bill for the relief of Sang Jun Lee (Thomas Lee Orzehowski); to the Committee on the Judiciary.

By Mr. THURMOND:

S. 1585. A bill to amend the Communications Act of 1934 in order to provide that the equal time provisions with respect to candidates for public office shall not apply to news and other similar programs; to the Committee on Interstate and Foreign Commerce.

S. 1586. A bill for the relief of May Hourani;

S. 1587. A bill for the relief of John R. Tankersley and Doris Tankersley; and

S. 1588. A bill for the relief of Mrs. Hunter Lott Browne; to the Committee on the Judiciary.

S. 1589. A bill relating to the retention of certain officers of the Naval Reserve in an active status; to the Committee on Armed Services.

(See the remarks of Mr. THURMOND relating to the first above-mentioned bill, which appear under a separate heading.)

By Mr. FULBRIGHT (by request):

S. 1590. A bill for the relief of the Government of the Republic of Iceland; to the Committee on Foreign Relations.

(See the remarks of Mr. FULBRIGHT when he introduced the above bill, which appear under a separate heading.)

By Mr. KERR (for himself, Mr. CASE of South Dakota, Mr. MONRONEY, Mr. FULBRIGHT, Mr. YARBOROUGH, Mr. CARLSON, Mr. MCCLELLAN, Mr. LONG, and Mr. ELLENDER):

S. 1591. A bill to promote and to establish policy and procedure for the development of water resources of lakes, rivers, and streams; to the Committee on Public Works.

(See the remarks of Mr. KERR when he introduced the above bill, which appear under a separate heading.)

By Mr. CURTIS (for himself and Mr. HRUSKA):

S. 1592. A bill to affirm and recognize the water laws of the States lying wholly or partly west of the 98th meridian; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. CURTIS when he introduced the above bill, which appear under a separate heading.)

By Mr. TALMADGE:

S. 1593. A bill to amend chapter 21 of title 28 of the United States Code with respect to the jurisdiction of the justices, judges, and courts of the United States; to the Committee on the Judiciary.

(See the remarks of Mr. TALMADGE when he introduced the above bill, which appear under a separate heading.)

By Mr. CASE of New Jersey:

S. 1594. A bill for the relief of Dr. Bong Oh Kim; and

S. 1595. A bill for the relief of Sirijo Tanfara; to the Committee on the Judiciary.

By Mr. LANGER:

S. 1596. A bill for the relief of O. M. Wick Construction Co.; to the Committee on the Judiciary.

By Mr. DODD:

S. 1597. A bill to establish in the Department of the Navy a Bureau of Submarines; to the Committee on Armed Services.

(See the remarks of Mr. DODD when he introduced the above bill, which appear under a separate heading.)

By Mr. JAVITS (for himself and Mr. CLARK):

S. 1598. A bill to establish the U.S. Arts Foundation; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. JAVITS when he introduced the above bill, which appear under a separate heading.)

By Mr. ERVIN:

S. 1599. A bill for the relief of George S. Zorbalas;

S. 1600. A bill for the relief of Grace L. Patton;

S. 1601. A bill for the relief of Mrs. Erika Elfriede Ida Ward; and

S. 1602. A bill for the relief of the Union Hardware Co., Inc.; to the Committee on the Judiciary.

By Mr. MORSE (for himself and Mr. HUMPHREY):

S. 1603. A bill to require Members of Congress, certain other officers and employees of the United States, and certain officials of political parties to file statements disclosing the amount and sources of their incomes, the value of their assets, and their dealings in securities and commodities; to the Committee on Rules and Administration.

(See the remarks of Mr. MORSE when he introduced the above bill, which appear under a separate heading.)

By Mr. ALLOTT:

S. 1604. A bill to amend the Communications Act of 1934 to provide that "equal time" provisions shall not apply to news programs; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. ALLOTT when he introduced the above bill, which appear under a separate heading.)

By Mr. HRUSKA (for himself, Mr. CARLSON, Mr. SCHOEPPEL, and Mr. CURTIS):

S. 1605. A bill granting the consent of Congress to the States of Kansas and Nebraska to negotiate and enter into a compact relating to the apportionment of the waters of the Big Blue River and its tributaries as they affect such States; to the Committee on the Judiciary.

(See the remarks of Mr. HRUSKA when he introduced the above bill, which appear under a separate heading.)

By Mr. BIBLE:

S. 1606. A bill to provide a method for obtaining the consent of Congress to interstate compacts; to the Committee on the Judiciary.

By Mr. CARROLL:

S. 1607. A bill to amend the Federal Reserve Act to provide for an additional Federal Reserve district; to the Committee on Banking and Currency.

(See the remarks of Mr. CARROLL when he introduced the above bill, which appear under a separate heading.)

By Mr. CARROLL (by request):

S. 1608. A bill for the relief of Henry B. Landers; to the Committee on the Judiciary.

By Mr. KEATING:

S.J. Res. 87. Joint resolution requesting the President to issue a proclamation designating Memorial Day, 1959, as a day for a nationwide prayer for peace; to the Committee on the Judiciary.

(See the remarks of Mr. KEATING when he introduced the above joint resolution, which appear under a separate heading.)

PRINTING OF ADDITIONAL COPIES OF CERTAIN HEARINGS ON TRANSPORTATION PROBLEMS IN WASHINGTON METROPOLITAN AREA

Mr. BIBLE submitted the following resolution (S. Res. 97) which was referred to the Committee on Rules and Administration:

Resolved, That there be printed for the use of the Joint Committee on Washington Metropolitan Problems, one thousand additional copies of the hearings held during the Eighty-fifth Congress entitled, "Transportation Problems in Maryland, Virginia, and the Washington Metropolitan Area."

APPROPRIATIONS FOR NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

Mr. JOHNSON of Texas. Mr. President, on behalf of myself and the senior Senator from New Hampshire [Mr. BRIDGES], I introduce, for appropriate reference, a bill to authorize appropriations for fiscal year 1960 for the National Aeronautics and Space Administration for salaries and expenses, research and development, construction and equipment, and for other purposes.

At the outset of this session, the Administrator of the National Aeronautics and Space Administration requested the introduction of an authorization bill which combined supplemental authorizations for fiscal year 1959 with authorizations for fiscal year 1960.

To assure expeditious handling of the supplemental authorizations for fiscal year 1959, a separate bill—S. 1096—covering fiscal year 1959 requirements, was introduced, and was passed by the Senate.

The bill now being introduced covers the amounts requested by the administration for fiscal year 1960—namely, $485,300,000.

It should be made clear that the amounts provided in this bill do not necessarily reflect the views of the sponsors. Introduction of the bill, however, will provide a basis for comprehensive hearings and detailed examination of the programs proposed for the National Aeronautics and Space Administration for the fiscal year 1960.

Upon the conclusion of such hearings, and with the information developed by the Subcommittee on Governmental Organization for Space Activities, we shall be in position to recommend the legislative action necessary to proceed with the space program in 1960.

The very able and beloved junior Senator from Mississippi [Mr. STENNIS] is the head of the subcommittee which will consider this authorization bill; I am informed that he is proceeding immediately with hearings, and that he will report the bill to the Senate at the earliest possible date. The very able Senator from Missouri [Mr. SYMINGTON] is the head of the Subcommittee on Governmental Operations for Space Activities. He already has conducted some hearings, and he plans to conduct others in the next few days.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 1582) to authorize appropriations to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction and equipment, and for other purposes, introduced by Mr. JOHNSON of Texas (for himself and Mr. BRIDGES), was received, read twice by its title, and referred to the Committee on Aeronautical and Space Sciences.

AMENDMENT OF COMMUNICATIONS ACT, RELATING TO EQUAL TIME PROVISIONS

Mr. THURMOND. Mr. President, earlier in the day I introduced a bill (S. 1585) to amend section 315 of the Communications Act.

Section 315 has a commendable purpose, that of requiring equal time to be granted to opposing political candidates by radio and television stations. Without requiring any radio or television station to give time to any political candidate, it has insured that no particular candidate could be favored by a station. The results have been salutary, and the public has greatly benefited.

Recently, however, literal constructions of this section have resulted in what may become a substantial detriment to public interests. The Federal Communications Commission, in what appears to be an objective interpretation of the language of the section, has applied the operation of the statute to news broadcasts and telecasts. Rather than submit to the equal time requirements, there is every reason to believe that radio and television stations and networks will eliminate certain items of legitimate newsworthiness which serve to keep the public informed about their own affairs.

This should not be allowed to happen. It is incumbent on Congress to act to protect the freedom of the news gathering and distributing services by amending the Communications Act, while at the same time retaining the salutary features of the "equal time" section which prevents favoritism toward a candidate by a station.

RELIEF OF THE GOVERNMENT OF ICELAND

Mr. FULBRIGHT. Mr. President, by request, I introduce for appropriate reference a bill for the relief of the Government of the Republic of Iceland. This bill was submitted to the Vice President by letter on March 13, 1959.

The proposed legislation has been requested by the Secretary of the Army, and I am introducing it in order that there may be a specific bill to which Members of the Senate and the public may direct their attention and comments.

I reserve my right to support or oppose this bill, as well as any suggested amendments to it, when the matter is considered by the Committee on Foreign Relations.

I ask unanimous consent that the bill may be printed at this point in the RECORD, together with the letter from the Secretary of the Army to the Vice President in regard to it.

The PRESIDING OFFICER (Mr. YOUNG of Ohio in the chair). The bill will be received and appropriately referred; and, without objection, the bill and letter will be printed in the RECORD.

The bill (S. 1590) for the relief of the Government of the Republic of Iceland, introduced by Mr. FULBRIGHT, by request, was received, read twice by its title, referred to the Committee on Foreign Relations, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury shall pay, out of any money in the Treasury not otherwise appropriated, to the Government of the Republic of Iceland, the sum of $5,378.98, and such additional sum due to increases in rates of exchange as may be necessary to pay this claim in foreign currency, in full satisfaction and final settlement of its claim against the United States in the amount of 88,000 Icelandic kronur, arising out of accidents involving United States Armed Forces during their presence in Iceland from July 7, 1941, to April 5, 1947, under the terms of the Agreements between the Government of the United States of America and the Government of the Republic of Iceland, respecting the defense of Iceland, dated July 1, 1941 (55 Stat. 1547), and regarding the settlement of claims of Icelandic Insurance Companies, dated November 23, 1956.

The letter presented by Mr. FULBRIGHT is as follows:

MARCH 13, 1959.

Hon. RICHARD M. NIXON,
President of the Senate.

DEAR MR. PRESIDENT: There is inclosed herewith a draft of a proposed bill for the relief of the Government of the Republic of Iceland.

The submission of this legislation is in accordance with procedures approved by the Secretary of Defense. The Bureau of the Budget has advised that it has no objection to the submission of this proposal for the consideration of the Congress, and the Department of the Army recommends its enactment.

The purpose of this proposed bill is to effect final settlement of claims of the Government of the Republic of Iceland in the amount of 88,000 krónur, arising out of accidents involving U.S. Armed Forces during their presence in Iceland from 1941 to 1947 under the terms of the agreement between the United States and Iceland dated July 1, 1941.

The agreement between the United States of America and Iceland respecting the defense of Iceland by U.S. forces; effected July 1, 1941; ratified by the Icelandic Regent in Council July 10, 1941 (55 Stat. 1547), specifically states:

"5. United States undertake defense of the country without expense to Iceland and promise compensation for all damage occasioned to the inhabitants by their military activities."

During the period July 7, 1941, to April 5, 1947, units of the Armed Forces of the United States were present in Iceland by virtue of the terms of the above agreement. When the Armed Forces of the United States departed Iceland there remained outstanding approximately 374 accident claims of two Icelandic insurance companies, Sjovatryggingarfelag Islands h.f. and Trolle and Rothe h.f., which were not satisfied. These claims, in most part, remained unsettled because of the excluding provisions of the Foreign Claims Act (55 Stat. 880 and 57 Stat. 66). There were also a number of claims against policyholders of the two Icelandic insurance companies in favor of the United States which were unpaid. The Icelandic Government, through diplomatic channels requested action on these claims.

On June 9, 1953, this Department notified the Department of State:

"It appears that no funds are available to the Department of the Army under present claims statutes for payment of the proposed settlement and that it will be necessary to request the introduction of a private relief bill to the Congress when agreement has been reached with the Republic of Iceland.

"A settlement covering the claims under consideration, and any other claims of these same insurance companies which may have arisen out of the agreement, dated July 1, 1941, between the United States and Iceland as you suggest, will be satisfactory. A proposed agreement is inclosed. When negotiations with the Republic of Iceland in this matter have been concluded this Department will request the necessary legislation."

In order to arrive at a possible satisfactroy conclusion on the matter the following agreement was reached:

"Agreement between the Government of the United States of America and the Government of the Republic of Iceland regarding the settlement of claims of Icelandic insurance companies

"The Government of the United States of America and the Government of the Republic of Iceland have reached agreement as set forth below regarding final settlement of certain claims of the Icelandic insurance companies, Sjovatryggingarfelag Islands h.f. and Trolle and Rothe h.f. (agent for Baltica, a Danish company), against the Government of the United States; and similar claims, or counterclaims, of the Government of the United States of America against these same insurance companies.

"ARTICLE I

"The two Governments agree that the claim of Sjovatryggingarfelag Island h.f. is meritorious in the sum of 84,703.19 krónur. Claims of the United States against

policyholders of that company are meritorious in the sum of 27,982.58 krónur, which latter amount is set off against the former. There remains a net amount of 56,720.61 krónur due Sjovatryggingarfelag Islands h.f.

"The two Governments agree that the claim of Trolle and Rothe h.f. (Baltica) is meritorious in the sum of 60,291.36 krónur. Claims of the United States against policyholders of that company are meritorious in the sum of 29,011.97 krónur, which latter amount is set off against the former. There remains a net amount of 31,279.39 krónur due Trolle and Rothe h.f. (Baltica).

"The sum of the net amounts due is 88,000 krónur.

"ARTICLE II

"The Congress of the United States will be requested to appropriate the necessary funds to effect payment of this settlement.

"ARTICLE III

"During the course of negotiations leading to this agreement, representatives of the two governments have considered claims of the aforementioned insurance companies which grew out of accidents or incidents involving military personnel and equipment of the Armed Forces of the United States, and policyholders, and vehicles owned by policyholders, of the two Icelandic insurance companies, during the period July 7, 1941, to April 5, 1947, when U.S. Armed Forces were present in Iceland under the terms of the agreement between the United States and Iceland, dated July 1, 1941 (55 Stat. 1547).

"Claims of the Government of the United States of America against policyholders of these same insurance companies which resulted from the same or similar incidents, have been evaluated, and set off, as shown in article I of this agreement.

"ARTICLE IV

"During the course of negotiations leading to this agreement, the representatives of the two Governments considered, but excluded from the setoff, those claims of the United States against policyholders of these insurance companies for expenses incurred relating to medical expenses, loss of services, burial expenses and gratuity payment in cases involving injury or death of military personnel; which claims are to be regarded as having been taken into account, but waived, under the terms of this agreement.

"Claims of the insurance companies arising out of the agreement dated July 1, 1941, between the United States and Iceland, supra, which have not hitherto been presented and included in this settlement are to be regarded as having been waived.

"ARTICLE V

"Upon payment of the amount heretofore agreed upon in settlement of the claims described herein, the Government of the Republic of Iceland discharges and agrees to save harmless the Government of the United States of America, its officials, employees, or agencies and instrumentalities, its nationals or other individuals and organizations, for these and all other claims of these same claimants, which may have arisen out of the agreement dated July 1, 1941, between the United States and Iceland, supra.

"In witness whereof, the undersigned representatives duly authorized thereto by their respective governments have signed this agreement.

"Done at Washington, in duplicate, this 23d day of November 1956.

"For the Government of the United States of America:

"C. BURKE ELBRICK,
"Department of State.

"For the Government of the Republic of Iceland:

"THOR THORS."

The cost of this proposal, if enacted, will be the dollar equivalent of 88,000 Icelandic krónur, which, at the rate of exchange of 16.36 krónur to $1, is $5,378.98.

Sincerely yours,

WILBER M. BRUCKER,
Secretary of the Army.

WATER CONSERVATION ACT OF 1959

Mr. KERR. Mr. President, on behalf of myself, the Senator from South Dakota [Mr. CASE], my colleague, the junior Senator from Oklahoma [Mr. MONRONEY], the junior Senator from Arkansas [Mr. FULBRIGHT], the Senator from Texas [Mr. YARBOROUGH], the Senator from Kansas [Mr. CARLSON], the senior Senator from Arkansas [Mr. MCCLELLAN], the junior Senator from Louisiana [Mr. LONG], and the senior Senator from Louisiana [Mr. ELLENDER], I introduce, for appropriate reference, a bill to promote and to establish policy and procedure for the development of water resources of lakes, rivers, and streams. I ask unanimous consent to have printed in the RECORD a statement in connection with the bill.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the statement will be printed in the RECORD.

The bill (S. 1591) to promote and to establish policy and procedure for the development of water resources of lakes, rivers, and streams, introduced by Mr. KERR (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Public Works.

The statement presented by Mr. KERR is as follows:

STATEMENT WITH REFERENCE TO WATER CONSERVATION ACT OF 1959

The persons and organizations which advocate enactment of this bill represent rural electric cooperatives, public power districts, and municipal electric utility systems in nearly every State of the Union which, collectively, purchase approximately 25 percent of all hydroelectric energy generated at Federal projects.

THE NEED FOR STATUTORY STANDARDS

Two basic problems are generally recognized by most parties interested in water resource development. First, national water supply is critical. President Eisenhower's Advisory Committee on Water Resources reported on December 22, 1955, that:

"Shortages of water for domestic and agricultural use are frequent. Industry is finding it increasingly difficult to locate adequate water supplies. Lack of adequate planning threatens to impose a water scarcity which can become a limiting factor on the growth of some of our cities. At the same time, flood damage in many areas continues to be great."

Second, differences between administrative agencies charged with separate phases of Federal water resource administration must be resolved, and the effects of policy differences between successive administrations mitigated. How better can these problems be met than by the establishment of statutory standards to guide all administrative agencies?

On December 14, 1956, Mr. Joseph Campbell, the Comptroller General, stated in commenting on Senate Resolution 281:

"To resolve the matter of reaching firm cost allocations, we believe Congress should take one of the following alternative courses of action:

"1. Establish policies and criteria for making cost allocations and designing specifically the agency to make the allocation.

"2. Establish policies and criteria for making the cost allocations and designating the Federal Power Commission to make the firm cost allocation wherever power is a purpose of the project. * * *

"3. Establish policies and criteria for making the cost allocations and requiring the construction agency, the power marketing agency, and the Federal Power Commission jointly to submit appropriate reports and allocations of the costs to the Congress, or its designated committees to approve an allocation. * * *

"Under either alternative, we believe the Congress should require that the cost allocations or the report on cost allocations be made and submitted about the time the project is substantially completed and placed in operation.

"Policies and criteria used for cost allocations and related matters have not been uniform between the agencies having water resource development responsibilities. Notwithstanding the efforts in recent years of the Interagency Committee on Water Resources (and its predecessor, Federal Inter-Agency River Basin Committee), the Presidential Advisory Committee on Water Resources Policy, and the Bureau of the Budget to formulate mutually acceptable principles and procedures, we believe that the Congress should provide the basic framework of policies and criteria. Among the factors in which the congressional intent may be expressed are:

"(1) Benefits and costs to be considered in the benefit cost analysis for the evaluation of projects and in the allocation formula. Under this factor the Congress may want to consider the degree to which secondary benefits and indirect costs are to be included in determining the total benefits and total costs.

"(2) Costs to be included for purposes of allocation and to be repaid by beneficiaries; that is, whether interest in the Federal investment, costs of other Federal agencies applicable to the project, and similar costs not paid directly by the constructing agency are to be classified and recorded as costs of the projects.

"(3) Number of years to be used as the basis for realization of project benefits and repayment of reimbursable project costs.

"(4) Rate of interest and method of computation.

"(5) Costs applicable to other purposes to be repaid by power revenues.

"(6) The purposes to which costs are to be allocated and the criteria for allocation."

The very purpose of this bill is to carry out the above recommendations of the Comptroller General.

COST ALLOCATIONS

Section 6(3) of this bill would apply to multiple purpose projects, which include hydroelectric features, the incremental method of cost allocation, with the principal purpose of the project considered basic. This provision is grounded on the fact that only in isolated instances does the Federal Government construct hydroelectric plants as such. Projects under the jurisdiction of the Corps of Engineers are usually authorized and constructed to achieve flood control or navigability, or a combination of these purposes. Power generation is included as an incidental feature.

The same principle applies to most Bureau of Reclamation projects. And although power features were included in reclamation projects at an earlier date than they were in flood control and navigation projects, power has been considered as a benefit incidental to the principal purpose of providing agri-

cultural, municipal and industrial water supply for the arid areas. Power generated at reclamation projects if first used as needed for pumping purposes. And, a substantial part of the revenue derived from the sale of the remaining power is used to repay the cost of project irrigation features.

But the very fact that the electric power features are lucrative, tends to induce a false belief that power is a principal project purpose, whereas actually it is not.

The administrative agencies responsible for operation of the Federal water resource development program have themselves misconstrued the intent of Congress. They have, gradually, abandoned the original concept of power as incidental, and now think of it as a principal project purpose. This is part of the change that has created an apparent need for Federal power rate increases, and poses to the power user a serious economic dilemma.

The problem arises particularly with respect to the multiple purpose dams on the main stem of the Missouri River and in the Southwest.

In 1953, the Bureau of Reclamation was allocating 31 percent of the cost of the main stem Missouri River plants to hydroelectric power and 69 percent to flood control and navigation, upon the theory that power was an incidental purpose for these projects which were originally designed to afford a 9-foot free-flowing navigable waterway below Gavins Point, conservation of water for upstream irrigation features and flood protection to the lower Missouri and Mississippi Valleys.

However, since 1953, the Bureau has revised these cost allocations, and now allocates 63 percent to power and 22 percent to flood control and navigation.

The Southwestern Power Administration originally allocated approximately 30 percent of project costs to hydroelectric power. By contrast, the Department of the Interior now allocates approximately 52 percent of SPA project costs to power. The authorization for two of the projects in the Southwest, Norfolk and Denison, was expressly conditioned upon the incremental method of cost allocation. For these two projects the present allocation to power is 32 percent and 47 percent respectively, and it is interesting to note that were the now prevalent separable cost-remaining benefits method applied to these two projects, hydroelectric power would bear 43 percent and 66 percent of construction cost respectively.

These cost allocation revisions have resulted from an administrative agreement between the Departments of the Interior and Army and the Federal Power Commission dated March 12, 1954, entitled "Cost Allocation" which is attached hereto as exhibit A. This agreement stipulates three methods of cost allocation as acceptable by the signatory agencies. They are (1) separable costs-remaining benefits, (2) alternative justifiable expenditure, and (3) use of facilities.

Bearing in mind the three methods that have been agreed upon as acceptable by the administrative agencies, attention is also directed to table I, attached hereto as exhibit B. Table I contains a list of 22 various Corps of Engineers and Bureau of Reclamation projects. It also contains for each project a tabulation of the percentage of project construction cost that would be allocated to hydroelectric power under six separate methods of cost allocation, each of which is being or has been used by one or more agencies of the Government at some time. The last line of table I shows the average allocations calculated by applying the six different methods of cost allocation to all of the projects. Note that the separable cost-remaining benefits method and the alternative justifiable expenditure method each result in an overall figure 61.3 percent of construction cost allocated to power, and that the use of facilities method results in an average allocation to power of 62.8 percent.

Thus, the three methods recommended by the administrative agencies are those which, on the average, result in the allocation to hydroelectric power of high portions of project construction cost. Note also that the priority of use method results in a 53.8 percent allocation, the incremental method in a 50.8 percent allocation and the specific costs method in 34.7 percent allocations. None of these other methods, which result in lower allocations of cost to power, are acceptable to the administrative agencies.

This bill does not contend for general application of the specific cost method which results in the lowest allocation to power. It contends for general application of the incremental method which, in our opinion, best expresses the intent of Congress, and which, for the 22 projects studied, would result in an allocation to power of approximately 50.8 percent of the project costs.

This bill is based on the premise that the 1954 agreement between the Departments of the Interior and Army and the Federal Power Commission is a departure from congressional intent, because it establishes cost allocation procedures which not only fail to recognize the general proposition that power is usually an incidental purpose, but, in fact, goes far beyond, and effectively holds that for practical purposes power is never an incidental purpose.

It is true that there may be some projects in which power is a principal feature. And in such cases, use of the separable costs remaining benefits method or the alternative justifiable expenditure method would be appropriate. We feel, however, that the general rule should favor the incremental method upon the presumption that power is, in most cases, an incidental purpose.

RECOGNITION OF FUTURE DEVELOPMENT

Section 7(1) of this bill is an attempt to recognize in the calculation of benefits attributable to a given multiple purpose project or unit, the value of future economic development in the area, and the assumption, in calculating such benefits, that comprehensive basin development will proceed in an orderly manner.

There has been substantial administrative reluctance to accept and utilize initial appropriations for the first units of comprehensive river basin developments on the ground that the benefits attributable to the initial units will not accrue until other projects of the plan are completed. This problem arises especially in the case of developments which include navigation and power facilities. A given navigation channel is, of course, not usable until each of the locks and dams constituting it are complete.

This section of the bill may be merely declaratory of existing practice in some instances, but it should be established as a statutory standard to guide all of the affected construction agencies.

TAXES FOREGONE

Section 7(3) of this bill is an attempt to preclude application of the taxes foregone provision of Budget Bureau Circular A–47.

Paragraph 8(h) of that directive reads as follows:

"Value of electric energy to be produced. This is equal to the lower of two figures: (1) The cost of equivalent energy from the cheapest alternative source of energy—private, Federal, or other—that is available, or could be expected to develop in the absence of the project, to meet the same power need. Taxes and interest charges for this alternative source should be computed on a basis comparable with the project. (2) Value of power to users (considered as the highest price they would pay, and applicable especially where the cost of alternative power would be prohibitive for particular users)."

This language makes mandatory upon the Federal power construction agency the calculation of power benefits based upon the cost of securing alternative power from a phantom Federal steam plant which would be the most unlikely of any imaginable alternative to actually develop.

It is a criterion which causes the power facilities of many multiple purpose projects to appear less desirable and, in some cases, reduces below unity the benefit-to-cost ratio of power features.

Thus, on June 10, 1957, the House Committee on Public Works, in considering authorization of power features for the Lone Rock and Gilbert Reservoirs, on the White River, was told by the Corps of Engineers that the benefit-to-cost ratio, considering taxes foregoing, would be 0.83 whereas were this test not applicable, the benefit-to-cost ratio would be 1.1 and no question would arise concerning the economic justification of the authorization.

The theory of taxes foregone is economically unsound. For, although a small increment of tax revenue might be created were a private plant constructed in lieu of the Federal project, it does not necessarily follow that because a Federal plant is substituted for the private plant, an equivalent reduction in tax collection would occur.

Experience is just the converse. It indicates that the construction of a Federal multiple purpose project generally stimulates the local economy to the extent that tax revenue from the geographical area in which the project is located increases substantially.

The taxes foregone provision of Budget Bureau Circular A–47 is not based on statute.

During hearings by the House committee on the 1957 rivers and harbors omnibus bill, the chairman of the Rivers and Harbors and Flood Control Subcommittee of the Senate Committee on Public Works, appearing as a witness, questioned the Chief of Engineers as follows:

"Senator KERR. I would like to ask my good friend, the Chief of Engineers, if he knows and if he can tell this committee how many of them (projects) are on the statute books today carrying the burden of the principle of taxes foregone.

"General ITSCHNER. I do not know of any hydroelectric projects that are authorized today that have the provisions in it."

PROTECTION OF IRRIGATORS

Section 8(a) of this bill is intended to be declaratory of existing Federal policy by which that portion of project construction cost allocated to irrigation and beyond the ability of the irrigators to repay may, to the extent necessary, be recovered from the establishment of an appropriate rate for commercial power.

A REASONABLE PAYOUT PERIOD

Section 8(a) of this bill establishes project payout period as the useful project life or 100 years, whichever is the shorter. This is an attempt to conclusively controvert paragraph 14(a) of Budget Bureau Circular A–47 which limits the repayment period to the lesser of the useful project life or 50 years.

The 50-year limit established in Budget Bureau Circular A–47 is, with respect to Corps of Engineers projects, not required by law.

Section 5 of the Flood Control Act of 1944 specifies:

"Rate schedules shall be drawn having regard to the recovery (upon the basis of the application of such rate schedules to the capacity of the electric facilities of the projects) of the cost of producing and transmitting

such electric power, including the amortization of the capital investment allocated to power over a reasonable period of years."

This bill contains the implication that the phraseology "reasonable period," when considered in connection with the durability of earth and concrete structures, should not be arbitrarily limited to 50 years.

During the 1956 hearings held by a subcommittee of the Senate Committee on Public Works to investigate the need for a Federal power rate increase in the Southwest, the chairman of the subcommittee asked Mr. Wright, the Administrator of the Southwestern Power Administration:

"Senator KERR. Now what is your opinion, and I am going to ask the engineers about this also, and if you do not have an opinion you do not need to give it, but I have a lot of respect for your engineering ability as well as the Army Engineers, what is your opinion as to the average useful life of these flood control projects in this group of seven?

"Mr. WRIGHT. I think there are some of them down there that are good for at least a thousand years. I think that we have none in the area that is not good for at least 150 years that are included in this study.

"Senator KERR. Would you think the average life of them would reasonably be estimated at 500 years?

"Mr. WRIGHT. I do, sir."

It is generally conceded that the revenue from the hydroelectric features will accrue to the Federal Government for a period in excess of 50 years. No reason is, therefore, apparent why the payout period cannot be calculated to run coincidentally with the anticipated useful life expectancy of the reimbursable features of the project without regard to arbitrary limitations such as the 50-year period specified in Budget Bureau Circular A–47.

INTEREST RATES

Section 8(a) of this bill seeks also to stabilize the rate of interest applicable to funds invested in multipurpose projects by providing that the interest rate shall be equivalent to the average rate of interest borne by all marketable interest-bearing obligations of the United States during the 15 years preceding the appropriation of initial construction funds.

In our opinion, this provision will minimize fluctuations in the interest rates applicable to successively authorized projects resulting from short-range variations in the cost of money.

RETROACTIVE APPLICATIONS

Section 9 of this bill would apply its substantive provisions to multiple-purpose projects previously completed. Section 10 excepts from the provisions of section 9 TVA projects and projects for which cost allocations have been previously determined by Congress.

RECOGNITION OF ALL BENEFITS IN DOLLAR TERMS

Section 5 of this bill would implement the language of section 3 by requiring that in submitting reports and recommendations to Congress for project authorization and appropriations such reports would be based upon the study of an entire basin. This section also would be, to some extent, declaratory of existing policy, but would assure administrative adherence and preserve uniformity of future studies.

Section 5(b) is an attempt to assure that all recognizable benefits will be included in benefit to cost ratios, and that all benefits, to the extent possible, will be expressed in dollar values.

Paragraph 14(j) of Budget Bureau Circular A–47, Revised, provides—

"Until standards and procedures for measuring secondary benefits are established by amendment of this circular, the benefit-cost analysis of any program or project shall be based upon primary benefits * * * despite the importance of effects which are local or regional rather than national in character, such effects shall not be considered as part of the benefit-cost analysis; rather these effects shall be fully evaluated as part of the analysis of the relation of the project to sound local and regional economic development."

Paragraph 15 of Budget Circular A–47, Revised, provides that—

"The associated costs to be incurred and induced costs which will result from a proposed program or project shall be subtracted from benefit estimates before a comparison of benefits and costs is made. Induced costs shall be evaluated as extensively and fully as benefits."

In effect, Budget Bureau Circular A–47 precludes the use of secondary benefits in the benefit-cost analysis, but requires the inclusion of so-called induced or indirect costs in such calculations, thereby seriously impairing the validity of apparent project evaluation studies.

An excellent example of the problem of evaluating intangible benefits was presented during the 1957 Senate hearings on S. 1164 before a subcommittee of the Senate Committee on Public Works. S. 1164 would have authorized the Corps of Engineers and Bureau of Reclamation to include in benefit-cost-ratio calculations a dollar evaluation of recreational benefits.

During those hearings, the Assistant Chief of Engineers for Civil Works testified that although the corps does evaluate recreational benefits generally such evaluations are not submitted to Congress and are not included in computation of benefit-cost ratios.

Senate bill 1164, as proposed, would have provided that where reservoir areas are developed by the Secretary of the Army or the Secretary of the Interior the annual recreational benefit shall be calculated as equivalent in dollars to the number of persons which might reasonably be expected to utilize the recreational facilities during a year, but not to exceed 15 percent of annual project costs.

During the 1957 Senate hearings on S. 1164, the Corps of Engineers testified that during 1955 some 62,522,000 persons utilized the recreational facilities at reservoirs under its jurisdiction. The Bureau of Reclamation testified that 8,703,000 persons used the recreational facilities at reservoirs under its jurisdiction during the same year. Yet no recreation benefits are generally calculated in the benefit-cost ratios.

It appears that, with respect to recreation benefits alone, a major factor favoring multiple purpose project construction is substantially ignored. And to the extent that because of this fact the benefit-cost ratios of some projects are less than one, then to that extent we are deprived of the opportunity to develop a sound water resource project.

UNECONOMIC INCREMENTS

Section 5(c) of this bill provides for the permissive inclusion in multiple purpose projects of units or features which, although themselves exhibiting a benefit-to-cost ratio of less than unity, would not reduce the total unit or project benefits below costs. In brief, it is a provision to allow the inclusion of uneconomic increments of benefit in a project that would not thereby be made uneconomic as a whole.

Under present administrative policies, the entire plan for a particular comprehensive river basin development plan must show an overall benefit-cost ratio in excess of unity as must each unit of such plan and each facility of each unit. This necessarily means that, in some cases, desirable features, such as municipal water supply or hydroelectric power, may be excluded from a particular unit or project because, as measured by the particular criteria in vogue at that time, they may not show a benefit-to-cost ratio above unity.

Let me emphasize that this part of the bill is not mandatory. It is permissive only and expresses the sense of the Congress that uneconomic increments may be included in multiple purpose projects, at the discretion of the agencies responsible for administering the law, provided that the overall economic justification of the project is not destroyed.

CONCLUSIONS

It is anticipated by those who have developed and advocate this bill that considerable objection to it will be raised. Constructive criticism is welcomed and the advocates of the bill will accept such amendments as may be necessary to prevent damage to other interested parties, provided, of course, that such amendments do not destroy the major provisions. It is suggested, however, that in view of the widespread acknowledgement of a need for this type of legislation, there rests upon the critics of this bill a burden to accompany their criticism with affirmative suggestions for an alternative approach.

Those who support this bill believe that the Nation can no longer afford to tolerate project justification and cast allocation procedures so restrictive that waste resource development is brought to a standstill. For to adopt a program based upon criteria of this nature is to make that criteria the master of the people rather than their tool.

Reference is made, in this connection, to the testimony of the Commissioner of Reclamation, the Honorable William A. Dexheimer, offered before the House Committee on Interior and Insular Affairs on Wednesday, March 30, 1955, during a discussion by the Committee of Budget Bureau Circular A–47. The following exchange took place:

"The CHAIRMAN. Without going into detail, Mr. Dexheimer, can you state whether or not any project now under study, and contemplated for authorization, could comply with the standards set up in A–47?

"Mr. DEXHEIMER. With the liberal interpretation of secondary benefits as a part of it, and utilizing the 50 years, plus the 10-year development period, we have some that could come within that circular.

"The CHAIRMAN. What are they?

"Mr. DEXHEIMER. The Ventura project would be one, in California, I believe * * * But if you strictly construe the budget circular to the 50-year limitation, there are very few, if any, of our projects that would qualify.

"The CHAIRMAN. In other words, it is fair to say that, except perhaps for the Ventura project in California, we would be at the end of the rope if we strictly applied the provision of this circular?"

EXHIBIT A

COST ALLOCATION AGREEMENT AMONG DEPARTMENT OF THE INTERIOR, DEPARTMENT OF THE ARMY, AND FEDERAL POWER COMMISSION

Costs of a multiple-purpose project shall be allocated among the purposes served in such a manner that each purpose will share equitably in the savings resulting from combining the purposes in a multiple-purpose development.

Acceptable methods (see attachment for brief description).

(1) Separable costs-remaining benefits method: This method is considered preferable for general application.

(2) Alternative justifiable expenditure method: This method differs from (1) only in employing specific costs of the various functions rather than their separable costs. It is acceptable where the necessary basic data to determine separable costs are not available and the time and expense required to obtain the data are not warranted.

(3) Use of facilities method: This method is acceptable where the use of facilities is

clearly determinable on a comparable basis and where use of this method would be consistent with the basis of project formulation and authorization.

MINIMUM ALLOCATION

Each purpose shall be allocated, in every case, at least its separable cost (the cost traceable to its inclusion in a multiple-purpose project). Limitations of basic data may occasionally require the use of specific cost (the cost of features identified solely with a single purpose) and other available data as constituting the best available basis for approximating separable costs.

LEGISLATIVE HISTORY

The legislative history of authorized projects shall be considered in the allocation of cost. The authorizing act, committee reports, project justification documents, and similar sources disclose the nature of the proposal submitted to the Congress and of congressional action thereupon.

CONSIDERATION OF ECONOMIC COSTS

In applying any one of the above allocation methods, taxes in an amount equal to those which would be foregone as a result of Federal development of the power rather than the most likely alternative development shall be included as an economic cost when distributing costs among the project purposes for analysis of economic justification, but shall be subtracted from the costs thus distributed to power in order to obtain the allocation of project costs to power.

VALUE OF POWER

The value of power produced means the estimated market value which would be obtainable if it were to be sold on an open competitive basis, without restriction as to use or resale. The value of power shall be determined as the lower of two figures:

(1) The estimated actual cost of equivalent power from the most likely alternative source that would be expected to develop in the absence of the project, to meet the same power needs, with appropriate adjustment for transmission costs and losses and other technical factors.

(2) Estimated value of power to users. (Applicable where costs of alternative power would be prohibitive either for part or all of the power produced.)

The value of power, determined as indicated above, shall be used for computations of economic benefits in project justification and for the allocation of project costs. It will not be used to establish the level of power revenues, which are based on the amortization of project costs (Federal power investment) over a reasonable period of years.

PROJECT FEASIBILITY

Criteria of project feasibility shall be such that, insofar as can be determined in advance:

(1) Projects will be considered economically feasible when the value of power (as defined above) will at least equal the project costs allocated to power, plus the amount of taxes which would be foregone as a result of Federal development of the power rather than the most likely alternative development.

(2) Projects will be financially feasible, i.e., they will have potential net revenues from power sales sufficient to reimburse the Federal Government for the Federal investment in power.

BRIEF DESCRIPTION OF METHODS OF COST ALLOCATION

The separable costs-remaining benefits method has the following steps:

(1) The benefits of each purpose are estimated.

(2) The alternate costs of single-purpose projects to obtain the same benefits are estimated.

(3) The separable cost of each purpose is estimated.

(4) The separable cost of each purpose in the multiple-purpose project is deducted from the lesser of each purpose's benefits or alternate cost. The lesser figure is used since alternate cost is used in this method only if it represents a justifiable expenditure, that is, if it does not exceed the benefits.

(5) From total cost of project deduct all separable costs to determine residual costs.

(6) Residual costs, designated as joint costs in this method, are distributed in direct proportion to the remainders found in step 4.

(7) To determine the cost allocated to each purpose, add the separable and distributed costs for each purpose and, in the case of power, subtract from that sum the amount of taxes foregone which was used in computing power costs under steps 2 and 3 above.

The alternative justifiable expenditure method has the following steps:

(1) The benefits of each purpose are estimated.

(2) The alternate costs of single-purpose projects to obtain the same benefits are estimated.

(3) The specific cost of each purpose is determined.

(4) The specific cost of each purpose in the multiple-purpose project is deducted from the lesser of that purpose's benefits or alternate cost. The lesser figure is used since alternate cost is used in this method only if it represents a justifiable expenditure, that is, if it does not exceed the benefits.

(5) From total cost of project deduct all specific costs to determine joint costs.

(6) Joint costs of the multiple-purpose project are distributed among purposes in direct proportion to the remainders found in step 4.

(7) Allocation of project cost is determined in the same manner as under the separable costs-remaining benefits method.

The use of facilities method has the following steps:

(1) The use which is made by each purpose of joint project facilities is estimated on some basis which is comparable for the purposes concerned, using such measures of use as those of flow, reservoir capacity, energy consumption, and others as may be applicable.

(2) The separable cost of each purpose is estimated. (In cases of minor importance specific rather than separable costs may be used.)

(3) From total cost of project deduct all separable costs to determine joint (residual) costs.

(4) Joint costs of the multiple-purpose project are distributed among purposes in proportion to the comparable measures of use of the joint facilities estimated in (1).

(5) To determine the cost allocated to each purpose, add the separable and distributed costs for each purpose and, in the case of power, subtract from that sum the amount of taxes foregone which was used in computing power cost under (2) above.

EXHIBIT B

TABLE I.—*Comparison of project cost allocated to hydroelectric power according to the allocation method used* [1]

Project	Total cost	Separable costs-remaining benefits	Alternative justifiable expenditure	Priority of use	Use of facilities	Incremental	Specific costs
		Percent	*Percent*	*Percent*	*Percent*	*Percent*	*Percent*
1. Fort Peck, Mont.	$158,300,000	53.1	55.3	40.0	49.7		25.1
2. Garrison, N. Dak.	295,000,000	55.0	56.9	43.0	52.0		35.2
3. Oahe, S. Dak.	356,800,000	57.9	59.5	46.2	54.8	[2] 51.2	33.1
4. Fort Randall, S. Dak.	195,000,000	71.4	71.6	58.8	69.2		39.6
5. Gavins Point, S. Dak.	53,000,000	82.1	81.9	66.8	82.8		47.7
6. Norfolk, Ark.	28,700,000	65.5	63.5	46.6	72.8	49.0	26.6
7. Table Rock, Ark.-Mo.	68,700,000	76.7	74.6	69.3	81.2	68.8	23.2
8. Bull Shoals, Mo.	76,329,000	56.6	55.8	47.0	65.5	56.2	25.4

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a statement which I have prepared concerning the water resources bill which was introduced by Senator KERR today.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR FULBRIGHT

I am cosponsoring the bill introduced today by Senator KERR to establish a national policy for the development of our Nation's water resources. I have been concerned for many years about the lack of guidance of the Nation's water resources development programs. I know that many other Senators also feel that we are sadly neglecting this important national asset. The terrible floods which occur throughout this country each year furnish graphic evidence of our failure to make our water resources work for us, rather than against us. Recent reports of progress on water developments in Russia and Red China indicate that our antagonists are fully aware of the significance of water projects in developing a nation's economic potentials. Unfortunately, there are many in the Congress, and a large segment of the

public, who look on our rather meager conservation efforts as "pork barrel" politics. Call it what you will, the harnessing of our abundant water resources has proved to be, and will continue to be, the wisest and most profitable domestic program in which our Government participates.

The before and after pictures of the TVA projects should convince the most confirmed skeptic on the latent economic potential in every major river system. The development of the Arkansas River Basin promises to revolutionize in a like manner the economy of Arkansas and Oklahoma. Completion of the Arkansas River program will be one of the most significant economic events in my State's history. My only regret is that the project was not initiated years ago.

I have touched briefly on the importance of water resources projects. I do this in order to emphasize the lack of an explicit congressional policy in this vital area of Government activity. It is almost unbelievable that we do not have statutory policy guides for a coordinated, effective water conservation program. The bill I have cosponsored will fill this void. It puts the Congress firmly on record in support of expanded efforts in the field of water conservation. There will no longer be any doubt as to the intent of Congress on allocation of project costs and the factors to be included in benefit-cost ratios. The bill will halt the Bureau of the Budget's exercise of powers which should only be exercised by the Congress. The Bureau has, by the promulgation of restrictive project-cost criteria, effectively scuttled many needed, worthwhile projects. In a sense, it is only natural that an executive agency would step into the vacuum left by failure to enact a definite congressional policy. The bill will clear away the doubt and uncertainty in this important field and once again put Congress in its rightful position of being the judge of what criteria are to be used in developing our water resources.

In order to refresh the memories of my colleagues, I am listing below some of the restrictions imposed by the Bureau of the Budget in determining project eligibility:

1. The Bureau of the Budget formula prevents use of the incremental method of allocating costs for power facilities. The Bureau's formula fails to recognize that power generation is usually an incidental purpose and only in isolated instances does the Federal Government construct hydroelectric plants, as such. However, the prevailing practice is to allocate project costs to power as if it were a principal purpose and this results in an unfair cost disadvantage for the power aspects.

2. The criteria established by the Bureau require that taxes foregone be substracted from the benefit side of calculations to determine feasibility of power generation. This formula does not take into account the increased tax revenues resulting from general stimulation of the local economy and often results in reducing the benefit-cost ratio of power features below unity. The same directive also makes it mandatory for the construction agency to calculate power benefits based upon the cost of securing alternative power from a phantom Federal steamplant. This is the most unlikely of any alternative which could develop in the project area.

3. The Bureau's formula limits the repayment period for the power generation features to the lesser of 50 years, or useful project life. This is an unrealistic and restrictive provision which results in arbitrarily high power rates. The payout period should be changed to coincide with the useful life of the project.

4. Bureau policy now prevents inclusion of secondary benefits in the benefit-cost ratio. However, the indirect project costs are included. These two provisions seriously impair the validity of project evaluation studies.

Our bill would abolish these restrictions and establish a more realistic policy to guide the agencies concerned with these problems. It is a tragic situation when the Congress stands idly by and lets the Bureau of the Budget assume a life or death power over these projects. I do not profess to be an expert on the intricacies of project data and it is possible that some of the bill's provisions will need to be modified to achieve a bill which will be fair and equitable to everyone concerned. I hope that the bill will at least start some serious thinking about the deficiencies in our present policies. If it serves only as a vehicle for discussions in the Congress, the executive branch and in interested private groups, the bill will have served a good purpose. I hope all Senators will give the bill serious study.

I would like to point out that Representative TRIMBLE, of Arkansas, has introduced a similar bill in the House.

RECOGNITION OF WATER LAWS OF CERTAIN STATES

Mr. CURTIS. Mr. President, on behalf of myself, and my colleague, the senior Senator from Nebraska [Mr. HRUSKA], I introduce for appropriate reference a bill to reaffirm and recognize the water laws of the States lying wholly or partly west of the 98th meridian.

The bill is sometimes known as the State water rights proposal. In the last Congress, it was known as the Barrett bill.

In connection with the introduction of the bill, I ask unanimous consent to have printed at this point in the RECORD Legislative Resolution 23 of the 69th session of the Legislature of Nebraska; and also an editorial entitled "Leave Water Rights to States," published in the Lincoln Evening Journal and Nebraska State Journal of January 31, 1959.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the resolution and editorial will be printed in the RECORD.

The bill (S. 1592) to affirm and recognize the water laws of the States lying wholly or partly west of the 98th meridian, introduced by Mr. CURTIS (for himself and Mr. HRUSKA), was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

The resolution and editorial presented by Mr. CURTIS are as follows:

LEGISLATIVE RESOLUTION 23

Whereas recent decisions of the Federal courts and recent assertions from the U.S. Department of Justice have deprived States and persons of rights which said States and persons previously enjoyed to regulate and control the use of the water in the respective States; and

Whereas said decisions and assertions are further a part of a general pattern developing gradually into Federal supremacy and usurpation over water which, if continued, will destroy individual and State rights over water and substitute in lieu thereof an all powerful centralized government control thereover: Now, therefore, be it

Resolved by the members of the Nebraska Legislature in 69th session assembled—

1. That the Congress and President of the United States and the Representatives of Nebraska in the Congress of the United States be, and they are hereby urged and requested to take all necessary action to (a) preserve the water rights of the individual and the States and to prevent Federal usurpation of those rights; (b) see that legislation is initiated and supported to recognize and protect rights of individuals and States which have been taken from them by the Federal courts and the Department of Justice; and (c) in every way possible, to reaffirm, renew, and defend the concepts that water rights are property rights and that established rights to the use of water, by a State or an individual, should not be taken away without due process of law and adequate compensation.

2. That certified copies of this resolution be promptly transmitted to the President and Vice President of the United States, Speaker of the House of Representatives of the United States, chairmen of the U.S. Senate and House Committees on Interior and Insular Affairs, U.S. Senator ROMAN L. HRUSKA, U.S. Senator CARL T. CURTIS, U.S. Representative PHIL WEAVER, U.S. Representative GLENN CUNNINGHAM, U.S. Representative DONALD F. MCGINLEY, and U.S. Representative LAWRENCE BROCK.

DWIGHT W. BURNEY,
President of the Legislature.

I, Hugo F. Srb, hereby certify that the foregoing is a true and correct copy of Legislative Resolution 23, which was passed by the Legislature of Nebraska in 69th regular session on the 25th day of March 1959.

HUGO F. SRB,
Clerk of the Legislature.

[From the Lincoln Evening Journal and Nebraska State Journal, Jan. 31, 1959]

LEAVE WATER RIGHTS TO STATES

The line between Federal and State rights is always vague and often controversial.

Scientific and social advances necessarily have shifted some activities away from local authority toward Federal management. But in the field of water rights, control clearly must continue to rest with the States.

Legislation to make this point clear will be considered by Congress this year, as it has in several past sessions. Many lawmakers feel this is urgently needed to counter an attitude within the administration, primarily in the Justice Department, that the Federal Government should control the use of water. This view also has been upheld in recent U.S. Supreme Court decisions.

Traditionally, the right to use water has been regarded as a property right, the same as a right to use land. On this basis, water rights seem definitely to belong to the States.

Any change in this concept would play havoc with existing water rights issued by States. Irrigators guard these rights even more diligently than their property.

They are well aware that any tampering with present water appropriations would endanger the whole structure of irrigation. Much of Nebraska's agricultural economy is built on the sanctity of existing water rights.

If the Federal Government should preempt the right of Nebraskans to use water flowing through the State, the agricultural and industrial advantages of a bountiful water supply would be lost. So would a sound principle of governmental authority.

AMENDMENT OF COMMUNICATIONS ACT, RELATING TO APPLICABILITY OF EQUAL TIME PROVISIONS TO NEWS PROGRAMS

Mr. ALLOTT. Mr. President, on February 19 the Federal Communications Commission announced a decision which cannot help but undermine one of our most precious freedoms, freedom of the press. I refer to the so-called Daly Decision, in which the FCC ordered a Chicago television station to provide equal time for a mayoralty candidate because

the current mayor, also a candidate, had been seen on a newscast.

I shall review that case briefly to point up what I believe is a necessary change in the Federal Communications Act.

Late last year Lar Daly announced himself a candidate for both Republican and Democratic nominations for mayor of Chicago. Mr. Lar Daly often has been a candidate, but never a winner. Major candidates in this election were Mayor Richard Daly and Mr. Timothy Sheehan.

During the course of its regular news coverage, television station WBBM–TV, had what it felt to be important aspects of the campaign as a part of its news presentation. This included both of the aforementioned gentlemen filing nomination papers. Also Mayor Daly was shown greeting a foreign dignitary and the mayor and his wife opening the March of Dimes campaign. Mr. President, it is easy to see that these items are normal news stories in the public interest, the latter two nothing more than usual news coverage of Chicago's chief executive.

However, the FCC, by a one-vote majority, decided that this normal news coverage required the station to give equal time to Lar Daly, as a candidate, on a regular newscast.

This interpretation has far-reaching results. First, it abridges radically both the usefulness of radio and television to our society and their freedom as news media. Second, it will necessitate, on the part of the broadcasting industry, a negative approach to the role broadcast journalism plays in our present way of life.

To hold that news coverage must be matched by allotting equal free time to other candidates, even though the original appearance is obviously a part of reasonable coverage of news having general interest for the public, is a crippling decision with respect to broadcast journalism. Although this decision was based on the language contained in section 315(a) of the Federal Communications Act, it seems to me that the scope of the FCC as described in the preamble to that act has been broadened far beyond anything that was contemplated by Congress. The preamble of that act indicates no intention thus to regulate and interfere with the programing of radio and television stations.

Mr. President, in order that my colleagues may better study this statement in light of the passage to which I have referred, I ask unanimous consent that the preamble and section 315(a) of the act be printed in the RECORD at this point in my remarks.

There being no objection, the preamble and section were ordered to be printed in the RECORD, as follows:

SEC. 151. Purposes of chapter; Federal Communications Commission created.

For the purpose of regulating interstate and foreign commerce in communication by wire and radio so as to make available, so far as possible, to all the people of the United States a rapid, efficient, nationwide, and worldwide wire and radio communication service with adequate facilities at reasonable charges, for the purpose of the national defense, for the purpose of promoting safety of life and property through the use of wire and radio communication, and for the purpose of securing a more effective execution of this policy by centralizing authority heretofore granted by law to several agencies and by granting additional authority with respect to interstate and foreign commerce in wire and radio communication, there is created a commission to be known as the "Federal Communications Commission," which shall be constituted as hereinafter provided, and which shall execute and enforce the provisions of this chapter.

SEC. 315. Candidates for public office; facilities; rules

(a) If any licensee shall permit any person who is a legally qualified candidate for any public office to use a broadcasting station, he shall afford equal opportunities to all other such candidates for that office in the use of such broadcasting station: *Provided*, That such licensee shall have no power of censorship over the material broadcast under the provisions of this section. No obligation is imposed upon any licensee to allow the use of its station by any such candidate.

Mr. ALLOTT. Mr. President it will be noted that nowhere is such stringent, unnecessary regulation contemplated.

The dissemination of news is essential to an informed public. Only by this means can the American people form intelligent opinions and express their views which are ultimately effected in what we do in this body and in the other House.

To this end, the widest possible dissemination of differing political points of view serves a most useful purpose. To say, however, that the incidental appearance on a news broadcast of a political candidate requires identical coverage for other candidates deprives the broadcaster of the right to make his own decision. The practical effect can only be to eliminate coverage of political campaigns by radio and TV.

There can be no argument that freedom of the press, as described in the first amendment, means freedom to exercise judgment as to what is the news and the way in which it will be reported. The broadcaster must be given latitude in judgment and discretion in the day-to-day operation of his station.

The policy inherent in this decision, were it maintained on a broad basis applicable to all news media, would make democracy unworkable as we know it. Shall we demand equal space in newspapers on a word-for-word basis each time a rival candidate is mentioned? Must we insist upon picture-for-picture in our newspapers and magazines each time reasonable coverage of the news includes a photograph of a candidate for office? Would we be correct—legally and morally—in using the second-class postal privileges extended to newspapers as an excuse for unwarranted jurisdiction over equality of coverage in their editorials and regular news coverage? I think not.

Mr. President, the February 19 decision by the FCC made it impossible for the broadcaster to take full advantage of his own technical capabilities. It will reduce drastically the amount of news accorded the public about election campaigns. Such broadcast news coverage as that to which we have become accustomed will be in grave danger of disappearing. This is because the so-called equal-time provision of the act has been interpreted as applying not to just candidates for Federal office, but candidates for any elective office at all. It will apply, apparently, to actions of an official—in his official capacity—whenever he becomes again a candidate. It would mean a virtual blackout of public activities, as well as political activities, during a campaign period.

Judgments as to the newsworthiness and the means of presenting newsworthy events concerning candidates will not be made on a news-value basis. They will have to be made with an eye to the amount of time which must be given the candidate's opponents, present and potential.

Mr. President, it is my opinion that such decisions should be based upon the honest judgment of radio and television broadcasters weighing only the newsworthiness of the story or individual concerned, without his being saddled with obligations ad infinitum to other candidates. Responsibility and freedom go hand in hand, and I believe that our American broadcasters are mature enough to carry out their obligations in this regard.

Let me say here that I have no desire to abridge the considerable equal time rights now enjoyed by all candidates. They are safeguarded. Nor do I have any desire to establish some electoral system of prejudgment and and exclusion by our broadcasters. They would, I am sure, be the first to reject such an arrangement. Deeply ingrained in the nature of these men is the American sense of fairplay. And they must answer to an ever-present conscience in the voice of the public.

The bill which I offer today, Mr. President, is designed to make clear the intent of Congress with respect to section 315 (a) of the act. That intent is not to prevent a broadcaster from exercising his judgment in determining the newsworthiness of a story based upon what additional time commitments will be forced upon him. I ask that my colleagues join me in assuring our broadcasting journalists—and the public as well—that we shall permit unfettered news coverage of all aspects of our American way of life, election campaigns included.

I ask unanimous consent that the bill be printed at this point in the record.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1604) to amend the Communications Act of 1934 to provide that "equal time" provisions shall not apply to news programs, introduced by Mr. ALLOTT, was received, read twice by its title, referred to the Committee on Interstate and Foreign Commerce, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 315 (a) of the Federal Communications Act is amended to read as follows:

"SEC. 315. (a) If any licensee shall permit any person who is a legally qualified candidate for any public office to use a broadcasting station, he shall afford equal

opportunities to all other such candidates for that office in the use of such broadcasting station: *Provided*, That such licensee shall have no power of censorship over the material broadcast under the provisions of this section. No obligation is hereby imposed upon any licensee to allow the use of its station by any such candidate. Appearance by a legally qualified candidate on any news program, including news reports and news commentaries, where the format and production of the program are determined by the broadcasting station, or by the network in the case of a network program, and the candidate in no way initiated the recording or the broadcast, shall not be deemed to be use of a broadcasting station within the meaning of this subsection."

COMPACT BETWEEN STATES OF KANSAS AND NEBRASKA RELATING TO WATERS OF BIG BLUE RIVER

Mr. HRUSKA. Mr. President, on behalf of myself, the Senators from the State of Kansas [Mr. CARLSON and Mr. SCHOEPPEL], and my colleague, the junior Senator from Nebraska [Mr. CURTIS], I introduce, for appropriate reference, a bill having for its purpose the granting of congressional consent to the States of Kansas and Nebraska to enter into the negotiation of a compact with respect to the waters of the Big Blue River and its tributaries, including the Little Blue River.

The Big Blue flows in a southeasterly direction, leaving the State of Nebraska in Gage County and entering Kansas in Marshall County. The Little Blue likewise flows in a southeasterly direction, leaving the State of Nebraska in Jefferson County and entering Kansas in Washington County.

It appears desirable at this time for the two States to begin negotiations looking toward an apportionment of the waters of these streams so that they may be developed in an orderly manner and without controversy between the States.

The Governors of both States, according to information received here, are in favor of this step being taken. The Kansas Water Resources Board is reported to have taken action at its March 9 meeting approving the text of the bill, and His Excellency Governor Docking, of Kansas, is reported to support the bill in its present form.

Mr. Dan S. Jones, Jr., director of water resources for the State of Nebraska, likewise supports this proposed legislation and has reported to the Senator from Nebraska that His Excellency Gov. Ralph G. Brooks, of Nebraska, concurs in this approach toward effecting apportionment of these streams between the States.

As the text of the bill indicates, no compact, the negotiation of which is authorized by this act, shall be binding upon the parties thereto until it has been ratified by the legislatures of each of the respective States, and approved by the Congress of the United States.

Mr. President, the leadership of both States is to be commended for their vision in taking this timely action which will have a heavy and vital impact upon the future water history and uses of these two neighboring States.

This is another example of the splendid working relationship which has existed between Kansas and Nebraska. It pleases me a great deal to be instrumental in this small way toward putting in concrete form this further evidence of the spirit of cooperation and mutual helpfulness.

Mr. President, I ask unanimous consent that the text of the bill, which is brief, be printed in the CONGRESSIONAL RECORD at this point in my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1605) granting the consent of Congress to the States of Kansas and Nebraska to negotiate and enter into a compact relating to the apportionment of the waters of the Big Blue River and its tributaries as they affect such States, introduced by Mr. HRUSKA (for himself, Mr. CARLSON, Mr. SCHOEPPEL, and Mr. CURTIS), was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the consent of Congress is hereby given to the States of Kansas and Nebraska to negotiate and enter into a compact relating to the interests of such States in the waters of the Big Blue River and all its tributaries, and providing for an equitable apportionment between said States of the waters of the Big Blue River and its tributaries and for matters incident thereto: *Provided*, That one qualified person appointed by the President of the United States shall participate in such negotiations as Chairman, representing the United States, and who shall make a report to the President and to the Congress on the proceedings and on the compact. No compact, the negotiation of which is authorized by this Act, shall be binding upon the parties thereto until it has been ratified by the legislatures of each of the respective States, and approved by the Congress of the United States.

SEC. 2. There is hereby authorized to be appropriated a sufficient sum to pay the salary and expenses of the representative of the United States appointed hereunder: *Provided*, That such representative, if otherwise employed by the United States, shall not receive additional salary for services performed in connection with the compact negotiations authorized herein.

AMENDMENT OF FEDERAL RESERVE ACT TO PROVIDE AN ADDITIONAL FEDERAL RESERVE DISTRICT

Mr. CARROLL. Mr. President, I introduce, for appropriate reference, a bill to amend the Federal Reserve Act to provide for an additional Federal Reserve district. I ask unanimous consent that the bill may lie on the desk until the close of business on Friday, April 10, in order to give other Senators the opportunity to cosponsor it if they so desire.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will lie on the desk, as requested by the Senator from Colorado.

The bill (S. 1607) to amend the Federal Reserve Act to provide for an additional Federal Reserve district, introduced by Mr. CARROLL, was received, read twice by its title, and referred to the Committee on Banking and Currency.

DESIGNATION OF MEMORIAL DAY, 1959, AS A NATIONWIDE DAY OF PRAYER FOR PEACE

Mr. KEATING. Mr. President, I introduce, for appropriate reference, a joint resolution requesting the President to issue a proclamation designating Memorial Day, 1959, as a day for a nationwide prayer for peace.

Especially in these days of one world crisis after another, and ominous rumblings and threats of war from all corners of the globe, the desire for peace is uppermost in the minds of all Americans. Nearly all our citizens, regardless of faith or creed, realize that religion is one of the cornerstones of our Nation. Indeed, it was our forefathers' desire to worship freely that caused them to leave their homes and cross the seas to found a new country. Because of their willingness to fight and die for their beliefs, this right to freedom of religion is guaranteed us in the Constitution.

People of all religious faiths also realize and believe in the power of prayer. Thus I think that it is fitting to authorize the President to lead the way and issue this proclamation in order to encourage all our people to pray for peace.

Mr. President, I ask unanimous consent that the joint resolution be printed in the RECORD, and that the joint resolution lie on the desk through Tuesday, April 14, in case other Senators desire to join in sponsoring it.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred; and, without objection, the joint resolution will be printed in the RECORD, and lie on the desk, as requested by the Senator from New York.

The joint resolution (S.J. Res. 87) requesting the President to issue a proclamation designating Memorial Day, 1959, as a day for a nationwide prayer for peace, introduced by Mr. KEATING, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is authorized and requested to issue a proclamation calling upon the people of the United States to observe Memorial Day, 1959, by praying, each in accordance with his religious faith, for permanent peace, designating a period during such day in which all the people of the United States may unite in prayer for a permanent peace; calling upon all the people of the United States to unite in prayer at such time; and calling upon the newspapers, radio stations, and all other mediums of information to join in observing such day and period of prayer.

AMENDMENT OF FEDERAL RESERVE ACT, RELATING TO CERTAIN RESERVES—AMENDMENT

Mr. BUSH. Mr. President, I submit an amendment to S. 1120, the bill relating to Reserve requirements for member banks of the Federal Reserve System,

which would eliminate from the Federal Reserve Act and other banking laws the classification "central Reserve city," and reclassify New York and Chicago as Reserve cities.

Mr. President, I ask that the amendment lie at the desk through Friday of this week so that other Senators may join as cosponsors if they so desire.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BUSH. Mr. President, I also ask unanimous consent that a statement in explanation of the amendment be printed in the RECORD, following these remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BUSH. Mr. President, I submit the amendment.

The PRESIDING OFFICER. The amendment will be received and appropriately referred; and, without objection, the amendment will be printed in the RECORD.

The amendment was referred to the Committee on Banking and Currency, as follows:

On page 1, in line 4, strike out "provisos" and insert "proviso"; in line 5, strike out "and fifth paragraphs" and insert "paragraph"; in lines 5 and 6, strike out "and (c), respectively"; in line 7, strike out "each"; in line 8, strike out "fifth" and insert "fourth."

On page 2, lines 6, 7, and 8, strike out "and a member bank in a central Reserve city may hold and maintain the reserve balances specified in paragraph (a) or (b) above."

On page 2, strike out lines 15 through 19, and insert the following:

"SEC. 2. (a) Section 19 of the Federal Reserve Act is amended by striking out the fifth paragraph, lettered '(c)'."

On page 2, line 21, after "amended" insert the following:

"(i) by striking out '(1) by member banks in central Reserve cities or (2) by member banks in Reserve cities or (3) by member banks not in Reserve or central Reserve cities or (4) by all member banks' and inserting in lieu thereof '(1) by member banks in Reserve cities or (2) by member banks not in Reserve cities or (3) by all member banks' and (ii)."

On page 2, after line 23, insert the following:

"SEC. 3. (a) New York and Chicago are hereby reclassified as Reserve cities.

"(b) The classification 'central Reserve city' and the authority of the Board of Governors of the Federal Reserve System to classify or reclassify cities as 'central Reserve cities' is terminated.

"(c) All references in the Federal Reserve Act, in the National Bank Act, and in any other Federal statute to central Reserve cities shall be deemed to be and shall be treated as reference to Reserve cities."

Amend the title so as to read: "A bill to amend the National Bank Act and the Federal Reserve Act with respect to the reserves required to be maintained by member banks of the Federal Reserve System against deposits and to eliminate the classification 'central Reserve city'."

The statement presented by Mr. BUSH is as follows:

STATEMENT BY SENATOR BUSH

This amendment will eliminate a discrimination under which New York and Chicago are now suffering, requiring them to carry more reserves against their deposits than banks in the 49 Reserve cities. The historic reasons for this discrimination ceased in 1917, and it is high time that we ceased the discrimination.

The Federal Reserve Board has recommended a bill which was introduced by the chairman of the committee and the ranking Republican and Democratic members as S. 1120. One of the purposes of the bill expressed by the Federal Reserve Board was to permit moving toward a more equitable and rational structure of reserve requirements. As part of this program the Board proposed reducing the range within which it could set reserve requirements in central Reserve cities from the present 13–26 percent down to 10–20 percent, the range now applicable to Reserve cities. However, the Board would not have abolished the central Reserve city classification. The Board would still be permitted to establish a higher reserve requirement for central Reserve cities than for Reserve cities. This is now the case. Banks in central Reserve cities are required to maintain 18 percent of their deposits as reserves, while banks in Reserve cities are only required to keep 16½ percent of their deposits as reserves. This 1½ percent differential means that central Reserve city banks in New York and Chicago must keep some $400 million of reserves in their Federal Reserve banks which they would have available for lending if they were subject to the same reserve requirements as Reserve cities.

The original reason for the central Reserve city classification, under the National Bank Act, was that banks in Reserve cities were permitted to keep a portion of their reserves in banks in central Reserve cities. This made classification as a central Reserve city a real asset to that city's banks, and St. Louis and Chicago both voluntarily became central Reserve cities shortly after 1887, but after 1917, all member bank reserves had to be kept in the appropriate Federal Reserve bank, and classification as a central Reserve city became only a handicap. St. Louis was able to escape from the classification in 1922 by reclassification as a Reserve city. New York and Chicago, however, have not been successful either in escaping from the classification or in having the reserve requirements of the classification placed on a par with the reserve requirements of the Reserve cities. Consequently, they still suffer from a handicap imposed for a reason which has been an anachronism since 1917.

It is not the purpose of my amendment simply to increase member bank reserves. If this were its only purpose, it would be inflationary, and this I should oppose as much as the Federal Reserve Board would oppose it. But the Federal Reserve Board can take other action, for example, through open market operations, to offset any possible inflationary effect which this amendment might have.

The sole purpose of my amendment is to eliminate the discrimination under which central Reserve city banks in New York and Chicago have been suffering for many years.

NATIONAL MINING AND MINERALS POLICY—ADDITIONAL COSPONSORS OF BILL

Under authority of the order of the Senate of March 25, 1959, the names of Senators BARTLETT and GRUENING were added as additional cosponsors of the bill (S. 1537) to establish a national mining and minerals policy, introduced by Mr. ALLOTT on March 25, 1959.

STABILIZATION OF PRODUCTION OF LEAD AND ZINC—ADDITIONAL COSPONSORS OF BILL

Under authority of the order of the Senate of March 25, 1959, the names of Senators CHURCH, BARTLETT, and GRUENING, were added as additional cosponsors of the bill (S. 1538) to stabilize production of lead and zinc from domestic mines, introduced by Mr. ALLOTT on March 25, 1959.

HOME GARDEN PROGRAM FOR NEEDY FAMILIES—ADDITIONAL COSPONSORS OF BILL

Under authority of the order of the Senate of March 25, 1959, the names of Senators BYRD of West Virginia, DOUGLAS, HUMPHREY, and RANDOLPH were added as additional cosponsors of the bill (S. 1561) to establish a home gardening program to assist needy persons in supplementing their food supplies, introduced by Mr. COOPER, on March 25, 1959.

CONSUMERS ACT OF 1959—ADDITIONAL COSPONSORS OF BILL

Under authority of the order of the Senate of March 26, 1959, the names of Senators RANDOLPH and O'MAHONEY were added as additional cosponsors of the bill (S. 1571) to establish a Department of Consumers in order to secure within the Federal Government effective representation of the economic interests of consumers; to coordinate the administration of consumer services by transferring to such department certain functions of the Department of Health, Education, and Welfare, the Department of Labor, and other agencies; and for other purposes, introduced by Mr. KEFAUVER (for himself and other Senators) on March 26, 1959.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. KUCHEL:

Address entitled "A Republican Challenge: Keeping Ours the Party of Freedom," delivered by him before the Wayne County Republican Central Committee, at Detroit, Mich., on April 2, 1959.

By Mr. KENNEDY:

Article entitled "A Voice for the Cities," written by Senator CLARK, and published in the Nation of March 7, 1959.

By Mr. JAVITS:

Correspondence between himself and the Office of Civil and Defense Mobilization regarding problems of civil defense in event of a nuclear war.

NOTICE OF HEARING ON NOMINATION OF J. GRAHAM PARSONS TO BE ASSISTANT SECRETARY OF STATE

Mr. FULBRIGHT. Mr. President, as chairman of the Committee on Foreign Relations, I desire to announce that the Senate today received the nomination of J. Graham Parsons, of New York, to be an Assistant Secretary of State, vice Walter S. Robertson, resigned.

In accordance with the committee rules, the pending nomination may not be considered prior to the expiration of 6 days.

NOTICE OF RESUMED HEARINGS ON CIVIL RIGHTS

Mr. JOHNSON of Texas. Mr. President, the chairman of the Senate Judiciary Committee's Subcommittee on Constitutional Rights [Mr. HENNINGS] has asked me to announce that, following the Senate recess for Easter, public hearings on pending Federal civil-rights proposals are being resumed on Wednesday morning, April 8, 1959, at 10 a.m. in room 318—the caucus room—of the Old Senate Office Building, in Washington, D.C.

Organizations and individuals interested in testifying or in filing statements for the RECORD should communicate, preferably in writing, with the office of the subcommittee.

NEEDED: AGGRESSIVE DIPLOMACY, TEMPERED BY REASON, IN DEALING WITH THE KREMLIN ON THE BERLIN CRISIS

Mr. WILEY. Mr. President, we recognize that in the days ahead the world—particularly the free world—will be faced with serious decisions that may well affect our security both now and in the future.

In attempting to deal with the Communist efforts at world aggression, particularly as regards the Soviet-created crisis in Berlin, we need, I believe, aggressive diplomacy, tempered by reason, in attempting to find a solution not only to the problems relating to Germany, but also to the general lessening of East-West tensions. The Berlin crisis, especially, presents a real challenge.

Recently the Western Alliance, through its NATO meetings, has again examined the Allied position, and has found it constructed upon a solid foundation of principle, reason, honor, justice, and the best interests of the people involved, including their right to freedom.

By contrast, it is again evident that the Soviet policy toward Berlin, first, is based on violation of—not adherence to—its international agreements.

Second. It shows a disinterest in protection of the rights of the people involved, and aims only at furthering the efforts of the Communists toward gaining control of more land and people. The Kremlin is, of course, particularly anxious to erase West Berlin as the showplace of the free world's progress which is embarrassing to the Communists in the face of their lack of progress in providing good things in life for their people.

Third. The Soviet policy is without justification, either by law, principle, reason, or on the grounds that it would lessen tension and promote peace in Europe; rather, it is aimed only at the enslavement of more people, including the 2 million West Berliners, to communism.

TIME FOR PEACE TREATY

We recall that Khrushchev has reminded us that 14 years after the cessation of World War II, it is high time for a peace treaty. This is true. However, it should be made clear that it is the Soviet Union, not the Western Alliance, which has obstructed a solution of the German problem and adoption of a peace treaty.

The creation of the German "Undemocratic" Republic in East Germany by the Soviet Union—contrary to its post-World War II agreements—has erected the major obstacle to settlement of German unification, to writing a peace treaty, and to a solution of related German questions, including a lessening of East-West tensions on the European Continent.

In referring to East Germany, I use the term German "Undemocratic" Republic advisedly—but, I believe, correctly—since the Soviet Union has opposed, and continues to strongly oppose, free elections in the "puppetized" area.

In view of Mr. Khrushchev's "holier than thou" attitude in urging a peace treaty with Germany, it would seem pertinent to revive the question of when the Soviet Union will release its despotic grip on the orbit nations of Poland, Hungary, Rumania, Czechoslovakia, Bulgaria, and other countries.

While the outlook apparently is not for early freedom for these nations, it would be well to reaffirm that the West has not "written them off" forever to the Kremlin—for use in furthering its goals of world domination by communism.

AGREEMENT ON FREE WORLD OBJECTIVES

Fortunately, the NATO nations have found it possible to agree upon general principles and objectives for dealing with the Berlin crisis.

We recognize, of course, that there may be different views on just how, in detail, these objectives can be attained. Despite this, however, I believe the Allies can and will develop a constructive set of plans to present to the May 11 conference of East-West Foreign Ministers.

The Western proposals, of course, will be discussed further in the working conference scheduled for London on April 13, and the Western Foreign Ministers' meeting set for April 29 in Paris.

The wide range of issues contributing to East-West tension that may well be examined include:

First, the status of West Berlin, including protection of the freedom of the 2 million West Berliners and the right of access to Berlin by the Allies;

Second. Possible reduction of armed forces in Europe;

Third. Efforts toward agreement on a possible ban on nuclear testing, accompanied by safeguards to prevent sneak attacks;

Fourth. Efforts toward reunification of Germany, including, for example, possible working-level negotiations between East and West on such things as free communications, trade relations, cultural exchanges, and similar points of contact. Once under way, these negotiations might then go on to other more important areas. Although the current outlook for free elections is extremely dim, this must, of course, continue to be an essential goal for the ultimate reunification of Germany.

These, and related problems, will present a real challenge.

MAY 11 CONFERENCE MUST SHOW PROMISE

As the Western Allies attempt to formulate constructive proposals on these and other areas of East-West tensions. it is again important to stress—as the President has emphasized—that the May 11 conference of East-West Foreign Ministers must, indeed, show real promise of progress toward agreement on crucial issues, if a summit conference is to be agreed upon. This should include, among other things, a demonstration by the Soviet representatives that they are ready and willing to negotiate realistically for a peaceful solution of the involved problems. In the past, we have experienced that they stubbornly stick to only proposals which would further the Communist aims without really contributing to the settlement of the questions involved, or to peace.

In the search to find grounds for agreement with the Soviets, we must be careful not to lose sight of our basic rights, as well as obligations, in relation to Berlin.

The right of access by the Allies to West Berlin was based on post-World War II agreements among the wartime Allies, including Russia, for enforcing the surrender terms on Nazi Germany.

The attempts by the Soviets to abrogate their obligations under the agreements, as well as to undermine the rights of the Allies to be in Berlin, are, in effect, in violation of international law.

The right of the three powers to free access to Berlin is not a privilege bestowed by the Soviet Union upon the Western Powers; rather, it is an essential part of their rights of occupation. The Soviet Union accepted its zone of occupation subject to these rights of access.

The Soviets' efforts to interfere with the Allies' carrying out their obligations in West Berlin, or the Soviets' threat to turn over authority to the East German puppet government—which, of course, would only be a facade—are completely unjustifiable.

In adhering strongly to its stand-firm position—sometimes criticized for its inflexibility—the West need not apologize. Acting on a solid foundation of right and justice, we can, and must, rather, adopt a policy of aggressive diplomacy, tempered with reason, and forge ahead to attain our justifiable goals through reasonable ways and means.

The forthcoming East-West Foreign Ministers Conference—and, if all goes well, a summit conference—will involve presenting our case, not only to the Soviets but to the whole world.

BERLIN PICTURE IN PERSPECTIVE

We recognize, of course, that the Berlin crisis is only one scene in the global theater in which the Communists are making dramatic and dangerous efforts to extend their sphere of influence.

In Iraq, in Tibet, and other areas, the Communists are attempting to carry forward—by persuasion, by coercion, by death—their aggressive aims.

The resolution of the Berlin crisis—to whatever degree this is possible—would, of course, lessen tensions on the European Continent. However, we must gird ourselves for a long-term struggle on all fronts to cope with continuous expansionist efforts by communism around the globe for years to come.

SAVING OF FORESTS AND NATURAL RESOURCES OF KLAMATH INDIAN RESERVATION, OREG.—ARTICLE BY SENATOR NEUBERGER

Mr. MURRAY. Mr. President, our good friend, the junior Senator from Oregon [Mr. NEUBERGER], has written an illuminating article for the April 1959, issue of Harper's magazine, under the title "How Oregon Rescued a Forest."

The article describes the long struggle to prevent the pine forests, waterfowl marshes, watersheds, wildlife, and other natural resources of the great Klamath Indian Reservation from being looted and liquidated. This reservation is located in southeastern Oregon.

As chairman of the Senate Committee on Interior and Insular Affairs, I was glad to participate with Senator NEUBERGER and others in bringing about this successful result.

I know that other Members of the Senate will be interested in the article by the junior Senator from Oregon published in the current issue of Harper's magazine, and I ask unanimous consent, Mr. President, that it be printed in the body of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW OREGON RESCUED A FOREST

(By RICHARD L. NEUBERGER, U.S. Senator from Oregon)

(An unexpectedly happy ending to the story of a blunder which almost ruined a tribe of Indians, a State's lumber industry, and one of the few remaining natural beauty spots of the west coast.)

The Klamath Indians of southeastern Oregon—like most American Indian tribes—have an old history of sorrow. During the first years of the Eisenhower administration, the Klamaths seemed fated for new disaster—not only to themselves but to the whole State of Oregon. But their story has turned into one of the few almost-bright chapters in what former Secretary of the Interior Douglas McKay caustically called the Indian business. The turn came last summer, at the end of the 85th Congress, when a group of stouthearted Republicans and Democrats joined forces in a rare bipartisan action to conserve our natural resources.

In 1954 Congress had passed a bill terminating the reservation status of the Klamath people, and in due order the Klamaths, numbering some 2,133 men, women, and children, voted by a 77 percent majority to withdraw from the tribe and take, each and every one, his share of the assets. According to a surprise provision of the Federal bill, every Klamath could collect $58,000 in cash. A family of four might end up with almost a quarter of a million dollars, snugly secure from income tax.

Yet these claims, totaling nearly $120 million, would not only destroy by auction sale one of the world's great forests of Ponderosa pine and endanger a precious and rare waterfowl refuge; they would beggar the timber economy of the State of Oregon. What termination might do to the Klamath people themselves was summed up by Elnathan Davis, stern-faced secretary of the tribal council, 1 of the 23-percent minority who voted to remain in reservation status:

"It'll be like throwing a steak to the dogs. Too few of us are prepared to handle these things. The money might do us a lot more harm than good."

As matters now stand, the Klamaths will still get their money, for good or for ill, but the forests and the wildlife will be guarded by and for the American people. Here is how it happened.

When Douglas McKay was appointed as the first head of the Interior Department under the Eisenhower administration, one of his declared objectives was to commence the process of ending Federal trusteeship over the country's 350,000 Indians. This obligation was costing the Treasury at least $150 million annually. Opinions on the effectiveness of the reservation system were, to say the least, sharply divided. It made good political propaganda, along orthodox Republican lines, to be shutting down so expensive an undertaking.

Furthermore, many Indian tribes seemed to be deteriorating under this benevolent paternalism. Alcoholism was on the rise, the general level of education often on the wane. Indians, especially reservation Indians, were rarely able to share in the increased living standards and economic activity which had benefited so many Western States. Indeed, Robert W. Chandler, editor of the Bend, Oreg., Bulletin, had said of the Klamaths themselves that only 16 had graduated from high school during a 13-year period, and but 1 of these had gone on to college. "This is the fault of the system imposed upon the Indians many years ago by the Federal Government, which is their guardian," Chandler added.

The original Klamath termination bill looked innocent enough. It provided for a long, orderly period in which the Klamaths would be prepared for life in the outside world, beyond the stately tree-stockaded reservation. No specific plan for managing the assets of the tribe could be put into effect until approved by the Government. Presumably a private trust, overseen by some responsible bank, would replace the Bureau of Indian Affairs as supervisor of the property—nearly a million acres—which the Indians had been given at carbine point by treaty with their blue-clad cavalry conquerors in 1864.

But, at the 11th hour during consideration of the termination bill, there was unobtrusively slipped into the legislation a provision allowing any tribal member to claim his proportionate share of the value of the reservation. Records of Senate and House committees leave amazingly vague exactly how this clause got into the bill. Some of us have always suspected that certain lumber operators, eager for a quick financial killing, knew about its origin. A greater mystery is why the Interior Department let the President of the United States sign a piece of legislation which had been so drastically transformed in character without any real explanation on the floor of either Chamber of Congress—legislation, too, which held the fate of more than $100 million worth of Indian tribal property.

After President Eisenhower had approved this dubious law, a survey by the Stanford Research Institute revealed that over three-fourths of the members of the Klamath Tribe would elect to withdraw from the tribe under the moot provision and take their cash. But cash could result only if the trees were sold, and speedily. All at once, the timber economy of southeastern Oregon faced the ugly prospect of boom and bust. And it would not be boom and bust for a few years. It would be for keeps.

THE HIDDEN WEALTH OF THE INDIAN FOREST

In the Klamath Basin, many of the Ponderosa pines are as tall as 20-story office buildings, 6 feet in diameter. To stand in a grove of Ponderosas is like being among the Corinthian columns of some cosmic temple. Because of careful management by trained foresters of the Indian Bureau, the prodigious Indian forest had survived in a region where much of the other privately owned timber had long since vanished. Over the years logging operators bidding competitively on the stumpage, had taken 4.6 billion board-feeet of finest-quality pine off the reservation. This was enough lumber to house all the residents of the Pacific coast metropolises of San Francisco, Portland, and Seattle. Each tribal member collected $1,100 annually, tax free, from the sale of this timber. Yet prudent harvesting of only the ripe and mature trees had left some 4.2 billion board-feet of pine still standing. Patrolled by the same wise policies, 80 million feet of logs could have been taken off the Indian reservation each year in perpetuity, keeping Oregon sawmills in operation and Oregon lumberjacks on the payroll. Their paychecks would ring the cash registers of merchants in Klamath Falls, Bend, Medford, and other nearby communities.

But now this had come to an apparent end. With at least 75 percent of the Klamaths pulling up stakes from the tribal society, a minimum of 3.3 billion feet of the Ponderosa forest had to be liquidated virtually overnight to satisfy the legal claims of the withdrawing Indians. Oregon's lumber market was already as shaky as aspic because of the adverse impact of stiffening interest rates on the national demand for housing. Unemployment in Oregon had led the country during the previous 3 or 4 years. Now, the dumping of 3.3 billion board-feet of Indian timber could break apart a depressed lumber industry. A few opportunist operators might get the Indian forest for a song, because genuine competitive bidding would be practically out of the question when 40 times the normal annual cut was put up for sale in one frantic grab.

But these operators would be the sole beneficiaries. Dr. Richard E. McArdle, chief of the U.S. Forest Service, pointed out that the flooding of the market could cost nearby national forests in Oregon and northern California some $49.7 million in stumpage receipts. Inasmuch as one-fourth of this amount—about $12.4 million—would ordinarily have been allocated for the financing of schools and roads in 10 counties, the chaos might thread all the way down into the classroom and ranch turnpike.

Nor did even this begin to encompass all the possible ravages to the region. The Klamaths' preserve is contiguous to Crater Lake National Park, although five or six times the size of that majestic mountain wonderland. For epochs the high Indian forest had soaked up rain and snow like a sponge, letting it run off gradually into Upper Klamath Lake, largest in Oregon, and through the gorges and canyons of many roaring rivers. The water sustained a huge 303,000-acre irrigated agricultural economy of potatoes, alfalfa, and diversified row crops. The Williamson River was unparalleled for trout fishing, and the Klamath River nurtured the important hydroelectric plants of the California-Oregon Power Co. in both States. With the stripping bare of the Indian pine forest, all these beneficial uses could be imperiled by a shortage of water. The rhythmical capillary flow of the drainage from the uplands would be replaced by flash floods—and then choking drought.

The Indian reservation also contained the continent's most intensively used waterfowl marsh outside the refuge systems of the wildlife services of the United States and Canada. Such protection had never been essential as long as it sprawled within the cordon of safety assured by the Indian reservation. Eighty-five percent of the birds traveling the Pacific flyway nested and fed on this fabulous marsh. I have seen redheads, canvasbacks, ruddies, and mallards rising from off its glistening surface in undulating waves that made the heart beat faster. But if the reservation had to be liquidated financially in order to pay each migrating Klamath $58,000, it was obvious that the marsh would no longer serve as a sanctuary for waterfowl. Peripatetic ducks

and geese carry no wallets. Millions of nomadic birds, finding their nesting place drained for grazing purposes or farmland, might be driven by hunger to foraging on fields and crops. The inevitable out-of-season slaughter by growers would be bloody, and when would the birds come again—if ever?

It was obvious that somebody had goofed, and that somebody had to be the Government of the United States—Interior Department, Senate, House, and President.

A SUDDEN REVERSAL

Amid the mounting anxiety, a thunderclap sounded. Secretary McKay had appointed three of his personal friends, all staid and reliable Republican businessmen, to handle the liquidation of the Klamath Reservation at a salary of $1,000 monthly apiece. Now the chairman and dominant member of the three, 68-year-old Thomas B. Watters, of Klamath Falls, imperturbably announced there was only one solution. The Government itself had to buy the Klamath Indian Reservation, and fast. Then the marsh could be made a game refuge, and the timber could be harvested under the same perpetual-cutting practices which had successfully guided the operation of the reservation for so many years. Any other alternative, added Watters, would result in an economic disaster for our area that is too disturbing to contemplate.

Oregon was stunned. With much fanfare, termination of Government supervision over the Klamaths had been heralded as a tremendous victory for free enterprise. Immense sections of land—formerly under the quasi-public status of the reservation—of course would be placed on the taxrolls as private timber holdings. The Government would be saved millions in congressional appropriations. The Indian Agency office could be permanently closed. What finer way to please Senator BYRD, then Secretary of the Treasury Humphrey, and the Hoover Commission in one fell stroke?

Yet Secretary McKay's handpicked appointee was proposing that the Government reverse the whole procedure and add the entire reservation to the already extensive Federal holdings in Oregon—with the U.S. Treasury, of course, footing the bill. For many decades, conservatives in Oregon politics had made a lively issue of the fact that the Federal Government owned half the land area of the State. But here was the former Republican mayor of Klamath Falls warning that this Government domain had to be increased, or the direst of calamities would occur.

DELAYING THE AUCTION

"At first we thought Tom Watters might be touched in the head," I was told by Frank Jenkins, exuberant and forceful publisher of the Klamath Falls Herald and News. "Yet the more we studied the situation from every possible angle, the more we saw he was entirely right. The clear cutting of the Indian forest would have been a monstrous catastrophe for our State. But who could prevent it except the Government?"

And so I introduced a bill early in 1957 to provide for Federal purchase of the Klamath Reservation, with the funds to be used for reimbursement of the 77 percent of the Klamath tribal members who wanted to leave their traditional bivouac grounds. The pine timber would be added to nearby national forests, for sustained-yield management by the Forest Service. The marsh would become a refuge supervised by the Fish and Wildlife Service. In the meanwhile, as chairman of the Senate Indian Affairs Subcommittee, I had secured passage of an emergency measure delaying, until August of 1958, the time when the timber and the waterfowl marsh had to go on the auction block to satisfy the claims of withdrawing Indians. We had that much elbow-room in which to save vast watersheds and natural resources in southeastern Oregon. The patient Klamaths had agreed to the delay. Their sympathy with the white man's plight was truly heroic.

A dilemma was posed for Secretary McKay's successor at the head of the Interior Department, Fred A. Seaton. He could not allow destruction of the Indian marsh, forest, and uplands. Yet he hesitated to repudiate his predecessor's position completely. So Mr. Seaton, with the collaboration of the Agricultural Department, recommended an alternative to my bill. In essence it was this:

The Indian timber first would be offered for sale in huge blocks to private mills, at competitive bids. The successful buyers would have to agree to pay an appraised price which would be fair to the Indians, and also to cut the timber under strict Government supervision. This, of course, would mean that sustained-yield policies would keep the yearly cut in balance with new growth. Any timber not bought by private operators by April of 1961 would be purchased by the Government and turned over to the Forest Service as national forest land. Under this proposal, the marsh would become a wildlife sanctuary.

MY BILL "BY REQUEST"

Now the dilemma was mine. If I insisted on my own bill and it bogged down in a partisan political debacle, the economy of my native State would suffer grievously. I desperately needed the unified backing of all my colleagues on the Indian Affairs Subcommittee if we were to have any chance of success with the Senate as a whole. And if only one or two large blocks of Indian timber were purchased privately under the Interior Department's bill, its total cost would be $90 million as contrasted with $120 million under my original bill. This was decisive with me, for I knew that many of my fellow western Senators—rebuffed on relatively small reclamation and public-works projects in their own States—would wonder why scores of millions of dollars were necessary to buy an Indian reservation in Oregon.

I took the bill which Secretary Seaton had sent to me and dropped it in the Senate hopper "by request." If I had not crossed the Rubicon, I at least had crossed Upper Klamath Lake. It was my bill now.

A few weeks later the National Lumber Manufacturers Association began a bitter and abusive attack against even this bill. They denounced it as a threat to the American system of government and to free enterprise in the lumber industry. To its credit, the largest operator in the Klamath Basin, the Weyerhaeuser Timber Corp., declined to join in this massive assault. Five of my colleagues helped particularly to bring the measure to passage—James E. Murray, of Montana; Clinton P. Anderson, of New Mexico; and Frank Church, of Idaho, all Democrats; and Arthur V. Watkins, of Utah, and Barry Goldwater, of Arizona, both Republicans.

The crisis came when lobbying by the National Association of Lumber Manufacturers succeeded in eliminating in the House of Representatives all the language guaranteeing sustained-yield management of any of the Ponderosa timber which might be privately purchased. This could have been ruinous. We had to restore the lost language in conference between the two Chambers. At this juncture there came to the rescue a man who is not customarily a hero with liberals—Ezra Taft Benson, Secretary of Agriculture. He sent to the conference a strong letter detailing why the Forest Service (which is in his Department) could not accept responsibility for supervising the timber effectively unless it had full legal authority to keep the forest from being recklessly cut. This meant that sustained-yield policies had to be assured. Benson's letter carried the day.

And so, as these words are written, biologists of the Fish and Wildlife Service are measuring off the acreage their agency soon will acquire in the Klamath marsh. Foresters of the Indian Bureau and the Forest Service are preparing for sale some 617,000 acres of the great Ponderosa groves—with $90 million in purchase funds already approved by Congress for national forest acquisition in the event private buyers do not materialize.

And a valuable lesson has been learned all around—albeit an expensive one. Secretary Seaton now insists that it would be absolutely unthinkable for any Indian tribe to be forced into a termination proceeding without its full understanding and consent. Mr. Seaton also has said that it would be incredible, even criminal, to send any Indian tribe out into the stream of American life until and unless the educational level of that tribe was one which was equal to the responsibilities it was shouldering.

Although Oregon is essentially a conservative and cautious State, practically every element of Oregon society had rallied to the cause of Federal rescue of the Klamath Reservation—press, pulpit, industry, banking, labor unions, conservation and outdoor groups, women's clubs, farm groups, education organizations. Few of these influential citizens believe the Klamaths measure up to the standards prescribed by the Secretary for merging with the stream of American life. Yet the egg cannot be put back into the shell. Legal rights have been vested and each withdrawing Klamath is entitled to his share of the tribal assets, which might conceivably be reduced to $45,000 because of a new appraisal of the timber that reflects a declining lumber market. The amount of the exact sum due every Klamath may yet end up before the Indian Claims Commission. Fervent thanks are offered daily, however, that neither the $58,000 nor the $45,000, multiplied many times, is to be at the expense of the lumber, water, and wildlife economy on which Oregon is so utterly dependent.

But nobody in our State talks very much these days about getting the United States Government out of the Indian business.

THE BUDGET

Mr. BUSH. Mr. President, I hold in my hand a clipping from Newsweek magazine of March 30, 1959, under the column entitled "The Periscope," which reads in part as follows:

Democratic leaders in Congress are claiming Ike's "balanced" 1960 budget is beyond salvation, even if they tried to save it.

In addition to the attacks already made on it, the Democrats say they will continue to try to force supplemental money requests into the budget.

That is a very serious charge, I think. I hope it is not true. Nevertheless, there have been evidences that there may be some truth in the charge.

I ask unanimous consent that the entire part of "The Periscope" entitled "Battle of the Budget," be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BATTLE OF THE BUDGET

Democratic leaders in Congress are claiming Ike's "balanced" 1960 budget is beyond salvation, even if they tried to save it.

In addition to the attacks already made on it, the Democrats say they will continue to

try to force supplemental money requests into the new budget.

They also say they have no intention of giving Ike the two things he needs most to balance the budget: Higher Federal taxes on motor fuels and higher postal rates. Thirty-two Governors sounded off against a gas-line tax boost.

Mr. BUSH. Mr. President, I have in my hand an article which appeared in the Wall Street Journal for Monday, March 30, 1959, entitled "Inflation's Real Roots. How Federal Deficits Cause Dollar's Decline, Price Rises."

I think this is one of the most revealing articles I have seen on the subject, and drives home fully and clearly the importance of the effect of deficit financing. In fact, the article goes so far as to say that inflation is not possible and will not occur without an increase in the quantity of money available. It is the most impressive article on the subject I have seen this year, and I ask unanimous consent that it be printed at this point in the RECORD following my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INFLATION'S REAL ROOTS—HOW FEDERAL DEFICITS CAUSE DOLLAR'S DECLINE, PRICE RISES

What is the record on inflation? Since inflation is an issue in the political arena, let us look at the record of the last 6 years of Democratic national administration and the first 6 years of the present Republican national administration.

From January 1947 to December 1952, the Consumer Price Index rose by 24.4 percent. From January 1953 to December 1958, the rise was only one-third as large, amounting to an 8.6-percent increase.

However, the issue of monetary policy and inflation was supposed to have been removed from the political arena when the Federal Reserve Board was established as an independent agency. Members were appointed for 14-year overlapping terms in order to insulate them from political pressures. The Board has been given great powers which can be used to control the quantity of money in circulation. By controlling the quantity of money, they control the price level.

From January 1947 through December 1952, the manner in which the Board used their powers resulted in a 19-percent increase in the quantity of money. From January 1953 through December 1958, they used their powers to restrict the rate of increase in the quantity of money to 9 percent. As a result, we had less inflation in the last 6 years than we did in the preceding 6.

QUANTITY CLIMBS 180 PERCENT

In the period from 1940 to 1950 the quantity of money increased from $39 billion to $110 billion, an increase of 180 percent.

We might well ask, "Why did the quantity of money increase so much, and why did we allow it to do so if we were truly interested in avoiding inflation?" Or, to rephrase the question into a more pertinent one, "Why did the Federal Reserve Board pursue a course of action which pumped an additional $70 billion into the hands of the public from 1940 to 1950?"

Some people would argue that the inflation was caused by unions pushing wage rates up and by businessmen passing on the cost increases to the public in higher prices. However, our studies at the University of Chicago indicate that it was the increases in the quantity of money which came first.

With more money in their pockets, consumers tried to buy more goods. Since the stock of money could purchase more goods at current prices than could be produced, shortages developed or prices were bid up to levels which absorbed all the money consumers wanted to spend.

With higher prices offered by consumers for goods, manufacturers were eager to produce more. They tried to hire the men to do the job, but shortages of labor developed. In nonunion industries, employers offered higher wage rates in order to attract additional men. In unionized industries, employers offered wage increases in their bargaining sessions.

The answer to the question of what caused inflation is really the answer to the question of "Why did the Federal Reserve Board follow the course it did in the 1940's?"

The primary reason was that the Federal Government had a large deficit in this period. It offered bonds for sale to the public to finance the deficit. Because the interest rates carried by the bonds were very low, ranging from three-eighths of 1 percent to 2½ percent, insufficient funds were obtained to cover the Government deficit. In these circumstances, the Government turned to the Federal Reserve for help in its financing.

Rather than offer higher interest rates or increase taxes to pay its bills, the Government, in effect, asked the Federal Reserve to buy the bonds and to provide banks with more funds so that they also could buy them. Since the Federal Reserve Banks are fiscal agents for the U.S. Government, and, also, since they felt it was their patriotic duty to assist with the financing of the war, they responded. In doing so, they undertook actions which increased the stock of money from $39 billion in 1940 to $94 billion in 1945.

They might have stopped increasing the stock of money in 1945 since the war was over. However, the U.S. Treasury had become accustomed to selling bonds at low interest rates. It did not want to raise rates to the point where the public would find purchases attractive. The administration, therefore, exerted great pressure on the Federal Reserve to keep buying bonds and to keep manufacturing money to buy the bonds. As a consequence, the quantity of money continued to rise, by another $16 billion, to $110 billion in 1950. And the inflation continued.

Marriner Eccles, the former Chairman of the Reserve's Board of Governors, and other members of the Board constantly protested against this policy. Finally, a blowup came in 1951. It was becoming obvious that the Federal Reserve had become an engine of inflation. The System had either to declare its independence or continue as a subservient arm of badly managed Treasury policy. Eccles presented the Federal Reserve's case in testimoney on January 25 before the Joint Committee on the Economic Report.

In an unprecedented move, President Truman, on January 31, asked the Federal Reserve Open Market Committee to meet with him. The next day, the White House announced that the Federal Reserve would continue to peg the Government bond market. Since the Open Market Committee had not agreed to this policy, Eccles released the minutes of the White House meeting, giving the lie to the White House statement.

A final result of all this was an accord between the Treasury and the Federal Reserve in March 1951. The Treasury agreed to the dropping of the Federal Reserve pegs in the Government bond market. The Federal Reserve agreed to maintain an "orderly" market (whatever that may mean).

Since March 1951 inflation has proceeded at a very moderate pace, compared to the earlier pace. But it has continued, however moderate the pace may now be. The Federal Reserve has continued to pump money into the economy in its attempt to maintain an orderly bond market and to ease the Treasury's problems in raising funds to pay off maturing issues.

THE BASIC LESSON

Now what is the moral of this experience?

First of all, inflation is not possible and will not occur without an increasing quantity of money. Second, the quantity of money will not increase unless the Federal Reserve either provides extra money, or makes it possible for banks to increase the stock of money by providing them with more reserves or by cutting required ratios. Third, the Federal Reserve increases the stock of money primarily as a result of the pressures exerted on it to assist in financing governmental deficits and secondarily to assist the Treasury in refinancing maturing debt when the demand for funds is strong, and the Treasury would have to offer more attractive interest rates to get the money from noninflationary sources.

In essence, the only way we are going to avoid inflation in the future is by avoiding deficits in Government budgets.

Even in the absence of deficits, there will still be moderate inflationary pressure from the necessary refinancing in Government debt unless the Government runs a surplus in order to ease the Treasury's problem in handling the roll-over.

A surplus in the budget is desirable for two reasons. It would ease the upward pressure on interest rates in capital markets. The Treasury's refinancing problems in connection with maturing debt would become less pressing, and the heat would be off the Federal Reserve to manufacture more money to assist the Treasury.

A second virtue of a surplus is that the flow of funds for financing the purchase of new, more productive machinery would be increased. The holders of maturing bonds would use the funds to invest in the securities of business firms. The more available funds are to these firms (from noninflationary sources), the more rapidly they will modernize their plants, and the sooner they will rehire high-priced labor not worth employing on low-output, obsolescent equipment.

The more rapid growth in our stock of capital which would occur with a surplus in the Federal budget (assuming it is not created by raising taxes which reduce the rate of saving) would lead to a more rapid growth in production. This, too, would help restrain the rate of inflation.

THE PROPOSED BUDGET

To turn back to the question of the prospects for continued inflation, we should examine the prospects for balance or surplus in the Federal budget. The President has proposed a balanced budget for the fiscal year ending June, 1960. The President may propose, but Congress disposes. The mood of the current Congress is evidently in favor of a conglomerate of spending programs beyond those in the administration's proposed budget.

Even the proposed budget contains programs whose required outlays will be rising in the future. The only way the Federal budget can be kept in balance is by preventing new programs and discontinuing old ones. The proposed budget does not eliminate programs; it only nibbles at the expenditures for a few of the eixsting projects.

Many of the programs now in the budget and additional ones proposed to the Congress are political frauds which are designed to institute spending programs for which people would not vote if the proposals were presented separately on the ballot. The proposed Federal aid to education program is typical in this regard.

The proposed housing bill, and Federal aid to airports bill, as well as the education bill are beyond the proposals of the President and must be stopped if the proposed balanced budget is to become an actuality. Furthermore, many Federal programs must be discontinued if we are to avoid deficits in the future. For example, Federal Government grants for vocational education have

accomplished their purpose. The proposed expenditure of $9 billion for improving navigation on inland waterways should be killed.

If we are to prevent inflation, we must get sanity into the making of the Federal budget. We can reduce Federal outlays, increase the rate of growth in productivity, wage rates, and personal income, and reduce the rate of inflation if we prevent unneeded and economically wasteful Federal programs.

Mr. BUSH. I also ask unanimous consent that there be printed in the RECORD an editorial from the same newspaper of the same date, commenting on the article to which I have just referred.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HALFWAY TO ZERO

Senator Majority Leader JOHNSON said the other day that American economic history casts "grave doubts" on the theory that Federal budget deficits lead to inflation.

This sort of talk is by no means unusual, especially these days when the budget is such a sharp political issue. Those in and out of Congress who want the Government to spend much more via deficit financing naturally do not care to bear the onus of responsibility for inflation. So they like to search for the causes of inflation almost anywhere except in Federal fiscal and monetary policy.

And it is true enough that economists are far from unanimous on the subject. Some think wage increases in excess of productivity gains are the main cause of inflation. Others think prices administered by industries allegedly immune to competition are the big villain. Still others combine these two. And so on.

But it seems to us it is not necessary to adhere dogmatically to every detail of any particular economic theory in order to come to some conclusion about inflation. In this field as in others, common sense is a pretty good guide, and common sense certainly underlies Professor Brozen's article—a kind of primer on inflation—on this page today.

As Mr. Brozen shows, there is no doubt at all that the money supply has been inflated in recent times—from $39 billion in 1940 to $94 billion in 1945 and an additional $16 billion between 1945 and 1950. The expansion of the money supply has continued since, though much more moderately.

There is equally no doubt whatever that the purchasing power of the dollar has markedly declined in the past 20 years during which this huge expansion of the money supply has taken place. So at least a presumptive cause and effect relationship is evident. But Mr. Brozen goes on to make the connection specific: The inflation occurred through the monetary means employed to deal with the heavy Government deficits of the war and postwar years.

The conclusion thus seems inescapable that bank-financed Government deficits are the primary cause of inflation, whatever other contributory causes there may be. After all, no entity except the Government can in the first instance control the level of the money supply.

Once the basic responsibility of the Government is recognized, other phenomena fall more easily into place. For example, Senator JOHNSON and others dispute the connection between deficits and inflation on the ground that Federal red ink has sometimes been accompanied by rising prices and sometimes by low or falling prices.

That, though, is a somewhat misleading linkage. Rising prices are not the equivalent of inflation, though they are a frequent result of inflation. Inflation may seem to be dormant, when it is not. Inflation's upward impact on prices is not always or necessarily immediate; it may be delayed. Inflation, in short, is a treacherous enemy.

The important point about deficit-generated inflation, experience indicates, is that a huge pool of excess money is created. That pool becomes a threat, whether or not immediately apparent, to the value of the currency. For only out of it can come the wage increases in excess of productivity gains that show up in ever-higher prices. And the longer the deficits continue the more certain it becomes that the inflation will be reflected in a rapidly moving wage-price spiral.

Once that spiral is in rapid motion, moreover, the Government is likely to inflate more to keep up with the spiral, thus speeding the spiral. Meantime public expectation of more, and more serious, inflation leads to all manner of speculative excesses.

In the combination of these forces lies the strongest reason for questioning the idea of some economists that inflation can be kept indefinitely at a creeping pace. Experience and human psychology, not mere theory, show that at some point inflation can and does start galloping toward financial collapse.

Still, let's not be dogmatic. Let's say it's only about 90 percent sure that the almost uninterrupted Federal deficits of the past generation are mainly responsible for the simultaneous loss of more than half the value of the dollar. Even if it were far less certain, why should sensible people let deficit-bent politicians run the risk of completing the destruction?

Mr. BUSH. Mr. President, finally, I ask unanimous consent that another editorial, from the Wall Street Journal of March 26, 1959, entitled "Out of Reason's Market," be printed in the RECORD following the preceding insertions.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUT OF REASON'S MARKET

Some American machine toolmakers are buying foreign companies to produce and sell both abroad and in the United States, and this trend is expected to grow. The reason is that the U.S.-made products are running into increasing price-competition trouble with foreign-made products.

Steelmakers will try to counter union demands this spring with the argument, among others, that higher prices may mean more imports from abroad and fewer jobs for American steelworkers. And in point of fact, steel imports have been rising and exports declining.

Automakers are finding that while imports from abroad continue to mount, their own overseas sales are sliding in about the same proportion.

In all these examples—and others could easily be cited—is a common thread: U.S. products are pricing themselves out of world markets. This is one of the important things that is going to be studied by Vice President NIXON's new Cabinet Committee on Price Stability for Economic Growth.

Now the immediate significance of the pricing-out-of-the-market trend can doubtless be exaggerated. But it is happening, and there is little reason to suppose it will not become a problem of serious proportions unless something is done. So the question is, What should be done?

The protectionists have a ready answer; they are already mounting, through their numerous spokesmen, a campaign to build a higher wall of tariffs, quotas, and other restrictive devices around American industry. There are many things that can be said about this point of view—that it forces the consumer to pay higher prices than he otherwise would have to; that to try to protect some American firms is automatically unfair to others.

But for the present discussion, perhaps the most useful thing to say about the protectionist answer is that it does not come to grips with the problem. The protectionists say the trouble is that foreign wage rates are usually lower than American. U.S. productive efficiency, however, has long been able to more than compensate for that cost disadvantage; the unarguable fact is that the United States has been highly successful in competing against foreigners both on its home ground and theirs.

That this country is now showing signs, in some fields, of losing out, suggests that rising wages and prices are beginning to outrun the compensating power of American efficiency. In the case of American machine tools, the average price has doubled in the past decade, which naturally reflects mounting wage costs. But then the question must be posed, How is it possible for such increases to have occurred?

A considerable part of the answer is the fact of Government-induced inflation. Some people talk as though inflation were at the most a future threat, but of course we have been having inflation right along—a lot of it up until about 1951, less since. From inflation springs the wage increases that exceed productivity gains and the consequent price rises now beginning to play hob with our competitive ability. In short, the inflation we have permitted through years of Federal red ink is starting to catch up with us in world markets.

Now protectionism is plainly no answer to inflation; indeed, it is a self-defeating notion. If we cut off our international trade, we will likely spur inflation without "saving" our domestic industry, which will simply become higher cost, less efficient, and less competitive.

Equally clearly, one might think, more inflation cannot be a solution of inflation. Yet today many in Congress are in effect saying just that. They are trying to keep the Government on the path of heavy inflationary deficits because they profess to think that is the path to economic growth. Unhappily it is the way not to sound economic growth but to economic contraction and eventually to financial collapse.

The way to deal with inflation is to stop inflating. What is beginning to happen to our international trade is one more sharp warning that the time to stop is long past and we had better not wait much longer.

The American people ought to consider that warning before they let either the protectionists or the inflationists price them out of reason's market.

PROGRESS MADE BY REPUBLIC OF VIETNAM

Mr. MANSFIELD. Mr. President, in the April 2, 1959, issue of the Wall Street Journal there appears an article by Vermont Royster entitled "Up From Chaos." Mr. Royster's article outlines, in an interesting and informative fashion, the very considerable progress which has been made in the Republic of Vietnam during the past few years. In reading it I was reminded of the grim days in 1953, 1954, and 1955, when the future of all of Indochina was at stake.

The Senate will recall that I visited Vietnam in each of those years and reported my observations and recommendations. I remember particularly the vital part played by the present President of the Republic, Mr. Ngo Dinh Diem, in the survival of the hope for freedom in Vietnam. That any part of Vietnam was able to remain out of Com-

munist hands is a tribute to his exceptional leadership of the transition to national independence at a time when the Communist north was moving forward with great impetus for the conquest of all of the country. His leadership has been characterized by perseverance, determination, and great personal bravery and integrity.

As Mr. Royster's article makes clear, the road ahead for Vietnam is still not an easy one. Nevertheless, there now exists in that country tangible evidence of progress and the promise of more, whereas formerly there was scarcely hope.

Mr. President, I ask unanimous consent that I may insert at this point in the RECORD the article entitled "Up From Chaos," from the April 2 issue of the Wall Street Journal.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UP FROM CHAOS—VIETNAM BATTLES ITS WAY TO ORDER AND FREEDOM

(By Vermont Royster)

SAIGON.—The new nation of Vietnam has sensually beautiful women, a clean and spacious capital, fertile fields, miles of impenetrable jungle and a Roman Catholic government for a Tao-Buddhist people.

These people, ethnologically Chinese but culturally modified by French colonialism, are made up of a highly educated elite and a large uneducated mass. They combine, in a strange fashion, the attitude that the day is sufficient unto itself with the apparently unshakable conviction that they can remake tomorrow.

They also have a divided nation, hostile neighbors, internal guerrillas, a struggling economy, a tough political boss, and the largest bundle of U.S. foreign aid ($185 million a year) of any nation in southeast Asia.

And these last considerations, coupled with the fact that they occupy a strategic keystone on the map of southeast Asia, make the people, their economics, their politics and their government of particular interest to a visiting American.

NEAR SWEEP BY REDS

A bare 5 years ago only a bold prophet would have given Vietnam those 5 years to live free of the Communists. In the spring of 1954 the French, who only a few years before had had their colonial grip shaken, were ready to lose their last hold, while the world watched at Dien Bien Phu. Their puppet emperor, Bao Dai, was already tottering.

The Communists held the whole north of the country, and much of the south outside a few cities. Armed guerrillas—neither Communist, nor Nationalist, nor anything else except plain bandits—roamed the countryside. There was no safety for the traveler in the byways, and hardly on the highways. And, as so often happens amid chaos, the colonels and the generals were growing restless for power.

That summer Vietnam was partitioned, in the manner of Korea, but there were few hopes that the truncated land would long withstand the relentless Communist pressure. Certainly South Vietnam could expect no help from the beaten, exhausted, and demoralized French.

Today the streets of Saigon, laid out in wide boulevards by those same French long ago, are immaculate, orderly and yet bustling with business and traffic save during the somnolent siesta hours.

The markets are full of rice and fish (cheap), the bazaars are stacked with cloth for the long, flowing dresses (lovely), and the main-street shops are full of Western consumer goods (expensive). Around the city's edge a few small industries are busy making cigarettes (terrible), soap (fair), matches (they light), and beer (pretty good).

In neighboring Cholon there is all the teeming hurly-burly that is always found in any Chinese-populated city where there is law and order enough for both the shops and the people to burst out onto the streets.

Beyond, on the narrow still-rutted road that links the capital with the countryside, the visitor's only concern for his safety is from the spirited driving of the jeep's chauffeur. The rice paddies here are not so intensively cultivated as in, say, Japan or Formosa; they depend on beneficent nature rather than irrigation for their water. But the water is plentiful in season, the land rich, and today the farmers can go out and till their fields unmolested. The towns such as My-Tho (pop. 20,000) are as neat as those of New England but far more bursting with life.

Plainly, then, the new government has begun to provide the first, basic thing asked of any government, peace and order. But that in itself has not been easy, nor is all yet completely peaceful and orderly.

The organized bandit gangs in the central area have been cleaned out. Police corruption has been pretty well eliminated; the vice lords (and ladies) are no longer political powers; the army is firmly under government control. But Communist agents and propaganda are still plentiful, the northern border is still not really secure against forays, and there are still guerrillas hidden in the jungles and the mountains.

In other matters, too, the government has been only partly successful. Beyond the restoration of the war-torn fields, economic progress has been slow and painful. The government has been too preoccupied with the immediate problems of security to give much thought to economic problems. Indeed, it is doubtful if some of the men-of-action who made the revolution really understand them.

So it is hardly surprising that the country has been plagued by inflation and by monetary and other economic curbs that discourage the foreign investment that the government officially invites. On this, as in many matters, the Vietnamese are of ambivalent mind; they are unconsciously suspicious of outside influence while consciously wanting outside help.

This suspicion has been fostered by history. The Vietnamese wrested their independence from the Chinese in the 10th century and kept it until they were conquered by the French in the 19th. They have been through a long struggle to oust the French, during which time the Communists won their foothold by nurturing this ambition. Yet this same fierce sense of independence makes them today as "anti-China," and in that sense, as anti-Communist, as any peoples in southeast Asia.

Ngo Dinh Diem—President, chief of state, chief of government, chief of the army, and chief of the only political party that amounts to anything—is a distillation of this sense of independence. Youthful looking, he was Minister of Interior of Annam (central Vietnam) as far back as 1933. He resigned in protest against French refusal to liberalize the government and for the next 20 years refused political office despite pleas by the French, the Japanese, and the Communists.

He came to power in 1955 when all seemed lost, and since then he has fought the French, the warlord gangs, the Communists, the Vietnamese Army, the Emperor Bao Dai, political dissidents and even U.S. aid advisers. So far he has bested them all, except perhaps U.S. aid advisers.

He is a strange man, disturbing and appealing all at once. A half-hour interview with him stretches into 2 hours, mostly a monologue that reveals an almost mystical dedication to the independence of Vietnam from all and sundry. So dedicated he does not hesitate to be ruthless against any he sees as enemies of the State; yet so confirmed in his Roman Catholicism that his ruthlessness seems to give him sincere pain.

Impatient of advisers, he has surrounded himself with an impressively capable group of advisers. A full staff meeting would put in one room at least one graduate of Oxford, several of the Sorbonne and the Ecole Politique and a few alumni of American universities; even his press secretary is a graduate of the London School of Economics and a Ph.D. from Geneva. He has a blunt-spoken American adviser (paid by him, not the United States) whose chief function seems to be to serve as a hair shirt.

ELITE AND MASS

For the most part these Vietnamese share Diem's missionary spirit; many have returned from successful careers abroad simply to help their country. Many of them are better educated (two to five languages) and better trained than their counterparts from the U.S. mission who are there to "rub off some civilization" on the backward peoples. They are working hard to make their country "go."

But it's a long drop from this elite to the mass of the people. The French were not enthusiastic about educating the Vietnamese masses, and the present educational and training program has far to go, even though it is being pressed with vigor.

And the accomplishment so far, frankly, rests on American aid. Without that aid there would be no Vietnam. Apart from military hardware, the United States poured in more than $300 million a year for the first few years; currently, economic aid amounts to about $185 million. But while Diem wants more aid, others feel the country is now ready to taper off from the U.S. funnel. Ironically, the very dollar aid so vital in the beginning now makes their inflationary problem more acute.

As for the future, the departing visitor feels it will be troubled. The present government does not have deep political roots; with Catholic leaders of a Buddhist people there is some religious separation. The Communists to the north are not likely to relax their pressure. Economically many difficulties remain to be surmounted.

But these are not only delightful people; they are more energetic and determined than most in Southeast Asia. And they, anyway, are made confident of their future by looking back at all they have survived.

MISS DEBRA GLATER, OF SCHENECTADY, N.Y., SPEAKS FOR DEMOCRACY

Mr. KEATING. Mr. President, a fine young constituent of mine, Miss Debra Glater, of 1438 Richard Street, Schnectady, N.Y., was recently named as the New York State winner of the 1958–59 Voice of Democracy broadcast script-writing contest. Debra, who is the daughter of Mr. William H. Glater, is a student at Mount Pleasant High School.

She competed with high school students from throughout New York State by writing and delivering a 5-minute speech on the theme, "I Speak for Democracy." As a State winner, Debra recently visited Washington and participated in a series of tours and other activities.

Mr. President, the highest praise possible is due the National Association of Broadcasters and its able leader, Harold E. Fellows, the Electronic Industries

Association, and the Veterans of Foreign Wars, for their vigorous sponsorship of this worthy contest. Through their efforts, our young people are being stimulated to think and speak about the opportunities, challenges, and benefits of our democratic form of government.

Nothing is more important to our youth than that they be prodded to do more thinking about the wonders of America and our way of doing things. More importantly, perhaps, it is vital that our young people learn to express their thoughts about the freedoms which we all too often take for granted. That is why this Voice of Democracy Contest is such a commendable undertaking. By encouraging our young people to think about the meaning of our form of government in their own lives and by urging them to communicate their ideas to others, this contest is contributing much to building a stronger America for the future.

Debra Glater was kind enough to send me a copy of the thoughtful, eloquent, and heartwarming remarks which resulted in her selection as a winner of the New York State Voice of Democracy Contest. They bear close study by all Americans, regardless of age. More than that, they deserve wide dissemination to all corners of the globe. Therefore, Mr. President, I ask unanimouse consent that they be printed at this point in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

I SPEAK FOR DEMOCRACY

(By Debra Glater, Schenectady, N.Y.)

May I read you a letter which I received 2 weeks ago from Bonn, Germany?

"MY DEAR COUSIN DEBRA: Life is so wonderful in the West, but yet so strange. I say strange in the sense of newness. Although I am 17 years old, I must begin life again like a newborn baby. So many new words I've learned in these few days. Yesterday, while walking in the market square, I overheard two people talking about coming to America. I heard them say that America is a land of fulfillment, a land rich in opportunity. And, Debbie, one word I heard them repeat over and over—'democracy.' I've heard this word in school, but what does it really mean?"

Helena's letter goes on, but I must stop here, as it's this part of the letter that troubles me. How can I explain the word "democracy"? How can I put into simple words this way of life which is my heritage, and which I take so much for granted? Will you listen to me in my answer? Do you think I I have told her the truth about democracy?

DEAR HELENA: I rejoice with you in your new-found freedom. I know there will be many new things you will be wanting to see and enjoy, and I feel that an excellent place to begin is with your question, What is democracy? This question is not easily answered, for democracy is a composition of many ideals. To me, democracy means freedoms.

In the United States I can fulfill my religious ideas freely. As I walk down State Street in Schenectady I can see St. John's Church, the First Methodist Church, and Beth Israel Synagogue. I can hear soft melodious voices of young choirboys singing Christmas carols; the ancient appeal of the Kol Nidre melody on the eve of the Jewish Day of Atonement emanates from the walls of the synagogue. You see, Helena, I need not be ashamed of my religion—that my beliefs are not like those of my neighbors. This privilege, this wonderful feeling of freedom of religion, everyone in a democracy possesses. This is a sharp note in the harmonious chord of democracy.

The freedom of press, speech, and public opinion—to what do these liberties entitle me as a citizen of America? I can write any article I may desire, without reprisal, but must consider the reputations of my neighbors. I can print what I know and feel is the truth and express my thoughts on anything from economics to a cartoon. In my democracy I am free to think, to investigate, and to express myself. This is another forceful note in the chord of democracy.

The freedom of enterprise grants to me the privilege of choosing my occupation. If I wish to further my education, I may do so. If I take pride in my work, I can be a success. This opportunity for success is very evident, for in America one can see the tables of the workingman as well as the tables of the executive filled with food. In America one can see a picture of well-being. People are well clothed and possess the material comforts which contribute to their security and happiness. And so the third exuberant note is struck in the chord of democracy.

But, Helena, democracy begins with education. It's a wonderful sight to see students in high school working in a physics laboratory or studying math, history, and languages, for they mean America's future. I, as well as each individual, have the benefit of public schools and colleges, which will teach me to become a better American citizen. Thus, the final thundering note in the chord of democracy is struck.

What is democracy, Helena? It is the constant repetitious song of freedom-loving citizens bound together by the basic melody in our Constitution. It is a way of life—the American way of life. I hope you understand my explanation, Helena, and that it will not be too long before both of us can speak for democracy.

CONTAMINATION OF THE EARTH'S ATMOSPHERE BY NUCLEAR EXPLOSIONS

Mr. CHURCH. Mr. President, the public concern over contamination of the earth's atmosphere by nuclear explosions is growing throughout the United States.

A most recent aspect has been public reaction to the lack of disseminated information on the newly discovered fallout characteristics of nuclear contamination, and the delay in making public the findings of high levels of strontium 90 in certain samples of Minnesota wheat and Dakota milk.

This deep-felt concern about the suppression of legitimate public information, I welcome—first, because it is a corollary to the nuclear test problem itself, and, secondly, because it spotlights the Geneva question: How can we salvage from this statemated conference one agreement which will protect mankind from the ravages of radiation?

My position on this question has been made clear. The time is late, and with the Geneva Conference scheduled to resume its discussions next Monday, following an Easter recess, the time is also appropriate to give consideration to an all-important atmospheric test ban.

In line with this thinking, two additional newspapers in my own State of Idaho recently expressed their fears for the ultimate safety of the world's population if agreement is not soon reached.

I ask unanimous consent that an editorial of April 3, by Perry Swisher, from the Boise (Idaho) Journal, and another of March 26, by Robert L. Anderson, in the Idaho County (Idaho) Free Press, be printed at this point in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Boise (Idaho) Journal, Apr. 3, 1959]

BREAD AND MILK

It wasn't many months ago that this editor was asked to transfer the subscription of a man deep in the AEC to another member of his family. The explanation was that the editorials about nuclear contamination of the air were an embarrassment.

Now that John A. McCone is in and Lewis Strauss is out as Chairman of the Atomic Energy Commission, the Nation is learning in detail what the scientists knew but could not drive home because of security regulations: Strontium 90 contamination of the atmosphere is far more serious than Mr. Strauss and Dr. Edward Teller, unable to see the evidence because of their preconceived policy, were willing to admit.

The debate about underground tests may continue, but no argument remains—or logically ever existed—against pressing at Geneva for a ban on further test pollution of the air. Idaho's U.S. Senator FRANK CHURCH deserves unlimited credit for so clearly drawing the line between the arguable question of underground test control and the unarguable ability of this Nation and Russia to detect atmospheric nuclear explosions anywhere in the world.

A WORKABLE APPROACH

When the Geneva session reconvenes April 13, the United States absolutely must be in position to ask publicly, with the world as its audience, that Russia join the West in suspension of all nuclear tests above ground. This is feasible. Agreement on the whole nuclear weapons control package is not. Neither country trusts the other far enough to reach complete agreement on all aspects of international control. But the world distrusts both powers to such an extent that above-ground control of test bomb explosions is, from the viewpoint of other nations, imperative. If the human race ranked ahead of principalities, the ban would already be in force.

From such tangible evidence as the strontium contamination of Minnesota wheat and milk, the public now learns in terms of bread and milk what science knew many months ago. But in those days, incredibly, the AEC, most of the Nation's reliable news magazines, some of her diplomats (but not Mr. Dulles this time), Defense chiefs and the White House were backing a position the facts now thoroughly discredit. The humane, informed protests of Pius XII and Albert Schweitzer were dismissed as naivete.

"HE'S MY BOY"

We learn one lesson at a time in this atomic age. Each one is terrible enough in fact or in its implications that we cannot forget them. This exercise in national policy (and in news slanting) should teach us that recording and presenting the nuclear facts of life—literally facts of life—must transcend all traditional administrative practice. In other words, loyalty to mankind, amid the impersonal consequences of nuclear experiment or foreknowledge, comes ahead of the loyalty a public servant may demand of his immediate superiors. This demand, in this era, has extended to the news media and inferentially to all true patriots the media can reach.

Until a special science adviser to the President was appointed—Dr. James Killian, Jr.—the President wasn't aware that a large pro-

portion of the top nuclear physicists and weapons experts in this field were in favor of a test ban with safeguards.

"They had been inhibited in speaking out publicly," the Christian Science Monitor flatly reports, "by the rigid secrecy rules over which Mr. Strauss presided, in the atomic energy field." Once more time has demonstrated that political conceit or obstinacy, rather than national security, dictates the results of suppressing information at the appointive level of Government. Not only is critical information withheld from the public, but from the chiefs of state. The ancient necessity of technological military secrecy can never justify such practices, widespread as they may be in modern governments.

EVERYMAN'S SNEEZE

Inquiry as to degree will go on indefinitely, but: When atomic bombs burst into blossom, all people everywhere are allergic to their pollen. And unlike us, our descendants will have had no chance to protest; they must be heard through our objections.

Last year's editorials, we readily admit, were a reaction to obvious withholding and distortion of needed information. They weren't scientifically expert. That's not our field.

No, the significance of the facts since forced into the light is, for the purposes of this editorial, that insistence on the peoples' right to know is not a mere exercise in journalism. It directly involves the lives of the people themselves, the very air they breathe.

[From the Idaho County (Idaho) Free Press, Mar. 26, 1959]

THE PROMISE

"Because I live ye shall live also."—John 14: 19.

This was the message of the risen Christ and centuries later it holds the promise of civilization.

But the strife-ridden world, now in a quagmire of ideological and materialistic dictation, seems little prepared to partake of the Eastertide this Sunday.

The science of warfare has blotted out principles of peace taught by a Saviour.

Facing mankind is a firing of the world with hydrogen weapons, with the tolls of death and disease never to be estimated accurately.

Senator CHURCH, in a recent address to the U.S. Senate, urged this Nation to take strong leadership in an 11th hour attempt to unite the major powers at the Geneva conference with a proposal:

"An agreement to suspend further nuclear weapons tests in the earth's atmosphere, within the framework of a trustworthy and sufficient international control system, adequate to detect reliably and report any violation * * *."

What the Idaho Senator warns is that failure at Geneva will be the failure of mankind and he asks that the United States never let up in its conferences with Russia, and others to seek an effective detection system and policing of hydrogen firings.

Current news stories, Senator CHURCH said, revealing the marked increase in levels of strontium 90 now appearing in our milk and wheat, emphasize the grave importance of the Geneva negotiations, and the "urgency for our doing our utmost there."

It is an era of sadness, more than terror. Man is not suitable to govern the universe as long as he seeks to destroy it.

At this Eastertide, let the hearts and prayers of all men seek enlightenment and pray that the promise of Christ, "because I live ye shall live also," shall exert an influence on restoring the conclave at Geneva onto paths of righteous government of the world's peoples.

GERMAN DEBT PREPAYMENT

Mr. WILEY. Mr. President, all too often we have heard grumbling in this country about the supposed giveaway nature of our mutual assistance programs. Complaints have been directed not only against grants of aid—which many people refuse to see have contributed mightily to peace and America's security during the past decade—but also against loans. The latter, which increasingly are proving the most satisfactory vehicle for assistance, are all too frequently referred to as "money down the drain." I do not accept this description for a moment.

I take great pleasure and satisfaction, therefore, in drawing the attention of my colleagues to an exchange of notes between the Governments of the United States and the Federal Republic of Germany in Bonn on March 20. By this means, the Federal Republic agreed to make an advance payment of $150 million on March 31 against its indebtedness arising from U.S. expenditures under the Marshall plan and other programs. This prepayment is a part of the 1953 settlement agreement which provided for the payment to the United States of $1 billion with interest over a period of 30 years. The West Germans have been paying interest since 1953, and began repaying the principal last year.

This $150 million is the first payment on the principal.

My colleagues should note that this act of good faith and good business was linked with West Germany's financial assistance, through debt repayment, to Great Britain's balance of payments. It is especially good to witness such mutually helpful transactions among three firm allies at a time when the interdependence of the free world countries requires fresh emphasis in the face of Soviet divisive maneuvers.

Mr. President, I ask unanimous consent that the Department of State press release on this subject be printed in the RECORD as a part of my remarks.

It will be noted from the release that:

The Governments of the United States and the Federal Republic of Germany exchange notes in Bonn on March 20 under which the Federal Republic agrees to make an advance payment of $150 million on March 31, 1959.

The words are "an advance payment of $150 million on March 31."

March 31 has passed, Mr. President, and the payment has been made.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

GERMAN DEBT PREPAYMENT

The Governments of the United States and the Federal Republic of Germany exchanged notes in Bonn on March 20 under which the Federal Republic agrees to make an advance payment of $150 million on March 31, 1959, on its indebtedness to the United States for postwar economic assistance totaling approximately $3 billion. This debt arose as a result of United States expenditures in Germany under the Marshall plan and other assistance programs. An agreement for settlement of this indebtedness, signed in London on February 27, 1953, provides for payment to the United States of $1 billion with interest over a period of 30 years. Semiannual payments of interest beginning July 1, 1953, and of principal installments beginning July 1, 1958, have been made by the Germans under this agreement as they became due.

This advance payment to the United States fulfills a requirement of the 1953 agreement that, in the event of a German prepayment on their corresponding debts to either the British or French Governments, the Federal Republic will, unless the United States agrees otherwise, make proportionate prepayment on its postwar assistance debt to the United States. A prepayment of a comparable percentage of the Federal Republic-United Kingdom debt had already been offered by the Federal Republic as part of the financial assistance given the British balance of payments.

The United States note was signed by the chargé d'affaires at Bonn, Henry J. Tasca, and the German note by Foreign Minister Von Brentano.

The text of the United States note follows:

"I have the honor to refer to Your Excellency's note of March 20, 1959, which, in agreed translation, reads as follows:

" 'I have the honor to declare that, in accordance with the agreement of February 27, 1953, between the Federal Republic of Germany and the United States of America regarding the settlement of the claim of the United States of America for postwar economic assistance (other than surplus property) to Germany (hereinafter referred to as the agreement), the Federal Government is ready to conclude the following agreement with the Government of the United States of America.

" '1. The Federal Government shall make a prepayment of $150 million by March 31, 1959, on the principal sum still outstanding under the agreement.

" '2. As regards the prepayment to be made by the German Federal Government under paragraph 1 above, the Government of the United States of America agrees that instead of the semiannual installments of $23,790,000 as stated in paragraph 2, article 1 of the agreement, the Federal Government shall in 1961, 1962, 1963, 1964, and 1965 only pay semiannual installments of the amount required under the agreement as interest on the principal sum still outstanding in those years, and in 1966 shall make additional payments in liquidation of the principal sum only inasmuch as the principal sums owed and due under the agreement have not already been settled by the prepayment under paragraph 1, above.

" '3. The new amortization schedule to liquidate the debt arising out of the postwar economic assistance of the United States of America (other than surplus property), a copy of which is attached, follows from the above.

" 'If the Government of the United States of America agrees with the above provisions, I have the honor to suggest that this note and Your Excellency's reply to it should be regarded as an agreement between the two governments, to enter into force on the day of the receipt of your reply.'

"I have the honor to inform Your Excellency that the Government of the United States of America accepts the foregoing provisions and accordingly agrees that Your Excellency's note and this reply shall constitute an agreement between the two Governments.

"Accept, Excellency, the renewed assurances of my highest consideration."

PRESENTATION OF GAVEL TO SENATOR HAYDEN

Mr. STENNIS. Mr. President, recently, at the first meeting of a subcommittee of the Senate Committee on Appropriations, in the hearing room in the Senate Office Building, it was my privilege to

present a gavel to the chairman of the committee, the senior Senator from Arizona [Mr. HAYDEN]. The gavel was made from a bristle cone pine, said to be the oldest living thing in the world. It is located in the home State of the Senator from Arizona.

I desire to perpetuate the remarks which I made at that time in tribute to the Senator's fine record. I ask unanimous consent that my remarks be printed in the RECORD.

There being no objection, the remarks by Mr. STENNIS were ordered to be printed in the RECORD, as follows:

TRIBUTE TO SENATOR CARL HAYDEN BY SENATOR JOHN STENNIS ON THE OCCASION OF THE PRESENTATION OF BRISTLE CONE PINE GAVEL TO CHAIRMAN HAYDEN AT INITIAL MEETING OF SENATE APPROPRIATIONS COMMITTEE IN ROOM 1224, NEW SENATE OFFICE BUILDING

This gavel is made from a live bristle cone pine, growing near the boundary line between the States of Arizona and California. This tree is thought to be the world's oldest living thing. Competent scientific authorities estimate these trees, which are still living, to be 4,600 years old. This means that they were over 2,600 years old when Christ was born, and were 600 years old when Abraham settled in the Land of Canaan.

As these trees have lived longer than anything in America, so Senator CARL HAYDEN has served longer in the Congress than anyone in American history. His career has always been active and constructive, with emphasis on the things that grow and strengthen our Nation.

Through a great number of constructive legislative programs, our national highway system, our agriculture and forest research programs, our irrigation projects, our soil and water conservation, the wisdom, the foresight and energy of CARL HAYDEN have already brought untold results.

For centuries to come these programs will continue to enrich the life and strengthen the economy of our Nation. Thus Senator HAYDEN'S contribution to the Nation's welfare through all these and other programs will continue to bear fruit for the American people longer than the 4,600 years this bristle cone pine has lived.

I salute and congratulate Senator HAYDEN for his achievements of the past and for his plans and continued work in the future. This gavel is presented as a token of recognition as well as appreciation for his work, past and future, all on behalf of his colleagues in the Congress and on behalf of the American people, including generations yet unborn.

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

AMENDMENT OF REORGANIZATION PLAN NO. 2 OF 1953

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 131, Senate bill 144.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (S. 144) to amend Reorganization Plan No. 2 of 1953.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Government Operations with an amendment, to strike out all after the enacting clause and insert:

That the functions and activities of the Rural Electrification Administration and the Administrator of the Rural Electrification Administration which were transferred to the Department of Agriculture and to the Secretary of Agriculture by Reorganization Plan No. II of 1939 and Reorganization Plan No. 2 of 1953 are hereby transferred to the Administrator of the Rural Electrification Administration, and shall be exercised and administered within the Department of Agriculture by such Administrator under the general direction and supervision of the Secretary of Agriculture; except that insofar as such functions relate to the approval or disapproval of loans authorized to be made under the Rural Electrification Act of 1936, as amended, their exercise by the Administrator shall not be subject to the supervision or direction of, or to any other control by, the Secretary of Agriculture.

Mr. JOHNSON of Texas. Is the Senator from Minnesota prepared to make a statement now, or does he prefer that I suggest the absence of a quorum?

Mr. HUMPHREY. I ask for a quorum call.

Mr. JOHNSON of Texas. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CURTIS. Mr. President, for the Senator from Georgia [Mr. RUSSELL], and myself I offer an amendment in the nature of a substitute for S. 144, a bill to amend Reorganization Plan No. 2. I ask unanimous consent that the amendment not be read, but that it be printed at this point in the RECORD.

The PRESIDING OFFICER. Without objection, the amendment will be printed in the RECORD.

The amendment offered by Mr. CURTIS is as follows:

Strike out all after the enacting clause and insert in lieu thereof the following:

"That there is hereby created and established in the executive branch of the Government an independent agency to be known as the "Rural Electrification Administration" all of the powers of which shall be exercised by an Administrator who shall be appointed by the President by and with the advice and consent of the Senate for a term of ten years and who shall receive a salary of $20,000 per annum. The Administrator shall have direction, supervision and control of the Rural Electrification Administration and all of its operations and functions as authorized in the Rural Electrification Act of 1936, as amended.

"SEC. 2. The incumbent of the Office of Administrator of the Rural Electrification Administration appointed before the effective date of this Act shall serve the remainder of the term for which he was appointed. At the expiration of such term, or if the office shall become vacant at any time for any reason, the President shall designate an Acting Administrator to exercise and perform all functions, powers, and duties vested in the Rural Electrification Administration until the appointment and qualification of an Administrator, as provided in the first section of this Act.

"SEC. 3. (a) Employees in the Department of Agriculture who are being utilized on the effective date of this Act primarily for the performance of functions, powers, and duties provided for in the Rural Electrification Act of 1936, as amended, shall be transferred to the jurisdiction and control of the Rural Electrification Administration in those instances in which the Administrator determines that they are qualified and necessary to carry out the functions, powers, and duties of the Rural Electrification Administration.

"(b) All assets, funds, contracts, property, and records used and employed in the execution of the functions, powers, and duties authorized by the Rural Electrification Act of 1936, as amended, are hereby transferred to the jurisdiction and control of the Rural Electrification Administration.

"(c) All unexpended balances of appropriations, allocations, or other funds available (including those available for the fiscal year ending June 30, 1959) for the Rural Electrification Administration and for the Secretary of Agriculture on account of the functions and activities of the Rural Electrification Administration shall be transferred to the Rural Electrification Administration and shall remain available for the exercise of the functions and activities of the Rural Electrification Administration.

"SEC. 4. (a) Notwithstanding any other provision of this Act, or of any rule of the Senate or of any committee of the Senate, any proposed legislation or other matter (including appropriations), relating to the administration of the Rural Electrification Act of 1936, as amended, shall, after the date of enactment of this Act, be referred to the same committees and subcommittees of the Senate to which such proposed legislation or other matter would have been referred had this Act not been enacted.

"(b) This section is enacted—

"(1) as an exercise of the rulemaking power of the Senate and as such it shall be considered as part of the rules of the Senate, and shall supersede other rules of the Senate only to the extent that they are inconsistent therewith; and

"(2) with full recognition of the constitutional right of the Senate to change such rule at any time, in the same manner and to the same extent as in the case of any other rule of the Senate."

Amend the title so as to read: "A bill to establish the Rural Electrification Administration as an independent agency, and for other purposes."

The PRESIDING OFFICER. The question is on agreeing to the amendment in the nature of a substitute offered by the Senator from Nebraska [Mr. CURTIS] for himself and the Senator from Georgia [Mr. RUSSELL].

INFLATIONARY PRESSURES—WHAT IS THE REMEDY?

Mr. WILEY. Mr. President, the Subcommittee on Antitrust and Monopoly of the Committee on the Judiciary has been paying particular attention to the problem of inflationary prices and whether the antitrust approach can be helpful by increasing competition and thus bringing prices down.

The hearings of the Antitrust Subcommittee have received very careful and thoughtful attention from the numerous newspaper reporters who have attended them.

An interesting example of the amount of research given by reporters to this problem was published on the first page of the Outlook Section of the Washing-

ton Post and Times Herald of Sunday, April 5, 1959. It was an article entitled "Steel Strike Pattern Could Change This Time," written by Bernard D. Nossiter.

I do not necessarily agree with Mr. Nossiter's comments, but the article which is a stimulating one, goes back to the time when President Truman went along with a steel price rise.

We are all interested in finding a remedy for inflationary pressures, which will not do more harm than good to private enterprise.

Mr. President, I ask unanimous consent that this article be printed in the RECORD at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STEEL STRIKE PATTERN COULD CHANGE THIS TIME

(By Bernard D. Nossiter)

Once again a forthcoming steel wage price bargain is in the center of the economic stage. This is logical. Steel, the backbone of the economy, goes into everything from sewing needles to superliners, from axes to autos.

Price changes in steel, some economists think, are a major cause of the behavior of the economy. Some of President Eisenhower's top advisers believe that the increase in steel prices (with help from autos) over the past 5 years triggered inflation, recession and the present slow recovery. The chief economists at the Federal Reserve Board feel the same way. And so do many in both parties on Capitol Hill.

Wage changes in steel are important, too. For if steel pricing sets the pace for industry, steel wages this year will set the pattern for all workers.

And this is no mere numbers game. For, as Woodlief Thomas, the economic adviser to the Federal Reserve Board, has emphasized, over-high prices and wages in steel throw sand into the economy's delicately interlocked parts. So the machine either breaks down (recession) or runs inefficiently (unemployment, slow growth).

EVENTUALLY, THEY'LL SIGN

Steel's current wage pact runs out June 30. Around the middle of next month, President David McDonald of the United Steelworkers will meet a representative of Roger Blough, chairman of the United States Steel Corp., in a New York hotel room. There McDonald and his retinue and Blough's man, Conrad Cooper, plus the industry's smaller management, will eventually sign an agreement.

Before the pact is finally signed, however, a strike may come—at least shutting down the steel mills. If it goes on long enough, steel's customers—autos, ships, farm machinery and lots more—will have to cut down, too.

The steel industry has been passing the word at least since last September that a strike was coming. Union sources fear that it is inevitable.

The prospective consequences not only of a strike (from industry's standpoint, a short one, clearing out currently excessive inventories, would not be entirely unwelcome) but of the wage and price bargain which would follow, have aroused many responsible officials, from President Eisenhower on down.

These officials hope that public opinion is being mobilized so strongly that there will be a peaceful settlement in which a wage increase will not be used as the lever for another price rise.

CURTAIN ROSE IN 1946

On March 25 Mr. Eisenhower broke a personal precedent, singling out by name the steel industry and the steel union in a plea for restraint. Meanwhile, support is mounting on Capitol Hill for bills which would require big industry and big labor to tell at Government hearings why specific prices and wages should be raised.

This is not the first time the White House has taken a direct interest in the drama of steel bargaining. The current negotiations can only be understood as the third act of a play which opened in the winter of 1945–6.

Then, the Nation, once again at peace, was sick of war and the restraints imposed by war. Price and wage controls were still on as the economy shifted gears from war production to peacetime goods. But everybody chafed at the restraints: industry wanted freedom to set its own prices; labor wanted to bargain for its own wages, and consumers were fed up with rationing.

The country appeared to want to go back to normalcy, but on a scale undreamed of in the Roaring Twenties. As it turned out, the country got just what it wanted.

TUSSLE OF TITANS

In that first postwar winter, two titans dominated steel and steel was the pace-setter for the economy. Philip Murray not only headed the big union but was also president of the CIO. Benjamin Fairless was United States Steel's chairman and his standing in the industrial community was as high as Murray's in labor.

Some of today's top steel stars were then important feature players on the bill. McDonald had risen from personal secretary to Murray to secretary-treasurer of the union; Blough was Fairless' counsel.

The bargaining, however, was three-cornered, because President Truman's administration had to be in the picture. The negotiations rambled from the White House to United States Steel's suite at the Carlton Hotel.

The union wanted a big wage increase for itself and as a pattern for mass-production industries. The corporation, then as now, insisted that any wage increase would require a hefty price increase. A strike would imperil reconversion by making scarce goods even scarcer.

Murray and Fairless pushed and hauled with each other, John Snyder, the Reconversion Director, and Chester Bowles, the Price Administrator. Bowles tried to hold the price increase down to $2.50 a ton. Snyder was more flexible.

At the 11th hour, Mr. Truman proposed a compromise: an 18.5 cent wage increase and a $4-a-ton price boost. Murray accepted this; Fairless said "No." A crippling 4-week strike then followed until Mr. Truman offered the corporation another $1-a-ton price raise. And the steelworkers went back to their jobs with the 18.5 cents.

In effect, this was a strike to get a price increase, because neither the Government nor the corporation opposed the 18.5 cents in wages.
